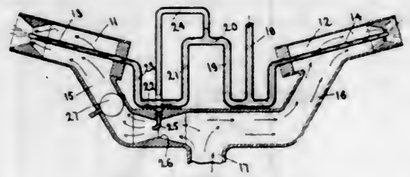
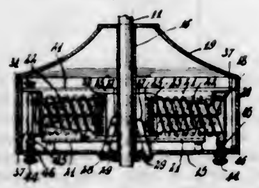
1. As a new article of manufacture, a velvet fabric woven from warp, weft and pile yarns dyed respectively to different colors and combined in the weave to blend the several colors to give the pile a different color as the face of the fabric is viewed from various angles.



1,676,932. CARBURETING DEVICE. HERBERT WILLIAM SPILLER, London, England, assignor to S. Smith & Sons (Motor Accessories) Limited, London, England, a British Company. Filed Jan. 4, 1927, Serial No. 158,985, and in Great Britain Jan. 22, 1926. 3 Claims. (Cl. 261—41.)

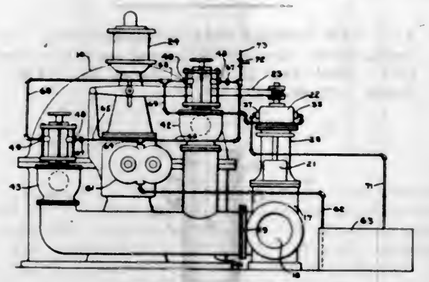
1. In a carbureting device, the combination of a suction chamber having a delivery passage at one side thereof, a duct block in the chamber, a cavity extending into the duct block, of relatively large cross sectional area and constituting an air intake, a plurality of separate short straight ducts each of relatively small cross-sectional area, each extending through said duct-block from the cavity to the suction chamber in alignment



with the said delivery passage therefrom and a suction-operated valve movable on the duct-block to cover and uncover the delivery mouths successively.

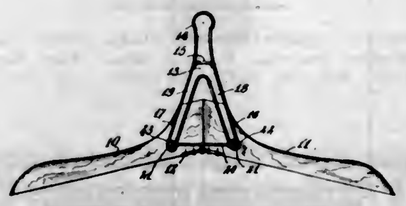
1,676,933. FUEL CONTROL FOR LIQUID-FUEL BURNERS. CECIL W. STANCLIFFE, New York, N. Y., assignor to Valveless Oil Burner Corporation, New York, N. Y., a Corporation of New York. Filed June 18, 1923. Serial No. 646,088. 34 Claims. (Cl. 158—35.)

1. In an oil burning apparatus, the combination with an oil conduit having connected legs forming, in series, two upright U-tubes and an intermediate inverted U-tube, of a container in which gas under pressure may be contained, and a pipe leading from said container to the upper part of said inverted U-tube and entering the same from above, together with means for supplying oil to such conduit at such pressure that, when the pneumatic pressure in the container is below a predetermined amount, oil may flow through said inverted U-tube, and when such pneumatic pressure is above such amount, an air lock is formed in the inverted U-tube preventing flow of oil therethrough.



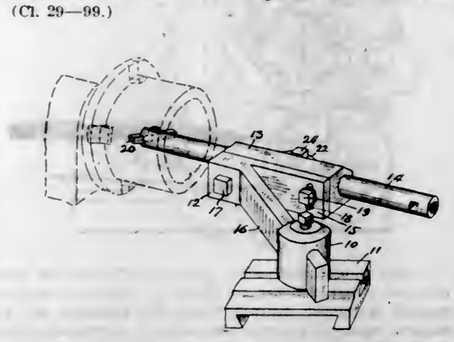
1,676,934. PORTABLE-LAMP ATTACHMENT. DEMETRIOS P. STERGIANOPULOS, New York, N. Y. Filed Nov. 26, 1926. Serial No. 150,859. 3 Claims. (Cl. 312—172.)

1. In a portable lamp attachment of the class described, a tubular member adapted to be disposed around an upright member of a portable lamp, a bowl shaped



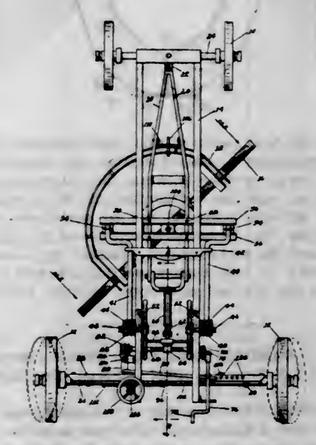
base member mounted on said tubular member and having apertures in the sides thereof, a casing rotatively mounted on said bowl shaped base member, and formed with extended elements covering the said apertures, radial guide members having grooves therein, mounted in the said base member in registration with said openings, supports slidably mounted in the grooves of said guide members, lazy tong members attached at one end to the said supports, and adapted to extend thru the openings in said base member when the casing is turned to move the extended elements from said openings, the said slidably mounted supports being adapted to move forwardly in the direction of the sides of said base member for further extending said lazy tongs thru said apertures, and means for normally urging the supports into this forwarded position.

1,676,935. POWER PLANT. GEORGE C. TAYLOR, Philadelphia, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 30, 1925. Serial No. 46,993. 5 Claims. (Cl. 137—158.)



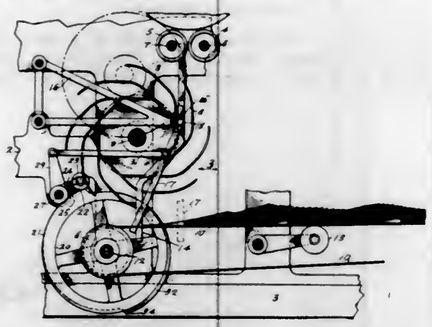
1. In a power plant, the combination of a turbine, a motive fluid admission valve for the turbine, a governor for actuating the motive fluid admission valve, a supplementary motive fluid admission valve for the turbine, manually operated means for opening or closing the supplementary admission valve, and fluid pressure means responsive upon an abnormal decrease or increase in the speed of the turbine for opening the closed supplementary admission valve or for closing the opened supplementary admission valve.

1,676,936. GARMENT HANGER. DIANA R. TREVINO, Roma, Tex. Filed Aug. 23, 1927. Serial No. 214,809. 4 Claims. (Cl. 223—65.)



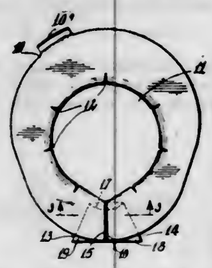
1. In a garment hanger, a pair of shoulder members hingedly connected at their inner ends and adapted to bear against each other above the point of the said hinged connection, a supporting frame of inverted Y formation having guide elements provided with elongated open spaces closed at their lower extremities, and flanged pivot members passing through the said open spaces and bearing freely against the sides of the said guide elements, means to limit the spread of the said guide elements at their lower ends, and means to support the frame elements above the upper portions of the said guide members, and means to suspend the whole from any suitable object.

1,676,937. ADJUSTABLE BORING-BAR HOLDER. ERIC E. VIDARSHOF, Westby, Wis. Filed Feb. 17, 1923, Serial No. 619,671. Renewed Apr. 25, 1925. 3 Claims. (Cl. 29—99.)



1. In a boring bar holder, a clamping member bored longitudinally for the reception of the bar, and provided with a slit extending outwardly of the bore, means engaging the slitted portion to clamp the boring bar in longitudinally adjusted position and prevent rotation thereof, in combination with a supporting member upon which the clamping member is pivotally mounted to permit vertical adjustment of the bar, and means for maintaining such vertical adjustment, the said supporting member being provided with a branch whereby the boring bar holder is supported in position for operation.

1,676,938. ROAD GRADER. HORACE R. WILSON and FRED D. WILSON, Harvey, Ill. Filed Sept. 22, 1926. Serial No. 137,143. 27 Claims. (Cl. 37—157.)



2. A road grader, in combination, a moldboard, a main frame supporting the moldboard, tiltable carrying wheels supporting the main frame and means operatively connecting the moldboard and wheels causing simultaneous co-action thereof.

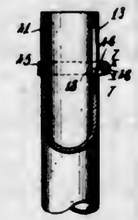
1,676,939. COUNTING MECHANISM. ERNEST G. BEVERIDGE, Brooklyn, N. Y., assignor to R. Hoe & Co., Inc., New York, N. Y., a Corporation of New York. Filed Sept. 23, 1925. Serial No. 57,999. 9 Claims. (Cl. 93—93.)

1. The combination with means for forwarding products, of a flat delivery to which the products are forwarded, a pusher against which the products are forwarded, means for giving the pusher a forwarding movement with the products, the extent of this forwarding movement determining the number of products forwarded against the pusher, means for effecting a quick return movement of the pusher to separate the products into bunches, and means for varying the forward movement of the pusher.

1,676,940. SANITARY TOILET-SEAT COVER. BRIDGET T. BING, New York, N. Y. Filed Oct. 11, 1927. Serial No. 225,427. 4 Claims. (Cl. 4—243.)

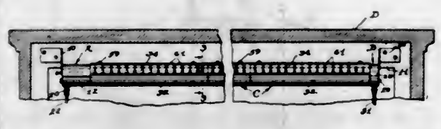
1. A toilet seat cover of the class described comprising a substantially U-shaped section, an inner front section, and outer sections between the extremities of said inner section and the extremities of the U-shaped section, said sections being divided by perforated lines extending from the inner edge to the outer edge thereof and disposed in superimposed relation with said inner front section in the bottom portion of said U-shaped section on the top and said outer sections therebetween.

1,676,941. GARDEN ROLLER. TOMAS CANTU, Elgin, Tex. Filed Oct. 24, 1927. Serial No. 228,196. 3 Claims. (Cl. 55—6.)



1. A garden roller comprising a roller proper, and a handle divided longitudinally into two sections, pivotally attached to one another, and means for locking said sections against relative swinging movement, said means being releasable by pulling on the handle.

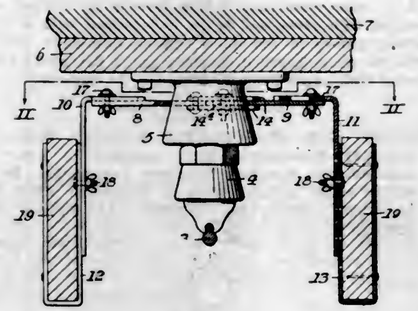
3. In a garden roller, a roller proper, a handle divided longitudinally into two sections pivotally attached together, an arcuate toothed face formed on the inner section, a locking bolt slidable longitudinally of the other section and adapted to engage said toothed face, a pair of arms hinged to the said other section and connected to said bolt, a pair of normally alined links connected to the ends of said arms and adapted on buckling movement of the links upon one another to swing said arms and



release said bolt, and releasable means holding said links against said buckling movement, said means comprising a slotted plug to which said links are pivoted at adjacent ends, and a sleeve rotatable on said plug and slotted along one side.

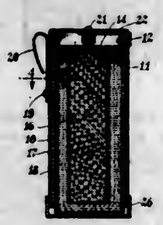
1,676,942. ORGAN-PIPE CONSTRUCTION. GYULA CESAR, Sopron, Hungary, assignor of one-half to Stephen Toth. Filed Aug. 23, 1927. Serial No. 214,811. 2 Claims. (Cl. 84—349.)

2. In a sound pipe of the class described, a body of non-metallic elemental structure, provided with an intake and air vent, and having a tone control aperture, a supporting band engaged upon the said body, and formed with side lips, a slotted winding pin mounted for rotation in the said lips, a slotted head at one end of the winding pin for turning purposes, a nut engaged upon the other end of the said pin for holding the pin against displacement, and a non-elastic ribbon secured at one end on the said body, and the other end engaging the slot in the pin, and arranged for varying the area of the tone control aperture upon turning of said slotted head.



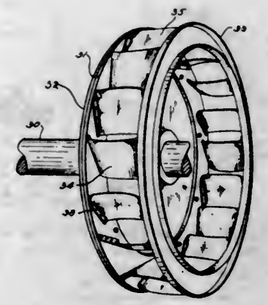
1,676,943. HUMIDIFIER FOR CIGAR CASES. JAMES BURGESS DARGAVEL, St. Paul, Minn. Filed Nov. 2, 1925. Serial No. 66,173. 10 Claims. (Cl. 131—30.)

8. An elongated assembly of sections comprising intercommunicating receptacles joined end-to-end, each section comprising a trough-like body of sheet metal and end-plates at the extremities thereof, means for securing together the abutting end-plates of said sections, the



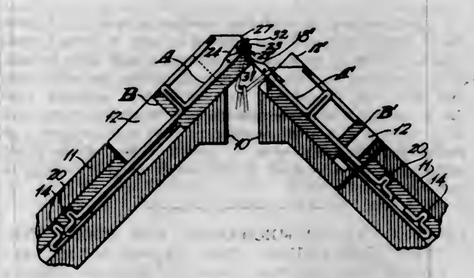
longitudinal margins of each body being turned to form strengthening ribs providing rails, a sliding cover for each body, each cover being formed with rider portions bearing upon said rails and also formed with apertures therein, and a sliding closure for each apertured cover, each closure having apertures therein arranged to register with the apertures in its respective cover in one position of the closure.

1,676,944. GUARD BRACKET FOR ELECTRIC WIRES. LAWRENCE DAVIS'N, Edmon, Pa., assignor of one-fourth to William Goudy and one-fourth to D. H. Slonaker, Avonmore, Pa. Filed Aug. 20, 1927. Serial No. 214,252. 10 Claims. (Cl. 191—35.)



1. A guard bracket comprising a pair of collar members arranged to embrace a hanger, means for pivotally connecting said members at one end for movement about an axis perpendicular to the plane of the collar members, means for adjusting the point of pivotal connection, in a direction tangentially of the said members, means for detachably connecting the other ends of said collar members, and a guard rail support carried by each of the collar members.

1,676,945. DRY-CELL BATTERY. LAURENCE VICTOR ELLIS, New York, N. Y. Filed Jan. 5, 1928. Serial No. 244,618. 8 Claims. (Cl. 136—132.)

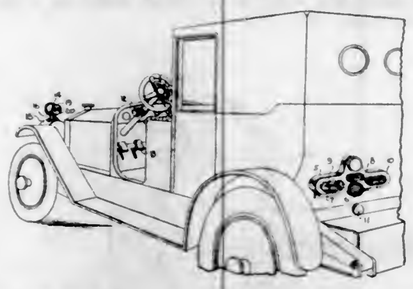


1. A refillable cell for a dry battery, comprising a zinc cup provided with a shoulder near its upper end, a rubber stopper forced into the top of the cup and against the shoulder, a rod with a bottom cup disposed through the center of the stopper, a carbon post with a reduced portion engaged in said bottom cup, electrolyte in the space between the carbon post and the zinc cup, a casing over said zinc cup, a contact strip on the inside of the casing and engaging the zinc cup, a contact on the outside of the casing connected with the contact strip by means of a rivet, a contact strip in the top of the casing, and projecting therefrom, a cup adjacent the contact strip, a rivet holding the latter cup and contact strip to the top of the casing, the said rod, disposed in the stopper engaged in the latter mentioned cup, and a bottom cover for the casing.

1,676,946. CENTRIFUGAL PUMP. CARL J. FECHHEIMER, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 31, 1926. Serial No. 158,223. 24 Claims. (Cl. 103—115.)

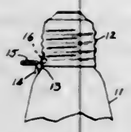
1. A centrifugal impeller for impelling fluids, embodying a plurality of backwardly directed blades, the blades being curved with respect to planes which pass through the longitudinal axis.

1,676,947. KNITTING NEEDLE. FRANKLIN M. FRAZIER, Placerville, Colo. Filed Jan. 26, 1927. Serial No. 163,582. 4 Claims. (Cl. 66—64.)



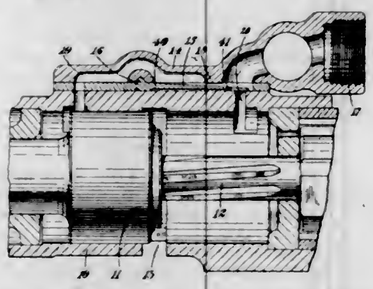
4. The combination in a knitting machine having opposing needle beds, of latch needles adapted to coact in opposing pairs, and a jacket mounted in one of the needle beds coacting with a needle in its respective bed to cast the yarn therefrom, and means for contacting said jacket with the hook of the opposing needle for reception of the yarn from said jacket, said contact being effected prior to casting the yarn onto the jacket.

1,676,948. ELECTRIC SIGNAL FOR AUTOMOBILES. HARRY E. GORDON and GEORGE D. GORDON, Rochester, N. Y. Filed Nov. 29, 1922. Serial No. 604,067. 1 Claim. (Cl. 177—339.)



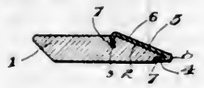
In a signal system for automobiles, the combination of means for displaying an electric signal at the rear denoting a right or left hand turn, said means including an electric circuit and a circuit closer, said circuit including a relay, a second circuit having contacts closed by the operation of the relay when the first-mentioned circuit is closed, a front signal light in said second circuit which is visible to the driver, another circuit through the relay winding having an individual circuit closer, a rear stop

signal in said last-mentioned circuit, and a circuit through said contacts and said last-mentioned circuit closer connected in parallel with said second circuit and



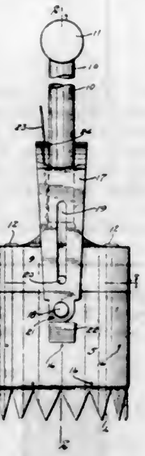
including an audible signal adjacent to the stop signal, whereby to attract the attention of drivers in the rear when the stop signal is displayed.

1,676,949. METHOD OF SOLDERING LEADING-IN WIRES TO LAMP BASES. JOHN JOSEPH HIGGINS, East Orange, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Apr. 21, 1923. Serial No. 633,798. 8 Claims. (Cl. 176—32.)



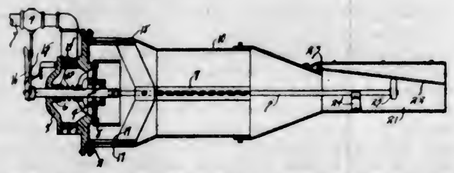
1. The method of soldering leading-in wire to a base which comprises bending a leading-in wire to form a loop, drilling a hole in said base, positioning said loop in said hole, inserting an end of a rod of fusible material into said hole and in contact with said loop, severing said rod to permit a short section thereof to project from said hole, moving a heated member to fuse said section and positioning the lamp so as to permit a flow of the fused material along a portion of the length of said leading-in wire.

1,676,950. VALVE MECHANISM FOR FLUID-OPERATED ROCK DRILLS. JOHN LEONARD HOLMAN and ARTHUR TREVE HOLMAN, Camborne, England, assignors to Holman Brothers Limited, Camborne, England, a British Company. Filed Jan. 20, 1927. Serial No. 162,313, and in Great Britain Oct. 14, 1926. 9 Claims. (Cl. 121—19.)



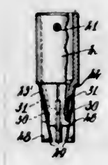
1. For a fluid-operated rock-drill, the combination of a valve-chamber having two outlet-ports leading therefrom, a swinging flap-valve which is hinged at one end in said chamber and which has two valve-faces for controlling respectively the two outlet-ports and means which, when one valve-face is held against one of said ports by pressure of driving-fluid on its opposite face, will admit driving-fluid also to that valve-face which is held against the outlet-port but not that portion that covers the port, so as at least partially to balance the pressure of the driving fluid acting on its other face to hold the valve closed.

1,676,951. RULER. HENRY E. HUNT, Toronto, Ontario, Canada. Filed June 13, 1927. Serial No. 198,466. 2 Claims. (Cl. 33—107.)



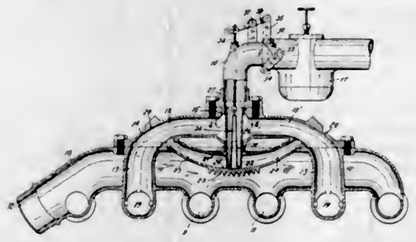
1. A ruler comprising a body having its forward edge bevelled both above and below and formed with a longitudinal groove in its upper surface forming a dovetail with the under bevelled surface; and a flat metal facing having both edges flanged to engage the dovetail.

1,676,952. ICE-CREAM-CARTON FILLER. BURTON L. HUNTLEY, Minneapolis, Minn., assignor, by mesne assignments, to Speedpak Dispenser Corporation, Minneapolis, Minn., a Corporation of Delaware. Filed June 18, 1926. Serial No. 116,833. 14 Claims. (Cl. 226—19.)



1. An ice cream carton filler comprising a cylindrical carton container, a cap for said container, a stem projecting from said cap, and a lever in the form of a yoke pivoted to the sides of said container and slidable on said stem, said yoke in its arms having longitudinal slots and said cap having diametrically projecting lugs working in said slots.

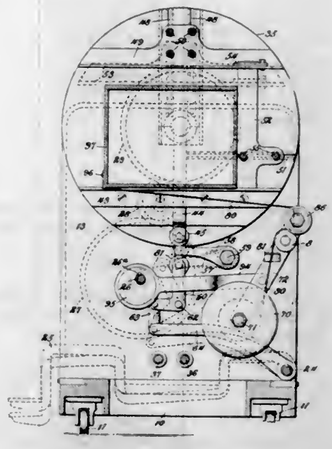
1,676,953. GAS BURNER. MORTIMER JONES, Fort Worth, Tex. Filed July 11, 1927. Serial No. 204,885. 6 Claims. (Cl. 158—119.)



3. A gas burner comprising a combined air receiving and mixing chamber, a gas feeding chamber connected thereto, a gas supply means for delivering gas to said gas feeding chamber and a gas supply control, gas feed control means partly in said gas feeding chamber and partly in said air receiving chamber, an air feed control means in said air receiving chamber, a nozzle connected to said mixing chamber and an explosive mixture discharge control in said nozzle, and a shaft journaled in said burner and operatively connected to all of said controls for actuating the same simultaneously.

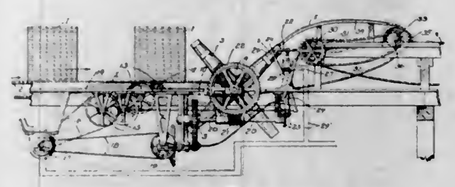
1,676,954. FLAGPOLE HOLDER FOR GOLF COURSES. GEORGE E. KANNEMANN, Woodbury, N. Y. Filed Apr. 18, 1928. Serial No. 270,865. 5 Claims. (Cl. 273—34.)

1. A bushing for a device of the class described, comprising a main portion arranged for connection with a golf pole, and a shoulder and reduced portion connected therewith and provided with wedge members slidably mounted and being capable of snugly engaging in a cup opening of a golf hole bracket for holding an engaged golf pole in a vertical position.



1,676,955. INTAKE MANIFOLD FOR INTERNAL-COMBUSTION ENGINES. WILLIAM E. KEMP, New York, N. Y. Filed May 17, 1924. Serial No. 714,144. 10 Claims. (Cl. 123—122.)

1. The combination with a heater, of a branched intake-manifold having a duct extending into said heater and communicating with the branches of the manifold, said manifold being provided with an inlet at the point of junction of the branches thereof and situated to permit of an initial downward flow of the combustible charges thereinto, a passage in said manifold in alignment with said inlet and leading downwards to said duct, and means inserted between the inlet to said manifold and said passage for leading liquid particles which have separated from the charges to the bottom of said duct.

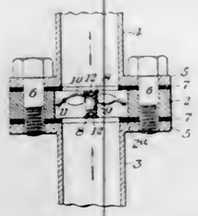


1,676,956. ROTARY BINDING MACHINE. JAMES MARSHALL LEAVER, Jr., Oakland, Calif. Filed May 10, 1920. Serial No. 380,376. 70 Claims. (Cl. 100—31.)

19. In a machine of the class described, a drive shaft, power means for turning said shaft, a clutch interposed between the power means and the shaft, said clutch permitting a single rotation of the shaft at one time, rotatable means for supporting an article, means interposed between said supporting means and the drive shaft whereby the supporting means is rotated once on its axis during each cycle of the machine, means for wrapping a band about the article during said rotation, and means automatically yielding and retracting said band while being wrapped about the article.

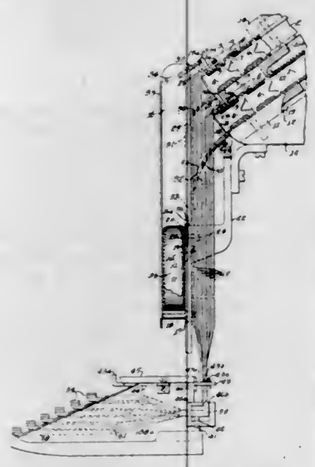
29. In a machine of the class described, a plurality of rotary chucks, means on each chuck for supporting and clamping a bundle, means to simultaneously rotate the chucks, means for controlling the two previously mentioned means, said last-named means operating to first cause clamping of the bundle, then rotation of the bundle, and finally releasing the bundle, means for placing a band about the bundle during the rotation, means for tensioning the band, and means for compensating for the variation of tension caused by the rotation of the bundle.

1,676,957. METHOD AND APPARATUS FOR UNSTACKING LUMBER. JAMES M. LEAVER and JAMES M. LEAVER, Jr., Oakland, Calif. Filed Apr. 7, 1924. Serial No. 704,714. 13 Claims. (Cl. 214—8.5.)



1. In a lumber unstacker of the character described two sets of spider arms projecting radially from a common shaft, said sets of arms being arranged to embrace between the sets an obtuse angle for support of a lumber unit against both sets of arms and whereby the supported sides of the unit will form the same obtuse angle and the edges of the boards of the unit will become in stepped relation, one to the other.

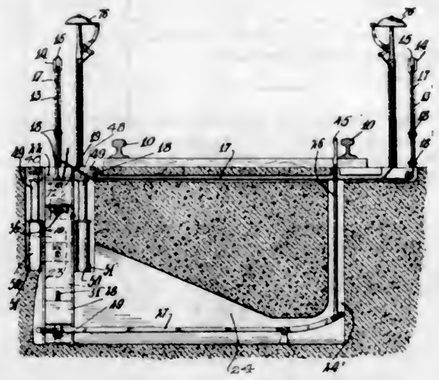
1,676,958. FUEL-MIXING DEVICE. JAMES P. MALONE, Pittsburgh, Pa. Filed Feb. 13, 1926. Serial No. 88,026. 1 Claim. (Cl. 48—180.)



A fuel mixing device of the class described including a body member, supporting means on the body member, a fan wheel rotatably mounted on the supporting means, said fan wheel having a plurality of vanes, and a sinuous

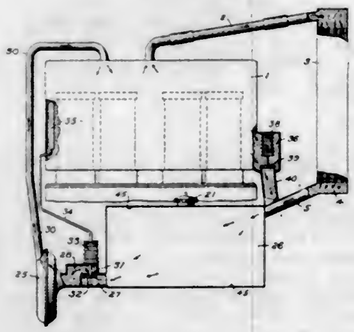
rim connecting the outer ends of the several vanes, and an auxiliary air inlet passage through the body in the plane of the wheel and opening toward the wheel out of

line with the center thereof, said sinuous rim permitting air entering through the opening to contact with the vanes of the wheel.



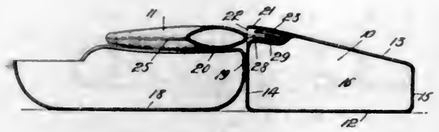
1,676,959. TYPOGRAPHICAL MACHINE. GEORGE E. MARLATT, Pasadena, Calif. Filed Sept. 29, 1925. Serial No. 59,299. 11 Claims. (Cl. 199—19.)

1. In a typographical machine having magazines containing fonts of matrices arranged in channels irregularly spaced apart according to the thickness of the matrices in individual channels, two fonts of matrices arranged in alternating channels of said magazines, two corresponding sets of escapements irregularly spaced apart according to the spacing of said channels, actuating devices for said escapements, and means for selectively connecting said actuating devices with one or the other of said sets of escapements regardless of the irregular spacing apart thereof, said means consisting in bending portions of said escapements so that all pairs of alternating escapements will be equally spaced at the point where they are engaged by the said escapement-actuating devices.



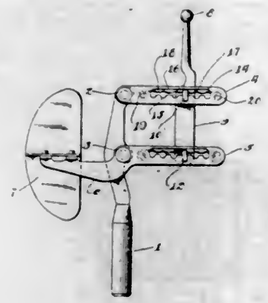
1,676,960. AUTOMATIC RAILROAD GATE. ZOLTAN MOLNAR, Welland, Ontario, Canada, assignor of one-fourth to Mihaly Szabo Czorboy and one-fourth to Mihaly Grebecz. Filed Mar. 4, 1927. Serial No. 172,628. 4 Claims. (Cl. 39—7.)

1. An automatic railroad gate, comprising a gate, a pair of weights to operate the gate, means for releasing the bottom one of said weight to close the gate, means for reattaching the weights leaving the gate closed, and means for releasing both of the weights to open the gate.



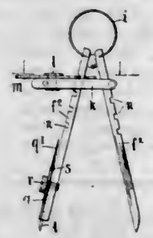
3. An automatic railroad gate comprising a gate, a flexible cable connected thereto, a pair of weights to operate the gate, the top weight of said pair of weights being connected to the cable, means for releasing the bottom one of said weights to close the gate, means for reattaching the weights leaving the gate closed, and means for releasing both of the weights to open the gate.

1,676,961. PROCESS OF AND APPARATUS FOR COOLING INTERNAL-COMBUSTION ENGINES. WELLINGTON W. MUIR, Lockport, N. Y., assignor to Harrison Radiator Corporation, Lockport, N. Y. Original application filed Nov. 20, 1922, Serial No. 602,267. Divided and this application filed Dec. 17, 1923. Serial No. 681,186. 15 Claims. (Cl. 123—178.)



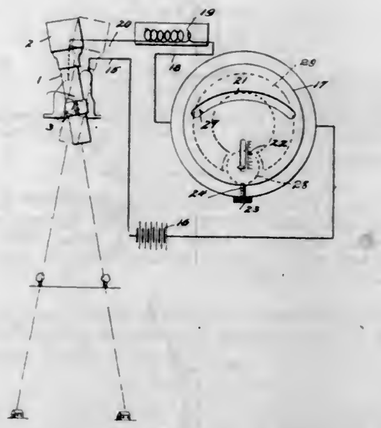
1. In a cooling system for an internal combustion engine, the combination of a jacket; a radiator; a tank disposed below said jacket and radiator; connections leading from the bottom of said radiator and from said jacket directly to said tank and adapted to keep said radiator and jacket empty of liquid while the temperature of said jacket is below a predetermined point when the engine is operating; and means for automatically passing liquid into said jacket when the engine is running and the temperature of said jacket is above another predetermined point.

1,676,962. COMFORT CUSHION. CHRISTENA MURPHY, New York, N. Y. Filed May 8, 1926. Serial No. 107,577. 5 Claims. (Cl. 4—113.)



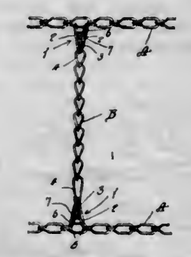
1. A comfort cushion, for use with a bed pan, and including a pair of cushion sections assembled together, one of said sections being thicker than the other and adapted to be positioned laterally of a bed pan at the upper edge thereof, and the other section being adapted to overlie a portion of the rim of the bed pan.

1,676,963. ADJUSTABLE WIND-VANE SIGHT. CHARLES L. PAULUS, Dayton, Ohio. Filed June 27, 1923. Serial No. 648,119. 5 Claims. (Cl. 33—53.)



5. A wind vane sight for fire arms comprising a support, notched parallel arms pivotally mounted on said support, wind vane means controlling the movement of said arms, a bead supporting device adjustably connected to said arms and selectively engaged with said notches, and means for maintaining said connection.

1,676,964. DIVIDER OR COMPASS. ERNEST LOUIS RANKIN, London, England. Filed Sept. 3, 1924. Serial No. 735,673, and in Great Britain Sept. 5, 1923. 4 Claims. (Cl. 33—153.)



4. A divider comprising pivotally connected limbs, a support adjustable to predetermined positions on one limb, and a plate having a cam groove therein rotatable mounted on the said support and means on the other limb in contact with the periphery of the said cam groove.

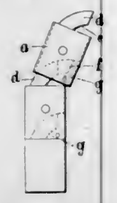
1,676,965. GROUND-SPEED INDICATOR. HERBERT O. RUSSELL, Detroit, Mich., and CHARLES LEIGH PAULUS, Dayton, Ohio. Filed Apr. 18, 1922. Serial No. 555,410. 2 Claims. (Cl. 33—46.5.)

1. In combination in a ground speed indicator for aircraft, a sight, means pivotally mounting said sight for training on a stationary object, an electric circuit including a make and break mechanism, a galvanometer and induction coil, and gearing connecting said sight and make and break mechanism to operate the latter at a speed proportional to the rate of pivotal movement of the sight to cause said galvanometer to give an indication proportional to the ground speed of said craft.

1,676,966. CONNECTING LINK FOR CROSS CHAINS OF ANTISKID CHAINS. ROYAL A. SEAGER, Ogden, Utah. Filed June 23, 1927. Serial No. 200,938. 3 Claims. (Cl. 24—237.)

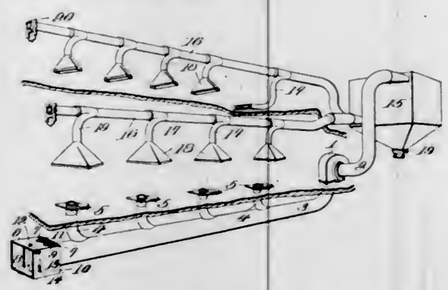
1. An anti-skid chain, comprising links adapted to connect the ends of cross chains to side chains and having spaced members to engage links of the side chains at the ends thereof to prevent longitudinal movement of the cross chains relatively to the side chains.

1,676,967. TERMINAL FOR ELECTRIC AND WIRELESS CONNECTIONS. LOUIS JOHN SIMON, London, England. Filed Nov. 29, 1924, Serial No. 752,959, and in Great Britain July 11, 1924. 1 Claim. (Cl. 173—259.)



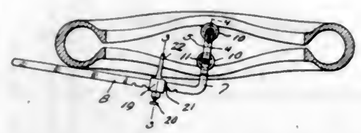
A spring clip terminal made from a single flat strip of resilient metal and formed into an attaching base, two uprights having a spring tension toward each other, and two depending ends substantially parallel and between the uprights, said ends having a contacting ten-

sion, said ends being further provided with plug-receiving portions and one being provided with a terminal lip extending below the terminal of the other end and



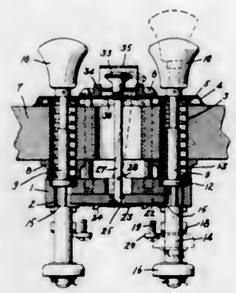
acting as a stop to prevent the accidental passing of a terminal plug beyond the point of contact between the ends.

1,676,968. FILING POST FOR LOOSE-LEAF LEDGERS AND LIKE BINDERS. HOWARD BRITTEN STONE, London, England. Filed June 9, 1924, Serial No. 718,908, and in Great Britain June 19, 1923. 9 Claims. (Cl. 129—13.)



6. A filing post section comprising a body portion having at one end a curved wall recessed therein to form a mortise, a lug having a curved wall opposite to the said recessed curved wall, and an annular segmental tenon of less extent than a quarter of a circle carried by the other end of said body, said tenon having curved edges equal in length and curvature to the said curved walls, respectively.

1,676,969. ONE-FAN COMBINED DUST-COLLECTING AND AIR-SUPPLY SYSTEM FOR PNEUMATIC SEPARATORS AND CLEANERS. HENRY MOORE SUTTON, WALTER LIVINGSTON STEELE, and EDWIN GOODWIN STEELE, Dallas, Tex. Filed Dec. 3, 1923, Serial No. 678,346. Renewed May 18, 1927. 8 Claims. (Cl. 209—502.)

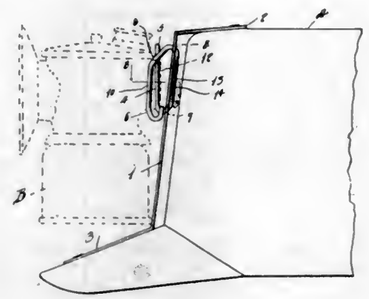


1. An air supply for a plurality of pneumatic separators and a dust collector, comprising a fan having a greater capacity than that required by the system, an air supply conduit connected with the outlet end of the fan having a plurality of connections with the separators, a dust collector conduit having a plurality of dust collectors, a dust separator connected with the dust collecting conduit, the suction side of the fan connected with said dust separator, and automatic means for controlling the amount of air pressure within the said air conduit, whereby a single fan operates a plurality of suction devices and supplies air to a plurality of separators.

1,676,970. TIRE SPREADER. ALBERT H. THOMAS, Louisville, Ky. Filed July 30, 1927. Serial No. 209,610. 4 Claims. (Cl. 152—27.)

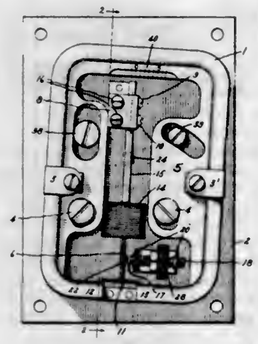
3. A tire spreader of the class described including a shank, a pair of bolts extending from the shank laterally and in spaced parallelism to each other, a handle extending from the shank at an angle thereto, a pin extending laterally from the handle in the same direction with the shank for engaging one bead of the tire, adjustable means for mounting said pin on said handle, rollers journaled on said bolts.

1,676,971. PULL-BUTTON-CONTROLLING SWITCH. ARTHUR B. WEAVER, Philadelphia, Pa., assignor to General Electric Company, a Corporation of New York. Filed June 1, 1923. Serial No. 642,830. 2 Claims. (Cl. 200—42.)



2. An electric switch comprising a plurality of movable circuit controlling members each biased to the open circuit position and having means by which they may be moved to closed circuit position, a locking element for said circuit controlling members mounted for movement transversely thereof, said locking element in one position preventing movement of one of said members to closed circuit position, in another position preventing movement of another of said members to closed circuit position and in an intermediate position preventing movement of both of said members to closed circuit position, a lever for operating said locking element having two extreme positions and an intermediate position corresponding to the positions of said locking element, and a restraining member for said lever adapted to be applied when the lever is in its intermediate position, said restraining member having a slotted portion for receiving the end of the lever to prevent movement thereof and a portion for covering the end of the lever.

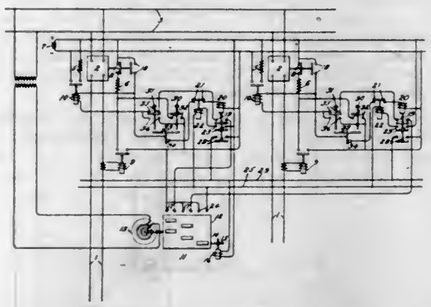
1,676,972. SECURING DEVICE FOR MINERS' LAMPS. ABRAHAM L. WELCH, Rush Run, W. Va., assignor of one-half to A. B. McClelland, Rush Run, W. Va. Filed July 10, 1926. Serial No. 121,719. 1 Claim. (Cl. 240—60.)



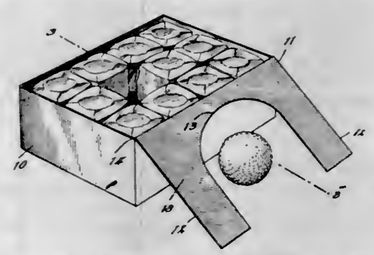
A securing device for miners' lamps having attaching clips thereon, comprising a hook member formed of a single length of wire bent intermediate of its ends to form an upstanding U-shaped member to engage the

clip on the miners' lamp, the wire at each side of the U-shaped member bent laterally and upwardly, the wire at the ends of said upwardly bent portions bent away from the upwardly bent portions and downwardly at

each side of the U-shaped member and adapted to engage the lamp at each side of the U-shaped member to prevent casual displacement of the lamp from said member.



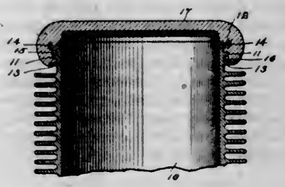
1,676,973. VIBRATORY CONVERTER. RALPH D. AMSDEN, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Aug. 24, 1922. Serial No. 583,981. 10 Claims. (Cl. 175—365.)



1. An electric converting device comprising a reed consisting in part at least of magnetic material, a magnet of unidirectional flux having poles arranged to hold said reed under magnetic tension and a winding surrounding said reed for inducing a cyclically varying magnetic flux therein, said winding being longitudinally adjustable with respect to said reed to time the phase relation of the vibrations of the contacts with respect to a cyclic current to be converted.

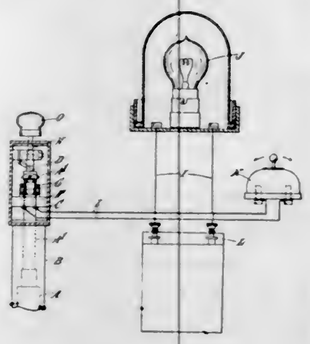
1,676,974. AUTOMATIC RECLOSING CIRCUIT-BREAKER SYSTEM. ARVID E. ANDERSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 15, 1922. Serial No. 552,870. 28 Claims. (Cl. 175—294.)

3. In an automatic reclosing circuit breaker system, the combination with a plurality of circuits, a circuit breaker in each circuit, a closing coil for each circuit breaker, and means for opening each circuit breaker upon the occurrence of an abnormal condition on the respective circuit, of a timing mechanism operative in response to the opening of any one of said circuit breakers to control successively the energization of said closing coils, and means associated with each circuit breaker and controlled by said timing mechanism and the position of the respective circuit breaker to prevent the automatic reclosing of the respective circuit breaker after said timing mechanism has operated to effect the reclosing of the respective circuit breaker a predetermined number of times



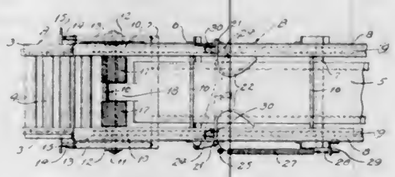
1,676,975. GOLF-BALL BOX. JOHN G. ANDERSON, Crestwood, and RICHARD H. WALDO, New York, N. Y., assignors to John Wanamaker New York, New York, N. Y., a Corporation of New York. Filed Nov. 5, 1926. Serial No. 146,494. 5 Claims. (Cl. 273—36.)

1. A golf ball box having a container and a notched flap hinged to an upper edge of the container, said flap being adapted when closed to cover the balls at the ends and at that edge of the container to which the flap is hinged, whereby the balls are restrained from falling out when the box is displayed upright, the notch in said flap being adapted to serve as a hole for golf putting practice when turned out, subsantially as described.



1,676,976. ENGINE CYLINDER. GLENN D. ANGLE and GEORGE E. A. HALLETT, Dayton, Ohio. Filed Dec. 30, 1920. Serial No. 434,136. 2 Claims. (Cl. 22—203.)

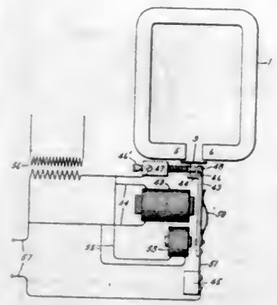
1. The method of fastening a cylinder head to a cylinder barrel, the same consisting in forming the barrel with a plurality of annular grooves the opposite walls of which are undercut and reversely inclined from the bottom to the top forming a groove in the end of said cylinder barrel, the opposite walls of which are undercut and reversely inclined from the bottom to the top



providing at intervals recesses intersecting said grooves, then casting the cylinder head around the adjacent end of the barrel so that portions of the material of the cylinder head will run along and fill said grooves.

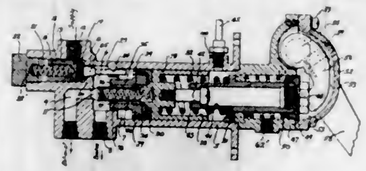
1,676,977. LIGHTING SHIPS' LIFEBOATS AND THE LIKE. JOHN GLASS BLAIR, Poplar, England. Filed Sept. 20, 1923, Serial No. 663,875, and in Great Britain Sept. 23, 1922. 14 Claims. (Cl. 171—97.)

1. An electrical lighting apparatus for a ship's lifeboat comprising a float, a switch operated thereby when it enters the water, a lamp circuit controlled by said switch, a lamp in said circuit, means whereby the float can be rendered inoperative, and hand operated means for controlling the lamp circuit when the float is inoperative.



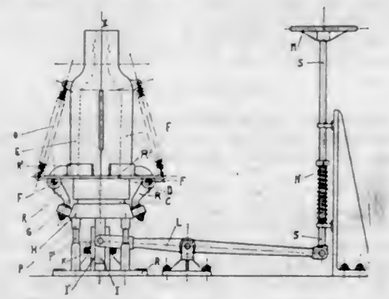
1,676,978. CONVEYER. WILLIAM J. BOHN, St. Louis, Mo., assignor to Alvey Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 3, 1925. Serial No. 47,680. 11 Claims. (Cl. 198—23.)

11. The combination with a power conveyer comprising a way and traveling devices for propelling articles along the same, of a pair of upright rock shafts disposed one on each side of said conveyer and having reversely curved arms adapted to extend into the path of the articles with their normally closest points not far from the line that joins said shafts, means for limiting the inward swinging movement of said arms, and means for normally yieldably holding said arms in the path of the articles, said arms comprising middle portions having a relatively small radius of curvature and free outer end portions having a relatively large radius of curvature.



1,676,979. VIBRATORY CONVERTER. RALPH T. CHEESEMAN, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Aug. 24, 1922. Serial No. 583,986. 10 Claims. (Cl. 175—365.)

1. An electric device comprising a magnet of constant polarity having opposite poles substantially in line with each other and separated by an air gap, a T-shaped armature, means for movably supporting said armature in a position magnetically centering the head of the T

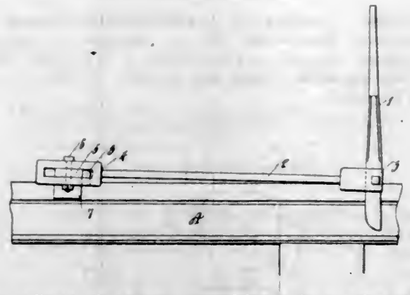


closely adjacent said poles outside of the confines of said gap, means for vibrating said armature and circuit-closing means operatively related with said armature.

1,676,980. BRAKE-CONTROL VALVE. NIELS A. CHRISTENSEN, Cleveland, Ohio. Filed Sept. 17, 1926. Serial No. 136,160. 3 Claims. (Cl. 303—54.)

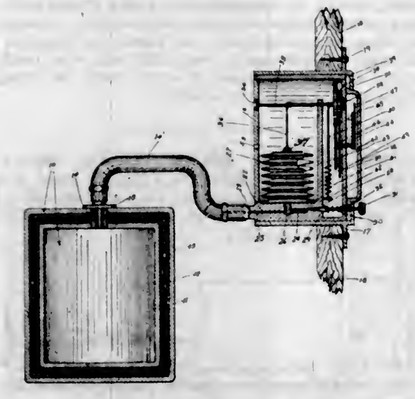
1. In a brake control valve, the combination of a main casing, control valves therein, a pressure-responsive member associated with said valves, a reciprocating plunger, a compensating spring interposed between said member and plunger, a release spring normally urging the plunger to release position, a sectional casing secured to the main casing and enclosing said release spring, and means for operating said plunger including a rock-shaft journalled between the parts of said sectional casing and having an end projecting therefrom.

1,676,981. APPARATUS FOR THE MANUFACTURE OF BOTTLES AND OTHER GLASS HOLLOW WARE. GUGLIELMO DE RENZIS, Sarzana, Italy. Filed June 23, 1926, Serial No. 118,050, and in Italy Mar. 24, 1926. 4 Claims. (Cl. 49—42.)



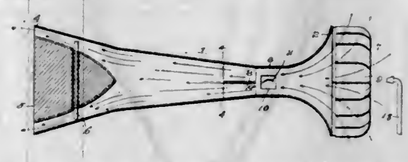
1. An apparatus for the manufacture of bottles and other hollow ware, comprising a fixed pin, an interchangeable glass supporting disc mounted on the pin, a

ring supporting the mold rotatably mounted on the pin, a conical ring coaxial with the latter, means for axially moving the ring, levers actuated by the conical surface of said ring to close said mold, and springs for opening the latter.



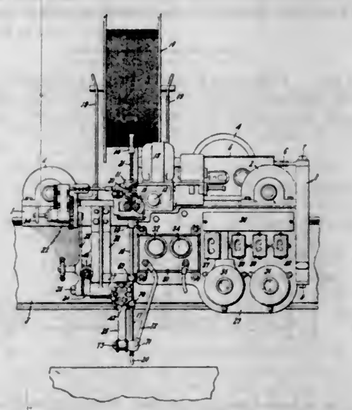
4. An apparatus for the manufacture of bottles and other hollow ware, comprising a fixed pin, a stationary support mounted on the latter, a sleeve rotatably mounted on the pin, bell-crank levers pivotally connected with the sleeve, mold sections carried on the upper end of the levers, a concentric conical ring surrounding the sleeve, means for moving the ring into and out of contact with the lower ends of the levers, a gear on the sleeve, a rack bar engaging the gear, and mechanism for reciprocating the rack to impart a circular oscillatory movement to the sleeve.

1,676,982. RAILROAD-TIE SPACER. GEORGE F. DICKS, Homedale, Idaho. Filed July 7, 1927. Serial No. 204,037. 1 Claim. (Cl. 254—44.)



A railroad tie spacer, comprising a lever adpated to engage a tie, a rod pivotally engaging said lever, a slotted head on said rod, a U-shaped member pivotally secured in said head, and a stop on said U-shaped member to limit the pivotal movement thereof in one direction, said U-shaped member being adapted to seat on a railroad rail and grip it during one movement thereof.

1,676,983. BAROMETRIC DEVICE. IVAN I. EREMEEFF, Dayton, Ohio. Filed July 23, 1921. Serial No. 487,143. 4 Claims. (Cl. 73—4.)

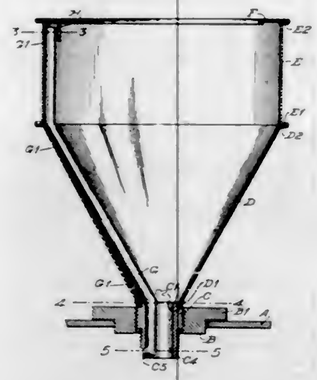


1. An instrument of the class described, comprising in combination a casing, an instrument case having a vent communicating with the atmosphere, pressure responsive bellows within said instrument case, said bellows being attached to said instrument case on one end, the other end whereof is movable in response to variations in the support afforded thereto by the internal pressure of said bellows against atmospheric pressure, means forming a communicative passage between the interior of said casing and the interior of said bellows, mechanism in the instrument case for indicating the extent of movement of said bellows and a normally closed valve adapted to be opened to afford communication between the atmosphere and said means and the interior of said bellows.

1,676,984. MEANS FOR VISUALIZING AIR-FLOW PHENOMENA. ELISHA N. FALES, Dayton, Ohio, and FRANK W. CALDWELL, Lookout Mountain, Tenn. Filed Dec. 3, 1920. Serial No. 428,165. 6 Claims. (Cl. 35—12.)

1. A wind tunnel embodying a tapered portion which contracts in a down stream direction, and another tapered portion which expands in a downstream direction, wind generating means in the tunnel on one side of the most constricted portion thereof, and air stream straightening means on each side of said constricted portion.

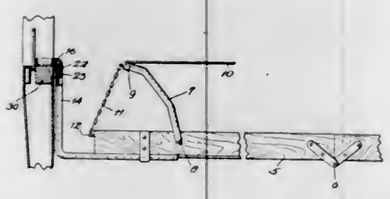
1,676,985. AUTOMATIC ARC-WELDING MACHINE. FRANK A. HAUGHTON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 14, 1925. Serial No. 56,108. 10 Claims. (Cl. 219—8.)



1. In an automatic arc welding machine wherein a welding head and the work are arranged to move relatively, means for oscillating an electrode at the welding arc comprising an adjustable throw crank, a rocker shaft, a support for said shaft, and a plurality of levers mounted on said shaft, and means for changing the position of two of said levers relatively to each other to adjust the alignment of said oscillating electrode relatively to the work.

1,676,986. FUNNEL. GLEN G. HILFORD, Tulsa, Okla. Filed June 6, 1927. Serial No. 196,866. 9 Claims. (Cl. 226—33.)

6. In a funnel, the combination of a tubular neck having an upper exteriorly threaded part formed to fit the interior of a tank connecting member and having a lower

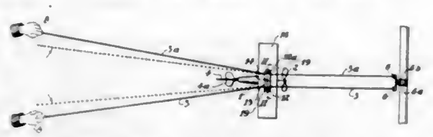


exteriorly threaded part formed to fit the interior threading of a smaller tank connecting member, said neck having an upward extension of smaller external diameter than the exterior diameter of said threaded part whereby a shoulder is formed and said neck having at its lower end a buffer extension, a tapering body having its lower end surrounding said extension and seated on said shoulder and secured to said neck, and a vent

tube extending downward through the body and said neck and opening laterally through the buffer extension.

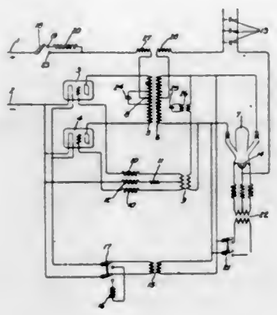
S. In a funnel, the combination of an exteriorly threaded neck, a body, a flange ring on the upper part of the body, and a vent tube opening laterally through said neck and extending upward through said neck and said body and nearly to and opening under said flange ring.

1,676,987. PORTABLE BED FOR AUTOMOBILES OF THE SEDAN TYPE. JOHN M. LINE, Springfield, Mo. Filed Apr. 2, 1926. Serial No. 99,305. 3 Claims. (Cl. 5—118.)



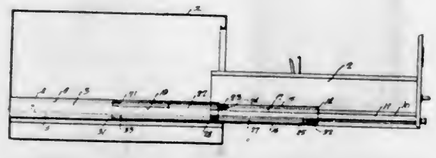
1. In a bed structure, a bed frame including foldable cross members, sill engaging hangers provided with separable sections, one section being adjustable on the other section, one section being of channel form defining flanges slidably embracing and guided by said cross members at one end, and clips carried by the cross members confining the hangers in position thereon.

1,676,988. FLUX FOR WELDING CAST IRON. COLIN C. MARYAN, Lawrence Park, Pa., assignor to General Electric Company, a Corporation of New York. Filed Dec. 8, 1925. Serial No. 74,170. 1 Claim. (Cl. 148—26.)



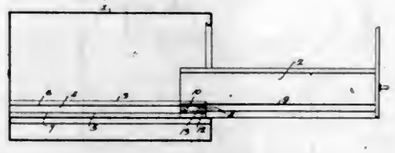
A flux for welding cast iron comprising substantially ferric carbonate 4 parts, ammonium chloride 12 parts, sodium borate 16 parts, sodium bicarbonate 20 parts and sodium chloride 12 parts.

1,676,989. AERONAUTIC TOY MOUNTING. EMMETT G. MCMENAMIN, Monterey, Calif. Filed Dec. 15, 1926. Serial No. 155,005. 2 Claims. (Cl. 46—50.)



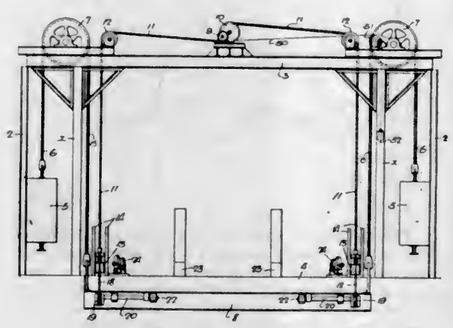
1. A device of the kind described comprising two supporting cords disposed in the same horizontal plane, the far ends of the cords attachable to supporting objects, the near ends of the cords being free, a horizontal bridge element traversable on said cords, said element having guide openings through which the cords extend and guide rollers in the openings engaging the cords, and a body suspended from the said element and swively connected thereto.

1,676,990. SYSTEM OF DISTRIBUTION. ALBERT H. MITTAG, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 13, 1923. Serial No. 651,399. 9 Claims. (Cl. 175—363.)



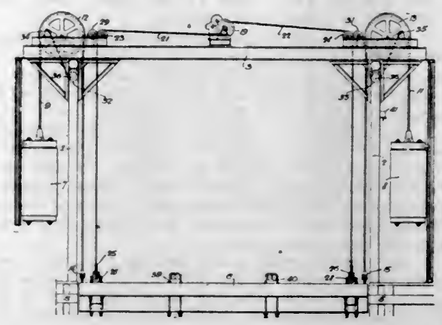
1. The combination in a system of electrical distribution of a source of direct current, a primary winding connected to said source through an electric valve, a secondary winding inductively associated with said primary winding, means for controlling the action of said valve to supply to said primary winding substantially rectangular wave form current impulses, and means for supplying to said valve control means from said secondary winding variable voltages the phase of which leads the voltages induced in said secondary winding.

1,676,991. DRAWER MOUNT. CONRAD BERGMANN, Philadelphia, Pa., assignor to Columbia Steel Equipment Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 28, 1925. Serial No. 72,015. 1 Claim. (Cl. 45—77.)



A drawer mount comprising a fixed track, a movable track, and an intermediate member cooperating with both of said tracks, said intermediate member having a flange with a pin fixed therein, and a roller journaled on said pin, the roller being adapted to engage both of the said tracks, said intermediate member also including two upright channels each containing a roller adapted respectively to engage under the said fixed track and under the said movable track, and an inverted channel, an integral part of said intermediate member projecting into and extending longitudinally of said inverted channel, and a roller comprising parts of different diameters, the part of smaller diameter being supported upon said integral inturned element whereby the latter constitutes a track for the roller, and the part of greater diameter being adapted to engage the top of said movable track.

1,676,992. DRAWER MOUNT. GEORGE BERGMANN, Philadelphia, Pa., assignor to Columbia Steel Equipment Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 20, 1925. Serial No. 16,999. 2 Claims. (Cl. 45—77.)



1. A drawer mount including in combination, a fixed track having oppositely extending spaced horizontal flanges and a vertical web connecting the said horizontal flanges, a roller journalled in the forward end of said vertical web, said upper horizontal flange being interrupted to provide an opening permitting mounting said roller with its upper portion projecting above the upper surface of said upper horizontal flange a movable track consisting of a bar of angular cross section arranged with one side disposed horizontally so as to overlie the upper horizontal flange of the fixed track to rest upon said roller, and a second roller journalled in the rear end of the movable track and adapted to operate between the horizontal flanges of the fixed track.

1,676,993. FERRY BRIDGE. PEIRCE CROSBY KELLY, Philadelphia, Pa., and HERBERT ALTON LANDIS, Haddon Heights, N. J., assignors to American Engineering Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 22, 1922. Serial No. 602,577. 24 Claims. (Cl. 14—71.)

1. The combination of a ferry-bridge structure to which a boat is to be moored; at least one strong back on said structure; and means adapted to exert an upward thrust on said boat tending to hold the same in engagement with said strong back.

1,676,994. CONTROL MECHANISM. ROBERT CRAIG LAMOND, Philadelphia, Pa., assignor to American Engineering Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 10, 1924. Serial No. 712,494. 13 Claims. (Cl. 14—42.)

1. A power device, bridge apparatus to be actuated thereby, means including a cable for operatively associating said device and said bridge apparatus, means for centralizing the slack in said cable appearing when the strain in the latter falls below a predetemined value, control means, and means whereby said slack may operate said control means.

1,676,995. SERUM AND METHOD OF PRODUCING THE SAME. CONSTANTINE LEVENTIS, Phoenix, Ariz. Filed Jan. 27, 1927. Serial No. 164,124. 8 Claims. (Cl. 167—7.)

1. In the process of preparing antitoxins and antibacterial serums, treating an animal with an antigen, injecting serum from an animal to be protected and of a different species into said treated animal and withdrawing the serum from the treated animal.

3. In the process of preparing antitoxins and antibacterial serums for human use, treating an animal with an antigen, injecting human serum into the said treated animal and withdrawing serum from the thus treated animal.

7. In the process of preparing antitoxins and antibacterial serums, treating an animal not normally responsive to a specific disease with the specific antigen, injecting into the said treated animal serum from an animal normally responsive to the specific disease thereby making the said treated animal responsive to the specific disease and withdrawing serum from the thus treated animal.

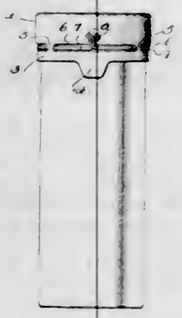
8. A specific serum derived from the blood of an animal which is not normally responsive to the specific disease, but which has been made responsive by injection with the specific antigen and serum of a responsive animal.

1,676,996. GLAND SERUM. CONSTANTINE LEVENTIS, Phoenix, Ariz. Filed June 20, 1927. Serial No. 200,294. 7 Claims. (Cl. 167—7.)

3. The process of preparing a serum which comprises castrating an animal while sexually immature, implanting a corresponding gland from an animal of a higher evolutionary order in the tissues of the castrated animal.

injecting the treated animal with human serum, withdrawing serum from the treated animal and preparing the withdrawn serum for medical use.

7. A serum derived from an animal deficient in a substance produced by a genital gland, such serum resulting from the implantation in the animal of a genital gland from an animal of a different species together with injection of human serum.

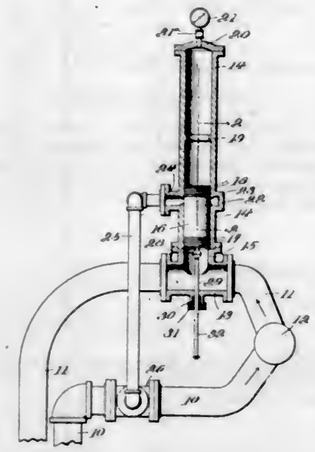


1,676,997. ANTITUBERCULAR SERUM AND METHOD OF PRODUCING THE SAME. CONSTANTINE LEVENTIS, Phoenix, Ariz. Filed Apr. 28, 1928. Serial No. 273,772. 5 Claims. (Cl. 167—7.)

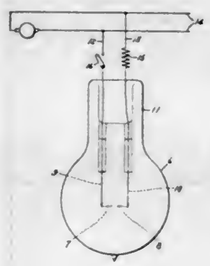
1. In the process of preparing tubercular antitoxins and serums, treating an animal with tubercular antigen, injecting serum from an animal to be protected and of a different species into said treated animal and withdrawing the serum from the treated animal.

4. In the process of preparing tuberculosis antitoxins and serums, treating an animal not normally responsive to tuberculosis with tuberculosis antigen, injecting into the said treated animal serum from an animal normally responsive to tuberculosis thereby making the said treated animal responsive to tuberculosis, and withdrawing serum from the thus treated animal.

5. An anti-tubercular serum derived from the blood of an animal which is not normally responsive to tuberculosis, but which has been made responsive by injection with tuberculosis antigen and serum of a responsive animal.



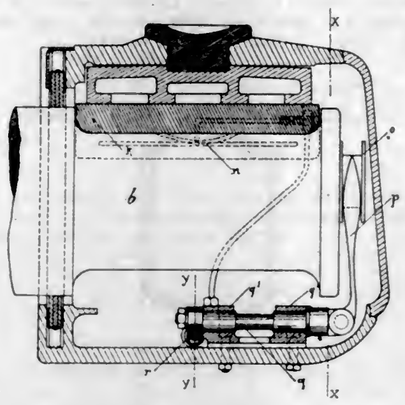
1,676,998. BOTTLE CAP AND FASTENER. BRUNO R. MEDIATI, Salt Lake City, Utah. Filed May 17, 1926. Serial No. 109,688. 2 Claims. (Cl. 215—41.)



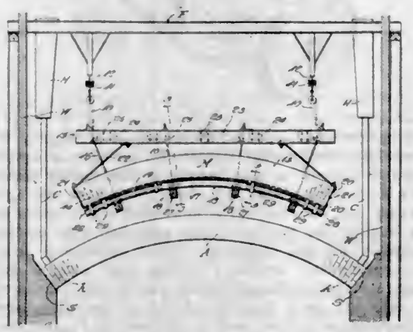
1. A container cap comprising a body of rubber having a concaved top portion and a continuous flange portion, said flange portion having at its outer surface spaced rings, there being a groove between the ends of the rings, a hoop member consisting of a single piece of wire passing through the rings and lying in the groove, said hoop member having interengageable end extremities.

1,676,999. PRESSURE-RELIEF APPARATUS. HENRY G. MOBLEY, League City, Tex. Filed May 24, 1926. Serial No. 111,441. 11 Claims. (Cl. 103—42.)

1. In a pressure control device for a pipe line, a T in said line, a cylinder of greater internal diameter than the branch of said T mounted thereon and communicating thereby with said line, an internal flange in said cylinder, a piston valve freely movable in said cylinder between its lower end and said flange, a hollow belt on said cylinder intermediate its chamber in communication with the interior of said cylinder, said piston valve normally closing such communication but adapted to move under increase of pressure in said line to open said communication, and an air chamber communicating with the interior of said cylinder whereby the movement of said piston valve is regulated.

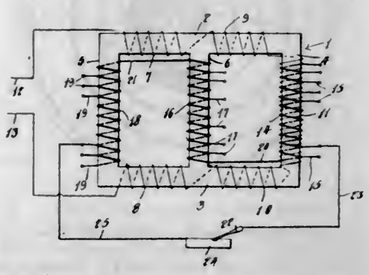


1,677,000. ELECTRIC DISCHARGE DEVICE. DANIEL MCFARLAN MOORE, East Orange, N. J., assignor to General Electric Company, a Corporation of New York. Filed Mar. 5, 1921. Serial No. 449,700. 3 Claims. (Cl. 176—123.)



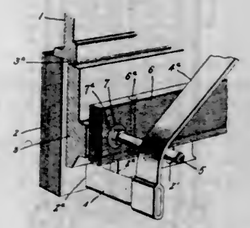
1. The method of starting an electric arc discharge in a gas between closely adjacent electrodes constituted of conducting material one of which comprises a body of closely adjacent conductors of small section to facilitate the production of corona which consists in initially impressing upon said electrodes a potential sufficient to produce a glow discharge therebetween, maintaining such glow discharge to bring said small conductors to incandescence and increasing the current flowing between the electrodes.

1,677,001. LUBRICATING DEVICE FOR AXLE JOURNALS. JULES MOREAU, La Garenne-Colombes, France. Filed Dec. 23, 1926, Serial No. 156,660, and in France Jan. 20, 1926. 2 Claims. (Cl. 308—84.)



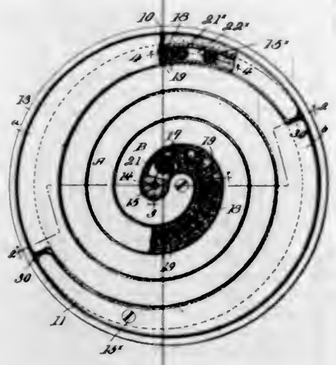
1. A lubricating device for axle journals, comprising a casing which surrounds the journal and is adapted to contain oil, a pump which is disposed in the said casing and serves to withdraw the oil and to deliver it upon the said journal, an eccentric disc secured to the outer face of said journal, a fork coacting with said disc and receiving an oscillating motion due to the rotation of the axle, and means imparting the oscillating motion of the said fork to the piston of the pump.

1,677,002. REPAIRING MEANS FOR FURNACE ARCHES. OTTO ELIS OLSON and LEOPOLD COOPER, Douglas, Ariz. Filed Sept. 8, 1927. Serial No. 218,278. 3 Claims. (Cl. 263—46.)



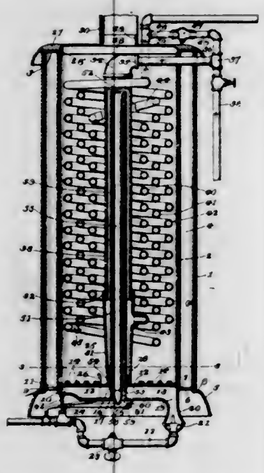
2. An arch member to be substituted for a portion of a furnace arch, comprising a fire resisting body, a supporting structure therefor embodying longitudinally arched bars underlying said body, slide bars at ends of said arched bars and extensible therefrom to assist in adding to said body when positioning it for use, means slidably connecting the two sets of bars and supporting means for said body and said arched bars free of attachment to said slide bars.

1,677,003. TRANSFORMER FOR ELECTRIC-ARC CUTTING, REPAIRING, AND WELDING APPARATUS. FREDERICK C. OWEN, Fayetteville, N. C. Filed Aug. 18, 1927. Serial No. 213,880. 9 Claims. (Cl. 171—119.)



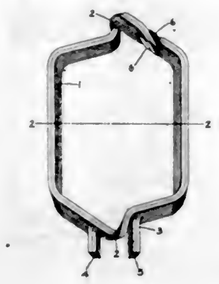
1. A transformer comprising a core providing a plurality of magnetic paths, a primary winding distributed about the greater portion of one of said paths and about a portion of the other, and a secondary winding embodying a coil in close coupled relation with the primary winding and coils in loose coupled relation with the primary winding.

1,677,004. MAGNETIC SHIELD FOR DYNAMO-ELECTRIC MACHINES. ROBERT POHL, Berlin, Germany, assignor to General Electric Company, a Corporation of New York. Filed Feb. 17, 1927, Serial No. 169,048, and in Germany Mar. 25, 1926. 7 Claims. (Cl. 171—252.)



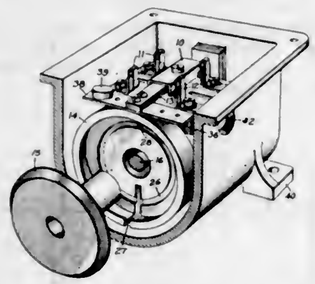
1. In a dynamo-electric machine, the combination of laminations forming a path for magnetic flux, a clamping member for said laminations, electrical conductors of the machine positioned in slots in said laminations and extending transversely therebeyond, and laminated magnetic material adjacent said conductors having the edges of the laminations thereof facing away from said clamping member adjacent thereto for preventing magnetic flux entering the side thereof, whereby eddy current losses are reduced.

1,677,005. NONWARPING HOT PLATE. LUDWIG REICHOLD, Winsted, Conn., assignor to The Fitzgerald Manufacturing Company, Torrington, Conn., a Corporation of Connecticut. Filed Sept. 15, 1927. Serial No. 219,670. 4 Claims. (Cl. 219—37.)



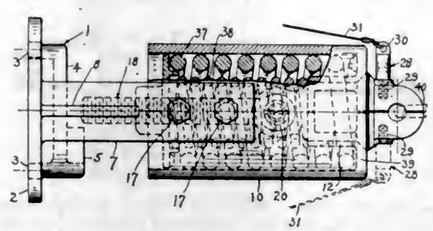
1. In a hot plate, a metal heat transmitting and vessel supporting member comprising a single spiral having a passage formed therein to receive the heating wire, and means to support said spiral at one end only, so that the spiral may expand in the direction of its length under the influence of heating.

1,677,006. HEATER. GEORGE E. STARKWEATHER, Los Angeles, Calif., assignor of one-fourth to Thomas A. Holland and one-fourth to Bryan Chambers, Los Angeles, Calif. Filed May 16, 1927. Serial No. 191,772. 2 Claims. (Cl. 122—245.)



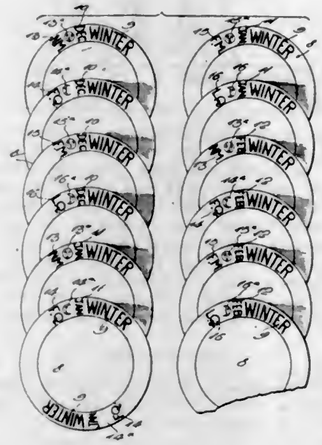
1. A water heater comprising a heating chamber, a set of communicating, concentrically disposed coils arranged within said chamber, a cold water receiving chamber arranged within the heating chamber, surrounded by said coils and communicating in proximity to its lower end with the inner coil of the set, a valve controlled cold water supply line extending into the heating chamber and communicating with the receiving chamber at the top thereof, a hot water discharge line communicating with the outer coil of said set, a by-pass between said lines and provided with a check valve, a heating element arranged at the bottom of the heating chamber, and control means therefor including a thermostatic element arranged within said receiving chamber.

1,677,007. COIL WINDING. IVAN H. SUMMERS, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Dec. 29, 1925. Serial No. 78,226. 5 Claims. (Cl. 171—206.)



3. A multi-turn coil for a dynamo-electric machine having reversing end turns and comprising a conductor formed of a plurality of insulated strands, the conductor of the coil having a twist of substantially 180° in the upper turn at one end of the coil.

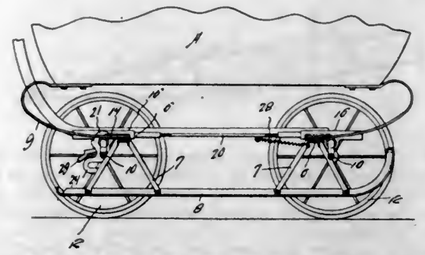
1,677,008. ROTARY SWITCH MECHANISM. GEORGE R. TOWNSEND, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 12, 1925. Serial No. 75,147. 3 Claims. (Cl. 200—52.)



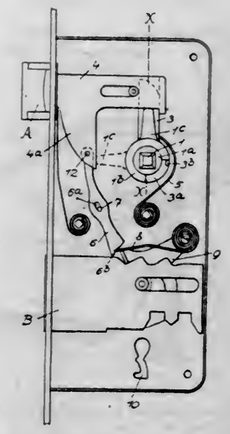
3. A direction switch comprising a casing, a shaft extending through one wall of the casing and rotatably mounted therein, a disc having a hub fixedly mounted upon said shaft within the casing, a second disc having a radial slot therein and a hub rotatably mounted upon the hub of the first disc and provided with a flanged extension on the periphery thereof forming a housing surrounding the periphery of the first disc, a switch mechanism mounted within the casing and connected to be actuated upon rotation of the second disc between predetermined limits, and a viscous oil in the bottom of the casing and immersing the bottom portion of said discs to be drawn through said slot and carried between the hubs and the adjacent faces of the discs and confined by said housing to form a yielding driving connection therebetween to operate said switch mechanism upon initial rotation of the shaft in either direction and to supply lubrication to the said shaft bearing and to the hub bearing between said discs.

1,677,009. ADJUSTABLE RELEASING DEVICE. OLIVER ERNEST WILTSIE, Troy, N. Y. Filed July 11, 1927. Serial No. 204,940. 4 Claims. (Cl. 280—33.16.)

1. An automatic adjustable releasing device comprising a bracket, attachable to a moving mechanism, rigidly holding a cylinder, an eyebolt carrying a pivot, holding two shouldered jaws thereon, a relatively heavy outer and light inner spring engaging one end of the said cylinder and a flanged circularly ribbed nut, adjustably held upon the said eyebolt.



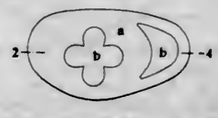
1,677,010. CARD GAME. LILLIE ZIMMERMANN, Fond Du Lac, Wis. Filed Mar. 1, 1928. Serial No. 258,319. 14 Claims. (Cl. 273—152.)



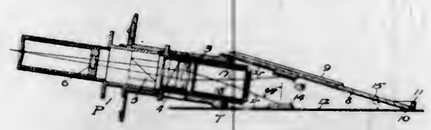
1. In a card game played by trick-taking and embodying suits of cards and a high trump card, a penalizing card operable if its player be out of suit to negative the trick-taking effect of any card played concurrently, including said high trump card.

1,677,011. BABY CARRIAGE. EDWIN J. ADAMS, Little Falls, N. Y. Filed Apr. 14, 1927. Serial No. 183,758. 4 Claims. (Cl. 280—11.)

1. In a carriage of the character described, a pair of transverse frame bars for supporting a carriage body, a pair of cross axles journaled to the frame bars to permit the rotation thereof, cranks on the ends of the axles, supporting wheels rotatable on the cranks, gears fixed on the axles, rack bars meshing with the gears, means interconnecting the rack bars to cause the simultaneous movement thereof, a lever on one of the axles for turning the same to cause the simultaneous turning of all of the axles through the gears and rack bars for raising and lowering the wheels in respect to the carriage body, means for normally maintaining the wheels in a lowered position, a pair of sleigh runners suspended from the cross bars for supporting the carriage when the wheels are raised, means engageable with the lever for maintaining it in wheel raised position, and additional manual controlled means for releasing said third mentioned means to permit the reverse turning of the axles to swing the wheels downwardly beyond the runners for supporting the carriage.

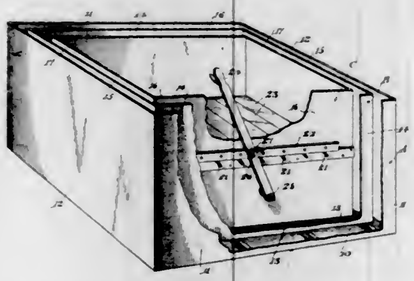


1,677,012. COMBINED LOCK AND LATCH. JULIUS ARIGI, Marianske Lazne, Czechoslovakia, assignor to the Firm: Aero, Továrna Ctadel, Praha-Vysočany, Czechoslovakia. Filed Nov. 18, 1926, Serial No. 149,217, and in Czechoslovakia Dec. 19, 1925. 6 Claims. (Cl. 70—29.)



1. In a combined lock and latch, the combination of a reciprocable latch-bolt, a dead bolt, means for retracting the latch-bolt, a lever connected with the latch-bolt and preventing movement of the dead bolt when the latch-bolt is in projected position, and a manually adjustable stop adapted to prevent retraction of the latch-bolt.

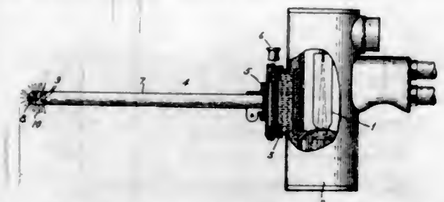
1,677,013. COMPOUND RUBBER TREAD. LOUIS CHARLES BATEMAN, West Ealing, London, England. Filed Aug. 1, 1927, Serial No. 209,798, and in Great Britain June 26, 1926. 2 Claims. (Cl. 36—32.)



1. A shoe sole comprising a felt base impregnated with latex having inserted therein to lay substantially flush therewith an inlay of crepe rubber.

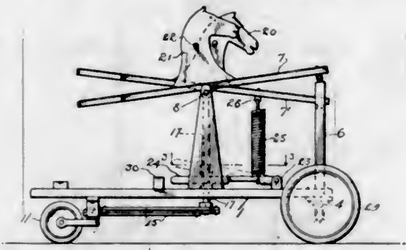
1,677,014. REFLECTOMETER. FRANK A. BENFORD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 30, 1925. Serial No. 27,015. 8 Claims. (Cl. 88—23.)

1. A photometric device comprising a photometer, a diffusing surface adapted to be illuminated to serve as a standard of comparison for measuring the index of reflection of a desired surface, said device so constructed that the diffusing surface and any surface, the index of reflection of which is desired, may be brought together, a pair of auxiliary diffusing surfaces located within the field of said photometer, one of said auxiliary surfaces facing toward the standard surface and adapted to be directly illuminated thereby and the other auxiliary surface facing toward the region where the surface to be tested and the device are brought together, said other auxiliary surface adapted to be illuminated by the surface to be tested when said surface and the device are brought together and when said surface to be tested is illuminated by the diffusing standard surface, whereby the index of reflection of the surface to be tested may be determined by comparing the illumination of the auxiliary surfaces.



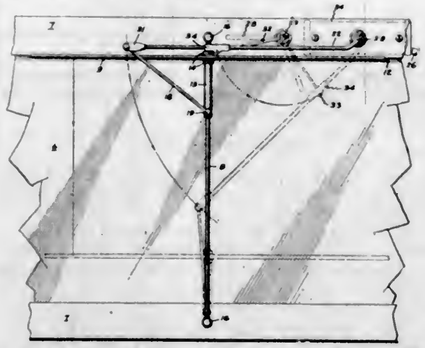
1,677,015. BEAN SEPARATOR. CURRAN S. BENTON, Port Huron, Mich. Filed Apr. 18, 1927. Serial No. 184,665. 4 Claims. (Cl. 209—173.)

1. A separator comprising an open top tank adapted to contain a gravitation solution for grading a commodity, a removable, open top intermediate tank positioned within and arranged in spaced relation with respect to the front, rear, sides and bottom of said other tank, said intermediate tank having a perforated bottom and adapted to receive a grade of the commodity being separated, the inner tank seated on said perforated bottom and arranged in spaced relation with respect to the front, rear and sides of the intermediate tank, said inner tank having an open top and bottom, a normally inactive combined separating and carrier means within said inner tank above the lower end thereof, and operating means for shifting said separating and carrier means to active position to provide for the latter to perform its separating and carrying function.



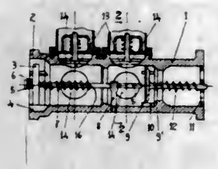
1,677,016. QUARTZ APPLICATOR. EDWARD R. BERRY, Malden, Mass., assignor to General Electric Company, a Corporation of New York. Filed July 1, 1926. Serial No. 119,975. 3 Claims. (Cl. 174—177.)

1. A therapeutic device comprising a source of radiant energy, an applicator for ultra violet rays comprising a member of material transparent thereto and being substantially free from cavities and a tip of material which is capable of transmitting the desired radiations and having interior cavities causing said radiations to spread



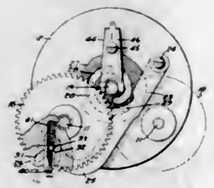
externally free from cavities and a tip of material which is capable of transmitting the desired radiations and having interior cavities causing said radiations to spread externally of said applicator.

1,677,017. VEHICLE FOR CHILDREN. CHARLES H. BOARDMAN, Columbus, Ohio. Filed May 31, 1927. Serial No. 195,303. 2 Claims. (Cl. 208—33.)



1. A vehicle of the class described, comprising a pair of platforms, a driving axle connected to the forward ends of the platforms, standards upon the platforms, seats pivotally connected with the standards, driving connections between the seats and axle for imparting rotary movement thereto upon rocking of the seats in alternate directions, a guide wheel carried by the ends of the platforms, a steering post pivotally connected with one of the seats, a head for rotating the post, connections between the post and steering wheel for controlling the latter, and a spring connecting one of the seats and its platform.

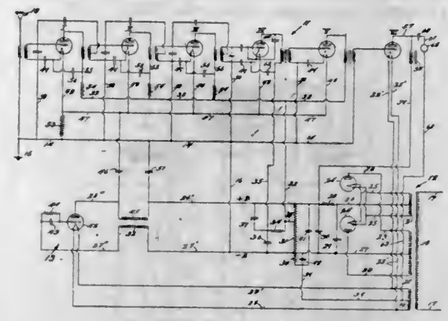
1,677,018. WINDSHIELD WIPER. CARL A. CARLSON, San Francisco, Calif. Filed Jan. 31, 1927. Serial No. 164,724. 5 Claims. (Cl. 15—251.)



1. A windshield wiper comprising a squeegee, means for constraining said squeegee to translatory motion, a crank constrained to rotary oscillation, and a link pivoted to said crank and said squeegee.

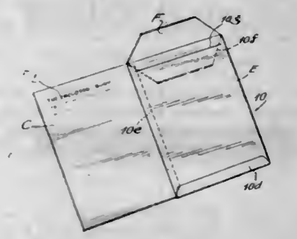
1,677,019. ARRANGEMENT FOR ELIMINATING THE DANGERS DUE TO BACK FIRES IN CARBURETORS. PIETRO CASATI and ALESSÁNDRO ANTONIOLA, Turin, Italy. Filed Dec. 29, 1926, Serial No. 157,783, and in Italy Jan. 14, 1926. 3 Claims. (Cl. 123—142.)

1. An apparatus of the character described, comprising a tubular body adapted to be inserted between an engine and a carburetor, a safety valve in one end of said body normally open towards said engine, a plunger in the other end of said body, a rod on which said plunger is movably mounted, and springs on said rod for holding the plunger in balanced position and operatively connected with the rod, whereby the latter is actuated to close the valve by the movement of the plunger.



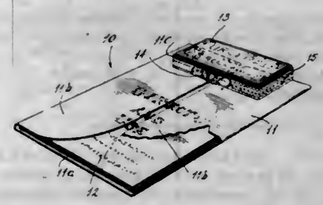
1,677,020. VARIABLE CONDENSER. ERNEST G. DANIELSON, San Francisco, Calif. Filed May 24, 1926. Serial No. 111,193. 10 Claims. (Cl. 175—41.5.)

1. A variable condenser comprising relatively movable electrodes, at least one of said electrodes being rotatable about a given axis, a rotatable control shaft, a pivoted actuating lever, means connecting said shaft and lever whereby said lever is rocked upon rotation of the shaft, a member rotatable with said one electrode, means connecting said member and lever whereby the rocking movement of the lever imparts rotary movement to said one electrode, said means comprising a pin, means for adjusting the position of said pin with respect to said lever and member, and means for constraining the movement of said pin to definite paths with respect to said lever and member, said paths being substantially parallel when the electrodes occupy a position for maximum capacitance but being intersecting when the electrodes occupy other relative positions.



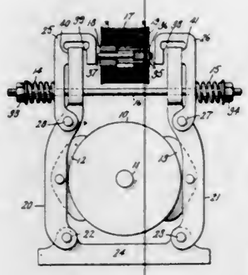
1,677,021. HIGH-FREQUENCY FILAMENT-HEATING MEANS. WARREN E. DANLEY, Highland Park, Ill., assignor to Fansteel Products Company, Inc., North Chicago, Ill., a Corporation of New York. Filed Oct. 6, 1927. Serial No. 224,328. 21 Claims. (Cl. 250—27.)

1. In combination, a radio receiver including filament and plate circuits, an oscillation generator for generating currents of ultra audio frequency differing from the received signal frequency, connections for supplying



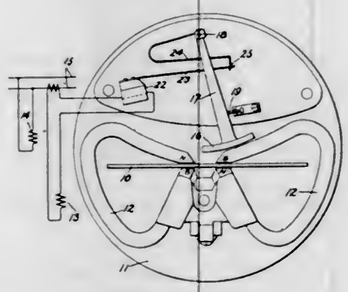
power to said plate circuit and to said generator, and connections for supplying oscillating filament heating current from said generator to said filament circuit.

1,677,022. ADVERTISEMENT CARRIER. ABRAHAM DEUTSCHMEISTER, New York, N. Y. Filed Mar. 21, 1927. Serial No. 176,900. 2 Claims. (Cl. 229—68.)



1. A complete article of manufacture comprising a single sheet of material creased to have central and end portions, one of said end portions folded over said central portion and secured thereto to form an envelope, said envelope having an opening, a closure flap for said opening adapted to retain the contents of the envelope, the other end portion being foldable over said envelope and adapted to bear a legend on the inner face thereof, and means for securing said legend bearing section to said envelope.

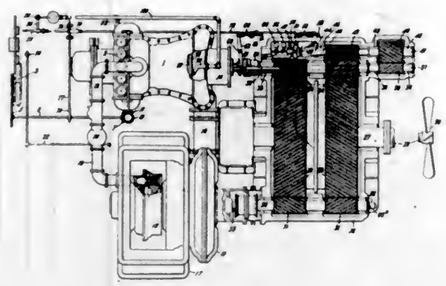
1,677,023. COMBINATION SAMPLE AND PAMPHLET CARRIER. HERMAN DEUTSCHMEISTER, New York, N. Y. Filed Dec. 27, 1926. Serial No. 157,164. 8 Claims. (Cl. 229—87.5.)



8. In a device of the character described a holder for retaining printed matter and a band extending from one end of the holder adapted to secure a receptacle to overlie the wrapper at said end.

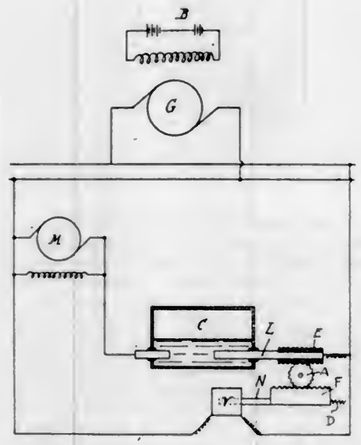
1,677,024. BRAKE. JOHN EATON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 1, 1927. Serial No. 180,287. 12 Claims. (Cl. 188—171.)

8. An electromagnetic brake comprising relatively movable friction members, a spring operably connected with one of the members for biasing the same into braking engagement with the other member, an electromagnet for opposing the spring, and connections between the spring and the electromagnet including a member controlled by the electromagnet and movable between two positions and arranged to reduce the force of the spring for biasing the friction members into engagement when said member is intermediate said positions.



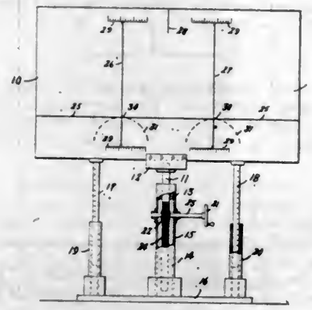
1,677,025. COMPENSATED METER. ARTHUR G. GRIER, Peterboro, Canada, assignor to General Electric Company, a Corporation of New York. Filed Dec. 8, 1925. Serial No. 74,178. 10 Claims. (Cl. 171—264.)

1. An induction type watthour meter having a tendency to run too slowly when subjected to an overload current, and means responsive to such overload current for decreasing the damping of said meter to compensate for such tendency.



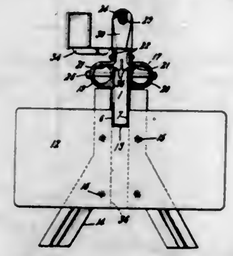
1,677,026. GEARED TURBINE INSTALLATION. BRUCE O. BUCKLAND and GLENN B. WARREN, Schenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Filed Nov. 6, 1925. Serial No. 67,424. 8 Claims. (Cl. 74—59.)

1. In a turbine installation, a high pressure turbine, a low pressure turbine, a driven shaft, and gears through which said turbines drive said shaft, said gears comprising a driven gear wheel, a pinion meshing therewith driven by the low pressure turbine, gear means comprising a pinion meshing directly with said driven gear wheel and a pinion connected thereto through a



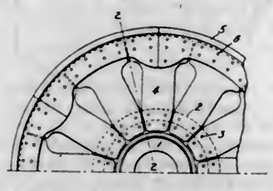
reduction gearing, and means whereby said high pressure turbine may be connected to drive through either of said pinions.

1,677,027. METHOD AND MEANS FOR CONNECTING WINDMILLS WITH ELECTRIC GENERATORS. LOUIS CONSTANTIN, Paris, France, assignor of one-half to Paul Fortier-Beaulieu, Roanne, France. Filed Feb. 5, 1925, Serial No. 7,128, and in France Feb. 12, 1924. 2 Claims. (Cl. 171—312.)



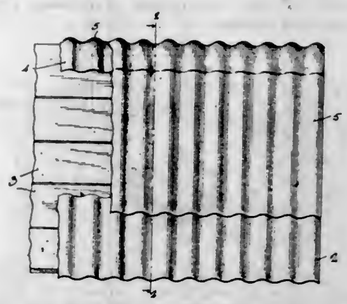
1. A voltage regulating system for dynamo-electric machines comprising in combination with a generator subjected to rapid variations in speed, a translating device, an electric boiler, a movable and a fixed electrode in said boiler, means for serially connecting said translating device, said generator and the electrodes of said boiler, means for varying the resistance of said boiler by changing the position of said movable electrode and automatic means for varying said last mentioned means in accordance with the voltage supplied by said generator for the purpose disclosed.

1,677,028. HEADLAMP-ADJUSTING CHART. THEODORE W. FRECH, Cleveland, Ohio, assignor to General Electric Company, a Corporation of New York. Filed Nov. 5, 1925. Serial No. 67,172. 3 Claims. (Cl. 33—180.)



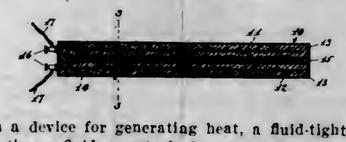
1. A headlight adjusting apparatus comprising a screen having thereon a horizontal line, supporting means for said screen, means for vertically reciprocating said screen, and a scale for indicating its height.

1,677,029. THERMOELECTRIC GENERATOR. TRUMAN S. FULLER, NATHAN H. ADAMS, and FRANK G. NOLTE, Schenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Filed Nov. 27, 1925. Serial No. 71,827. 8 Claims. (Cl. 136—4.)



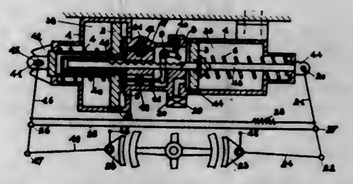
3. In combination, a thermopile, the portion of said thermopile which includes the junctions to be heated being reduced in cross section, and means for heating said reduced portion, said means including a pair of tubular members provided with burner openings and mounted on said thermopile and on opposite sides of said reduced portion.

1,677,030. MAGNET WHEEL. JOHANNES GESCHKE, Berlin, Germany, assignor to General Electric Company, a Corporation of New York. Filed Mar. 31, 1926, Serial No. 98,787, and in Germany Apr. 7, 1925. 5 Claims. (Cl. 171—252.)



1. A magnet wheel comprising a series of spokes having their ends widened to form a substantially continuous peripheral web, and a plurality of rim segments secured against the sides of the spokes, the segments being arranged with their ends substantially opposite the center lines of certain of the spokes.

1,677,031. SHEET-METAL ROOFING. LOUIS KUEHN, Milwaukee, Wis., assignor to Milwaukee Corrugating Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 16, 1925. Serial No. 15,753. 3 Claims. (Cl. 108—24.)



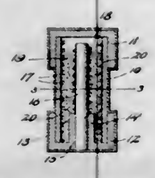
1. A sheet-meal roof section provided with corrugations extending from end to end thereof, one of the ends of said section being raised from the plane thereof and shaped to fit and nest with the raised end of a similarly-formed and oppositely arranged section to form therewith a ridge roll for a roof the other end of said section being adapted to overlap and nest with the adjacent end of an ordinary corrugated sheet metal roof section.

1,677,032. ELECTRICAL HEATING AND COOKING APPARATUS. JOAN WILLEM JULES KAFFER, Meester-Cornelis, Java, Dutch East Indies. Filed Nov. 9, 1926. Serial No. 147,352. 3 Claims. (Cl. 204—5.)

1. In a device for generating heat, a fluid-tight casing constituting a fluid receptacle for water, two spaced electrodes disposed in said casing and having means to connect said electrodes with the wires of an electric circuit, and a catalytic element disposed in said casing between said electrodes, said electrodes and said element being out of electrical contact with said casing and with one another.

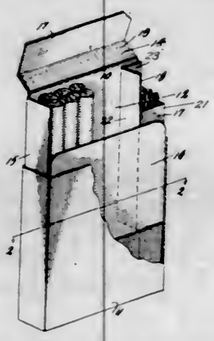
1,677,033. AIR-PRESSURE BRAKE. EMIL KREHANN, Vienna, Austria, assignor of one-half to the Firm Gebrüder Hardy, Maschinenfabrik und Giesserei Aktien Gesellschaft, Vienna, Austria. Filed Nov. 28, 1927, Serial No. 236,327, and in Austria Dec. 15, 1926. 8 Claims. (Cl. 303—6.)

3. In an air pressure brake comprising a casing, two coaxial cylinders, arranged opposite each other in such casing and differing in diameter, pistons, one for each cylinder, working in such cylinders and adapted to move in opposite directions, piston rods connected to such pistons, springs arranged and adapted to act on the sides remotest from each other, the spring of the larger piston being stronger than that of the smaller piston, means for sup-



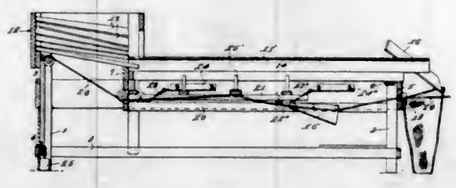
plying air under pressure to the ends of the cylinders next to each other, a pawl and ratchet gear comprising a ratchet rack connected to the smaller piston and a pawl pivoted in the said casing and adapted to engage into the said ratchet rack and means for actuating the said pawl, the said pawl and ratchet gear being arranged between the two pistons.

1,677,034. TOY TORPEDO. KOBY KOHN, New York, N. Y. Filed Oct. 6, 1926. Serial No. 139,922. 15 Claims. (Cl. 102—25.)



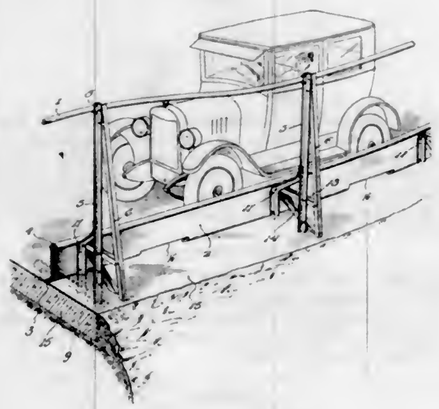
1. In a toy torpedo, in combination, a container having a pair of walls substantially parallel to each other and close together, abrasive on said walls and explosive material between the walls, said walls being made of material deformable on impact.

1,677,035. TOY TORPEDO. KOBY KOHN, New York, N. Y. Filed Oct. 6, 1926. Serial No. 139,923. 10 Claims. (Cl. 102—25.)



1. In a toy torpedo, in combination, a closed container, an explosive loosely arranged in said container, a resilient member projecting from the inner surface of a wall of the container, said member being adapted to cooperate with the inner surface of a wall to explode said explosive when the torpedo receives a violent impact.

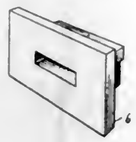
1,677,036. COMBINATION CIGARETTE AND MATCH BOX. RUDOLPH A. KRATOCHWILL, Greeneville, Tenn. Filed Nov. 19, 1925. Serial No. 70,176. 2 Claims. (Cl. 206—48.)



1. A box of the class described including a main container comprising a back, sides, a front flap, and a bottom, the sides and bottom being integrally connected with the said back, and an auxiliary container within the main container at one side thereof including the front integrally connected with the respective side of the main container, a side integrally connected with the said front and positioned opposite to the said side of the main container, a back integrally connected to the said side of the auxiliary container and engaging the inner side of the back of the main container, the said auxiliary container being open and unobstructed at its upper end, and the front of the auxiliary container having a transverse incision defining a flap.

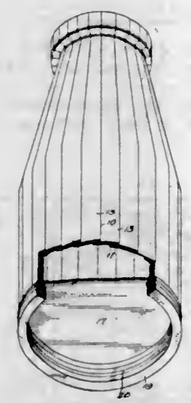
1,677,037. FRUIT-GRADING MACHINE. FRED F. LEWEKE, Rocky Ford, Colo.; Eva Leweke administratrix of said Fred F. Leweke, deceased. Filed June 10, 1927. Serial No. 197,923. 2 Claims. (Cl. 209—99.)

1. A vegetable grader comprising a longitudinally slotted inclined hopper, a slatted riddle connected thereto having its slats varying in distance apart, a reciprocable wheeled carriage with flexible rake fingers traversing the slats below the riddle, and pivoted guides for lowering and raising the carriage at the limits of its excursions and flexible means for facilitating manual reciprocation of the carriage.



1,677,038. SAFETY GUARD FOR DANGEROUS HIGHWAYS. HARRY C. LOOKABAUGH, Jacksonville, Fla. Filed Feb. 9, 1927. Serial No. 166,972. 9 Claims. (Cl. 256—1.)

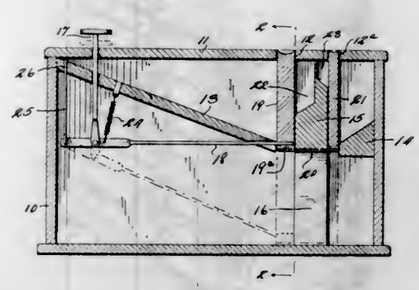
1. Protective means at the side of a highway, the same comprising a vertically disposed plate having its lower edge portion curved inwardly and in contact with the surface of the highway, and having its upper edge portion curved outwardly and downwardly to provide a stiffening and reinforcing roll.



9. Protective means at the side of a highway, the same consisting of an upper member having portions curved inwardly and outwardly, and a lower wheel engaging member set inwardly from the upper member and spaced therefrom, and connecting means for the members arranged at intervals.

1,677,039. TILING. WILLETT C. MAGRUDER, Louisville, Ky. Filed Dec. 7, 1927. Serial No. 238,301. 1 Claim. (Cl. 72—18.)

A tile for walls comprising a substantially flat face surrounded by matching edges, an extension on the back of the tile at substantially right angles thereto and an opening through the extension and the face of the tile, the cross sectional area of the opening being substantially equal throughout its length, and the central axis of the opening extending substantially at right angles to the face of the tile, substantially as set forth.



1,677,040. PAPER RECEPTACLE. CORNELIUS HENRY MCGIEHAN, Glens Falls, N. Y. Filed Oct. 19, 1923, Serial No. 669,604. Renewed May 17, 1928. 1 Claim. (Cl. 229—21.)

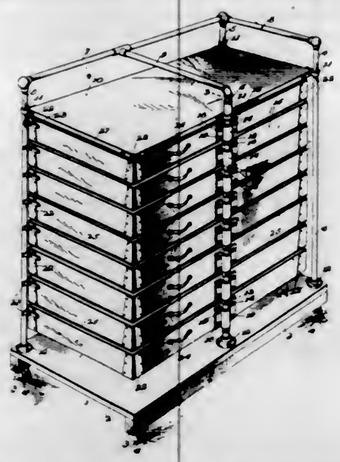
As a new article of manufacture, a milk bottle formed of a circular sheet of paper crimped to form a plurality of folds, the sheet being pressed into the shape of a bottle, the relatively thick multi-ply side walls of which are formed by the folded portion of the sheet, the central uncrimped portion of the sheet constituting a relatively thin fragile top of a single thickness of paper integral with the side walls, the bottom of said bottle constituting a filling opening, and a closure element for permanently sealing said filling opening after the contents of the bottle have been introduced.

1,677,041. CIGARETTE AND MATCH DISPENSER. ROBERT D. MILLS, Jr., Nashville, Tenn. Filed July 30, 1927. Serial No. 209,483. 3 Claims. (Cl. 312—79.)

1. A cigarette and match dispensing device comprising a box-like casing a top formed adjacent one end with an opening, a partition extending downward from said opening to the bottom of the box and spaced from the lateral walls of the opening to provide a cigarette and a match discharging opening on each side of the partition, the lower portion of the partition being vertically slotted and the partition defining a match compartment and a cigarette compartment, one on each side thereof, downwardly inclined false bottoms forming the bottoms of said compartments and having their lower ends spaced from the partition, a cross member extending through the slot in the partition, lifters mounted upon the cross

member and fitting the spaces between the lower ends of the false bottoms and the partition and movable upward through the openings in the top of the box, each of said lifters being transversely concave upon its upper edge face, and a handle operatively connected to one of said lifters and extending through one wall of the casing, the casing being formed with an opening to permit the handle to be vertically shifted.

1,677,042. CURVILINEAR FABRIC. JOHN V. MOORE, Pawtucket, R. I., assignor to Moore Fabric Company, Pawtucket, R. I., a Corporation of Rhode Island. Filed Apr. 23, 1926. Serial No. 104,180. 3 Claims. (Cl. 139—380.)

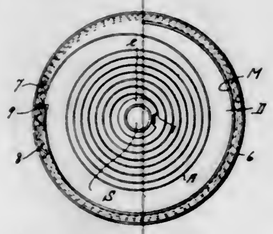


1. A curvilinear fabric woven as a single integral structure and adapted to be used as a tire lining strip, said fabric being curved longitudinally and being also curved in cross section and being concave transversely on its outer face and convex on its inner face and said fabric having two full selvage edges.

1,677,043. BREAD PROOFER. JAMES M. MORRILL, Milbank, S. Dak. Filed June 22, 1926. Serial No. 117,797. 3 Claims. (Cl. 45—95.)

1. A device of the character described comprising a base, a framework mounted upon the base comprising a pair of uprights at one edge spaced substantially the full length of the base and a second pair of uprights at the opposite edge spaced approximately half length of the base, said arrangement leaving one corner of the base

vacant, a plurality of trays each extending substantially the full length of the base and located within the framework in superimposed position, and means hingedly



mounting the trays upon one of the latter pair of uprights permitting swinging the trays through said corner vacancy into open positions.

1,677,044. WASHING COMPOUND. THOMAS MOSS, Long Beach, Calif. Filed May 9, 1922. Serial No. 559,595. 1 Claim. (Cl. 87—5.)

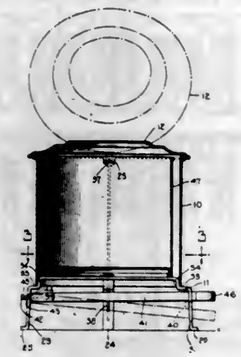
A cleaning mixture consisting of: soap and sodium thiosulphate in substantially equal parts.

1,677,045. SPRING MOTOR. DANIEL E. ODOM, Bennettsville, S. C. Filed Jan. 25, 1927. Serial No 163,417. 3 Claims. (Cl. 185—45.)

1. In combination with a shaft, a drum mounted thereon having a grooved peripheral wall, a spiral spring surrounding the shaft and having its inner end portion engaged therewith, the outer end portion of the spring being provided with an opening, an arcuate resilient member within the drum, the outer extremity of the spring extending between the resilient member and the peripheral wall of the drum, and an outstanding part carried by the resilient member and extending through the opening in in the spring to seat within a groove of the drum.

1,677,046. FLY SWATTER. ANDERS OLSON, Galesburg, Ill. Filed Mar. 22, 1926. Serial No. 96,464. 1 Claim. (Cl. 43—135.)

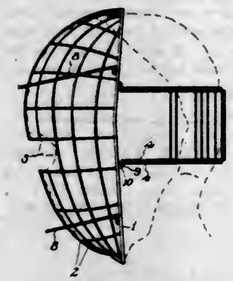
A device of the class described, comprising a rod and handle therefor, an auxiliary rod having a telescopic connection with said first-named rod, a swatter hinged to the end of said auxiliary rod and means for holding the same in adjusted positions with reference to said rod, a trigger at the handle end of said first-named rod adapted for connection with said auxiliary rod, to hold said rods



in fully telescoped relations, and a coiled spring on one of said rods, adapted to cause a sudden extension of said rods upon said trigger being released.

1,677,047. BRAKE MECHANISM FOR TRACTION DEVICES OF THE ENDLESS-BELT TYPE. BENJAMIN F. PAGENHART, Minneapolis, Minn., assignor of one-half to Thomas Young, Minneapolis, Minn. Filed July 16 1926. Serial No. 122,825. 8 Claims. (Cl. 180—9.1.)

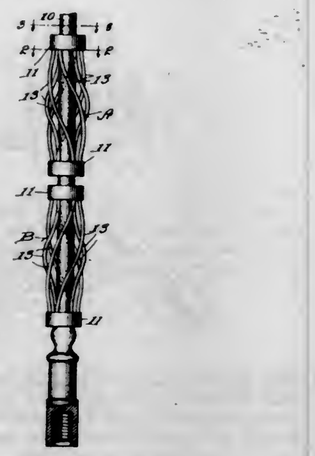
1. The combination with a motor-propelled vehicle having an axle and a traction device comprising a track mounted to oscillate about the axis of the axle, an endless belt mounted on the track and having ground-engaging elements and power means including a wheel for driving the belt, said wheel being journaled on a part carried by the track with its axis parallel to the axle and radially spaced therefrom, of brake mechanism for the belt operative through the wheel and including cooperating brake members, one of which is secured for common rotation with the wheel and the other of which is anchored in respect to said rotative member, and brake-setting mechanism including a member for operating the anchored brake member and extending between the axle and the anchored brake member and arranged to shift about the axis of the axle under the oscillatory movement of the track.



1,677,048. SANITARY REFUSE CAN. MORRIS PFEFFER, New York, N. Y., assignor to Enterprise Tinware Company, New York, N. Y., a Corporation of New York. Filed Apr. 1, 1927. Serial No. 180,093. 4 Claims. (Cl. 220—36.)

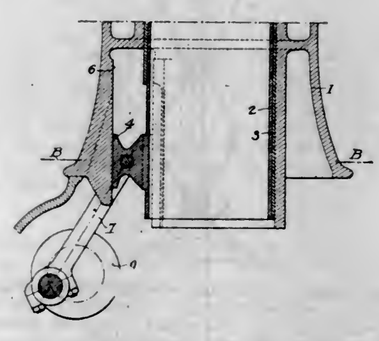
1. A receptacle comprising a housing, a closure hinged adjacent to the perimeter of the housing and provided with an arm extending beyond the fulcrum, a lever fulcrumed beneath and extending diametrically beyond the housing to oscillate in a plane substantially perpendicular to the plane of the hinging of the closure, a bar pivoted

to the extension of the closure and provided with a substantially right angular bend extending under the housing and supporting the lever.



1,677,049. TOWEL HOLDER. WILLIAM N. PROCTOR, Knoxville, Tenn. Filed Mar. 7, 1927. Serial No. 173,565. 3 Claims. (Cl. 128—163.)

1. A device for the purpose set forth comprising a bowl-like open sided receptacle shaped to conform to the human head, supporting legs adjacent the ends of the receptacle whereby to support it with the open side up, and retaining members at the open side of the receptacle between the legs to retain it upon the head.

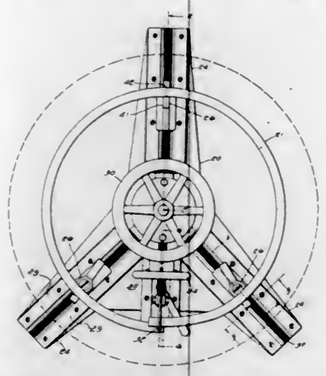


1,677,050. PARAFFIN CUTTER. MARTIN L. REED and HORACE E. BULLA, Wilson, Okla. Filed June 13, 1927. Serial No. 198,523. 1 Claim. (Cl. 166—18.)

The combination with a pumping rod, of a pair of paraffin cutters mounted upon the rod in superimposed relation, each cutter including a pair of spaced collars adapted to loosely surround the rod, and a plurality of spirally arranged cutting rods terminally connected with each pair of said collars, with the rods of one cutter reversely disposed with respect to those of the other cutter, and each of said collars including pivoted sections, a tongue

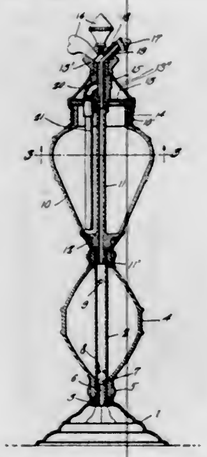
and groove connection between the meeting ends of said sections, and a removable pin for holding said sections associated.

1,677,051. SLEEVE OF THE ENGINE OF THE SLEEVE-VALVE TYPE. CHARLES SCHAEFFER, Paris, France, assignor to Société Anonyme des Anciens Etablissements Panhard & Levassor, Paris, France. Filed Feb. 1, 1927, Serial No. 165,168, and in France Feb. 8, 1926. 2 Claims. (Cl. 123—75.)



1. In an engine of the sleeve-valve type, a sleeve actuated by a crank, and a link pivoted to a lateral lug formed on said sleeve, a stationary guide path adapted to guide the lug of the said sleeve, said guide path comprising parallel sliding surfaces between which the said lug is guided after the manner of a cross-head, the said sliding surfaces being substantially tangential to the said sleeve.

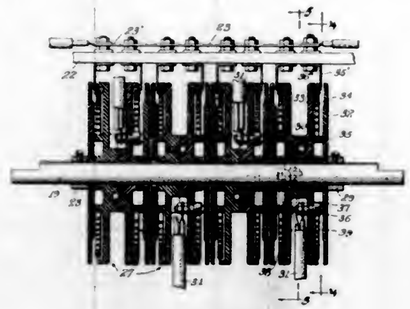
1,677,052. TIRE-CHANGING APPARATUS. ALBERT C. SENGER, Hamilton, Ohio. Filed Dec. 10, 1924. Serial No. 754,979. 4 Claims. (Cl. 157—1.)



1. In a tire changer, a support adapted to receive thereon a transversely split rim, means carried by said support for effecting contraction or expansion of the rim,

said means comprising a block guided for movement on said support, means for moving said block inwardly or outwardly, and rim-engaging means for transmitting motion of said block to the rim, said rim-engaging means

being pivotally connected with the block to permit movement thereof in a circumferential direction, and yielding means for returning said rim-engaging means to a normal position after such circumferential movement thereof.

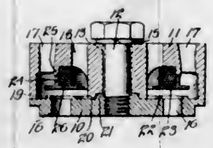


1,677,053. ATOMIZER. ARTHUR J. SHAUKIS, Haverhill, Mass. Filed Apr. 3, 1926. Serial No. 99,648. 2 Claims. (Cl. 299—88.)

1. An atomizer comprising a base, a tube connected therewith, a collapsible member supported by the tube and through which the tube passes, a valve at the lower end of the tube, said tube having openings therein for connecting its interior with the interior of the collapsible member, a liquid container, a tube therein having a lower extension extending into the upper end of the first tube, a removable head for the container, a nozzle carried thereby, means for connecting the nozzle with the tube in the container and means for connecting the nozzle with the lower part of the container.

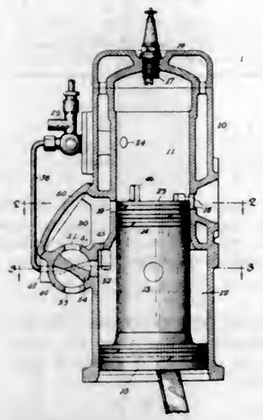
1,677,054. HEATER-SUPPORTING CHANDELIER. LOUIS E. SHAW, East Orange, N. J., assignor to Ernest Unger, New York, N. Y. Filed Dec. 11, 1925. Serial No. 74,735. 9 Claims. (Cl. 219—24.)

6. In an apparatus for waving hair, the combination of a drum formed of insulating material, a heater supporting cable adapted to be wound on said drum, a two conducting pin carried and insulated by said drum, a coiled spring positioned on one side of the drum for turning the drum to wind the cable thereon, one end of the



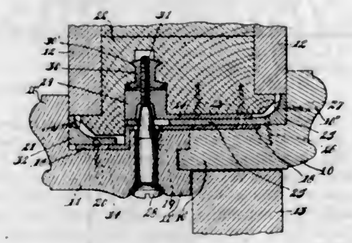
spring secured to one end of the pin, an end of the cable connected electrically to the other end of the pin and means for supplying current to the other end of the spring.

1,677,055. DIAMOND LATHE TOOL. ABRAHAM SIMONS, New York, N. Y. Filed Mar. 20, 1925. Serial No. 16,878. 3 Claims. (Cl. 29—99.)



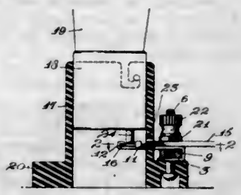
1. In combination, a holder having a plurality of longitudinal and substantially planar faces, a diamond point tool having a shank located within and connected to said holder, said shank being inclined to the longitudinal axis of the holder the front of said shank having an exposed diamond and intersecting two of the adjacent faces of said holder, the tip of said diamond projecting in front of the front of said holder, said diamond having a plurality of cutting edges.

1,677,056. CHECK VALVE. NORMAN M. SMALL, Waynesboro, Pa., assignor to Frick Company, Waynesboro, Pa., a Corporation. Filed Sept. 6, 1927. Serial No. 217,748. 2 Claims. (Cl. 251—119.)



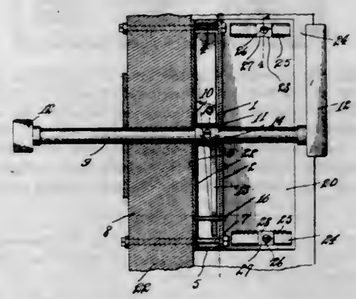
1. The combination of upper and lower detachable sections having fluid passages therethrough and forming a valve body, a seat in said valve body, a ring plate having a flat portion for cooperation with said seat for closing the passages through the valve, a spring for holding said ring plate upon the seat and having one end confined in a channel in one of the members of the valve body and having its other end disposed in a channel in the ring plate whereby its motion will be guided and held against lateral movement entirely by the action of the spring, substantially as set forth.

1,677,057. AIR COMPRESSOR FOR INTERNAL-COMBUSTION ENGINES. ALBERT B. STREETER, New York, N. Y., assignor to Dual Motors Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 3, 1925. Serial No. 12,990. 11 Claims. (Cl. 123—67.)



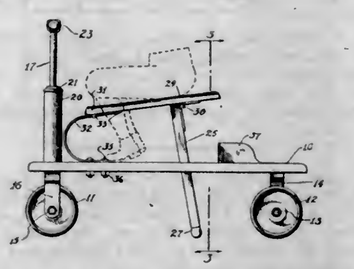
1. In an internal combustion engine, the combination of an explosion cylinder having an air scavenging port and a fuel inlet port, an axially aligned cylinder of larger diameter than the explosion cylinder, a trunk piston having two heads, one working in each cylinder and forming in the larger cylinder an annular pump chamber, an air reservoir at all times open to the air scavenging port, a cylindrical rotary valve casing having three circumferentially spaced openings, one an air intake opening directly to the external atmosphere, the second opening into the pump chamber and the third opening into the reservoir, and a rotary blade valve mounted in said valve casing for periodically opening the pump chamber to the external atmosphere and to the reservoir.

1,677,058. DOOR AND JAMB CONSTRUCTION. HARRY B. STEIN, Chicago, Ill. Filed June 3, 1927. Serial No. 196,365. 7 Claims. (Cl. 20—12.)



1. A construction of the type described comprising fastening mechanism including separable plates attachable to separable jamb parts and tapered screw means extending through said plates whereby to draw the plates together, for adjustably fastening together and mounting in position separable jamb parts with stop and casing means thereon, to permit convenient separation and removal of said jamb parts with stop and casing means.

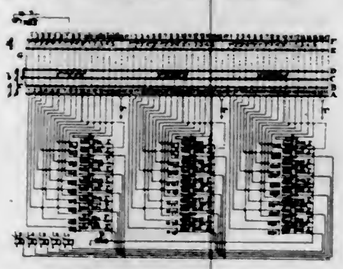
1,677,059. ELECTRICAL CONTACTOR. PAUL M. TEBBS, Harrisburg, Pa. Filed Dec. 1, 1924. Serial No. 753,267. 4 Claims. (Cl. 173—328.)



1. The combination of a socket having an opening, an electrical conductor including a wire, and a support mounted upon the socket, extending through the opening and holding a portion of the wire in position for direct contact by an appliance inserted in said socket, said support having means with which the wire engages for stabilization.

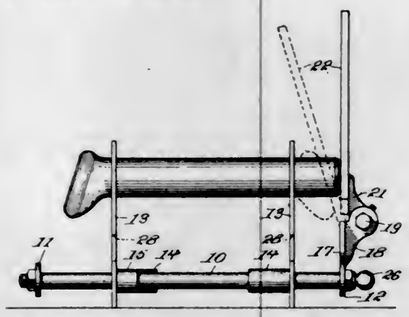
1,677,060. DOOR FASTENER. JOSEPH G. THORNE, Barnum, Minn. Filed Sept. 24, 1926. Serial No. 137,551. 6 Claims. (Cl. 292—340.)

1. A keeper formed with a slot having a side wall converging inwardly toward an opposed side wall, and adjustable securing means for said keeper adapted to be passed through the slot and engaged with a support with a portion fitting into said slot and bearing against the opposed walls of the slot to releasably secure the keeper in a set position but permit adjustment of the keeper longitudinally of the slot when the securing means is loosened.



1,677,061. VELOCIPEDE. JAMES TOMAN, Chicago, Ill. Filed Jan. 5, 1927. Serial No. 159,168. 3 Claims. (Cl. 208—38.)

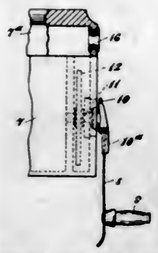
1. In a velocipede, a wheel bearing platform, a seat member, a resilient strap operatively connecting the seat member to the platform and normally supporting



the seat member from said platform and functioning to permit movement of the seat member relatively to said platform, a propeller member, and a spring hinge operatively connecting the propeller member to the seat member, said propeller member being operable by movement of the seat member relative to the platform for propelling said platform.

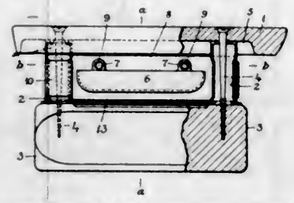
1,677,062. SIGNALING SYSTEM APPLICABLE TO TELEGRAPHY AND TELEMECHANICAL TRANSMISSION. CHARLES VERDAN, Strasbourg, and LOUIS MARIE JEAN LOISEAU, Paris, France, assignors to Compagnie Francaise pour l'Exploitation des Procedes Thomson-Houston, a French Limited Company, and Ateliers J. Carpentier, a French Limited Company. Filed May 25, 1925, Serial No. 32,782, and in France June 4, 1924. 10 Claims. (Cl. 178—52.)

1. The improvement in the art of signaling devised to avoid the effect of disturbing influences, consisting in emitting signals, repeating the signals in accordance with a predetermined rule whereby the received signals and repetitions of these signals are identified, and adopting only signals of which the initial receptions and their repetitions are correspondingly identified.



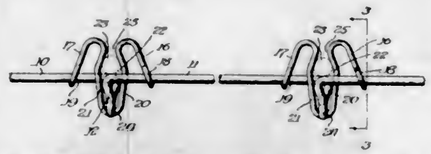
1,677,063. GAUGE TOOL. EMANUEL E. WAGNER, Lamar, Mo. Filed Nov. 4, 1927. Serial No. 231,121. 4 Claims. (Cl. 33—95.)

1. A gauge tool comprising a frame, a carriage slidably mounted thereon, and a marking bar swingably mounted upon the frame being adapted to be swung toward and away from the adjacent end of the work to determine the center thereof when supported upon the carriage.



1,677,064. FASTENING FOR BOXES OR CASES CONTAINING ROTARY SHARPENING APPARATUS FOR RAZORS AND EDGE TOOLS. JAMES ALEX DENBY WATT, London, England. Filed Sept. 5, 1925, Serial No. 54,746, and in Great Britain Sept. 10, 1924. 3 Claims. (Cl. 51—72.)

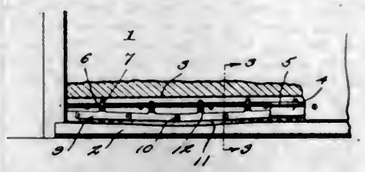
1. In combination, a box having a lid, a sharpening apparatus including a tool rotatably mounted in said box and including a drive shaft, means pivotally connected to the drive shaft for turning said shaft from the exterior of the box, and arranged to overlap the lid, engaging means carried by the turning means, and



a cooperating engaging part carried by the lid and adapted to be engaged by the engaging means on the turning means when the said turning means is moved about its pivot to overlap the lid.

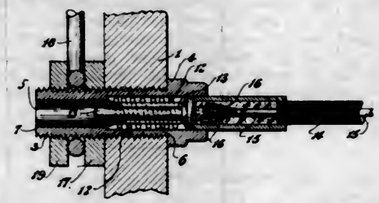
1,677,065. HAND IRON. JAMES WILSON-HAFFENDEN, London, England. Filed Oct. 14, 1926, Serial No. 141,551, and in Great Britain July 9, 1926. 3 Claims. (Cl. 138—23.2.)

1. In combination, a sad-iron, two pillars connected to and projecting from the top side thereof, a combined handle and iron support connected to said pillars, and a combined burner and deflector swingingly connected to one pillar and provided with means for detachably engaging the other pillar.



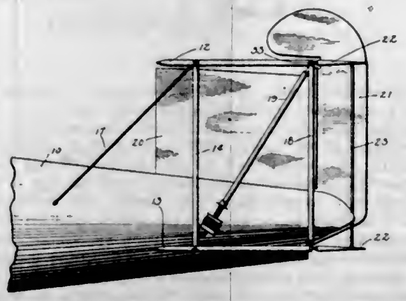
1,677,066. BAR CLIP. WILLIAM E. WHITE, Chicago, Ill. Filed Dec. 12, 1925. Serial No. 75,113. 6 Claims. (Cl. 72—122.)

2. In a spacer, the combination of a continuous wire having chairs formed at spaced intervals thereof, and a bar clip consisting of a continuous wire having a loop that straddles the chair beneath the same and provides a pocket for a bar above the chair, the ends of the looped wire extending diagonally from the loop and being attached to the continuous wire at opposite sides of the chair.



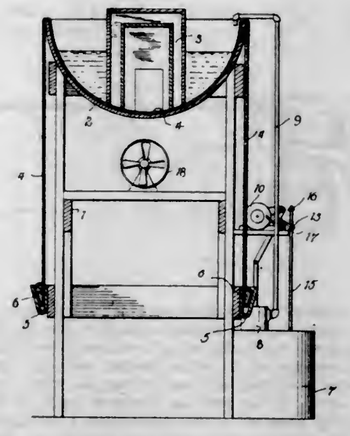
1,677,067. AUTOMATIC ALL-WEATHER STRIP. FRED D. ZIMMERMAN and CLINTON WELLS, Mount Clare, Nebr.; said Wells assignor to said Zimmerman. Filed Apr. 17, 1926. Serial No. 102,749. 2 Claims. (Cl. 20—68.)

1. The combination with a swingably mounted door which has its lower edge grooved longitudinally, of a substantially U-shaped member having its sides fixed to the side walls of the slot, a compressible strip of a length equaling that of the slot, plates on the sides of the strip having lapping ends which are pivotally connected together and to the strip, each of said plates having a central inwardly directed flanged portion that



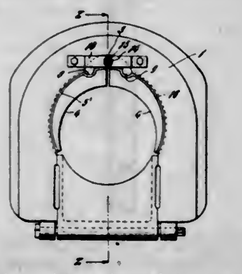
merges into an upstanding finger, said fingers passing through openings in the top of the U-shaped members and springs surrounding the fingers and exerting a tension between the flanged portions of the plates and the top of the U-shaped member.

1,677,068. TELEPHONE PLUG. MILTON ALDEN, Springfield, Mass., assignor to Alden Manufacturing Co., Springfield, Mass., a Corporation of Massachusetts. Filed Oct. 12, 1923. Serial No. 668,126. 1 Claim. (Cl. 173—363.)



In combination, a one piece member having an external thread for a part of its length which thread terminates in a shoulder part at one end and said member having an internal opening with an unthreaded surface of different diameters extending throughout the length of the member, a tubular member having a smooth outer surface secured in the smaller part of the unthreaded opening, which tubular member is formed with a slitted portion for providing resilient parallel finger ends and a coiled spring in the larger part of the unthreaded opening of the externally threaded member for engaging and normally forcing the said ends towards each other, whereby when a plug having a long cylindrical surface is inserted in the tubular member between the said ends the latter will yield outwardly against the action of said spring means.

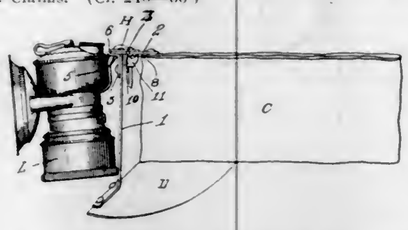
1,677,069. EMPENNAGE AND PLANE ARRANGEMENT. WALTER H. BARLING, Astoria, N. Y. Filed June 2, 1925. Serial No. 34,403. 15 Claims. (Cl. 244—29.)



1. In an aircraft, the combination of a pair of surfaces spaced vertically, a strut there-between, one of said surfaces being pivotally connected at said strut, and a diagonally disposed rigid but extensible and contractible incidence member connected between said surface and the other surface.

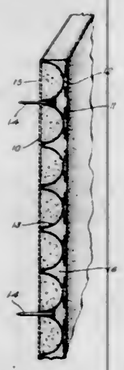
1,677,070. AIR COOLER. DAVID J. BESSE, San Angelo, Tex. Filed Mar. 16, 1927. Serial No. 175,780. 1 Claim. (Cl. 62—139.)

An air cooler including a framework of open construction, a reservoir at the top of the framework to receive water and ice, troughs at opposite sides of the framework adjacent the bottom thereof, a fabric dipping into the reservoir and extending along opposite sides of the framework and having its lower end terminating in the troughs, a tank disposed below the troughs to receive the drippings therefrom, a pump for drawing water from the tank and dispensing it into the reservoir, float controlled means actuated by the change of level of the water in the tank to throw the pump into and out of action, and a fan disposed below the reservoir and between the depending portions of fabric to create a positive circulation of air.



1,677,071. CROWN BEARING. RALPH D. BOBBITT, Norfolk, Va. Filed Apr. 12, 1926. Serial No. 101,506. 1 Claim. (Cl. 308—65.)

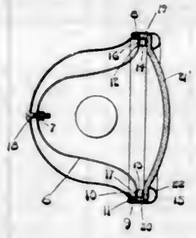
The combination with a journal box, of brass bearings for the journal therein, each of said bearings comprising two segmental sections which are gradually decreased in thickness from their confronting to their opposite ends, means between the bearing sections and the box for preventing the longitudinal movement of the said sections, said box, at the top thereof between the confronting ends of the bearing sections having an opening therethrough whose wall is rounded, a segmental member having its rounded surface received in the round opening, said member having its under face, at its corners formed with depending lugs which are arranged at opposite angles, and the segmental sections having angu-



larly disposed grooves to receive the lugs therein, a substantially U-shaped bracket having its ends fixed on the face of the box, a screw revoluble but held from longitudinal movement through the bracket, and said last mentioned segmental member having a threaded opening in which the screw is threaded, as and for the purpose set forth.

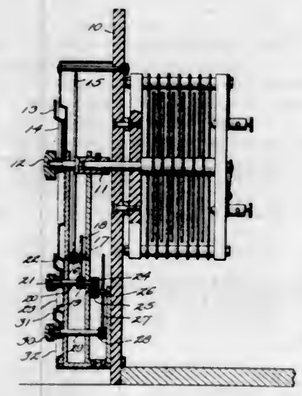
1,677,072. LAMP HOLDER. GEORGE S. CLARK, Huntington, W. Va. Filed Apr. 3, 1926. Serial No. 99,622. 2 Claims. (Cl. 240—60.)

1. A holder for the hook of a miner's lamp, comprising an angle member fixedly secured to the top and arranged at the front of a miner's cap, and having a notch at the juncture of the walls thereof and the horizontal wall being provided with an opening in which the beak of the hook of the lamp is received prior to the said hook being inserted in the notch, and a spring member fixedly secured to the horizontal branch of the angle member and including angularly disposed downwardly converging resilient inclined jaws, and a back portion which exerts a tension between the jaws for forcing the beak of the hook into frictional contact with the jaws when the said beak is arranged in supported position.



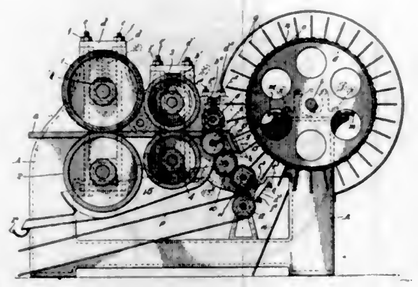
1,677,073. BUILDING MATERIAL. GEORGE COHEN, New York, N. Y. Filed Sept. 10, 1926. Serial No. 134,710. 8 Claims. (Cl. 72—116.)

6. A three-ply metal lath including flat outer plies one of which is foraminous and an intermediate ply corrugated to produce alternate undercut grooves and ribs adapted to serve as key anchorages for plaster forced through the foraminous ply.



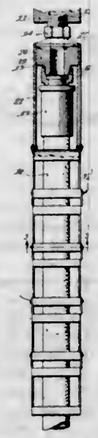
1,677,074. CLOSURE FASTENER AND GLASS RETAINER. THOMAS J. CORCORAN, Cincinnati, Ohio, assignor to The Thos. J. Corcoran Lamp Co., Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 3, 1925. Serial No. 47,748. 1 Claim. (Cl. 240—41.)

A closure fastener for an automobile lamp having an open ended body, a substantially cylindrical notched flange extending from and surrounding the open end of the body, a closure rim having a hooked rear edge adapted to fit over the flange at the open end of the body, and a glass adapted to occupy the rim, comprising a main member adapted to occupy the body in approximation of the interior shape thereof and having two branches each one of which extends to and occupies one of the flange notches at the open end of the body and extends radially beyond it to engage the hooked edge of the rim, springs extending transversely of and attached to the ends of the



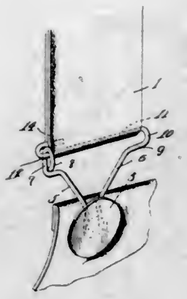
member adapted to engage the glass to retain it in position relatively to the rim and simultaneously therewith to retain the branches in engagement with the hooked rear edge of the rim, whereby the member is maintained yieldingly attached relatively to the rim, glass and body when in position therewith, and means adapted exteriorly of the body to draw the member into and the glass and rim upon the body and into relatively fixed relation to each other.

1,677,075. RADIO TUNING DIAL. LEONARD E. HORSEY, Contesville, Pa. Filed June 12, 1926. Serial No. 115,593. 1 Claim. (Cl. 116—124.)



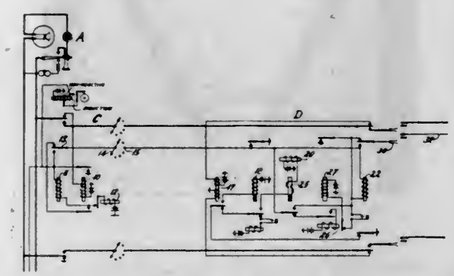
In a radio tuning device, a main shaft, a tuning element controlled thereby, a second shaft, gearing for rotating the main shaft through a predetermined angle, upon revolution of the second shaft, a third shaft, gearing for rotating the second shaft by the third shaft, and thence imparting movement to the main shaft through a fractional part of the angle first named, an intermediate shaft for each set of gearing, the shafts exclusive of the intermediate shafts including operating means, having their axes of rotation in parallel relation, and indicating devices on the third and second shafts, rotatable in a single direction and determining the extent of rotation in the same direction of the main shaft and tuning element, in fractions of a degree and in multiples of said fractional portions.

1,677,076. DEFIBRATING MACHINE. JOSEPH DUFOUR, Guatemala City, Guatemala. Filed Dec. 16, 1924. Serial No. 756,318. 4 Claims. (Cl. 19—27.)



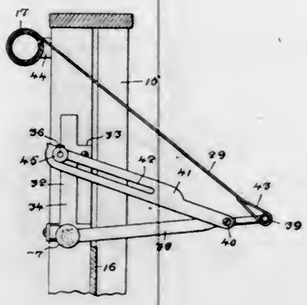
1. In a machine for defibrating vegetable material the combination of crushing rolls, a series of rotary blades which are flexible so as to have a dragging action and having continuous operating edges for acting on the crushed material, and means for holding the fibers in a thin sheet in elongated condition substantially parallel with the line of operation of the blades and just outside of the path of said blades while the non-fibrous material is removed by the blades.

1,677,077. HOSE PROTECTOR. DRURY D. FORTUNE, Cliffside, N. C., assignor of one-half to Burwell B. Byers, Shelby, N. C. Filed Sept. 20, 1927. Serial No. 220,773. 4 Claims. (Cl. 137—90.)



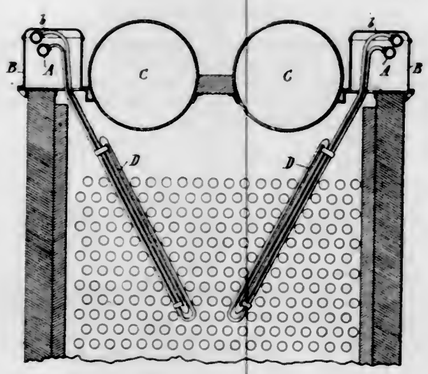
1. A device of the character described comprising a sleeve, a flexible sheath connected to the sleeve and comprising a plurality of sections pivotally connected together, each section being formed of a plurality of rings, and straps connecting said rings together, an end of each strap projecting beyond a ring and pivotally connected to a ring of an adjacent section.

1,677,078. SUPPORTING LOOP FOR GARMENTS, ETC. ROBERT E. GARRETT, Nashville, Tenn., assignor of one-half to Franz J. Schubert, Nashville, Tenn. Filed Apr. 29, 1927. Serial No. 187,613. 1 Claim. (Cl. 24—224.)



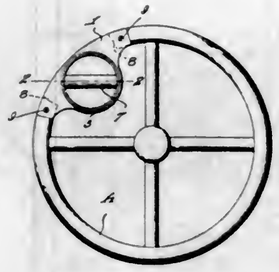
A device of the character described, composed of a single length of resilient wire shaped to provide a loop member of irregular and approximately triangular contour, said member comprising a button loop from which the sides of the member taper upwardly and outwardly in approximately V-shape and at the top of the V are each laterally extended oppositely outward, one lateral extension terminating in an upwardly, forwardly and downwardly bent eye lying in a plane transverse to the plane of the V, and the other lateral extension being bent reversely and extended transversely across and above the top of the V to form a single strap supported bar, the end of said bar being extended through and beyond said eye and being bent backwardly again over and above the eye to terminate at a point inclosed between the folds of a supporting webbing or strap looped over said bar, the space between the end of said bar and the engaging eye permitting expansion of the sides of the V during the insertion of a button in the button loop, and the forwardly and downwardly bent end of said eye being initially opened for the insertion of the strap bar therein, the material of the eye permitting and facilitating closure and opening thereof.

1,677,079. ZONE-METERING TELEPHONE SYSTEM. ROY F. GOULD, Chicago, Ill., assignor to Reserve Holding Company, Kansas City, Mo., a Corporation of Delaware. Filed Mar. 23, 1927. Serial No. 177,484. 10 Claims. (Cl. 179—9.)



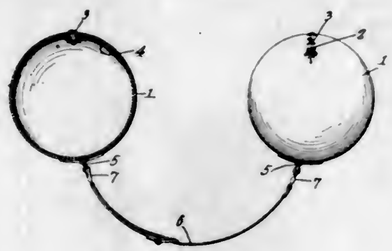
1. In a measured service telephone system, a meter having operating and non-inductive windings connected in series, and contacts on said meter effective, when operated, to short circuit said operating winding.

1,677,080. AWNING. GEORGE R. HALL, Waterville, Kans. Filed Mar. 23, 1927. Serial No. 177,756. 1 Claim. (Cl. 156—44.)



In a roller awning construction provided with an outwardly swinging bail and a slotted brace bar having one end pivotally secured to the bail, a bracket comprising upper and lower spaced horizontally disposed L-shaped attaching bars, a vertically disposed bar connecting the attaching bars, an offset ear extending from the lower L-shaped bar for pivotal connection with the bail, a threaded stud extending from the upper portion of the bracket to receive the slotted brace bar and a binding nut threadedly engaging the stud to bear against the brace bar and hold the bail in adjusted position.

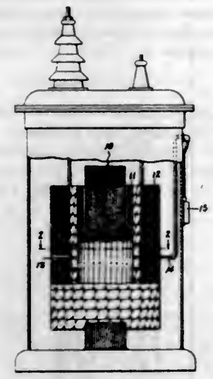
1,677,081. SUPERHEATER AND BOILER COMBINATION. JOHN ROBERT HANNAN, Shortlands, England, and WILLIAM ERNEST ENGLISH, Bishopston, South Wales. Filed Sept. 1, 1925, Serial No. 53,845, and in Great Britain July 9, 1925. 1 Claim. (Cl. 122—476.)



The combination of a water tube boiler of the horizontal type having its tubes arranged in spaced parallel rows, each row lying in a plane inclined at a substantial angle to the vertical, and a superheater comprising headers, disposed above the boiler tube level, and tube elements communicating with said headers and extending into the space between two adjacent rows of boiler tubes.

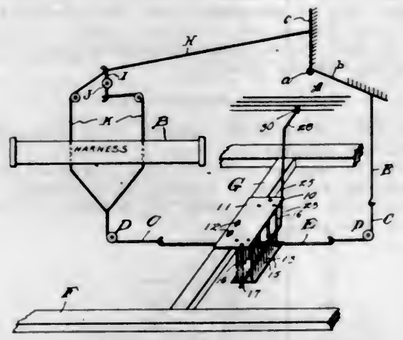
1,677,082. STEERING WHEEL. EDWARD L. HECKMAN, Notre Dame, Ind. Filed June 24, 1927. Serial No. 201,230. 2 Claims. (Cl. 74—33.)

1. In combination with a steering wheel of a vehicle, a frame connected with said wheel, a ring rotatably mounted in the frame and a cross piece carried by the ring and forming a hand grip.



1,677,083. WATER WINGS. JOEL ROBERT HEMINGER, Akron, Ohio. Filed Jan. 16, 1926. Serial No. 81,754. 1 Claim. (Cl. 9—17.)

A device of the class described including a pair of spherical covers of flexible material each having a smooth outer surface, there being a slit in each cover, an inflatable bladder insertable through the slit into each cover, means for drawing together the edges of the slit to close the cover and fully conceal and protect the bladder, a ring fixedly attached to each cover at a point substantially diametrically opposite the slits therein, a flexible breast strap, means at one end of the strap for detachably engaging one of the rings, and means adjustably connected to the other end of the strap for detachably engaging the other ring, said strap being adjustable to hold the covers at different distances apart, each cover with the inflated bladder therein, constituting a spherical float.



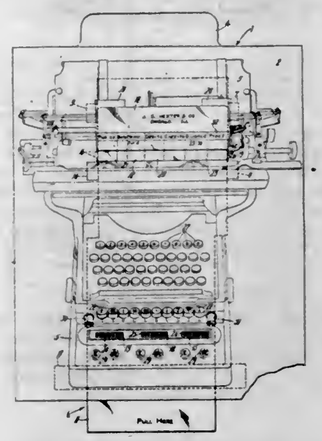
1,677,084. TRANSFORMER. ALLAN B. HENDRICKS, Jr., Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Sept. 2, 1927. Serial No. 217,035. 2 Claims. (Cl. 175—361.)

1. The combination with a transformer having a core provided with primary and secondary windings, of an auxiliary winding enclosing at least a portion of the magnetic leakage flux path of said transformer, said auxiliary

winding being arranged noninductively with respect to the main magnetic flux in said core and being provided with terminals for connection to an outside circuit.

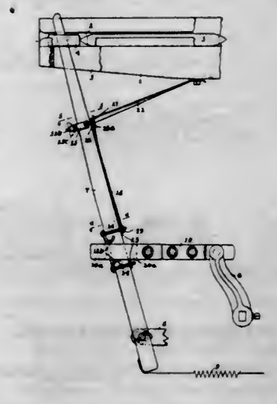
1,677,085. STOP MOTION FOR LOOMS. PAUL C. HERING, Lawrence, Mass. Filed Feb. 27, 1926. Serial No. 91,134. 6 Claims. (Cl. 139—337.)

1. In combination with a warp stop-motion and the harnesses and harness straps of a loom, a comb movable by said motion, and engageable by a harness strap upon breakage of the latter, and means coacting with the comb and broken harness strap to arrest motion of the comb.



1,677,086. PROCESS FOR CONVERTING CYANNAPHTHALENE SULPHONIC ACIDS. RICHARD HERZ and FRITZ SCHULTE, Frankfort-on-the-Main, and WERNER ZERWECK, Fechenheim, near Frankfort-on-the-Main, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 24, 1927, Serial No. 170,732, and in Germany May 17, 1926. 6 Claims. (Cl. 260—110.)

1. The process which comprises treating with an alkaline acting agent a compound of the general formula

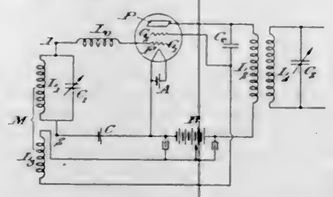


wherein the X's represent hydrogen atoms of which one or more may be replaced by a monovalent substituent and wherein the cyanogen and the sulfonic acid groups stand in ortho or para position to each other.

1,677,087. ACCOUNTING-MACHINE DEMONSTRATION CHART. JULIAN S. HEXTER, Chicago, Ill., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 23, 1925. Serial No. 25,218. 5 Claims. (Cl. 35—16.)

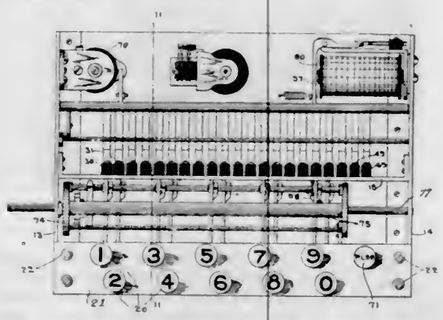
1. A frame comprising layers of cardboard secured together in a manner to leave space therebetween, a slide inserted in said space and having entries thereon, a representation of a computing and typing machine appearing on the face of the frame, sight-openings being cut through the frame in alignment with the slide and coming into registration with the entries appearing thereon upon manipulation of said slide, stops upon said slide and engaging guide-straps on the frame, a holding tab secured to the frame, and a finger-grip on the extremity of the slide.

1,677,088. PICKER STICK. JOHN A. HINRICHS, Paterson, N. J. Filed Feb. 25, 1927. Serial No. 170 972. 2 Claims. (Cl. 139—157.)



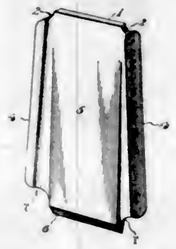
1. A picker-stick structure including a stick proper and means to resist bending of the stick proper as an incident of its impelling the shuttle including an elastic normally tensioned reinforcing strip secured to and extending lengthwise of the stick-proper and tending to flex the stick-proper so that the resulting flexion will be outwardly convex.

1,677,089. GOGGLES. SAMUEL HENRY HOPEWELL, Ensley, Ala. Filed Apr. 28, 1927. Serial No. 187,298. 2 Claims. (Cl. 2—14.)



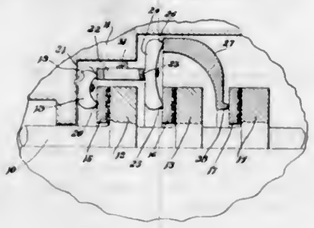
1. A pair of protective spectacles of the character described comprising similar shaped body portions, including rims, a partition disposed in each rim and being provided with a centrally disposed sight opening, means for securing the inner sides of said rims together in spectacle formation, chambers formed on the outer sides of said rims and communicating therewith, a clear lens secured in each of said rims and colored lens adapted to be cooperatively associated with said clear lens in a manner to be disposed in registration therewith and the sight openings respectively and capable of being disposed out of said registration and into the chambers.

1,677,090. VACUUM-TUBE CIRCUITS. LEWIS M. HULL, Boonton, N. J., assignor to Radio Frequency Laboratories, Incorporated, Boston, Mass., a Corporation of New Jersey. Filed Jan. 17, 1927. Serial No. 161,664. 7 Claims. (Cl. 179—171.)



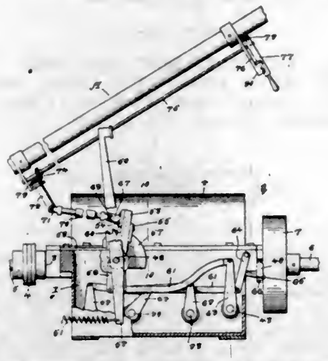
1. An electrical amplifier including a vacuum tube, an input circuit, an output circuit, elements producing capacitive coupling between said circuits, a circuit for compensating said capacitive coupling including in series a compensating coil coupled to one of said circuits and a compensating condenser connected to the other of said circuits, and an inductance connected to a control element of said vacuum tube in such a manner that retroactive currents flowing through said capacitive coupling must also flow through said inductance in series therewith.

1,677,091. IMPULSE-TRANSMITTING DEVICE. JOHN H. HOMRIGHOUS, Oak Park, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Sept. 13, 1918, Serial No. 253,860. Renewed Feb. 24, 1925. 39 Claims. (Cl. 179—90.)



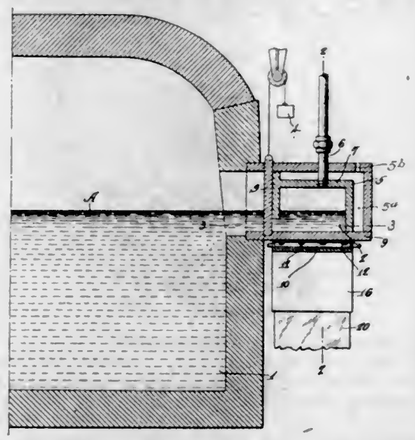
1. In a telephone system, a line, a device for transmitting impulses over said line consisting of a switch with a wiper having rotary motion, a set of keys, means controlled by any of said keys for starting the rotation of said switch to move said wiper and for predetermining the extent of movement thereof irrespective of an immediate subsequent operation of any other of the keys, and means controlled in the movement of said wiper for transmitting impulses.

1,677,092. CLAMP NAIL. CARL C. JENSEN, Chicago, Ill., assignor to Clamp Nail Company, Chicago, Ill., a Corporation of Illinois. Original application filed Sept. 13, 1926, Serial No. 135,225. Divided and this application filed Feb. 9, 1927. Serial No. 167,012. 1 Claim. (Cl. 85—11.)



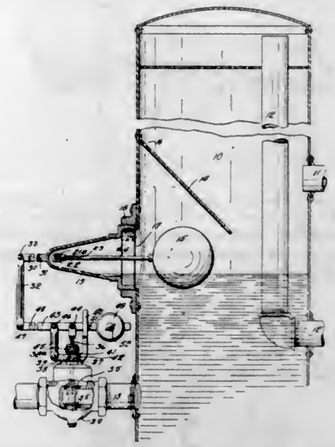
A clamp nail consisting of a flat web, a central transverse straight tongue at each end of the web, the tongue at the driving end of the web being blunt and the tongue at the driven end being beveled and the width of the tongues being less than the width of the web, and flanges along the side edges of the web projecting from both faces thereof and converging toward the driving end of the web, the flanges terminating short of the transverse edges of the tongues.

1,677,093. EQUALIZING MEANS FOR MULTIPLE-COLLAR BEARINGS. JOSIAH F. JOHNSON, Swarthmore, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 16, 1921. Serial No. 501,044. 4 Claims. (Cl. 308—160.)



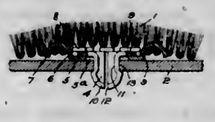
1. In a thrust bearing, the combination of a movable member; a stationary member; a plurality of spaced thrust collars on the movable member; a plurality of bearing shoes arranged about and operatively engaging each of the collars; and a plurality of thrust transmitting and equalizing mechanisms distributed abont the movable member for equalizing the thrust between the bearing shoes of one of said collars and the bearing shoes of another of said collars; each of said mechanisms operating independently of the others and comprising a lever member pivotally engaging a bearing shoe on one of said collars, a fulcrum support for said lever member carried by the stationary member, a second lever member pivotally engaging at one of its ends a bearing shoe on a second collar, seating means for the other end of the second lever, and a compression strut member interposed between the first lever member and the second lever member.

1,677,094. TRANSMISSION MEANS. HUGH J. JONES, Denver, Colo., assignor of one-half to The Western Battery & Supply Company, Denver, Colo., a Corporation of Colorado and ten per cent to George A. Bible, Rawlins, Wyo., and P. M. Bible, Denver, Colo. Filed Mar. 13, 1926. Serial No. 94,541. 8 Claims. (Cl. 74—34.)



1. In combination with transmission means including rock shafts, a spring controlled pedal actuated member, rocker arms associated with said member and connected with the rock shafts, a finger rotatably mounted on the pedal member, a hand lever and flexible means for connecting the hand lever with the finger to move the finger into engagement with any desired rocker arm.

1,677,095. METHOD AND APPARATUS FOR MANUFACTURING FIRE-POLISHED SHEET GLASS. CHARLES J. JORDAN, Woodbury, N. J., assignor of one-fourth to Rudolph G. Schaub, Woodbury, N. J. Filed Nov. 11, 1925. Serial No. 68,370. 6 Claims. (Cl. 49—32.)

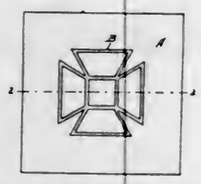


1. An apparatus for forming fire polished wire reinforced sheet glass consisting in a pot provided with a pair of spaced slots, and being in communication with a furnace, said pot provided with a third slot equi-distant of said first named slots, means for regulating the active width of said first named slots, guides extending diagonally from the first named slots and converging at a point remote from the pot and in alignment with said third slot, and air domes in said pot over said first named slots to apply air pressure to molten glass in the pot and means for controlling the communication between the pot and the furnace.

1,677,096. LIQUID-CONTROLLING DEVICE. LYLE W. BROWNE, Marshalltown, Iowa, assignor to The Fisher Governor Company, Marshalltown, Iowa. Filed Dec. 8, 1924. Serial No. 754,650. 2 Claims. (Cl. 137—101.)

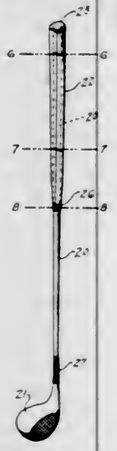
1. In combination with a tank having an opening therein, a device of the class described, comprising a flange secured to said tank and surrounding said opening, a tapered hollow support closed at its small and open at its larger end, said larger end being screw threadedly mounted in said flange, a shaft mounted in the wall of said support at its small end, a float, a float arm connecting the shaft with the float, a lever mounted on said shaft for longitudinal adjustment, a link pivoted to said lever, a valve structure having a casing and a stem projecting therefrom, a collar mounted externally on said casing by means of a set screw for rotary adjustment having an arm and opposite guide arms, a second lever detachably pivoted to said stem, a link pivoted to said collar arm and detachably pivoted to said second lever and a link detachably pivoted to said two levers.

1,677,097. FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Aug. 25, 1925. Serial No. 52,316. 8 Claims. (Cl. 16—4.)



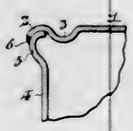
1. A carpet fastener installation comprising, in combination; a carpet, a casing secured to said carpet and a stud member assembled with and projecting from said casing, said stud shiftable in any transverse direction relative to said casing for alignment with a cooperating socket.

1,677,098. PROCESS OF MAKING TILE. THEODORE C. PROUTY and WILLIS O. PROUTY, Hermosa Beach, Calif., assignors, by mesne assignments, to American Encaustic Tiling Company, Ltd., Los Angeles, Calif., a Corporation of New York. Filed Mar. 7, 1925. Serial No. 13,887. 1 Claim. (Cl. 25—156.)



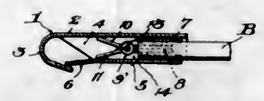
The process of making an integral multiple tile body having the appearance of an assemblage of a plurality of tiles, which comprises the operations of molding under pressure a dry bisque mixture by means of dies of the

form of the desired multiple tile body and one of said dies having thereon a relief design outlining the forms of a plurality of separate tiles and adapted to form grooves in the face of the multiple tile body, firing the multiple



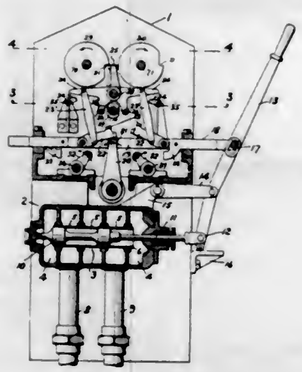
tile body so formed to produce the bisque, applying glaze mixture to the areas of said bisque between and defined by said grooves, again firing said tile body bearing the glaze mixture so applied, and subsequently filling said grooves with cement.

1,677,099. GOLF CLUB. WILLIAM E. HARNESS, Bloomington, Ill. Filed Sept. 24, 1927. Serial No. 221,769. 2 Claims. (Cl. 273—81.)



1. A golf club having a longitudinally tapered shaft, a head attached to one end of said shaft, and a handle fitting over the other end of said shaft, said handle being of substantially semi-elliptical cross-sectional area throughout its entire length and having a tapering bore formed in it, said bore being closed at the top.

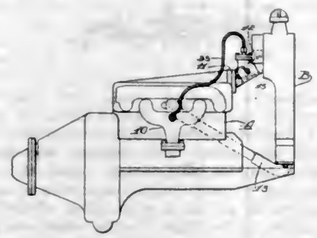
1,677,100. METALLIC CONTAINER. JAMES A. JENSEN, Philadelphia, Pa., assignor to Quaker City Iron Works, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 2, 1924. Serial No. 723,663. 2 Claims. (Cl. 220—67.)



1. A container of sheet steel comprising a cylindrical body portion having an internal corrugation merging into a substantially semi-circular cross-section terminal bead at each end thereof, similar material flat closure heads therefor having outset peripheral beads of half-round cross-section seating on the corrugations and overlapped by the terminal beads aforesaid, said overlapped portions forming a double thickness corner-edge whereby the container is rigidly braced against deformation with the heads securely prevented from inward or outward displacement, and said terminal and peripheral beads being joined by edge welding on the exterior surface for fluid tightness at the overlapped junctures.

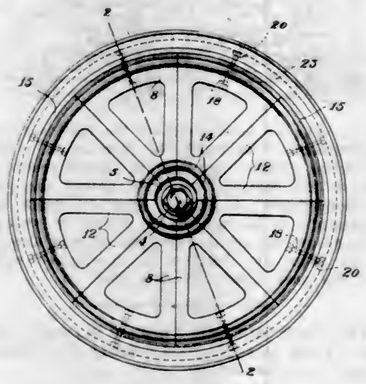
1,677,101. WATCH-BRACELET END HOOK. FREDERICK W. NITTEL, Attleboro Falls, Mass., assignor to M S Co., Attleboro, Mass. Filed Feb. 11, 1928. Serial No. 253,640. 5 Claims. (Cl. 24—233.)

1. In a watch bracelet end hook, a hook member having spaced sides, a latch member having a hollow shank received between said sides of the hook member and having a tongue engageable with the hook of the hook member, a connecting member having a pair of spaced knuckles, a bracelet having a hollow end receiving the connecting member therein and secured thereto, a substantially V-shaped spring in the hollow shank having a loop at its base received in the space between the knuckles and having its ends engaged with the back of the hook member and with the tongue to tension the latter, and a pin slidably extending through the sides of the hook member, through the shank of the latch member, through the knuckles of the connecting member and through the loop of the spring to connect all of the parts and to provide a pivot for the latch member.



1,677,102. AUTOMATIC CONTROL FOR WATER-GAS SETS. JOHN HAWLEY TAUSSIG, Philadelphia, Pa., assignor to The U. G. I. Contracting Company, Philadelphia, Pa., a Corporation of Delaware. Filed Sept. 19, 1924. Serial No. 738,570. 7 Claims. (Cl. 137—144.)

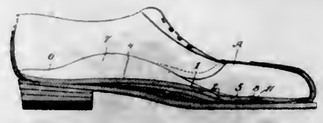
1. Automatic control for water gas sets including rocker arms, reciprocatable bars, master valves operatably connected with the bars, pivotal cam followers, confronting pivotal pawls carried by the bars and connected with the followers, throw-out cams for the followers, pivotal dogs for positioning the bars, and means common to the throw-out cams and dogs and adapted to position the bars.



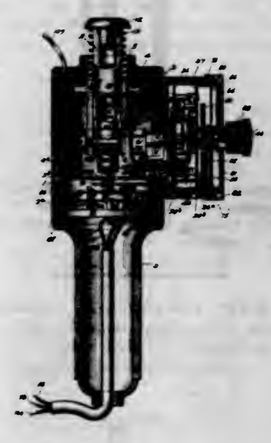
6. In automatic control for the valves of water gas sets a rocker arm, a bar slotted for the accommodation of the rocker arm, pawls pivoted in the slot and having heads for engagement with the top of the bar, and cam mechanism for positioning the pawls.

1,677,103. INTERNAL-COMBUSTION-ENGINE-TEMPERATURE CONTROL. PERCIVAL S. TICE, Chicago, Ill. Filed Jan. 5, 1927. Serial No. 159,065. 6 Claims. (Cl. 123—178.)

1. In combination with an internal combustion engine having a circulatory cooling system comprising a water jacket and a radiator in circulatory relation thereto, valve means for controlling the rate of circulation between the engine jacket and the radiator, means connected for being affected by and responsive to the engine intake manifold pressure with operating connections from said pressure responsive means to said valve means arranged for moving the valve to augment the water circulation through the radiator upon predetermined rise of intake manifold pressure, and to diminish the water circulation through the radiator upon reduction of said pressure.



1,677,104. WHEEL STRUCTURE. RUSSELL J. REANEY, Ottawa, Ontario, Canada, assignor to Reaney Limited, Ottawa, Canada. Filed Jan. 7, 1926. Serial No. 79,821. 6 Claims. (Cl. 301—64.)

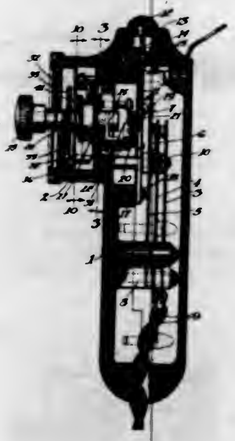


5. A wheel structure comprising a hub, a plurality of complemental skeleton sectors arranged thereabout, a felloe shrunk on the outer periphery of said sectors, said felloe having an annular groove on its inner periphery, formed by a pair of inwardly directed ribs, adapted to receive the outer periphery of said sectors and radially disposed bolts extending through registering perforations in said felloe and said sectors for securely fastening said felloe thereon.

1,677,105. SHOE INNER SOLE. BENJAMIN JOSEPH SILVER, Gloversville, N. Y. Filed Nov. 25, 1924. Serial No. 752,135. 1 Claim. (Cl. 36—71.)

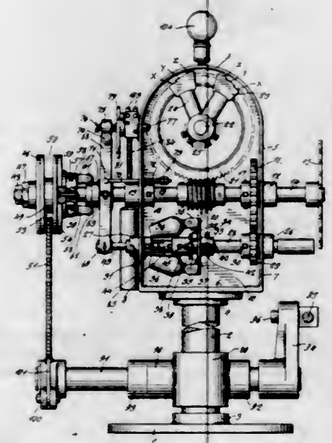
A shoe for preventing or correcting foot abnormalities comprising a permanent integral insole having an upper surface conforming to the sole of a low average normal foot and of such material and construction as to be wholly rigid from the heel to the ball line and maintain itself in its original shape, a member extending under the longitudinal and metatarsal arches and contacting throughout with the upper surface of the insole for increasing the elevation of those parts to prevent or correct abnormalities of the foot, and means to removably secure the member to the insole at its desired position.

1,677,106. TIME SWITCH. JOHN G. H. LIEBEL and EDWIN S. FLARSHEIM, Cincinnati, Ohio. Filed Oct. 10, 1921. Serial No. 506,612. 3 Claims. (Cl. 200—39.)



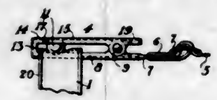
1. In an electric circuit controlling time switch, a self-opening electric circuit controlling switch, a sectional plunger, the sections cooperating unitarily for manually closing said switch and one section thereof releasable from the second for automatically opening said switch at the end of a timing period, clock mechanism for a timing switch control including a clock spring, gearing and ratchet means, the ratchet means connecting said spring and gearing, means connecting with said spring and rotated thereby adapted to engage said releasable plunger section for effecting the switch opening at the end of a timing period, and means for tripping said ratchet mechanism at the end of a timing period disconnecting the spring and clock gearing for effecting a spring release and utilizing its full recoil power for forcibly moving said plunger section for a switch opening while the second of said plunger sections is held depressed.

1,677,107. TIME SWITCH. EDWIN S. FLARSHEIM, Cincinnati, Ohio, assignor of one-half to John G. H. Liebel, Cincinnati, Ohio. Filed Mar. 23, 1925. Serial No. 17,484. 4 Claims. (Cl. 200—39.)



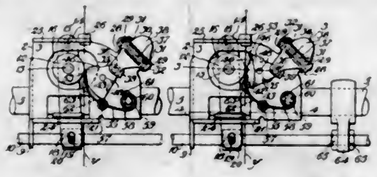
1. In an electric time switch, in combination with the contacts, a clock mechanism, a clock-releasing and a clock-stopping mechanism, a one-piece, spring-normalized plunger positioned between said actuator and said clock mechanism, supporting means for said plunger enabling a manual reciprocal movement to operate the contacts and to operate the clock-releasing mechanism, said means permitting a relatively lateral movement of the plunger, a member on one face of the plunger to

longitudinally engage and disengage the contacts and to laterally disengage said actuator, a member to be tripped on the opposite face of the plunger, a clock-



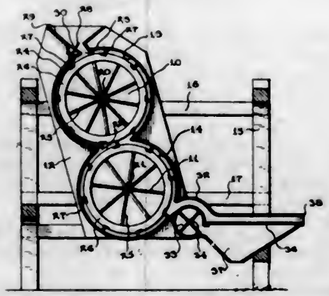
operated tripping member adapted to be set for a timed operated engagement with said member to be tripped, and means for limiting the clock operated movement of said tripping member.

1,677,108. HOIST CONTROLLER. ALFRED E. JOHNSON, Denver, Colo. Filed Oct. 17, 1927. Serial No. 226,774. 8 Claims. (Cl. 192—140.)



1. A controller, for use with hoists, comprising, in combination, a governor adapted to be operatively connected to the hoist so as to rotate at a speed corresponding to the speed of the hoist, and means for applying brakes to the hoist when the speed exceeds a predetermined value, said means comprising a shaft, means for rotating the shaft whenever the governor moves, a member rotatably mounted on the shaft, a clutch mechanism associated with the shaft and member and means controlled by the governor for operating the clutch.

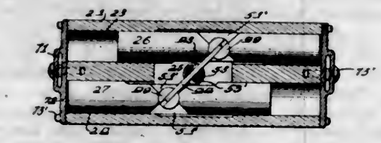
1,677,109. ADJUSTABLE SHOULDER-STRAP STAY. ISAAC KORPER, New York, N. Y. Filed Jan. 16, 1926. Serial No. 81,641. 2 Claims. (Cl. 24—253.)



1. An adjustable shoulder strap stay comprising a pair of elongated horizontally spaced clasps in combination with a tension member adapted to connect the inner ends of said clasps and adapted together with said clasps to function horizontally across the back of the wearer, each of said clasps comprising a base portion adapted to lie flat against the back of the wearer, a hook formation at the outer end of said base portion, a spring pressed gripper portion overlying said base portion and being substantially parallel therewith and closely spaced therefrom and being hinged and proportioned together with the other parts to provide a free cross-runway for a shoulder strap, a smooth rounded formation on the inside outer end of said gripper and being substantially non-abrasive to grip the shoulder strap sufficiently to prevent said clasp from sliding down on the shoulder strap, and also functioning to hold said shoulder strap flat within said runway, said hook formation itself functioning solely with its inner face to prevent the spreading of said shoulder straps.

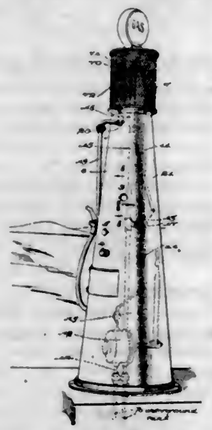
1,677,110. SLUG OR BUNCH CATCHER. THOMAS J. SANDS, Auburn, R. I. Filed Mar. 6, 1924. Serial No. 697,311. 11 Claims. (Cl. 28—64.)

1. In a slug or bunch-catcher, the combination of a bearing-element across which the yarn draws, a movable slug-detecting element arranged in spaced relation with respect to the bearing-element to permit the yarn to draw therebetween, a pivoted lever on which one of said elements is mounted, and means to swing said lever to adjust the relative position of said elements to vary the space therebetween in accordance with the size of the yarn being operated upon.



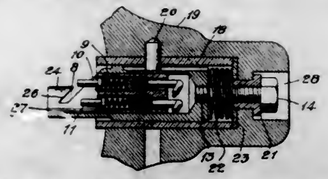
1,677,111. OAT HULLER. ROBERT STANLEY, De Witt, Iowa. Filed May 22, 1926. Serial No. 110,937. 5 Claims. (Cl. 83—36.)

1. An oat huller comprising substantially tangentially arranged crushing and separating cylinders, chambers in which said cylinders are mounted, the chambers be-



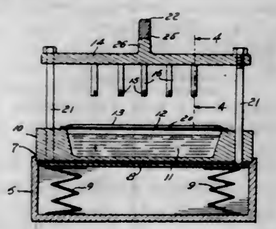
ing in communication at the point of tangency of the cylinders, and means for rotating the cylinders in relative reverse directions at the point of tangency, both cylinders having co-acting members moving in reverse directions at the point of communication between the chambers, those of the crushing cylinder casting the moving grain against those of the separating cylinder and intensifying the separating action as it passes from the chamber of the one to the chamber of the other.

1,677,112. RUBBING MACHINE. SWAN F. ANDERSON, Rockford, Ill., assignor, by mesne assignments, to C. Paul Parker, trustee, Chicago, Ill. Original application filed Sept. 4, 1917, Serial No. 189,563, Patent No. 1,492,659, dated May 6, 1924. Divided and this application filed Aug. 4, 1920. Serial No. 401,232. 22 Claims. (Cl. 121—114.)



17. In a machine of the character disclosed, in combination, a pair of laterally spaced cylinders, a double end piston reciprocable in each cylinder, a member pivotal about an axis intermediate the ends of and between said pistons and having a diametrically disposed guide, said guide having a sliding and rotary connection with each piston, an oscillatory valve coaxial with said member and actuated by movement thereof, and passages between said valve and said cylinders whereby said valve controls the delivery of fluid under pressure to said cylinders for reciprocating the pistons in opposite directions.

1,677,113. LIQUID-VENDING APPARATUS. NEPHI W. CLAYTON, Salt Lake City, Utah. Filed Aug. 17, 1926. Serial No. 129,798. 21 Claims. (Cl. 194—60.)



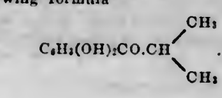
1. Liquid vending apparatus comprising a container, a pump having a pipe for delivering liquid to the container, a container discharge pipe, connected inlet and discharge valves in the respective pipes, a liquid return pipe extending into the container and having connection with the delivering pipe at the inlet valve, and means for turning the inlet valve to positions of communication of the pump with the container or of the pump with said return pipe and correspondingly turning said discharge valve to positions of non-discharge or discharge in reference to the container.

1,677,114. LIGHT SOCKET. OSCAR S. FIELD, Roselle, N. J., assignor, by mesne assignments, to Union Switch & Signal Co., Swissvale, Pa., a Corporation of Pennsylvania. Filed Apr. 6, 1921. Serial No. 459,199. 2 Claims. (Cl. 173—328.)

1. In a light socket for co-operation with an electric bulb having a bayonet base, a socket member open at one side and having oblique slots formed therein to receive the pins of the lamp base, and a spring pressed contact stud insulatively mounted therein, whereby upon pressure being exerted by the contact stud the base of the bulb is forced forwardly and transversely into intimate contact with the wall of the socket member to align the bulb in two planes.

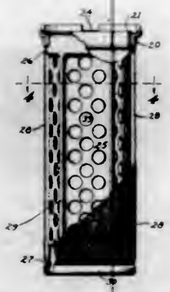
1,677,115. CUTTER FOR ICE CREAM AND SIMILAR PRODUCTS. REUBEN H. ARROWOOD, Los Angeles, Calif., assignor of one-half to Millard M. Mier, Los Angeles, Calif. Filed Feb. 23, 1926. Serial No. 90,177. 2 Claims. (Cl. 107—21.)

1. A device of the character described comprising; a base containing a reservoir with water therein; a perforate plate positioned upon the base above the reservoir adapted to allow the cutting elements to pass therethrough with small clearance into the water; a depressible cutting head guided by the base and carrying cutting elements depending therefrom; and springs adapted to yieldingly resist depression of the cutting head; said cutting elements being adjustably positioned upon the cutting head.



1,677,116. NORMAL AMYLYL RESORCINOL. ALFRED R. L. DOHME, Baltimore, Md., assignor to Sharp & Dohme, Inc., Baltimore, Md., a Corporation of New Jersey. Filed Apr. 29, 1925. Serial No. 26,811. 2 Claims. (Cl. 260—131.)

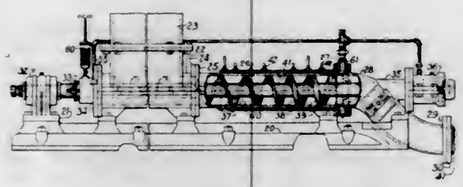
1. A new product comprising normal amylyl resorcinol having the formula



$$C_6H_3(OH)_2.CO.CH_2.CH_2.CH_2.CH_3.$$

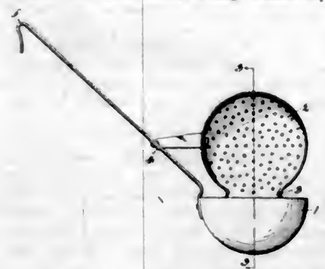
1,677,117. ISO-BUTYRYL RESORCINOL. ALFRED R. L. DOHME, Baltimore, Md., assignor to Sharp & Dohme, Inc., Baltimore, Md., a Corporation of New Jersey. Filed Apr. 29, 1925. Serial No. 26,812. 2 Claims. (Cl. 260—131.)

1. A new product comprising iso-butyryl resorcinol having the following formula



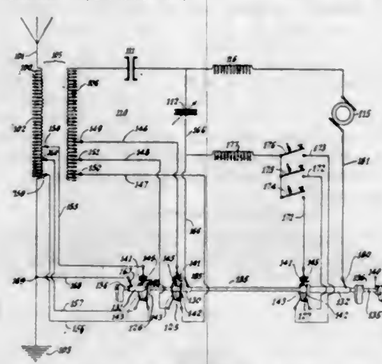
1,677,118. FUEL-FILTERING SCREEN. HENRY FORD, Dearborn, Mich. Filed Feb. 14, 1927. Serial No. 167,911. 2 Claims. (Cl. 210—154.)

1. In a device of the character described, a ring member adapted to be detachably mounted in a filler neck of a tank, a cylindrical guard member having portions thereof beaded outwardly and having a plurality of openings therethrough, means for securing the upper end of said guard member rigidly to said ring member, a cylindrical screen member surrounding said guard member and having its upper end secured to said ring, and a cup member receiving the lower end of the screen and the guard and adapted to form an enclosure therefor and to secure the guard and screen member together.



1,677,119. APPARATUS FOR CONVEYING PULVERIZED MATERIAL. ALONZO G. KINYON, Allentown, Pa., assignor, by mesne assignments, to James W. Fuller, Catasauqua, Pa. Filed July 25, 1925. Serial No. 45,966. 17 Claims. (Cl. 302—47.)

1. Apparatus for conveying pulverulent material comprising a casing, means for admitting material to be conveyed into the casing, a shaft supported for rotation within the casing, means on the shaft for advancing the material through the casing, means for admitting air under pressure into the casing beyond said advancing means to increase the mobility of the material, a bearing for the end of the shaft toward which the material is moved by said advancing means, and means independent of the bearing for supplying air under pressure to flow along the shaft into the casing, the air creating a counterflow preventing material being conveyed from being forced into said bearing.



1,677,120. COMBINATION LADLE AND STRAINER. JOSEPH RUBIN, Brooklyn, N. Y. Filed June 21, 1926. Serial No. 117,540. 1 Claim. (Cl. 65—28.)

A combined ladle and strainer comprising an imperforate ladle bowl of substantially hollow semi-spherical form, a perforate strainer bowl of corresponding form, a neck connecting the bowls at relatively adjacent sides and in laterally offset, relatively spaced position with their open sides in planes substantially at right angles to each other, the said neck being concavely curved

from side to side and convexly curved in a direction between the bowls, and a handle extending from the ladl bowl.

1,677,121. SYSTEM FOR TRANSMITTING ENERGY. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Original application filed Oct. 31, 1917, Serial No. 199,482, Patent No. 1,530,666. Divided and this application filed Jan. 12, 1925. Serial No. 1,744. 10 Claims. (Cl. 250—9.)

1. In a system for transmitting energy, the combination with an alternating current generator including a closed, oscillatory circuit for determining the frequency of the energy produced by the generator and means for energizing the closed, oscillatory circuit, of means for changing the tuning of said circuit in rotational sequence to different frequencies, and devices located outside of said oscillatory circuit and operable manually to modify the energization of said circuit in accordance with a plurality of different messages equal in number to the number of said different frequencies.

1,677,122. TOY AND ADVERTISING NOVELTY. NORMAN E. JOHNSON, Chicago, Ill., assignor to Spencer Thermostat Company, Cambridge, Mass., a Corporation of Massachusetts. Filed Mar. 12, 1923. Serial No. 624,428. 4 Claims. (Cl. 46—40.)

1. A toy comprising a concave disk of two layers of superimposed metal having different coefficients of expansion, and provided with a figure mounted upon the normally convex side of said disk, whereby when the disk is flexed in the direction opposite to the concavity and placed on a surface of a temperature different than its own, the disk will flex to its normal position and jump upwardly from said supporting surface.

Patents Nos. 1,677,123 to 1,677,879.

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 372—No. 3. TUESDAY, JULY 17, 1928. Price—$10 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual indexes, $11.50; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Adverse Decisions in Interference.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,443,681, A. H. Goodwin, Wooden shipping case, decided June 8, 1928, claims 7, 8, and 9.

Pat. 1,557,033, M. B. Kerr, Automatic telephone-exchange system, decided June 5, 1928, claims 8, 9, and 10.

Pat. 1,608,149, C. A. Warden, Coal-mining machine, decided June 8, 1928, claim 6.

Pat. 1,611,677, R. Raines, Storage-battery indicator, decided June 4, 1928, claim 7.

Pat. 1,654,260, R. C. Jones, Deaerator, decided June 8, 1928, claim 1.

Final decisions in interference have been rendered against the following trade-marks:

T. M. 137,945. Wheat flour, The Bennett Milling Co., Grafton, Ohio. Registered December 14, 1920. Decided June 8, 1928.

T. M. 189,456, Leather gloves, John Wanamaker Philadelphia, Philadelphia, Pa. Registered September 16, 1924. Decided June 8, 1928.

T. M. 197,210, Dried fruits, California Prune & Apricot Growers Assn., San Jose, Calif. Registered April 14, 1925. Decided June 21, 1928.

T. M. 219,531, Variously-flavored extracts sold solely for the making of nonalcoholic beverages for the home. Registered October 19, 1926. Decided June 25, 1928.

Adjudicated Patents.

(C. C. A. N. J.) Fagan patent, No. 1,128,120, for electric-light-bulb filament-support wire-inserting machine, *Held* not infringed. *Eisler v. General Electric Co.*, 26 F. (2d) 12.

(C. C. A. N. J.) Fagan and Frech patent, No. 1,220,836, claims 1–5, for electric-light-bulb filament-support wire-inserting machine, *Held* invalid. *Id.*

(C. C. A. Okla.) Shaffer patent, No. 1,486,162, for gauge cocks for testing height of water and pressure of steam in boilers, *Held* not infringed. *J. E. Shaffer Co. v. Smith Separator Co.*, 26 F. (2d) 66.

Notices of Cancellation.

U. S. PATENT OFFICE, *Washington, June 23, 1928.*

The Apex Coal Company, its assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of The Masteller Coal Company, of Keyser, W. Va., to effect the cancellation of the trade-mark registration of The Apex Coal Company, of Fort Smith, Ark., No. 160,128, dated October 17, 1922, and the notice of such proceeding sent by registered mail to the said The Apex Coal Company at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said The Apex Coal Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

U. S. PATENT OFFICE, *Washington, June 23, 1928.*

Alma Wooster, H. W. Patrick, and A. G. Palmer, their assigns or legal representatives, take notice:

An application was filed in this Office by Lysol, Incorporated, of Bloomfield, N. J., for cancellation of trade-mark Registration No. 35,104, issued September 18, 1900, to Caroline W. Patrick, of 22 East Main Street, Norwalk, Ohio. The assignment records of this Office show a transfer of title of this registration to Alma Wooster, H. W. Patrick, and A. G. Palmer. Since the Office has been unable to obtain the post-office address of Alma Wooster, H. W. Patrick, and A. G. Palmer, the proceeding can not be instituted. Therefore notice is hereby given that unless said Alma Wooster, H. W. Patrick, and A. G. Palmer, their assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

Condition of Applications Under Examination at Close of Business July 6, 1928.

(Total number of applications awaiting action, excluding Trade-Mark Division, 107,858; Trade-Mark Division, 1,802. Oldest new case, Sept. 8, 1927; oldest amended, Sept. 29, 1927. The dates given are 1927 except where † indicates 1928.)

Room No.	Divisions, Examiners, and Subjects of Inventions.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Supreme Court of the United States.

HOLLAND FURNITURE COMPANY *v.* PERKINS GLUE COMPANY.

Decided May 12, 1928.

1. PATENTS—PROCESS AND PRODUCT.

Product patents or patents of compositions of matter are distinct from patents of the process by which the product may be produced. The former, if sufficiently described, may exist and be sustained independently of the latter. Hence any narrowing of process claims is not necessarily a narrowing of product claims.

2. SAME—COMPOSITION OF MATTER—DESCRIPTION IN SPECIFICATION.

"It was necessary that the Perkins patent, so far as it is a patent of a composition of matter, should contain some description of the ingredients entering into the composition which would both define the invention and carry it beyond the previous development of the art."

3. SAME—PROCESS AND PRODUCT—EACH MAY BE PATENTABLE.

"A patentable process is a method of treatment of certain materials to produce a particular result or product. *Cochrane* v. *Deener*, 94 U. S. 780. The description of one does not necessarily embrace the other. Either or both may be patentable."

4. SAME—PRODUCT—DESCRIPTION BY PROCESS OF PRODUCING.

"There can be no description of a composition of matter without some designation of its ingredients. If the selection or choice or designation of an essential ingredient of a composition of matter may be referred to, inaccurately as we think, as a process, the 'process' is one inseparable from the composition itself. The description of one necessarily limits the other. Hence the patent of the product cannot extend beyond a product having the designated ingredient."

5. SAME—PRODUCT—DEFINED BY FUNCTION—LIMITATION OF CLAIMS.

"But an inventor may not describe a particular starch glue which will perform the function of animal glue and then claim all starch glues which have those functions, or even all starch glues made with three parts of water and alkali, since starch glues may be made with three parts of water and alkali that do not have those properties."

6. SAME—FUNCTIONAL CLAIMS.

"That the patentee may not by claiming a patent on the result or function of a machine extend his patent to devices or mechanisms not described in the patent is well understood."

7. SAME—PRODUCT—DESCRIBED BY FUNCTION.

"The attempt to broaden product claims by describing the product exclusively in terms of its use or function is subject to the same vice as is the attempt to describe a patentable device or machine in terms of its function. As a description of the invention it is insufficient and if allowed would extend the monopoly beyond the invention."

ON WRIT of certiorari to the United States Circuit Court of Appeals for the Sixth Circuit.

Mr. Charles E. Hughes and *Mr. William H. Davis* for Holland Furniture Company.

Mr. Gorham Crosby for Perkins Glue Company.

Mr. Justice STONE delivered the opinion of the Court.

Respondent brought this suit in the district court for western Michigan, to enjoin infringement of the Perkins reissued Patent No. 13,436. So much of the judgment for the defendant, petitioner here, as held the product claims of the patent not infringed by respondent's product, was reversed by the court of appeals for the sixth circuit. *Perkins Glue Co.* v. *Holland Furniture Co.*, 18 Fed. (2d) 387. The court of appeals for the seventh circuit, *Perkins Glue Co.* v. *Gould Manufacturing Co.*, 292 Fed. 596, and the court of appeals for the second circuit, *Perkins Glue Co.* v. *Standard Furniture Co.*, 287 Fed. 109, had previously held the patent not infringed by the same product.[1] This Court granted certiorari. 275 U. S. —.

The patent is entitled "A patent for starch glue and a method of making it." Perkins was the first to make successfully a starch glue suitable for wood veneering and similar uses. Glue made from animal substances, known as animal glue, has long been in common use as an adhesive and is especially adapted to use in wood veneering, in which thin sheets or layers of wood are fastened together by the use of an adhesive bonding material. The characteristic qualities of animal glue, making it peculiarly suitable for that use, are a low absorptiveness of water and a consequent high degree of fluidity, facilitating its application by mechanical means, high elasticity and great tensile strength. A high water content, characteristic of other adhesive preparations, delays drying, warps the wood and when dry leaves too little bonding material to secure the requisite strength. In practice animal glue is made suitably fluid for use in wood veneering by the addition of a critically small amount of water, three parts by weight to one of glue.

Long before Perkins's experiments, adhesive paste or mucilage made from starch was well known. The Gerard patent (1874, Belgian, No. 34,869) and the Dornemann patent (1893, French, No. 232,781) described a process of producing an adhesive or glue by dissolving starch in a solution of caustic alkali. The suitability of starch as a glue base in this and other processes depends upon its water absorptive quality which varies with the starch of different plants, and under varying conditions with the starch of the same plant. Because of their high water absorption, glues produced from starch, be-

[1] Other cases involving the patent in suit are *Perkins Glue Co.* v. *Solva Waterproof Glue Co.*, 283 Fed. 792; *Solva Waterproof Glue Co.* v. *Perkins Glue Co.*, 251 Fed. 64; *Perkins Glue Co.* v. *Hood*, 279 Fed. 454; *Perkins Glue Co.* v. *Holland Furniture Co.*, 279 Fed. 457; *Perkins Glue Co.* v. *Standard Furniture Co.*, 279 Fed. 458; *Perkins Glue Co.* v. *Gould Mfg. Co.*, 280 Fed. 728; *Perkins Glue Co.* v. *Crandall Panel Co.*, 294 Fed. 135.

fore Perkins, were too viscous and hence required too large an admixture of water for use successfully as a wood veneering glue. The controlling difficulty to be overcome in the development of a starch glue suitable for veneering was what may be called the normally large water absorptive quality of starch, corresponding to the viscosity of the resultant glue, a reduction of the one effecting a reduction in the other.

It has long been known that the viscosity or the water absorptive quality of starches may be reduced by chemical treatment known as degeneration in which changes in the arrangement of the atoms in the starch molecules are effected by use of a catalytic agent. In 1906 Gerson & Sachse (German, No. 167,275) patented a process for the preparation of a starch base for glue manufacture by degenerating starch by the use of oxidizing agents in the presence of an alkali. But the resultant glue from this and other processes was not suitable for use in the wood-working trades. To make it sufficiently fluid for convenient use required too large an admixture of water, four parts or more to one of glue, so that the wood was warped and when dried the glue was not sufficiently tenacious to be used successfully as a substitute in that manufacture for animal glue.

The Perkins patent described a process for making glue from starch and a resultant product "as good as animal glue," "which will have the great practical advantage that it may be practically used for the same purposes as the best animal glue." The process consisted of two steps. The basic material was a suitable raw starch, preferably starch made from the cassava root, and the first step was concerned with its conversion or degeneration so as to make a "glue base" with lower water absorptivity than ordinary untreated starch. This was to be accomplished by combining the basic raw material with oxidizing agents and subjecting them to heat. The method was that described in the Gerson & Sachse patent and was not new. The characteristic feature of this first step as described by Perkins was not the manner of degeneration but its degree. The degeneration of the raw cassava starch was to be carried to a point just short of its conversion into dextrine, a soluble starch, which, because of that property is of little value in glue manufacture. The patent in its reissued form stated with precision the particular degree to which the water absorptive properties of the starch might be reduced in the preparation of a suitable glue base and described with particularity tests (the "9 to 1 boil up" test and the 170° test) for ascertaining when that stage of degeneration had been reached.

The second step in the process consisted in the treatment of the glue base, as prepared by the first step, by the addition of three parts or less of water by weight to one of the glue base and a specified percentage of cellulose solvent such as caustic potash. This process was described by the Gerard and Dornemann patents and was not new. The fundamental ideas of the process patent might be expressed in simple terms as follows: Glue made by dissolving ordinary starch in an alkaline solution of three parts of water (the quantity with which the wood-working industry is accustomed) is too thick. Glue made from over-degenerated starch is too weak. Between the extremes there is a range of degeneration within which the starch base, when dissolved in caustic potash, will produce glue of ample fluidity without loss of tensile strength or other qualities characteristic of animal glue.

The product claims, of which more will be said presently, was for the resultant glue, in substance for a starch glue having substantially the properties of animal glue.

The patent has 38 claims, divisible into groups. One group covers the process of producing the degenerated starch glue base, the first step process, already described. One group embraces the glue base product produced by the first step process. Another group includes the process of dissolving the starch base, by the use of alkaline solvents, the second process step; another, the combination of the two process steps and finally the group with which we are now concerned is based upon the ultimate product, the glue itself. Three of the claims embraced in this ultimate product group are the only ones now in suit, 28, 30, and 31. They are as follows:

28. A glue comprising cassava carbohydrate rendered semi-fluid by digestion and having substantially the properties of animal glue.

30. A wood and fiber glue formed of a starchy carbohydrate or its equivalent by union therewith of about 3 parts or less by weight of water and alkali metal hydroxid.

31. A wood and fiber glue containing amylaceous material as a base dissolved without acid in about three parts of water or less, and being viscous, semifluid and unjellified.

Of these the broadest in terms is No. 28, but it appears that a glue thus composed will not have "substantially the properties of animal glue" unless containing only the small amount of water specified in claim 30. We may take it also that an article which is "wood and fiber glue" as described in the specifications will be "viscous, semifluid and unjellified" as described in claim 31, and will also have substantially the properties of animal glue as specified in claim 28, so that in point of substance the product claims in suit are for a starch glue which, combined with about three parts or less by weight of water will have substantially the same properties as animal glue.

With respect to the other or nonproduct groups of claims respondent, in consequence of earlier litigation, has filed a disclaimer. Brief reference must be made to both the litigation and the disclaimer.

The respondent brought an infringement suit in the northern district of Illinois against the Solva Company, asserting an infringement of claims in each of the five groups by the product of that company, comprising in part at least a raw cassava starch glue base which, for present purposes, may be taken as identical with the product of the petitioner. Upon appeal to the seventh circuit court of appeals (*Solva Waterproof Glue Co.* v. *Perkins Glue Co.*, 251 Fed. 64), that court rendered an opinion, in some respects obscure, which has given rise to widely differing views as to its effect. In considering the present question we may assume that the court below was right in saying of that opinion,

It held that the claims to the first step of the process, and to the product resultant therefrom—the glue base—were anticipated by Gerson & Sachse, and hence that the glue base, as a product and as the foundation of the second step in Perkins's process, was an old and unpatentable product. It found that Perkins's glue had the novelty and merit claimed for it. It sustained the claims to the compound two-step process, and to some extent at least, the claims to the ultimate product, and did not sustain the claims to the second-step process. No attention was paid to any distinctions in the different kinds of solva base that were involved. Its treatment of the process claims to the second-step process is open to the interpretation—and we think it the right one—that the court considered those claims broad enough to cover the specified treatment as applied to any starch base however high in viscosity, and employing water to any extent, and even though the product would not approximate Perkins's glue; and hence thought them invalid. If that view is correct they were too broad. At the conclusion of its opinion the court said that the decree "below sustaining the claims for the glue base and [first step] product, and for the so-called second step as such, is reversed, and that part of it which upholds the claims of the patent for the final process and the resultant product is affirmed."

We may assume also the correctness of the view of the court below that the effect of this decision was to sustain broadly the claim to the resultant product, the glue described in claims 28, 30 and 31, as distinguished from the intermediate product which was the resultant of the first step and was found to be old, and that the product claims thus upheld included a starch glue having substantially the properties of animal glue whether made by the employment of both steps of the compound process or not.

As a result of this decree the plaintiff filed a disclaimer of all the claims for the glue base itself and all those for the first process step. It also disclaimed from the second process step

any process of making glue, excepting where the starch or starchy product or carbohydrate subjected to the process, is degenerated to the extent described [in the patent], whereby the process results in the good as animal glue described

in the patent. Again we assume that the court below was right in saying that the effect of the disclaimer as to the second step claims was to limit them to a process where the material with which the second process step begins is any starch in fact degenerated to the point necessary to produce the result at which the second process step is aimed, whether the degeneration is effected by the first step or other artificial process or the suitable starch is a natural agricultural product, sufficiently degenerated without chemical treatment and purchaseable in commercial quantities.

The second step process as narrowed by the disclaimer consists in the selection of a starch suitably degenerated, no matter how, and the treatment of it with an alkali as in the Gerard and Dornemann patents, but by the terms of the disclaimer only such starches are suitable, that is to say, fall within the range of selection, which, when treated by the second step process, will produce a glue as good as animal glue for veneering. The use or function of the resultant glue is made the measure or test of the choice of its ingredients.

Apparently no brand of raw starch which Perkins could procure in commercial quantities when conducting his experiments could be used as a glue base without the artificial degeneration of his first step. But it appears that the defendant has been able to purchase in such quantities a starch which is a natural agricultural product having a low water absorptiveness and other characteristics making it suitable for use as a glue base. Beginning with this starch the petitioner employs what is in effect so much of Perkins's second step as is old by combining the starch with three parts of water or less and approximately four per cent of caustic soda. The mixture, when agitated and heated, produces a glue which petitioner says is heavier than animal glue, but which is used commercially as a substitute for it and which, for present purposes, may be taken as having substantially the qualities of animal glue. Whether the result may be attributed wholly to reduced viscosity of the starch, due to changed methods of cultivation or manufacture, or in some measure to peculiarities of petitioner's dissolving operation does not appear.

Petitioner contends that the raw starch selected and used by it in the manufacture of its product has high water absorptive qualities above the range defined by the patent, not satisfying the tests laid down in the patent for ascertaining whether the appropriate stage for degeneration has been reached for the employment of the second step. As the process claims are not before us this contention has bearing only upon the broad product claims which are the subject of the present suit. It is the contention of the respondent, and the court below held, that its product claims 28, 30, and 31, concededly broad enough, as stated, to cover the petitioner's product, are valid and that all starch veneering glues, at least when mixed with three parts of water or less, having substantially the properties of animal glue, infringe the patent whether made by Perkins's process or otherwise.

We take it, as the respondent argues, that product patents or patents of compositions of matter are distinct from patents of the process by which the product may be produced. The former, if sufficiently described, may exist and be sustained independently of the latter. *Rubber Company* v. *Goodyear*, 9 Wall. 788; *Leeds & Catlin* v. *Victor Talking Machine Co.*, 213 U. S. 301, 318; 144 O. G. 1089. Hence any narrowing of process claims is not necessarily a narrowing of product claims. So much of the claim as is saved from the second step of Perkins's process after the disclaimer and referred to here as a process claim is, in fact, only the choice of an ingredient of the glue product, independently of the chemical process of producing it. It was necessary that the Perkins patent, so far as it is a patent of a composition of matter, should contain some description of the ingredients entering into the composition which would both define the invention, *Grant* v. *Raymond*, 6 Pet. 218, 247; *Wood* v. *Underhill*, 5 How. 1, 5; *Tyler* v. *Bos-*

ton, 7 Wall. 327, 330; *Béné* v. *Jeantet*, 129 U. S. 683; 47 O. G. 407; *Howard* v. *Detroit Stove Works*, 150 U. S. 164. 167; 65 O. G. 1765, and carry it beyond the previous development of the art. Had Perkins claimed only a glue made of starch dissolved in three parts of water with an alkali, he would not have advanced beyond the Gerard and Dornemann patents and subsequent practice. As his patent discloses, it was well known that ordinary starch treated in this manner produced a thick glue unsuitable for wood veneering if made with three parts of water, and a thin glue not strong enough for wood veneering if made with four parts or more of water.

Perkins's real invention, apart from the combination of his first and second step processes, with which we are not now concerned, was that by the use of a particular kind of starch as an ingredient a new composition of matter was made for which he claimed his patent. Some description of this product was obviously essential to patentability and Perkins in the reissued patent sought to meet this necessity in two ways. One was to describe the product by describing its characteristic ingredient with particularity. If we look at the specifications, as we may, he did this by indicating the range of water absorptivity, or stated in another way the degeneration, of the starch ingredient in Perkins's glue. As described the starch ingredient fell short of dextrine or soluble starch, but was of lower water absorptivity than petitioner's glue base. The glue made of this ingredient within the specified range was a new product. This was invention of a new composition of matter and was the real contribution Perkins made to the art. As such it was entitled to the protection of a patent but as thus described and limited petitioner's product does not infringe.

To so describe the product is not, as the court below seemed to think, a limitation of product claims by reference to process claims. A patentable process is a method of treatment of certain materials to produce a particular result or product. *Cochrane* v. *Deener*, 94 U. S. 780. The description of one does not necessarily embrace the other. Either or both may be patentable. But here we are concerned only with the choice of one ingredient of the product. There can be no description of a composition of matter without some designation of its ingredients. If the selection or choice or designation of an essential ingredient of a composition of matter may be referred to, inaccurately as we think, as a process, the "process" is one inseparable from the composition itself. The description of one necessarily limits the other. Hence the patent of the product cannot extend beyond a product having the designated ingredient. See *Powder Co.* v. *Powder Works*, 98 U. S. 126. 137; 15 O. G. 289; *Béné* v. *Jeantet*, *supra*; *Goodyear Dental Vulcanite Co.* v. *Davis*, 102 U. S. 222; 19 O. G. 543.

Perkins's second way of describing the starch ingredient of his product was in terms of the use or function of the product itself. The chosen starch ingredient was to possess such qualities that when combined with three parts of water and with alkali it would produce a product "as good as animal glue" for veneering, or having the properties of animal glue, these properties being described in terms of its functions. The ingredient was thus described, not in terms of its own physical characteristics or chemical properties or those of the product, but wholly in terms of the manner of use of the product. Any glue made of a starch base, whatever its composition, water absorptiveness or other properties, combined with alkali and three parts of water, which has substantially the properties of animal glue, or is as good as animal glue for use in the wood-working trades, is claimed as Perkins's glue. Thus the inventor who advances the art by discovery that a certain defined material may be combined in a product useful for certain purposes seeks to extend his monopoly to any product which may subsequently be made from materials not within any defined range described in the patent, but which is likewise useful for those purposes.

But an inventor may not describe a particular starch glue which will perform the function of animal glue and then claim all starch glues which have those functions, or even all starch glues made with three parts of water and alkali, since starch glues may be made with three parts of water and alkali that do not have those properties. See *The Incandescent Lamp Patent*, 159 U. S. 465, 472; 73 O. G. 1289. Revised Statutes, section 4888, requires that the patent shall contain a description of the invention—

> and of the manner and process of making, constructing, compounding, and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art or science to which it appertains, or with which it is most nearly connected, to make, construct, compound, and use the same.

One attempting to use or avoid the use of Perkins's discovery as so claimed and described functionally could do so only after elaborate experimentation. Respondents say that laboratory tests would be insufficient and that—

> the best and probably the only satisfactory test is to try it out on a large scale in a furniture or veneering gluing factory.

A claim so broad, if allowed, would operate to enable the inventor who has discovered that a defined type of starch answers the required purpose to exclude others from all other types of starch and so foreclose efforts to discover other and better types. The patent monopoly would thus be extended beyond the discovery and would discourage rather than promote invention. *The Incandescent Lamp Patent*, *supra*, 476. That the patentee may not by claiming a patent on the result or function of a machine extend his patent to devices or mechanisms not described in the patent is well understood. *O'Reilly* v. *Morse*, 15 How. 62, 112, 113; *Knapp* v. *Morss*, 150 U. S. 221, 228; 65 O. G. 1593; *Electric Signal Co.* v. *Hall Signal Co.*, 114 U. S. 87, 31 O. G. 515; *Westinghouse* v. *Boyden Power Brake Co.*, 170 U. S. 537, 83 O. G. 1067; *Mitchell* v. *Tilghman*, 19 Wall. 287; *Fuller* v. *Yentzer*, 94 U. S. 288, 11 O. G. 551; *Ridson Iron & Locomotive Works* v. *Medart*, 158 U. S. 68, 71 O. G. 751. Respondent argues that this principle, applicable to machine patents, is inapplicable to a patent for the composition of matter which is always a result of a process and concededly is patentable as such, but the attempt to broaden product claims by describing the product exclusively in terms of its use or function is subject to the same vice as is the attempt to describe a patentable device or machine in terms of its function. As a description of the invention it is insufficient and if allowed would extend the monopoly beyond the invention. See *Béné* v. *Jeantet*, *supra*; *Cochrane* v. *Badische Anilin & Soda Fabrik*, 111 U. S. 293; 27 O. G. 813; *The Incandescent Lamp Patent*, *supra*; *Matheson* v. *Campbell*, 78 Fed. 910; 79 O. G. 686; *American Adamite Co.* v. *Mesta Machine Co.*, 18 Fed. (2d) 538.

So far as respondent seeks to enlarge its product patent by subordinating the patent description of the starch ingredient which the patentee used, and which respondent does not use, to the vague and indefinite description in the three product claims now in suit, the patent is subject to the same vice.

Reversed.

1,266,879, E. F. Suter, Electrical heating apparatus for permanently-waving hair, filed May 19, 1928, D. C., N. D. Ohio, E. Div. Doc. 2587. *Eugene, Ltd.* v. *Le Mur Co.*

1,271,529, M. C. Hopkins, Acoustic device, filed May 17, 1928, D. C., N. D. Calif. (San Francisco), Doc. E 2122, *Lektophone Corp.* v. *K. K. Jensen (Jensen Radio Mfg. Co.)*. Same, filed July 13, 1927, D. C. Dela. (Wilmington), Doc. E 653 and E 666, *Lektophone Corp.* v. *Algonquin Electric Co., Inc.* Patent held valid and infringed May 5, 1928.

1,272,883, H. Adelmann, Ham boiler, D. C. Colo. (Denver), Doc. 8036, *The Ham Boiler Corp.* v. *The Liberty Packing & Provision Co. et al.* Dismissed for want of prosecution May 2, 1928.

1,277,713, L. Goldstone, Boot or shoe counter reinforce, filed May 12, 1928, D. C., W. D. N. Y., Doc. E 1307–G, *O. Schindler* v. *A. G. Stevenson & Co., Inc.*

1,290,060, A. J. Boland, Enameling furnace, filed May 14, 1928, D. C., N. D. Ohio, W. Div., Doc. E 682, *A. J. Boland* v. *Surface Combustion Co.*

1,337,275, Sandt, Walz & Stahl, Platform and mud guard, filed Jan. 26, 1928, D. C. Minn. (St. Paul), Doc. 1031, *S. W. S. Co.* v. *Ford Motor Co.*

1,396,397, W. R. Borst, Sewage treatment, filed May 14, 1928, D. C. Dela. (Wilmington), Doc. E 682, *W. R. Borst* v. *Simplex Ejector & Aerator Corp.*

1,417,416, C. W. Schoppe, Automobile accessory, D. C., N. D. Calif. (San Francisco), Doc. E 1545, *C. W. Schoppe* v. *A. Concy et al.* Patent held valid (notice dated May 16. 1928).

1,432,873, O. Kroehle, Signal lens, D. C., N. D. Ohio, E. Div., Doc. 2310, *The Protex Signal Co.* v. *The Guide Motor Lamp Co.* Design Patent 58,916 and claims 3, 6, and 10 of Patent 1,432,873 held valid and infringed (notice dated May 16, 1928).

1,447,090, J. E. Langsdorf, Necktie, appeal filed May 14, 1928, C. C. A., 2d Cir., Doc. 10064, *Franc-Strohmeyer & Cowan, Inc.*, v. *A. Siegman, Inc.*

1,460,716, B. F. Greer, Book-form savings bank, filed Mar. 24, 1928, D. C. Ariz. (Phoenix), Doc. E 176, *Bankers Utilities Co., Inc.*, v. *First National Building & Loan Ass'n.* Same, filed May 14, 1928, D. C., N. D. Ohio, E. Div., Doc. 2585, *Bankers Utilities Co., Inc., et al.* v. *The Bankers Savings & Credit System Co.*

1,476,648, Sage & Boughner, Sand-reel-operating mechanism, filed May 18, 1928, D. C. Kans. (Wichita), Doc. E 503–N, *R. W. Sage et al.* v. *Parkersburgh Rig & Reel Co.*

1,485,552, E. F. Colby, Fan and pulley therefor, filed Apr. 23, 1928, D. C. Minn. (St. Paul), Doc. E 1144, *E. F. Colby* v. *Ford Motor Co.*

1,520,458, F. E. Vaughn, Cable drive, filed May 15, 1928, D. C., E. D. Ill. (Danville), Doc. 107–D, *F. E. Vaughn* v. *American Can Co.*

1,532,635, J. E. Osbun, Ceiling ventilator, filed May 2, 1928, D. C., S. D. Calif. (Los Angeles), Doc. N–86–H, *J. E. Osbun* v. *United Building Specialty Co. et al.*

1,547,249, G. L. Williams, Building construction, filed May 14, 1928, D. C., W. D. N. Y., Doc. E 1308–G, *Structural-Gypsum Corp. et al.* v. *U. S. Gypsum Co.*

1,561,836, N. Q. Donnelly, Apron, filed Mar. 23, 1928, D. C., E. D. Pa., Doc. 4359; *Donnelly Garment Co.* v. *H. Snyder.* Same, filed Apr. 26, 1928, D. C., E. D. Pa., Doc. 4385, *Donnelly Garment Co.* v. *M. I. Wolfson.* Doc. 4387, *Donnelly Garment Co.* v. *M. Samulovitz.* Same, filed May 5, 1928, D. C., E. D. Pa., Doc. 4407, *Donnelly Garment Co.* v. *E. Reisman et al.* Same, filed May 16, 1928, D. C., S. D. N. Y., Doc. E 45/166, *Donnelly Garment Co.* v. *Calrose Mfg. Corp.* Same, filed May 17, 1928, D. C., S. D. N. Y., Doc. E 45/168, *Donnelly Garment Co.* v. *A. Negrin.* Same, filed Apr. 25, 1928, D. C., S. D. N. Y., Doc. E 45/96, *Donnelly Garment Co.* v. *J. Nathan et al. (Naco Apron Mfg. Co.)*. Patent held valid and infringed May 18, 1928.

1,561,925. A. T. Hespe, Thermometer, filed May 19, 1928, D. C., W. D. N. Y., Doc. 1311-G, *A. T. Hespe* v. *Corning Glass Works, Inc.*

1,570,368, C. C. Zeh, Decorating glass surfaces, filed May 10, 1928, D. C., S. D. N. Y., Doc. E 45/156, *Zeh, Inc.* v. *L. Sborigi (G. Rae & Co.)*.

1,584,756, M. F. Dougherty, Method of and apparatus for moving forms used in constructing monolithic sewers, etc., filed Oct. 25, 1927, D. C. Minn. (St. Paul). Doc. 972, *Monolithic Form Device Co.* v. *Thornton Bros.*

1,590,409, H. Bender, Sport cap, D. C. Nebr. (Omaha), Doc. E 849, *Omaha Cap Mfg. Co.* v. *Omaha Hat Factory*. Decree for plaintiff, May 19, 1928.

1,594,490, E. C. Bertolet, Method of dyeing bone and the product thereof, filed Apr. 16, 1928, D. C., E. D. Pa., Doc. 4379, *G. K. Hale Mfg. Co.* v. *Hafleigh & Co. et al.*

1,601,575, L. C. Marshal, Piston packing, filed May 1, 1928, D. C., E. D. Pa., Doc. 4389, *The Simplex Piston Ring Co. of America, Inc.*, v. *G. Henderson (The Auto Gear & Parts Co.)*. Doc. 4391, *The Simplex Piston Ring Co. of America, Inc.*, v. *L. R. Remington*. Doc. 4393, *The Simplex Piston Ring Co. of America, Inc.*, v. *R. Palm (Miracle Piston Ring Co.)*. Same, D. C., S. D. N. Y., Doc. E 45/117, *The Simplex Piston Ring Co. of America, Inc.*, v. *M. Weissberger (Triangle Auto Parts Co.)*. Dismissed May 19, 1928. Same, D. C., N. D. Ohio, E. Div., Doc. 2563, *The Simplex Piston Ring Co. of America, Inc.*, v. *The Automotive Bearing & Equipment Co.* Dismissed May 12, 1928.

1,603,207, T. Huston, Paper bag and seal, D. C., N. D. Ga. (Atlanta), Doc. E 434, *T. Huston* v. *C. O. Barrett (Barrett Potato Chip Co.)* Decree and injunction against defendant (notice dated May 16, 1928).

1,615,147, R. M. Taylor, Combined muffler and cut-out, filed June 17, 1927, D. C., S. D. Ind. (Indianapolis), Doc. 1056, *J. E. Goerlich et al.* v. *H. McGinnis et al.* Decree for plaintiff May 9, 1928.

1,616,960, A. T. Johanson, Heater, filed May 17, 1928, D. C., N. D. Ind. (Ft. Wayne), Doc. E 62, *Combination Boiler Co.* v. *Bass Foundry & Machine Co.*

1,628,989, A. E. Loewy, Automatic controlling mechanism, filed Mar. 30, 1928, D. C., E. D. Pa., Doc. 4365, *Liberman Mfg. Co.* v. *Textile Machine Works.*

1,660,511, A. O. Jaeger, Catalytic apparatus, filed Mar. 30, 1928, D. C., E. D. Pa., Doc. 4367, *The Sheldon Co.* v. *Pennsylvania Salt Mfg. Co.*

Re. 13,436, F. G. Perkins, Glue and method of making, filed Apr. 26, 1928, D. C., S. D. Ind. (Indianapolis), Doc. 1139, *Perkins Glue Co.* v. *Showers Bros. Co.*

Des. 69,887, F. W. Horstmann, Fur, D. C., S. D. N. Y., Doc. E 40/80, *F. W. Horstmann et al.* v. *Brickner & Bernfeld, Inc., et al.* Patent held valid and infringed May 19, 1928. Doc. E 40/130, *F. W. Horstmann et al.* v. *J. Montag et al. (Montag & Ettelman)*. Decree as above. Doc. E 40/270, *F. W. Horstmann et al.* v. *J. Schwartz et al.* Decree as above.

Des. 74,586, M. Stettner, Radio cabinet or similar article, D. C., S. D. N. Y., Doc. E 45/3, *M. Stettner et al.* v. *S. Rappoport (Ideal Radio Cabinet Mfg. Co.)*. Patent held valid and infringed May 14, 1928.

T. M. 218,562, M. Becker Co., Beverages and various fruit flavors, filed May 21, 1928, D. C., W. D. N. Y., Doc. 1312-G, *E. M. Becker et al. (Miller Becker Co.)* v. *Eagle Bottling Works of Buffalo, Inc.*

Disclaimers.

1,208,287.—Whereas, on October 29, 1925, there was filed in this case a disclaimer to claims 5, 6, 7, 8, 21, and 23, but in the notice of this disclaimer as published in the OFFICIAL GAZETTE of November 17, 1925, the numbers of the claims disclaimed were given as 40, 72, and 73, now therefore this corrective notice of disclaimer is published.

1,208,287.—*Samuel E. Carlin*, Chicago, Ill. CALCULATING MACHINE. Patent dated December 12, 1916. Disclaimer filed October 29, 1925, by the assignee by mesne assignments, *John T. Underwood*.

Hereby enters this disclaimer to claims numbered 5, 6, 7, 8, 21, and 23, the right to said claims having been established by William S. Gubelmann in interference proceeding No. 43,578.

1,208,288.—Whereas, on October 29, 1925, there was filed in this case a disclaimer to claims 40, 72, and 73, but in the notice of this disclaimer as published in the OFFICIAL GAZETTE of November 17, 1925, the numbers of the claims disclaimed were given as 5, 6, 7, 8, 21, and 23, now therefore this corrective notice of disclaimer is published.

1,208,288.—*Samuel E. Carlin*, Chicago, Ill. CALCULATING MACHINE. Patent dated December 12, 1916. Disclaimer filed October 29, 1925, by the assignee, by mesne assignments, *John T. Underwood*.

Hereby enters this disclaimer to claims numbered 40, 72, and 73, the right to said claims having been established by William S. Gubelmann in interference proceeding No. 43,554.

1,290,557.—*Calvin H. Hill*, Oak Park, Ill. SEAT HINGE FOR ARTICLES OF FURNITURE. Patent dated January 7, 1919. Disclaimer filed June 25, 1928, by the assignee by mesne assignments, *Heywood-Wakefield Company*.

Hereby enters this disclaimer to claim 1 of Patent No. 1,290,557, which is in the following words:

"In an article of furniture, a framework, a stationary bracket attached thereto, a swinging seat supporting bracket pivotally held on said stationary bracket, a pair of rollers carried by said swinging bracket on diametrically opposite sides of its pivotal axis, and a pair of surfaces carried by said stationary bracket curved concentrically with the pivotal axis of said swinging bracket and in contact throughout their length with said rollers."

1,585,224.—*Clive Morris Alexander*, New York, N. Y. PROCESS OF AND APPARATUS FOR DISTILLING OILS. Patent dated May 18, 1928. Disclaimer filed June 28, 1928, by the patentee.

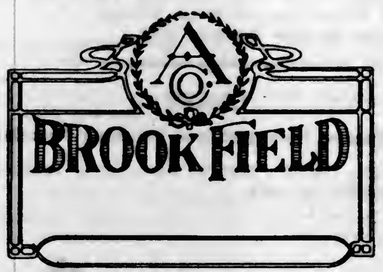
Hereby enters this disclaimer to the subject matter of claims 3, 5, and 7 of the said specification excepting when the oil and vapor are maintained and kept in intimate contact throughout their concurrent flow while being subjected to heat or while being heated.

TRADE-MARKS

OFFICIAL GAZETTE, JULY 17, 1928.

[VOL. 372. No. 3.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.



Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1.

Raw or Partly-Prepared Materials.

Ser. No. 264,550. AUERBACH COMPANY, Salt Lake City, Utah. Filed Apr. 9, 1928.

For Cotton Used as a Filling for Comforters, Quilts, Mattresses, Pads, Cushions, and Similar Articles.
Claims use since Jan. 1, 1927.

Ser. No. 264,893. LARAMIE COUNTY CERTIFIED SEED POTATO GROWERS ASSOCIATION, Egbert, Wyo. Filed Apr. 16, 1928.

No claim is made to the words "Grown Dry" apart from the mark as shown in the drawing.
For Seed Potatoes.
Claims use since Feb. 16, 1928.

Ser. No. 265,644. SOPHIE J. HILSCHER, doing business as A. J. Hilscher, Baltimore, Md. Filed Apr. 30, 1928.

The portion of the mark in script type represents the trade or business signature of applicant.
For Plants and Flowers.
Claims use since Jan. 4, 1928.

Ser. No. 266,067. WHITNEY-ECKSTEIN SEED CO., Buffalo, N. Y. Filed May 7, 1928.

VICTORIA - PARK

For Lawn Grass and Field Seeds.
Claims use since Apr. 10, 1928.

Ser. No. 266,289. WEST VIRGINIA SOUTHERN COAL COMPANY, Huntington, W. Va. Filed May 11, 1928.

Exclusive use of the word "Coal" is disclaimed.
For Coal.
Claims use since Mar. 24, 1928.

CLASS 2.

Receptacles.

Ser. No. 263,628. THE WHITE TAR COMPANY OF NEW JERSEY, INC., Kearny, N. J. Filed Mar. 22, 1928.

HANG-IN

For Garment Bags of Paper or Cloth.
Claims use since about Jan. 9, 1928.

Ser. No. 265,413. SHERIDAN-CLAYTON PAPER CO., St. Joseph, Mo. Filed Apr. 25, 1928.

The word "Kraft" does not form a part of the registration sought apart from the mark shown in the drawing.
For Paper Bags.
Claims use since 1887.

Ser. No. 265,996. SUPERIOR PAPER PRODUCTS COMPANY, Carnegie, Pa. Filed May 5, 1928.

SUPER-KRAFT

The word "Kraft" is disclaimed apart from the mark as shown.
For Corrugated-Paper Shipping Containers.
Claims use since Apr. 16, 1928.

CLASS 3.

Baggage, Animal Equipments, Portfolios, and Pocketbooks.

Ser. No. 263,964. THE MIDLAND COMPANY, South Milwaukee, Wis. Filed Mar. 29, 1928.

Red-Head

For Jointed Clips for Harness.
Claims use since Dec. 29, 1927.

Ser. No. 267,094. TIFFANY & COMPANY, New York, N. Y. Filed May 26, 1928.

For Shopping Bags, Chatelaine Bags, Suitcases, Traveling Bags, Vanity Bags, Portfolios, Purses and Pocketbooks, Riding Crops and Whips, Stirrups.
Claims use since February, 1900.

CLASS 4.

Abrasive, Detergent, and Polishing Materials.

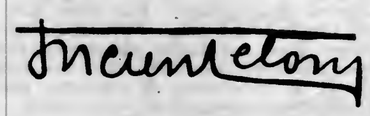
RELAM PAGO

For Shoe-Polish Creams.
Claims use since about May 23, 1924.

Ser. No. 242,956. LOCKWOOD, BRACKETT CO., Waltham, Mass. Filed Jan. 17, 1927.



For Soaps and Shampoo-Soap Solutions.
Claims use since on or about Feb. 1, 1926.

Ser. No. 255,357. SOCIETE ANONYME ETABLISSEMENTS MULVIDSON, Paris, France. Filed Sept. 28, 1927.

All wording appearing upon the drawing except the word "Emsa" is disclaimed apart from the mark as shown.
For Lixivial Liquids and Powders for Washing Stockings, Socks, and Lingerie.
Claims use since Apr. 18, 1927.

Ser. No. 257,166. LUCIEN LELONG, Paris, France, assignor to Lucien Lelong, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 7, 1927.

The mark consists of the facsimile signature of applicant.
For Toilet and Bath Soaps and Shaving Soap.
Claims use since December, 1924.

Ser. No. 263,605. JARRETT TYPE CLEANER, INC., New York, N. Y. Filed Mar. 22, 1928.

The applicator appearing in the drawing is disclaimed apart from the mark shown.
For Type Cleaner.
Claims use since on or about Dec. 6, 1927.

Ser. No. 264,797. THE AKRO AGATE COMPANY, Clarksburg, W. Va. Filed Apr. 14, 1928.

AKRO LITH

For Glass Balls for Graining and Polishing Plates and the Like.
Claims use since Mar. 5, 1928.

Ser. No. 265,317. CHARLES H. BRIGGS, doing business as Charles H. Briggs & Co., Chicago, Ill. Filed Apr. 24, 1928.

WHITE HORSE

For Antiseptic Chemical Cleaner for Cleaning the Hands, Floors, Wash Rooms, Toilets, Sinks, Ice Boxes, Stoves, and Metals.
Claims use since Mar. 7, 1928.

Ser. No. 265,866. WARREN SOAP MANUFACTURING COMPANY, Boston, Mass. Filed May 3, 1928.

For Dry-Cleaning Soap Preparation.
Claims use since Nov. 1, 1927.

Ser. No. 266,497. MILTON D. SWARTZ, doing business as The Bluko Co., Baltimore, Md. Filed May 16, 1928.

BLUKO

For Cleaning Material—Namely, a Preparation for Cleaning Woodwork, Interior and Exterior, Furniture, Pianos, Toilets, Bathtubs, Porcelain Fixtures, Laundry Tubs; Marble, Tile, and Kitchen Floors; Oilcloth and Linoleum, Refrigerators, Kitchen Cabinets, Windows and Mirrors, Glassware and Cutlery, Pots, Pans, Kitchen Utensils, Stoves, Silverware, Aluminum, Nickel, Copper, Brass, Tin, Oil Paintings and Statuary, Display Fixtures, Automobiles, Trolley Cars, Railway Coaches, Steamships and Yachts.

Claims use since September, 1927.

CLASS 6.

Chemicals, Medicines, and Pharmaceutical Preparations.

Ser. No. 241,656. WILLIAM S. DRUM, doing business as W. S. Drum Company, Delhi, N. Y. Filed Dec. 18, 1926.

ACE-NOL

For Antiseptic Preparation for Treatment of the Hair and Face.

Claims use since May 15, 1926.

Ser. No. 251,977. SARAT CHANDRA NANDI, Detroit, Mich. Filed July 13, 1927.

The word "Hindu" is disclaimed.

For Incense.

Claims use since July 1, 1915.

Ser. No. 256,180. I. G. FARBENINDUSTRIE AKTIENGESELLSCHAFT, Frankfort-on-the-Main, Germany. Filed Oct. 17, 1927.

For Chemical Products for Industrial, Scientific, and Photographic Purposes—Namely, Coal-Tar Intermediate Products, Artificial Indigo, Artificial Alizarine, Hydrosulphites, Aniline Oil, Aniline Salt, Resorcin, β-Naphthol, Naphthylamine Paranitraniline Metanitroparatoluidine, Orthonitrotoluidine, Orthonitroparaphenetidine, Benzidine, Dianisidine, Chloranisidine, Parasanol, Paraacid, Anthraquinone, Methyl Orange, Chromochloride, Perchloride, Potassium Sulphite, Acetaldehyde, Acetone, Antichlor, Caustic-Soda Lye, Chlorine, Chrome Alum, Diethylsulphate, Sodium Acetate, Sodium Bisulphite, Sodium Sulphite, Olein, Paraldehyde, Sulphate, Hydrogen, Zinc Powder, Photographic Developers and Sensitizers; Dyestuffs; Mordants for Dyeing and Printing Purposes; Acids—Namely, Acetic Acid, Acetic-Acid Essence, Acetic-Acid Anhydrid, Monochloroacetic Acid, Nitric Acid, Hydrochloric Acid, and Sulphonic Acid; Tanning Materials; Disinfectants; Plant and Animal Extirpatives—Namely, Fungicides, Germicides, Insecticides, and Parasiticides; Benzoic Acid for Preservation of Foodstuffs; Pharmaceutical and Therapeutical Preparations—Namely, Antigonorrhœics, Analgesics, Antineuralgics, Antipyretics, Antirheumatics, Antiarthritics, Anæsthetics, Antidiabetics, Anthelmintics, Antidyspnoics, Antisyphilitics, Astringents, Antiparasitics, Antichlorotics, Antidiarrhœics, Antihydrotics, Antiphthisics, Antiblennorrhœics, Antispasmodics, Digestives, Desiccatives, Biological Reagents and Diagnostics, Dietetics, Cardiac Tonics, Diuretics, Diaphoretics, Expectorants, Hæmostatics, Iodine Preparations, Mydriatics, Nutrients, Laxatives, Narcotics, Organotherapeutics, Ocytocics, Tonics and Vasotonics, Urinary Antiseptics, Uric-Acid Solvents, Vulneraries, Serums, and Vaccines; and Preservatives for Leather and Wood—Namely, Antiseptic Chemical Substances in Liquid or Paste Form Used as Preservatives and Sanitary Coatings or Dressings for Wood, Stonework, Brickwork, and Metal.

Claims use since Sept. 22, 1927.

Ser. No. 259,620. CERTIFIED DOG REMEDIES, Atlanta, Ga. Filed Jan. 3, 1928.

LIX-A-FIT

For Dog Remedies—Namely, Medicines for the Treatment of Fits.

Claims use since Oct. 1, 1926.

Ser. No. 260,180. KOTOBUKIYA COMPANY LIMITED, Osaka-Shi, Japan. Filed Jan. 16, 1928.

Applicant disclaims the right to the exclusive use of all wording except the word "Smoca," the signature "S. Toru" and the name "Kotobukiya Company Ltd.," apart from the mark shown on the drawing.

For Tooth Powders, Tooth Pastes, Tooth Washes, and Other Dentifrices.

Claims use since November, 1925.

Ser. No. 262,366. JOHN W. MACKEWICZ, New Hanover Square, Pa. Filed Feb. 28, 1928.

For Antifreezing Liquid.

The word "Water" is disclaimed apart from the mark shown.

Claims use since December, 1926.

Ser. No. 262,768. THE PALMOLIVE-PEET COMPANY, Chicago, Ill. Filed Mar. 7, 1928.

The words "Talc Egyptian" appearing on the drawing are claimed only to the extent that the same comprise a component part of the trade-mark as a whole and such words are disclaimed apart from the mark as shown. This disclaimer, however, is made with the express reservation of and claim to all common-law rights to the mark in its entirety as well as in its component parts.

For Talcum Powder.

Claims use since January, 1922.

Ser. No. 263,373. BROTHERS CORPORATION, New York, N. Y. Filed Mar. 19, 1928.

ADUIN

For Prepared Medicine, a Brand of Bile Salts.

Claims use since Jan. 11, 1928.

Ser. No. 263,859. CHEMISCHE FABRIK JACOBUS G. M. B. H., Berlin-Charlottenburg, Germany. Filed Mar. 28, 1928.

MERCERISIN

For Chemical Product to be Mixed with Water and Used in Disinfecting and Restoring to Textile Fabrics the Glossy Finish and Original Coloring.

Claims use since Sept. 1, 1927.

Ser. No. 264,193. PINAUD INCORPORATED, New York, N. Y. Filed Apr. 2, 1928.

For Hair Tonic.

Claims use since 1886.

Ser. No. 264,194. PINAUD INCORPORATED, New York, N. Y. Filed Apr. 2, 1928.

EAU DE QUININE

The words "Eau de Quinine" are disclaimed apart from the mark as shown on the drawing.

For Hair Tonic.

Claims use since 1886.

Ser. No. 264,195. PINAUD INCORPORATED, New York, N. Y. Filed Apr. 2, 1928.

EAU DE QUININE

The words "Eau de Quinine" are disclaimed apart from the mark as shown on the drawing.
For Hair Tonic.
Claims use since 1886.

Ser. No. 264,221. CHARLES A. BUCHER, Pittsburgh, Pa. Filed Apr. 3, 1928.

The drawing is lined and is intended to indicate the colors red and blue.
For Face Powders and Rouges.
Claims use since Feb. 16, 1928.

Ser. No. 264,689. MOHAMMED I. KITCHLEW, Chicago, Ill. Filed Apr. 11, 1928.

Applicant states that no claim is made to the words "Oriental Incense" apart from the mark as shown.
For Incense.
Claims use since Dec. 5, 1927.

Ser. No. 264,690. CHIN LAIN, doing business as Kwong Qwong Chiy Co., Canton, China, and as The Quong Chong Co., San Francisco, Calif. Filed Apr. 11, 1928.

The drawing is lined to denote the color gold.
For General Tonic.
Claims use since Mar. 1, 1915.

Ser. No. 264,748. BEAUTY RESEARCH LABORATORIES, INC., Chicago, Ill. Filed Apr. 13, 1928.

For Skin Salve Preparations Including Facial Creams.
Claims use since Feb. 10, 1928.

Ser. No. 265,289. ROBERT E. PARRISH, doing business as The Parrish Drug Co., Bennington, Okla. Filed Apr. 23, 1928.

POULTRY ANTISEPTIC

No claim is made to the words "Poultry Antiseptic" apart from the mark shown in the drawing.
For Medicine for the Prevention and Treatment of Roup, Blackhead, Sore Head, Cholera, Colds, and General Intestinal Antiseptic for Poultry.
Claims use since August, 1927.

Ser. No. 265,400. PENNSYLVANIA SALT MANUFACTURING COMPANY, Philadelphia, Pa. Filed Apr. 25, 1928.

The shading in the drawing is intended to denote the colors blue and yellow. The words "Chlorinated Lime for Technical Purposes only Manufactured by, Philadelphia, Pa." are disclaimed apart from the mark as shown.
For Chlorinated Lime.
Claims use since May, 1923.

KORREX

For Foot Deodorant.
Claims use since May 1, 1928.

Ser. No. 267,100. VERMILYA MEDICINE COMPANY, Bloomington, Ind. Filed May 26, 1928.

VerWilKo

For a Vegetable Tonic and Blood Purifier for Laxative Purposes.
Claims use since Apr. 14, 1928.

Ser. No. 267,109. THE AYER COMPANY, Lowell, Mass. Filed May 28, 1928. Under 10-year proviso.

PECTORAL

For Cough Medicines.
Claims use since about 1853.

Ser. No. 267,271. RALPH M. PALMER, New York, N. Y. Filed May 31, 1928.

Ferro-Nil

For Chemical Preparation for Preventing Corrosion of Metal Surfaces Such as the Interior Surfaces of Water Pipes.
Claims use since Dec. 1, 1927.

Ser. No. 267,275. THE PRESERVALINE MANUFACTURING CO., Brooklyn, N. Y. Filed May 31, 1928.

LAKTONE

For Coloring for Cheese, Butter, Milk, Cream, Beverages, Ice Cream, Custard, Sherbets, Water Ices, and Food Products in General.
Claims use since 1892.

Ser. No. 267,369. GEORGE L. MAX, doing business as Maxine Products Co., Detroit, Mich. Filed June 2, 1928.

BLUE HEAVEN

For Perfumery, Brilliantine, Hand Lotion, Toilet Water, Cold Cream, Vanishing Cream, Massage Cream, Shampoo, Cleansing Cream, Face Powder, Hair Tonic.
Claims use since Mar. 16, 1928.

Ser. No. 267,663. THE OHIO SALT COMPANY, Wadsworth, Ohio. Filed June 7, 1928.

999

For Salt.
Claims use since Oct. 1, 1927.

Ser. No. 267,831. JOHN BUCHANAN, East Pittsburgh, Pa. Filed June 11, 1928.

"O-BOY"

For Antifreeze Solution for Automobile Radiators.
Claims use since May 1, 1928.

CLASS 7.

Cordage.

Ser. No. 265,205. MAURICE P. GERAGHTY, Chicago, Ill. Filed Apr. 21, 1928.

GIFT
Fantasie
CORD

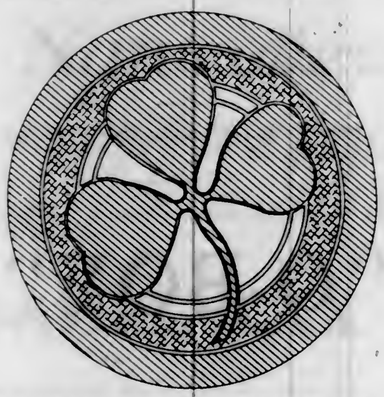
The words "Gift Cord" are disclaimed apart from the mark shown.

For Articles Consisting of a Pressed-Paper Tube Around Which is Wound Decorative Wrapping Cord, the Cylinder Containing at One End a Cone-Shaped Piece of Sealing Wax and at the Other a Decorative Seal.

Claims use since Mar. 3, 1928.

Ser. No. 266,048. SAMSON CORDAGE WORKS, Boston, Mass. Filed May 7, 1928.

PHOENIX



For Braided and Twisted Cords and Twines—Namely, Sash Cord, Trolley Cord, and Similar Braided Cotton Cords and Twines.

Claims use since Apr. 13, 1898.

CLASS 10.

Fertilizers.

Ser. No. 266,525. THE GIBSONBURG LIME PRODUCTS COMPANY, Gibsonburg, Ohio. Filed May 17, 1928.

The drawing is lined for green and orange color.

For Agricultural Lime.

Claims use since Sept. 12, 1927.

CLASS 11.

Inks and Inking Materials.

Ser. No. 263,571. GÜNTHER WAGNER, Hanover, Germany. Filed Mar. 21, 1928.

"Chin-Chin"

For Inks and Ink Powders for Writing, Drawing, Copying, Printing, Duplicating, Lithographing, Stamping, and Stenciling.

Claims use since 1897.

Ser. No. 266,740. THE NELSON-EISMANN CO., Chicago, Ill. Filed May 21, 1928.

LILY

For Typewriter Ribbons.

Claims use since May 15, 1913.

CLASS 12.

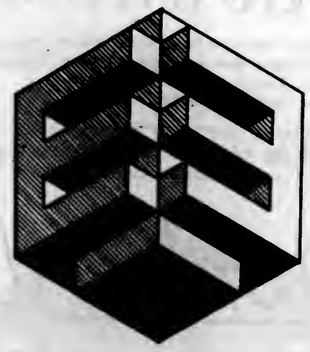
Construction Materials.

Ser. No. 257,066. HARRY H. HONIGBAUM, doing business as The Rubber Roofing Co., New York, N. Y. Filed Nov. 4, 1927.

HURRICANE

For Composition Roofing.

Claims use since March, 1917.



Ser. No. 259,963. LOUIS MICHAEL, doing business as the Keystone Asphalt Products Company, Philadelphia, Pa. Filed Jan. 11, 1928.

NOMOLEAK

For Asphalt and Asbestos Fibre Roofing Compound.

Claims use since Aug. 2, 1924.

Ser. No. 261,331. SOCIETE ANONYME ETERNIT EMAILLE, Cappelle-au-Bois, Belgium. Filed Feb. 7, 1928.

For Building Materials—Namely, Plates, Tiles, Blocks, and Pipes of Enameled Asbestos Cement.

Claims use since November, 1927.

Ser. No. 249,514. DICTOGRAPH PRODUCTS CORPORATION, New York, N. Y. Filed May 25, 1927.

For Acousticons, Church Acousticons, Acousticon Batteries; Interior Communicating Telephone Systems for Offices, Banks, Factories, Etc.; Interior Telephone Systems for Apartment Buildings Providing Communication Between Vestibule, Apartments, Janitor, Tradesmen, or Other Essential Points; Loud-Speaking Paging or Announcing Systems for Locating Doctors in a Hospital, Announcing Systems Employing Loud Speakers Operated from Central Transmitting Station, Loud-Speaking Limousine Telephones, Radio Loud Speakers, Radio Receiving Sets, Switches for Radio Receiving Sets with One or More Loud Speakers, Radio Loud-Speaking Receiver Units for Attachment to Sounding Boards of Pianos; Listening Devices Employing Supersensitive Transmitters and Headset Receivers for Use by Detective Agencies, Police Departments, Etc.; and Sensitive Transmitters Used as Essential Parts of Burglar Alarms and Vault Protection Systems Whose Operation is Controlled by Sound Waves.

Claims use since Apr. 1, 1927.

Ser. No. 253,877. ELI P. FAY, Los Angeles, Calif. Filed Aug. 24, 1927.

For Battery Separators.

Claims use since on or about Aug. 1, 1924.

Ser. No. 257,713. CHARLES M. SEBEROFF, doing business as Radio Engineering Laboratories, Long Island City, N. Y. Filed Nov. 17, 1927.

REL

For Fixed and Variable Condensers, Inductors for Transmission, Transmitter Frames, Panels, Transmitting Inductances, Grid Leaks, Plug-In Coils, Receiving Kits, Coil Kits, Holders for Transmitting Tubes, Tube Sockets, Choke Coils, Transmitting Kits; Tuned-Plate Tuned-Grid Transmitting Kits and Complete Transmitters, Vacuum-Tube Relays, Assembled Oscillator Power-Amplifier Units, Assembled Broadcast Station Line Amplifier Units, Complete Telephone Transmitting Sets; Microphone Units and Receivers of the Earphone-Type for Radio, Telegraph and Telephone Apparatus, and Complete Radio Picture-Transmitting Apparatus, Low-Power Transmitting Kits Short-Wave Superheterodyne Receiving Sets, Assembled Broadcast Station Line Amplifiers and Control Units, Tube Mountings, and Tube Adapters.
Claims use since October, 1924.

Ser. No. 261,445. MARATHON ELECTRIC MANUFACTURING COMPANY, Wausau, Wis. Filed Feb. 9, 1928.

MARATHON
OK
MOTORS

Applicant disclaims for the purposes of registration exclusive right to the use of the word "Motors" apart from the mark shown.
For Electric Fans, Electric Motors, Electric Generator Sets, Electric Polishing Lathes, and Electric Buffers.
Claims use since 1918.

Ser. No. 265,786. GENERAL CABLE CORPORATION, New York, N. Y. Filed May 2, 1928.

ENTERITE

For Bare and Insulated Electrical Wires and Cables.
Claims use since Nov. 29, 1927.

Ser. No. 265,839. GREAT WESTERN STOVE CO., Leavenworth, Kans. Filed May 3, 1928.

THE HEART OF THE HOME
Banquet

For Electric Ranges.
Claims use since Apr. 13, 1928.

Ser. No. 266,697. JAMES F. WHELAN, Philadelphia, Pa. Filed May 19, 1928.

MIDGY

For Night Table and Nursery Lamps.
Claims use since on or about Apr. 2, 1928.

Ser. No. 267,038. CHICAGO FLEXIBLE SHAFT COMPANY, Chicago, Ill. Filed May 26, 1928.

The drawing is lined to indicate a contrasting color scheme and not to indicate any particular color.
For Electric Sadirons, Electric Grills, Electric Toaster Stoves, Electric Heating Pads, Plugs, and Conductor Cables.
Claims use since about Oct. 1, 1924.

Ser. No. 267,184. FRED BUTTERFIELD & CO., INC., New York, N. Y. Filed May 29, 1928.

LIGHT O' DAY

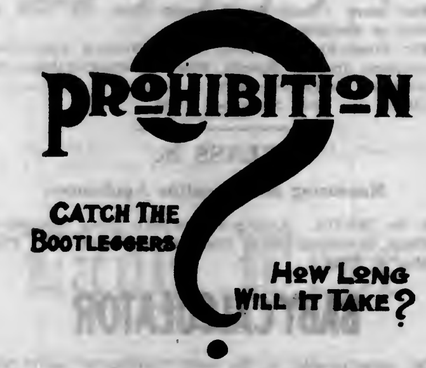
For Electric Lamps and Fixtures.
Claims use since Jan. 16, 1928.

CLASS 22.

Games, Toys, and Sporting Goods.

Ser. No. 261,730. WILLIAM HENRY LAMPERT ALFRED, doing business as Eaton & Deller, London, England. Filed Feb. 16, 1928. Under 10-year proviso.

HALFORD



For Silk Fishing Lines.
Claims use since Apr. 3, 1891.

Ser. No. 264,655. A. J. REACH COMPANY, Philadelphia, Pa. Filed Apr. 10, 1928.

For Tennis-Racket Presses, Tennis-Racket Covers, Tennis Bags, Tennis Posts, Tennis Markers, Tennis-Marking Tapes, Tennis Center Straps, Tennis Pulleys and Axles, Tennis Reels.
Claims use since June 1, 1907.

Ser. No. 265,484. MURRY LIVINGSTON, New York, N. Y. Filed Apr. 27, 1928.

For Table Game Played with Pieces.
Claims use since July 1, 1927.

Ser. No. 265,824. AUSTIN W. ANDREWS, New York, N. Y. Filed May 3, 1928.

Tric-Trac

For Table Game Played with Pieces.
Claims use since Apr. 1, 1928.

Ser. No. 266,935. HILLERICH & BRADSBY CO., Louisville, Ky. Filed May 24, 1928.

Travis C. Jackson

The trade-mark consists of the signature of Travis C. Jackson.
For Baseball Bats.
Claims use since June 4, 1924.

CLASS 23.

Cutlery, Machinery, and Tools, and Parts Thereof.

Ser. No. 248,950. THE AUTOMATIC MERCHANDISER INC., Boston, Mass. Filed May 13, 1927.

In the trade-mark shown by the drawing the lettering is red.
For Vending Machines.
Claims use since Jan. 28, 1927.

Ser. No. 260,498. FISADCO LIMITED, London, England. Filed Jan. 23, 1928.

WIZARD

For Fish Cleaning, Boning, and Cutting Machines; Fish-Heading Machines, Fish-Slicing Machines, Fish-Washing Machines, and Fish-Canning Machines.
Claims use since May 25, 1926.

Ser. No. 260,889. HOWSER VALVE TOOL MANUFACTURING CO., Laporte, Ind. Filed Jan. 30, 1928.

The Rigid MASTER

No claim is made for the word "Rigid" apart from the mark shown in the drawing.
For Valve-Reseating Tools.
Claims use since November, 1925.

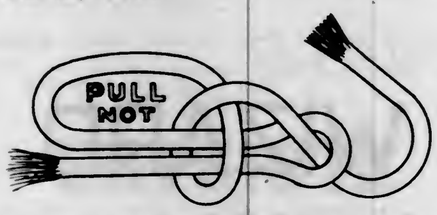
Ser. No. 262,318. THE MANHATTAN RUBBER MFG. CO., Passaic, N. J. Filed Feb. 27, 1928.

PAROCK

For Bearings Made of Hard Rubber.
Claims use since July 29, 1927.

Ser. No. 265,265. EVINRUDE MOTOR COMPANY, Milwaukee, Wis. Filed Apr. 23, 1928.

The Original EVINRUDE Fleetwin



No claim is made to the word "Twin" apart from the remainder of the mark.
For Outboard Boat Motors.
Claims use since Jan. 19, 1928.

Ser. No. 265,647. HUDSON MANUFACTURING CO., Minneapolis, Minn. Filed Apr. 30, 1928.

VACO

For Sprayers and Spraying Attachment for Household and Industrial Uses.
Claims use since about Mar. 8, 1928.

Ser. No. 266,069. HENRY B. WOMACK, doing business as Birmingham Grinding Works, Birmingham, Ala. Filed May 7, 1928.

No claim is made to the words "Pull Not" apart from the trade-mark shown in the drawing.
For Razors and Razor Blades.
Claims use since Sept. 1, 1927.

Ser. No. 267,352. CONSOLIDATED MACHINE TOOL CORPORATION OF AMERICA, Rochester, N. Y. Filed June 2, 1928.

MAGIC

For Drill Chucks.
Claims use since 1901.

Ser. No. 267,473. GUSTAV WIEDEKE COMPANY, Dayton, Ohio. Filed June 4, 1928.

W D

For Tube and Flue Expanders, Tube and Flue Cutters, and Tube and Flue Beading Tools.
Claims use since Dec. 15, 1911.

CLASS 24.

Laundry Appliances and Machines.

Ser. No. 266,124. CANNON ENGINEERING COMPANY, Jamaica, N. Y. Filed May 9, 1928.

VAPO RON

TRADE MARK

The word "Trade-Mark" apart from the mark as shown is disclaimed.
For Steam-Pressing Irons, Steam-Pressing Appliances, Vaporizers, Ironing Boards, Steam-Pressing Tables, and Accessories for Laundry Use.
Claims use since November, 1926.

CLASS 26.

Measuring and Scientific Appliances.

Ser. No. 266,114. HAROLD S. ZEWISKE, doing business as Baby Calculator Sales Company, Chicago, Ill. Filed May 8, 1928.

BABY CALCULATOR

No claim is made to the word "Calculator" apart from the mark as shown.
For Calculators.

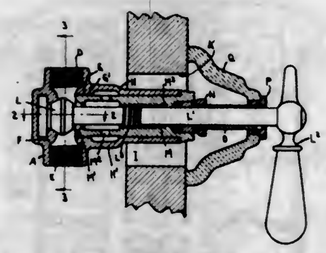
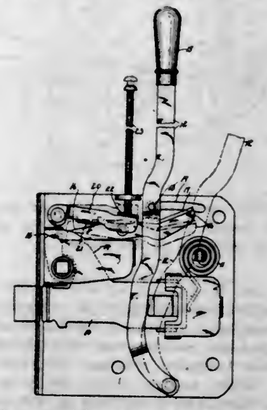
REISSUES



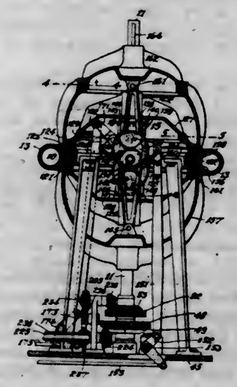
JULY 17, 1928.

17,033. METHOD OF MAKING BOILERS. ROBERT W. BIRCHFIELD, Joliet, Ill., assignor to Heggie Simplex Boiler Company, Joliet, Ill., a Corporation of Illinois. Filed Sept. 19, 1927. Serial No. 220,616. Original No. 1,565,542, dated Dec. 15, 1925, Serial No. 655,638, filed Aug. 4, 1923. 8 Claims. (Cl. 29—157.4.)



7. The herein described method of forming the inner shell of a boiler which has an auxiliary combustion space rising above a main combustion space and which shell includes a main crown sheet, depending main side sheets and side sheets for an auxiliary combustion space rising above the main crown sheet, which method consists in forming a main section of the shell with a suitable crown sheet and depending side sheets, and completing the rear part of the shell by attaching auxiliary plates in the planes of the main side sheets and which auxiliary plates project above the main crown sheet to form the side sheets of the auxiliary combustion space.

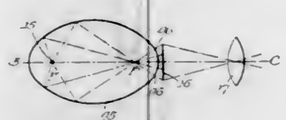
17,034. FOUR-WAY DIVERTER VALVE. LEON BLOCH, Cleveland, Ohio, assignor to The Republic Brass Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 19, 1926. Serial No. 142,740. Original No. 1,579,503, dated Apr. 6, 1926, Serial No. 33,137, filed May 27, 1925. 3 Claims. (Cl. 251—22.)



1. In a valve, the combination of a casing having two inlet and two outlet openings disposed in the same plane and said outlet openings being disposed on opposite sides of said casing, two spaced interior partitions in said casing defining a diverter chamber separated from said outlet openings but in communication with said inlet openings, said partition having aligned ports therein, and said casing having angular passages extending from said aligned ports to said outlet openings respectively, a hollow sleeve disposed in said casing and having a lateral port establishing communication between one of said angular passages and said diverter chamber, and a valve disposed between said aligned ports and movable into a position closing either thereof to divert the flow of liquid through the other of said ports.

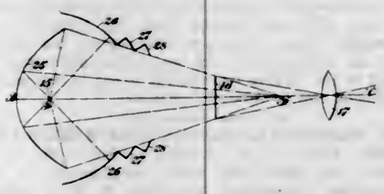
17,035. LATCH FOR VEHICLE DOORS. RICHARD V. KAIMER, New Haven, Conn., assignor to The English & Mersick Co., New Haven, Conn., a Corporation. Filed Nov. 11, 1927. Serial No. 232,921. Original No. 1,562,096, dated Nov. 17, 1925, Serial No. 49,887, filed Aug. 13, 1925. 10 Claims. (Cl. 292—173.)

1. A latch, comprising a bolt, a lever for retiring said bolt, a roll-back adapted to retire said bolt, a locking-lever pivoted above the bolt and extending into the path of the roll-back, a push-rod lever pivoted at one end, above and forward of the locking-lever, a push-rod mounted in line with and bearing upon the push-rod lever and adapted, when forced down, to depress the forward end of the locking-lever, and means for depressing the rear end of the locking lever to lift it out of the path of the roll-back and to raise the push-rod.



17,036. METHOD AND MACHINE FOR MAKING CORD TIRES. KNUT O. B. TEXTORIUS, New York, N. Y., assignor, by direct and mesne assignments, to Tex. Engineering Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 29, 1922. Serial No. 557,459. Original No. 1,359,632, dated Nov. 23, 1920, Serial No. 321,533, filed Sept. 4, 1919. 65 Claims. (Cl. 154—11.)

1. In a cord tire building machine, means for assembling individual cords of predetermined length in

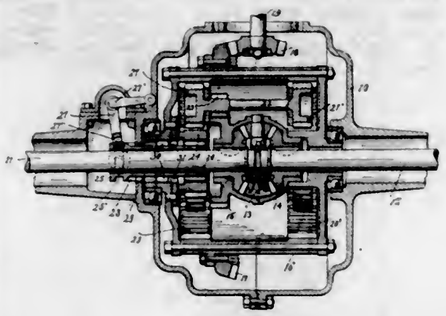


parallel relation to each other, and automatic means for transferring the assembled cords and applying the same upon a tire forming core in a continuous circumferential layer.

17,037. PROJECTING APPARATUS. EDWIN C. BALLMAN, St. Louis, and EDWARD P. EVERS, Overland, Mo., assignors, by mesne assignments, to Acme Motion Picture Projector Company, Chicago, Ill., a Corporation of Illinois. Filed July 16, 1927. Serial No. 206,364. Original No. 1,275,120, dated Aug. 6, 1918, Serial No. 855,420, filed Aug. 6, 1914. 6 Claims. (Cl. 88—24.)

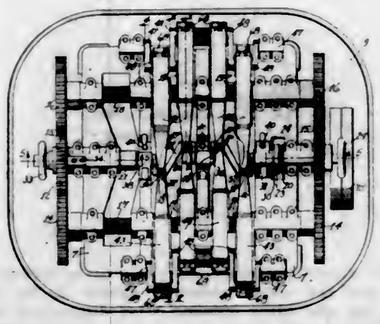
1. A projecting apparatus comprising an electric light bulb having a portion thereof formed as an ellipsoid reflector with the filament at one focus.

17,038. PROJECTING APPARATUS. EDWIN C. BALLMAN, St. Louis, and EDWARD P. EVERS, Overland, Mo., assignors, by mesne assignments, to Acme Motion Picture Projector Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 4, 1920. Serial No. 401,276. Original No. 1,275,120, dated Aug. 6, 1918, Serial No. 855,420, filed Aug. 6, 1914. 6 Claims. (Cl. 88—24.)



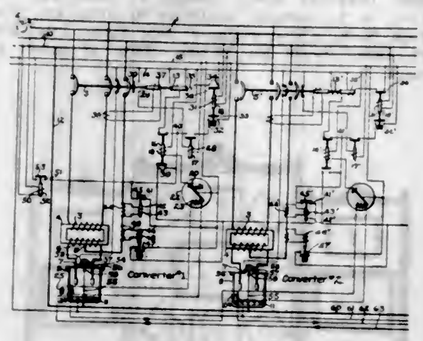
1. A projecting apparatus comprising an ellipsoidal reflector, a source of light positioned at the focus of said reflector so as to cause the latter to concentrate the major part of the light from said source on an object, and means for projecting an image of the object on a screen.

30. A projecting apparatus comprising a source of light, an object, a reflector arranged to receive part of the rays emitted by said source, and means for reflecting another part of the rays emitted by said source upon said reflector, said reflector being constructed and arranged to concentrate on said object the rays received by it, and means for projecting an image of said object on a screen.



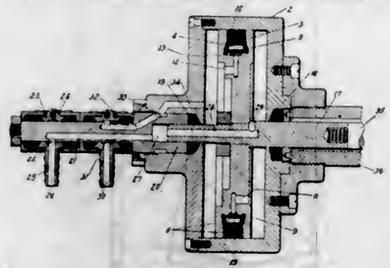
17,039. PLANETARY-GEAR MECHANISM. HARRY L. BURKHARDT, New York, N. Y., assignor to Ruckstell Sales & Manufacturing Company, Berkeley, Calif., a Corporation of California. Filed Aug. 19, 1926. Serial No. 130,328. Original No. 1,586,944, dated June 1, 1926, Serial No. 563,064, filed May 23, 1922. 3 Claims. (Cl. 74—99.)

1. In combination with a rear axle having a differential mechanism, a gear on the casing of the differential mechanism, a rotatable housing enclosing said differential mechanism, a ring gear for driving said housing, and planetary mechanism interposed between the ring gear and the gear on the differential casing, said planetary mechanism comprising an internal gear driven by the ring gear, a set of planetary pinions meshing with the



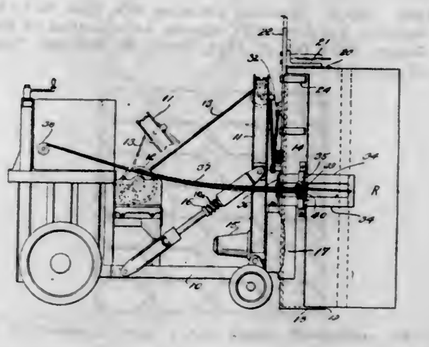
internal gear, an axle for each of the planetary pinions, means for maintaining said axles in parallel relation, a pinion on each axle meshing with said gear on the differential casing, and a sun gear meshing with said planetary pinions, and means for controlling the operation of the sun gear to vary the action of the planetary pinions.

17,040. CRANK-PIN LATHE. LOUIS J. KIRCHENBAUER Chicago, Ill., assignor, by mesne assignments, to The R. K. Le Blond Machine Tool Company. Filed Feb. 29, 1928. Serial No. 258,110. Original No. 1,372,075, dated Mar. 22, 1921, Serial No. 310,149, filed July 11, 1919. 23 Claims. (Cl. 82—9.)



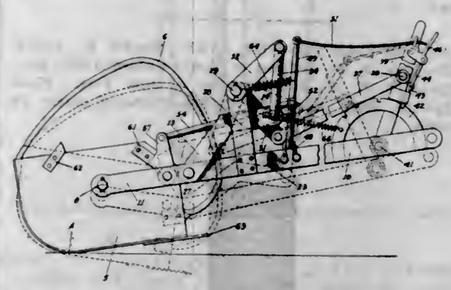
1. A crank shaft lathe comprising a frame; crank shaft holders journaled in the frame; a rotatable element journaled in the frame and connected with the crank shaft holders for simultaneous movement; a tool block reciprocally mounted in the rotatable element; resilient means tending to hold the tool block away from work in the crank shaft holders; and automatic feeding means in said rotatable element adapted to feed the tool block toward work in the crank shaft holders.

17,041. AUTOMATICALLY-CONTROLLED VAPOR-CONVERTER SUBSTATION. WILLIAM V. LOVELL, New York, N. Y., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 13, 1923. Serial No. 631,922; Original No. 1,389,147, dated Aug. 30, 1921, Serial No. 194,457, filed Oct. 3, 1917. 15 Claims. (Cl. 175—363.)



1. The combination with an alternating-current source and a direct-current consuming circuit, of a plurality of vapor converters and means for selectively connecting one or more of said converters to said source and to said circuit in accordance with the gas pressure within said converters.

17,042. PISTON AND PACKING. JOHN A. OLSON, Cleveland, Ohio, assignor to The S-P Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 15, 1927. Serial No. 184,106. Original No. 1,544,679, dated July 7, 1925, Serial No. 534,100, filed Feb. 4, 1922. 22 Claims. (Cl. 74—109.)

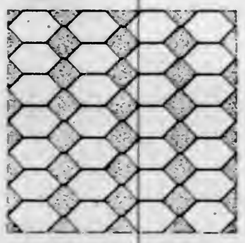


6. A fluid pressure operated piston comprising an end wall and an annular side wall provided with an annular groove, an endless, elastic, resilient member in the groove highly resistant to distortion freely movable bodily in the said groove and forming a cross wall therein, the said member being initially of greater width than the groove and substantially an elongated rectangle in cross section and having its edge portions distorted inwardly when positioned in the groove whereby the said edge portions automatically press outwardly into intimate contact with the sides of the said groove, and a wear ring in the said groove engaging the walls of a cylinder in which the piston is to reciprocate and being pressed by the cylinder walls against and flattening the portion of the said member with which it engages and increasing the pressure of the edge portions of the said member against the side walls of the groove.

17,043. INDUSTRIAL TRUCK. ALBERT R. GOLDRICK, Cleveland, Ohio, assignor to The Elwell-Parker Electric Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 20, 1923. Serial No. 681,889. Original No. 1,439,233, dated Dec. 19, 1922, Serial No. 493,799, filed Aug. 20, 1921. 23 Claims. (Cl. 214—65.)

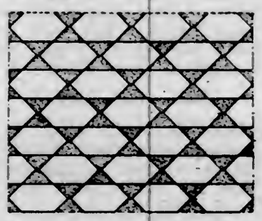
1. The combination in a truck of an upright frame mounted thereon, a load lifting member operatively mounted on the frame, means to raise said load lifting member and mechanism carried by the load lifting member and vertically movable relative thereto for automatically engaging the top surface of the load to clamp the top and bottom surfaces thereof when said load lifting member is raised.

17,044. SCRAPER. BRUCE E. ROSE, Stockton, and GEORGE WOOLWINE, Empire, Calif. Filed July 19, 1926. Serial No. 123,494. Original No. 1,460,340, dated June 26, 1923, Serial No. 550,382, filed Apr. 7, 1922. 2 Claims. (Cl. 37—140.)



1. In a device of the character described, a scoop, draw bars pivoted to said scoop, said draw bars having offset portions, draft means pivoted to said draw bars at a point substantially midway of their length, said draft means comprising parallel spaced portions provided with offsets therein, standards secured to said draft means, a segment secured to said draft means, a lever pivoted to said draft means and adapted to move over said segment, a bar extending between said standards, levers mounted on the ends of said bar, links extending from said levers to the free ends of said draw bars and means for rotating said bar through the movement of said first mentioned lever for the purpose of moving the free ends of said draw bars toward said draft means.

DESIGNS

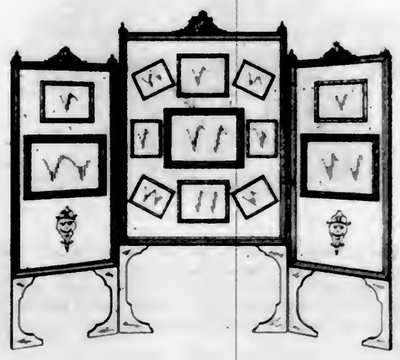


JULY 17, 1928.

75,761. ROOF. HERBERT ABRAHAM, New York, N. Y., assignor to The Ruberoid Company, a Corporation of New Jersey. Filed Oct. 21, 1921. Serial No. 509,430. Term of patent 14 years.

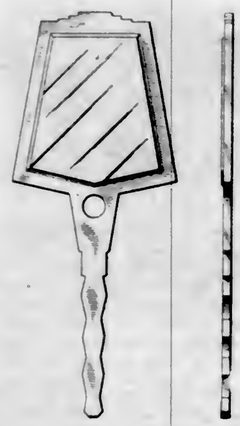
The ornamental design for a roof substantially as shown.

75,762. ROOF. HERBERT ABRAHAM, New York, N. Y., assignor to The Ruberoid Company, a Corporation of New Jersey. Filed Oct. 27, 1921. Serial No. 510,980. Term of patent 14 years.



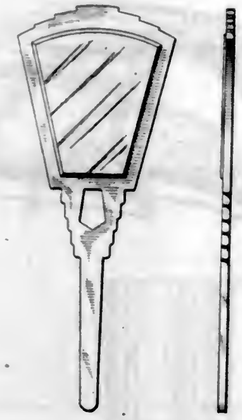
The ornamental design for a roof substantially as shown.

75,763. BOTTLE OR THE LIKE. RALPH B. ANNIS, Brooklyn, N. Y., assignor to Mower-Gulden Annis, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Apr. 24, 1928. Serial No. 26,444. Term of patent 14 years.



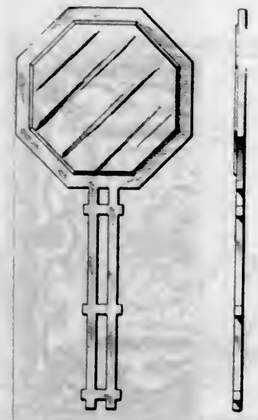
The ornamental design for a bottle or the like, as shown.

75,764. DISPLAY SIGN. JOSEPH B. AUERBACH, New York, N. Y., assignor to Joseph S. Arvid Co., New York, N. Y., a Corporation of New York. Filed Feb. 27, 1928. Serial No. 25,605. Term of patent 14 years.



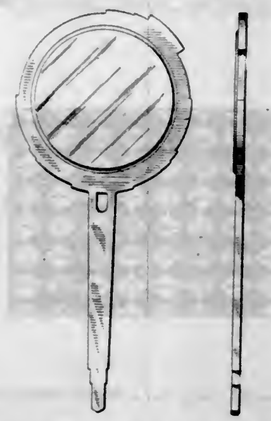
The ornamental design for a display sign, substantially as shown.

75,765. MIRROR OR SIMILAR TOILET ARTICLE. WILLIAM S. BECHTOLD, Newark, N. J. Filed Apr. 28, 1928. Serial No. 26,501. Term of patent 7 years.



The ornamental design for a mirror or similar toilet article, as shown.

75,766. MIRROR OR SIMILAR TOILET ARTICLE. WILLIAM S. BECHTOLD, Newark, N. J. Filed Apr. 28, 1928. Serial No. 26,502. Term of patent 7 years.



The ornamental design for a mirror or similar toilet article, as shown.

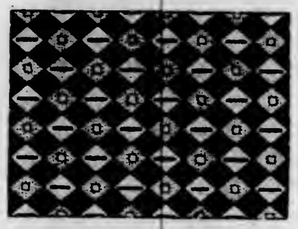
75,767. MIRROR OR SIMILAR TOILET ARTICLE. WILLIAM S. BECHTOLD, Newark, N. J. Filed Apr. 28, 1928. Serial No. 26,503. Term of patent 7 years.

The ornamental design for a mirror or similar toilet article, as shown.

75,768. MIRROR OR SIMILAR TOILET ARTICLE. WILLIAM S. BECHTOLD, Newark, N. J. Filed Apr. 28, 1928. Serial No. 26,504. Term of patent 7 years.

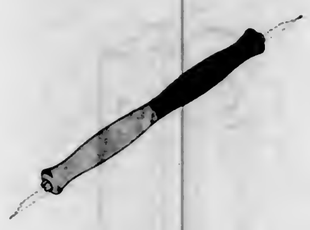
The ornamental design for a mirror or similar toilet article, as shown.

75,769. FUSE CONTAINER. RALPH S. BENNETT, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Jan. 27, 1928. Serial No. 25,052. Term of patent 14 years.



The ornamental design for a fuse container as shown.

75,770. TOY AVIATION DEVICE. SAMUEL I. BERGER, Newark, N. J. Filed Jan. 17, 1927. Serial No. 20,407. Term of patent 3½ years.

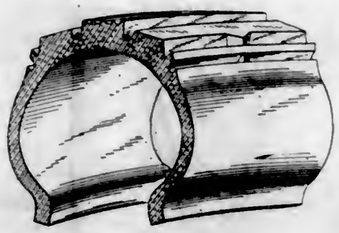


The ornamental design for a toy aviation device as shown.

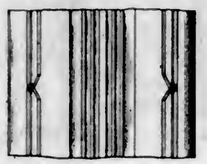
75,771. TEXTILE FABRIC. LUCIEN BIVA, Brooklyn, N. Y., assignor to Pennsylvania Textile Mills, Inc., Clifton, N. J., a Corporation of New Jersey. Filed Feb. 9, 1928. Serial No. 25,323. Term of patent 3½ years.

The ornamental design for a textile fabric substantially as shown.

75,772. PENHOLDER. PARKER Z. BLOSER, Columbus, Ohio, assignor to The Zaner-Bloser Company, Columbus, Ohio, a Corporation of Ohio. Filed Apr. 17, 1928. Serial No. 26,357. Term of patent 14 years.

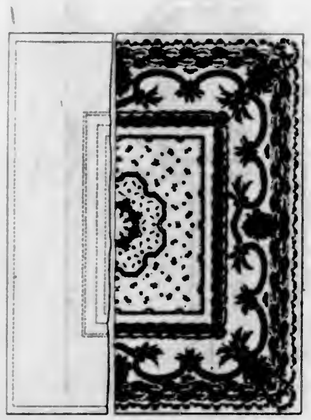


The ornamental design for a pen holder, as shown.

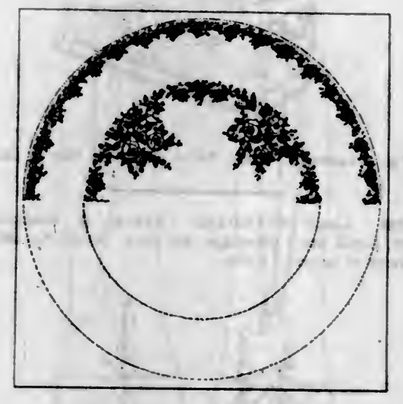


75,773. CUP. THOMAS MAITLAND CLELAND, Scarboro-on-the-Hudson, N. Y., assignor to Individual Drinking Cup Company, Inc., Easton, Pa. Filed Aug. 22, 1925. Serial No. 14,555. Term of patent 14 years.

The ornamental design for a cup, as shown.



75,774. TIRE. EDWARD WILLIAM COLEMAN, Northolt Junction, England. Filed Sept. 3, 1927. Serial No. 23,294. Term of patent 14 years.

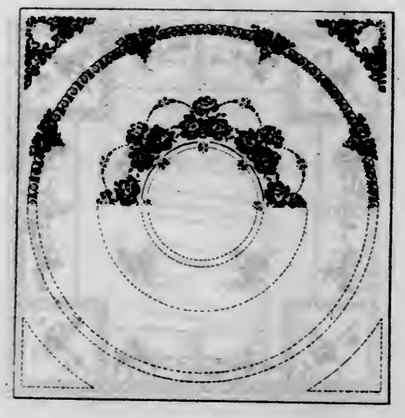


An ornamental design for a tire as shown.

75,775. TABLE COVER OR SIMILAR ARTICLE. HENRY W. DIECK, Brooklyn, N. Y., assignor to The Standard Textile Products Company, New York, N. Y., a Corporation of Ohio. Filed Sept. 22, 1927. Serial No. 23,500. Term of patent 3½ years.

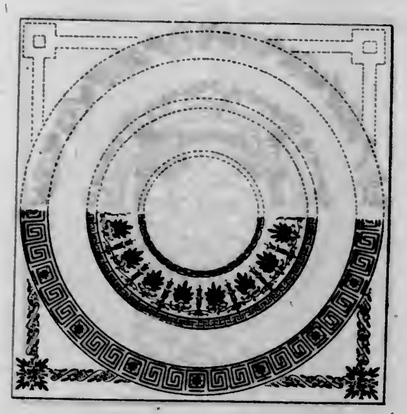
The ornamental design for a table cover or similar article, as shown and described.

75,776. TABLE COVER OR SIMILAR ARTICLE. HENRY W. DIECK, Brooklyn, N. Y., assignor to The Standard Textile Products Company, New York, N. Y., a Corporation of Ohio. Filed Sept. 22, 1927. Serial No. 23,501. Term of patent 3½ years.



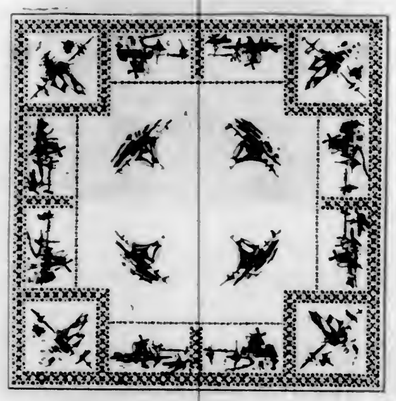
The ornamental design for a table cover or similar article, as shown and described.

75,777. TABLE COVER OR SIMILAR ARTICLE. HENRY W. DIECK, Brooklyn, N. Y., assignor to The Standard Textile Products Company, New York, N. Y., a Corporation of Ohio. Filed Sept. 22, 1927. Serial No. 23,503. Term of patent 3½ years.



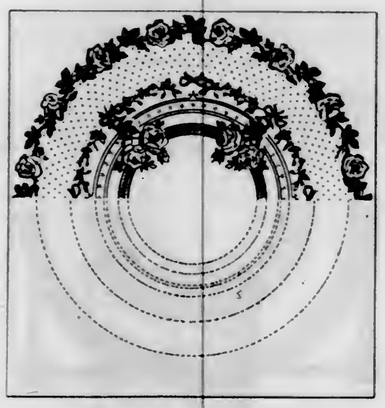
The ornamental design for a table cover or similar article, as shown and described.

75,778. TABLE COVER OR SIMILAR ARTICLE. HENRY W. DIECK, Brooklyn, N. Y., assignor to The Standard Textile Products Company, New York, N. Y., a Corporation of Ohio. Filed Sept. 22, 1927. Serial No. 23,504. Term of patent 3½ years.



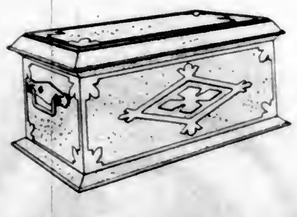
The ornamental design for a table cover or similar article, as shown and described.

75,779. TABLE COVER OR SIMILAR ARTICLE. HENRY W. DIECK, Brooklyn, N. Y., assignor to The Standard Textile Products Company, New York, N. Y., a Corporation of Ohio. Filed Sept. 22, 1927. Serial No. 23,505. Term of patent 3½ years.



The ornamental design for a table cover or similar article, as shown and described.

75,780. TABLE COVER OR SIMILAR ARTICLE. HENRY W. DIECK, Brooklyn, N. Y., assignor to The Standard Textile Products Company, New York, N. Y., a Corporation of Ohio. Filed Sept. 22, 1927. Serial No. 23,506. Term of patent 3½ years.

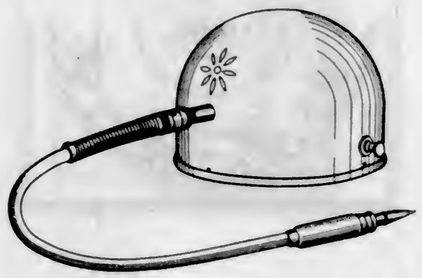


The ornamental design for a table cover or similar article, as shown.

75,781. TABLE COVER OR SIMILAR ARTICLE. HENRY W. DIECK, Brooklyn, N. Y., assignor to The Standard Textile Products Company, New York, N. Y., a Corporation of Ohio. Filed Sept. 22, 1927. Serial No. 23,507. Term of patent 3½ years.

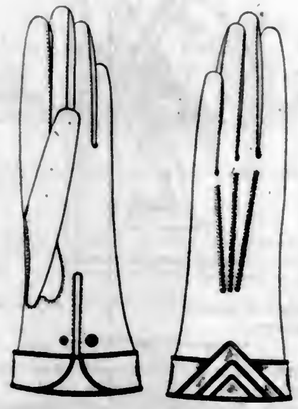
The ornamental design for a table cover or similar article, as shown and described.

75,782. DECORATED BOX. FELIX EBERHART, Arlington, N. J., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed May 7, 1928. Serial No. 26,602. Term of patent 14 years.



The ornamental design for a decorated box as shown.

75,783. LAMP STANDARD. SAMUEL G. EDMONDSON, St. Louis, Mo. Filed Apr. 20, 1928. Serial No. 26,398. Term of patent 7 years.

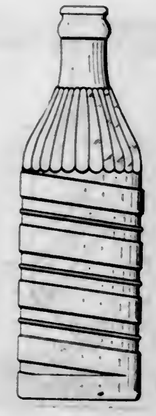


The ornamental design for a lamp standard, as shown.

75,784. MANICURING INSTRUMENT. IDA M. ELDRIDGE, Los Angeles, Calif., assignor of one-half to Lena R. Hoefler, Los Angeles, Calif. Filed May 3, 1926. Serial No. 17,540. Term of patent 3½ years.

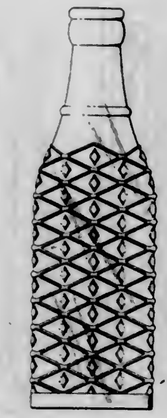
The ornamental design for a manicuring instrument, substantially as shown.

75,785. GLOVE. JOHN FITZ GIBBON, Bronxville, N. Y., assignor to The Fitz Gibbon Co., Inc., New York, N. Y., a Corporation of New York. Filed Mar. 19, 1927. Serial No. 21,213. Term of patent 3½ years.



The ornamental design for a glove as shown.

75,786. WALL-POT HOLDER. MAUD C. FOX, New York, N. Y. Filed May 9, 1928. Serial No. 26,612. Term of patent 3½ years.

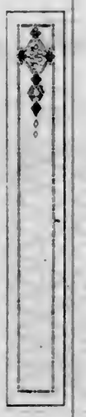


The ornamental design for a wall pot holder as shown.

75,787. BOTTLE. PAUL A. GINTER, Toledo, Ohio, assignor to The American Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 23, 1928. Serial No. 26,425. Term of patent 14 years.

The ornamental design for a bottle, substantially as shown.

75,788. BOTTLE. PAUL A. GINTER, Toledo, Ohio, assignor to The American Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 23, 1928. Serial No. 26,426. Term of patent 14 years.



The ornamental design for a bottle, substantially as shown.

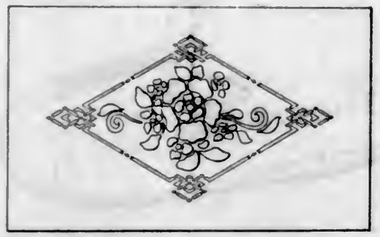
75,789. BOTTLE. PAUL A. GINTER, Toledo, Ohio, assignor to The American Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 23, 1928. Serial No. 26,427. Term of patent 14 years.

The ornamental design for a bottle, substantially as shown.

75,790. TILE OR ARTICLE OF SIMILAR NATURE. ERIC H. GIBIAN, Chicago, Ill., assignor to The Vitrolite Company, a Corporation of West Virginia. Filed Oct. 13, 1927. Serial No. 23,739. Term of patent 7 years.

The ornamental design for a tile or article of similar nature, as shown.

75,791. TILE OR ARTICLE OF SIMILAR NATURE. ERIC H. GIBIAN, Chicago, Ill., assignor to The Vitrolite Company, a Corporation of West Virginia. Filed Oct. 13, 1927. Serial No. 23,740. Term of patent 7 years.

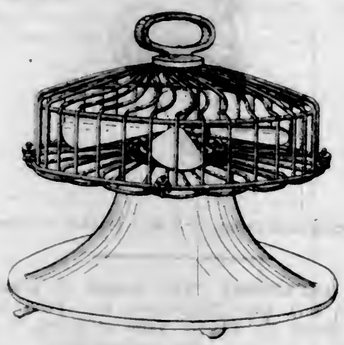


The ornamental design for a tile or article of similar nature, as shown.

75,792. TIRE. THORNTON G. GRAHAM, Kent, and HENRY F. SCHIPPEL, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Jan. 20, 1928. Serial No. 24,952. Term of patent 14 years.

The ornamental design for a tire as shown.

75,793. TILE OR ARTICLE OF SIMILAR NATURE. LILLIAN GUNTHER and ERIC H. GIBIAN, Chicago, Ill., assignors to The Vitrolite Company, a Corporation of West Virginia. Filed Oct. 13, 1927. Serial No. 23,748. Term of patent 7 years.



The ornamental design for a tile or article of similar nature, as shown.

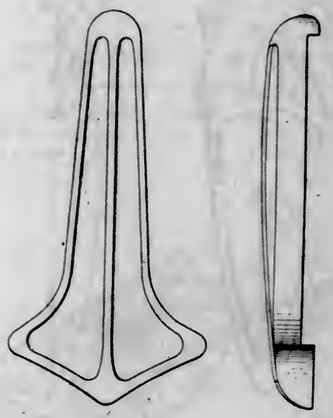
75,794. WALL-PAPER PANEL OR THE LIKE. HARRY L. HOFFMAN, New York, N. Y., assignor to Richard E. Thibaut, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 27, 1928. Serial No. 26,473. Term of patent 7 years.

The ornamental design for a wall paper panel or the like, as shown.

75,795. ELECTRIC FAN. HARVEY HUBBELL, Jr., Bridgeport, Conn., assignor to Harvey Hubbell, Incorporated, Bridgeport, Conn., a Corporation of Connecticut. Filed Feb. 14, 1927. Serial No. 20,749. Term of patent 3½ years.

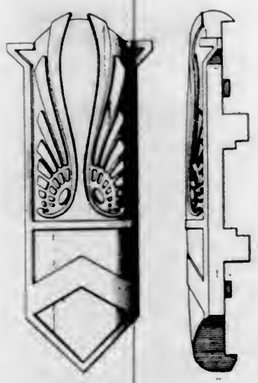
The ornamental design for an electric fan substantially as shown.

75,796. RING OR SIMILAR ARTICLE. LAWSON L. JAFFE, Chicago, Ill., assignor to S. Wechter Company, a Corporation of Illinois. Filed Feb. 1, 1928. Serial No. 25,129. Term of patent 14 years.



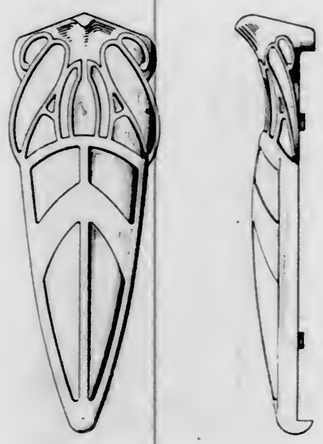
The ornamental design for a ring or similar article substantially as shown and described.

75,797. RING OR SIMILAR ARTICLE. LAWSON L. JAFFE, Chicago, Ill., assignor to S. Wechter Company, a Corporation of Illinois. Filed Apr. 7, 1928. Serial No. 26,173. Term of patent 14 years.



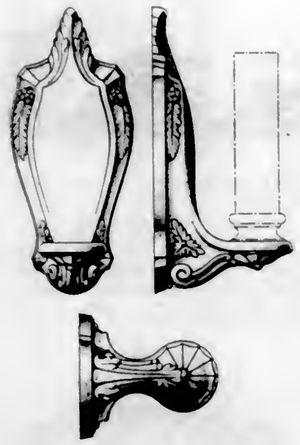
The ornamental design for a ring or similar article substantially as shown and described.

75,798. CLAMP PLATE. HERBERT S. JANDUS, Detroit, Mich., assignor to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Sept. 9, 1927. Serial No. 23,339. Term of patent 14 years.



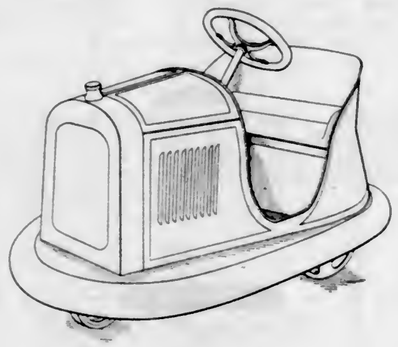
The ornamental design for a clamp plate, substantially as shown.

75,799. CLAMP PLATE. HERBERT S. JANDUS, Detroit, Mich., assignor to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Sept. 9, 1927. Serial No. 23,340. Term of patent 14 years.



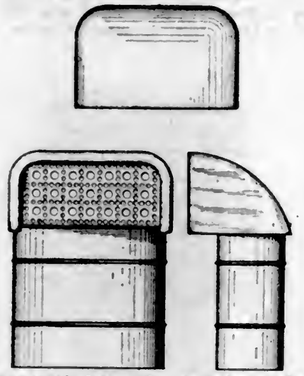
The ornamental design for a clamp plate, substantially as shown.

75,800. CLAMP PLATE. HERBERT S. JANDUS, Detroit, Mich., assignor to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Sept. 9, 1927. Serial No. 23,341. Term of patent 14 years.



The ornamental design for a clamp plate, substantially as shown.

75,801. WALL BRACKET. CHARLES LEHRMAN, Brooklyn, N. Y., assignor to Levolite Co. Inc., New York, N. Y., a Corporation of New York. Filed Apr. 27, 1928. Serial No. 26,474. Term of patent 7 years.

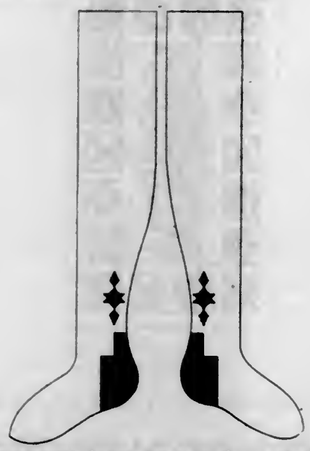


The ornamental design for a wall bracket, as shown.

75,802. AMUSEMENT CAR. JOSEPH C. LUSSE and ROBERT J. LUSSE, Philadelphia, Pa. Filed Aug. 6, 1927. Serial No. 23,017. Term of patent 14 years.

The ornamental design for an amusement car substantially as shown.

75,803. DEFLECTOR FLUE CAP. JOSEPH A. MCCARTHY, Jamaica, N. Y. Filed Mar. 29, 1928. Serial No. 26,061. Term of patent 7 years.

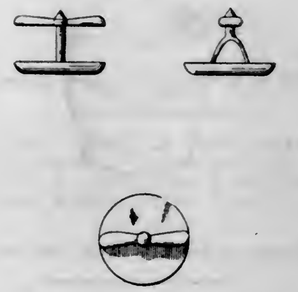


The ornamental design for a deflector flue cap, as shown.

75,804. EYEGLASS FRAME. FAY MCFADDEN, Rutland, Vt., assignor to Bay State Optical Company, Attleboro, Mass., a Corporation of Maine. Filed Oct. 24, 1927. Serial No. 23,855. Term of patent 14 years.

The ornamental design for an eyeglass frame as shown.

75,805. STOCKING. ERNST OSCAR NEBEL, Philadelphia, Pa., assignor to Oscar Nebel Co. Inc., Hatboro, Pa., a Corporation of Pennsylvania. Filed May 11, 1928. Serial No. 26,642. Term of patent 7 years.



The ornamental design for a stocking substantially as shown.

75,806. CUFF LINK. JOSEF PEJCHAR, Brooklyn, N. Y. Filed Sept. 3, 1926. Serial No. 18,965. Term of patent 14 years.

The ornamental design for a cuff link, as shown.

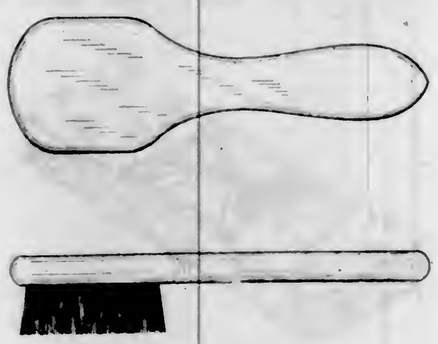
75,807. CUFF BUTTON OR SIMILAR ARTICLE. FREDERICK CARLYLE RILE, Chicago, Ill. Filed Mar. 2, 1928. Serial No. 25,650. Term of patent 14 years.

The ornamental design for a cuff button or similar article, as shown.

75,808. BOX. FRANK J. SCHLEICHER, St. Louis, Mo. Filed Apr. 26, 1928. Serial No. 26,467. Term of patent 14 years.

The ornamental design for a box, substantially as shown.

75,809. FINGER RING. JOHN SCHUMER, Cincinnati, Ohio, assignor to The Schumer Brothers Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Oct. 12, 1927. Serial No. 23,734. Term of patent 7 years.



The ornamental design for a finger ring as shown.

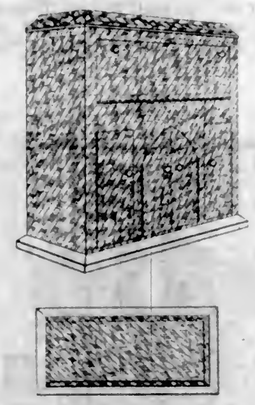
75,810. VIGIL LIGHT CUP. EARL SHEELEY, Philadelphia, Pa., assignor to Wright Manufacturing Company, Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 8, 1928. Serial No. 26,609. Term of patent 14 years.

The ornamental design for a vigil light cup, as shown.

75,811. BRUSH. HENRY E. SMITH, Troy, N. Y., assignor to Parks & Parks, Inc., Troy, N. Y., a Corporation of New York. Filed Sept. 15, 1926. Serial No. 19,075. Term of patent 7 years.

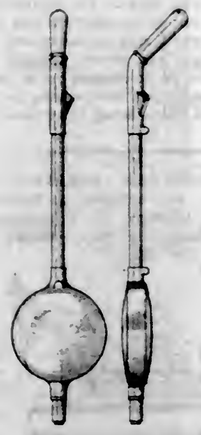
The ornamental design for a brush, as shown.

75,812. TILE OR ARTICLE OF SIMILAR NATURE. FRANK SOHN, Chicago, and LOUIS G. MARMION, Villa Park, Ill., assignors to The Vitrolite Company, a Corporation of West Virginia. Filed Aug. 17, 1927. Serial No. 23,131. Term of patent 7 years.



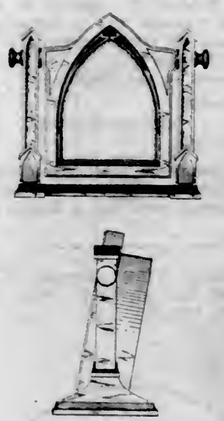
The ornamental design for a tile or article of similar nature, as shown.

75,813. TILE OR ARTICLE OF SIMILAR NATURE. FRANK SOHN, Chicago, and LOUIS G. MARMION, Villa Park, Ill., assignors to The Vitrolite Company, a Corporation of West Virginia. Filed Aug. 17, 1927. Serial No. 23,132. Term of patent 7 years.



The ornamental design for a tile or article of similar nature, as shown.

75,814. RADIO-RECEIVING-SET CABINET. ALBERT TAYLOR, Henryville, Ind. Filed Mar. 13, 1928. Serial No. 25,824. Term of patent 3½ years.



The ornamental design for a radio receiving set cabinet, as shown.

75,815. VACUUM-CLEANER HANDLE. BERNARD J. TAMARIN, Philadelphia, Pa. Filed Apr. 3, 1928. Serial No. 26,112. Term of patent 14 years.

The ornamental design for a vacuum cleaner handle as shown.

75,816. CLOCK CASE. RICHARD H. WHITEHEAD, New Haven, Conn., assignor to The New Haven Clock Co., New Haven, Conn., a Corporation. Filed Sept. 1, 1927. Serial No. 23,269. Term of patent 14 years.

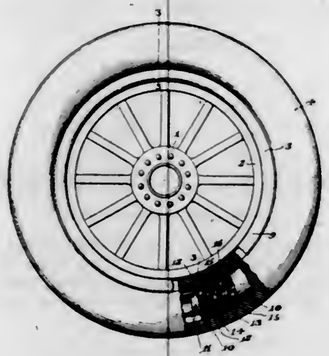
The ornamental design for a clock case as shown.

75,817. LIGHTING FIXTURE. JOSEPH ZWEIG, Brooklyn, N. Y., assignor to Metropolitan Lamp Co. Inc., New York, N. Y., a Corporation of New York. Filed May 2, 1928. Serial No. 26,544. Term of patent 3½ years.

The ornamental design for a lighting fixture substantially as shown.

PATENTS

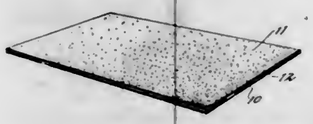
GRANTED JULY 17, 1928.



1,677,123. CYCLOPENTENYL ALKYL ACETIC ACID. ROGER ADAMS, Urbana, Ill., assignor to Abbott Laboratories, North Chicago, Ill., a Corporation of Illinois. Filed Aug. 25, 1927. Serial No. 215,517. 3 Claims. (Cl. 260—108.)

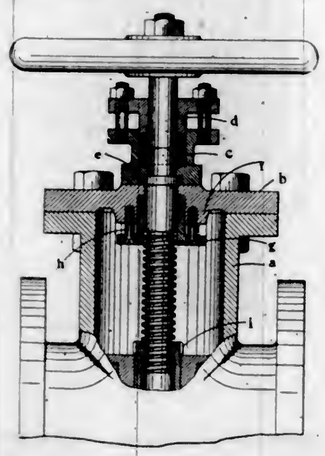
1. New compounds of the formula

$$\begin{matrix} CH=CH \\ | \quad \diagdown \\ CH_2-CH_2 \end{matrix} CH-CH(R)\,COOZ,$$



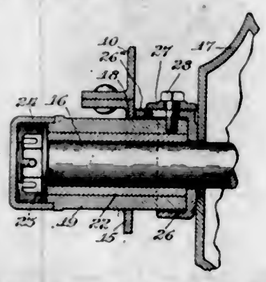
in which R represents an alkyl group containing five or more carbon atoms, and Z represents hydrogen or a substituted hydrogen, such as a metal or an alkyl group.

1,677,124. CUSHION TIRE. ANTOINE L. ALAJ, Chicago, Ill. Filed May 27, 1927. Serial No. 194,740. 2 Claims. (Cl. 152—8.)



1. In a cushion tire a core comprising a pair of resilient tubes one arranged within the other, a fabric tube interposed between said resilient tubes, and a hollow annulus in the form of closely arranged spring coils interlaced with the strands or threads of the fabric tube.

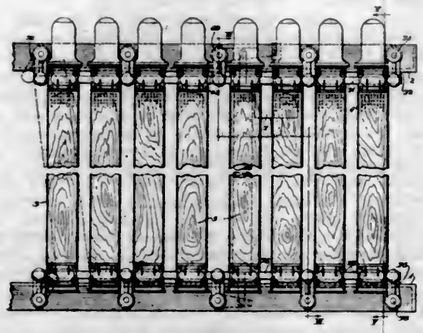
1,677,125. LEATHER PRODUCT. MILTON H. COOK, San Francisco, Calif., assignor to The H. N. Cook Belting Company, San Francisco, Calif., a Corporation of California. Filed June 26, 1926. Serial No. 118,764. 2 Claims. (Cl. 91—68.)



1. An article of manufacture comprising a sheet of celluloid, having a surface coated with granulated particles of leather, the celluloid material of the surface constituting a binder for holding the granulated particles together and to the said surfaces.

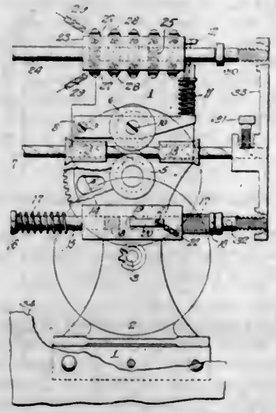
1,677,126. VALVE. HUBERT WALTER DENNIS, London, England. Filed June 17, 1925, Serial No. 37,855, and in Great Britain June 30, 1924. 3 Claims. (Cl. 251—48.)

1. A valve comprising in combination, a casing, a movable valve disposed within said casing, a closure member upon and forming part of said casing, a main stuffing box disposed upon said closure member, an inverted auxiliary stuffing box disposed on the underside of said closure member and within said casing, a valve spindle passing through said closure member and through said main and auxiliary stuffing boxes, an inverted gland ring and packing forming part of said auxiliary stuffing box, means for maintaining said inverted gland ring loosely in position and for permitting the said inverted gland ring to be moved into the said auxiliary stuffing box, and means adapted in the raised position of said valve to engage said inverted gland ring to apply pressure upon the packing in said auxiliary stuffing box on said valve being fully open, substantially as described.



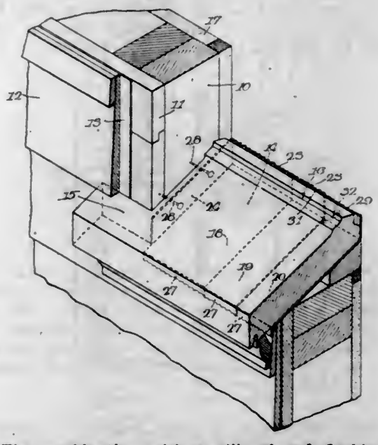
1,677,127. LAND-ROLLER BEARING. SAMUEL K. DENNIS, Chicago, Ill., assignor to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed Apr. 30, 1923. Serial No. 635,540. 2 Claims. (Cl. 308—22.)

1. In a land roller, the combination with the frame, shaft, and roller thereon, of an end bracket secured to



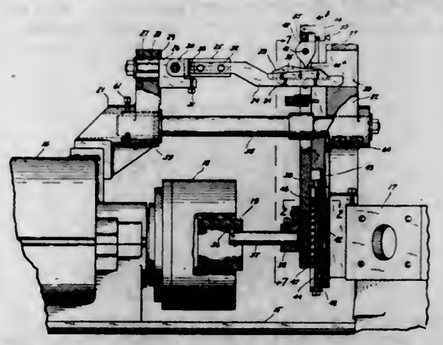
the frame, a journal sleeve supported in said bracket and receiving one end of the roller shaft, a clamping member carried on the inner end of said journal sleeve and bearing on the end of the roller, and axially adjustable connecting means between the sleeve and clamping member.

1,677,128. OSCILLATING SUCTION BOX. ALONZO ALDRICH, Beloit, Wis., assignor to Beloit Iron Works, Beloit, Wis., a Corporation of Wisconsin. Filed Dec. 5, 1927. Serial No. 237,802. 12 Claims. (Cl. 92—51.)



8. In a device of the class described, a pair of longitudinally extending vibrating hanger bars adapted to remain in parallel relation during vibration, a plurality of suction boxes and means for suspending said boxes from said hanger bars to permit relative movement between adjacent surfaces of said boxes and said bars.

1,677,129. AUTOMATIC ELECTRIC DOOR CONTROL. HERBERT CADY BLODGETT, Kalamazoo, Mich., assignor to Door Control Company, Hartford City, Ind., a Corporation of Indiana. Filed Feb. 12, 1926. Serial No. 87,831. 4 Claims. (Cl. 192—142.)

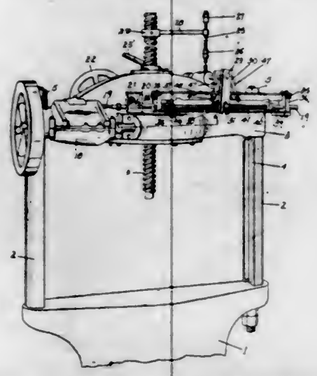


3. In an electrically operated door or gate control, an electric motor, a connection and support therefor on the said door or gate, friction drive means connected to said motor, a traction connection supported adjacent the path of said door engaged by the said friction drive, a cut-out switch carried by the motor support, stops for actuating the same at each end of the travel of said door, a reversing switch carried by the said motor support with stops for shifting the same at the end of travel of said door, and a control switch to start the action, as specified.

1,677,130. SILL FLASHING. GEORGE L. CHERRY, Portland, Oreg. Filed Feb. 7, 1927. Serial No. 166,320. 6 Claims. (Cl. 20—11.)

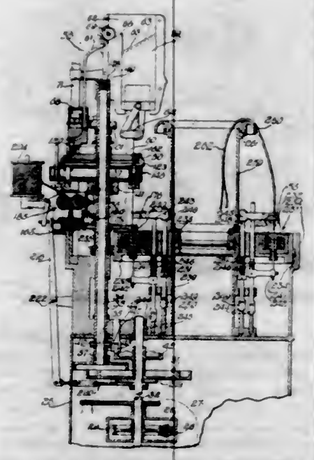
3. The combination with a sill, of end flashing disposed thereunder, intermediate flashing on said end flashing to permit a variable spread thereof, and corrugations impressed in said flashing to effect unidirectional drainage thereon.

1,677,131. MACHINE TOOL FOR BORING AND TURNING IRREGULAR SURFACES. LESTER M. COLE, Cleveland Heights, EDMUND H. HALTER, Maple Heights, and ROBERT H. LEWIS, Cleveland, Ohio, assignors to The Warner & Swasey Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 10, 1927. Serial No. 225,271. 22 Claims. (Cl. 29—57.)



1. In a machine tool, a work holding member, a tool holding member, a cam, a follower engaging the cam and operatively connected to the tool holder, said follower being movable from an operative position to an inoperative position to relieve the tool from the work piece on the completion of a cut, and a movable retainer for normally holding the follower in operative position.

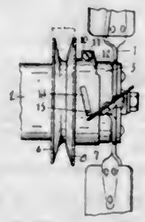
16. An attachment for a machine tool for cutting irregular surfaces on a work piece, said attachment comprising a pair of brackets adapted to be attached respectively to the work and tool holding members of



the machine tool, one bracket being adapted to support a cam and the other having a movable tool holder, a follower engageable with the cam, and spring means acting on the movble tool holder so as to tend to move the same in one direction or in a direction opposite thereto, depending upon the relative positions of the cam and follower.

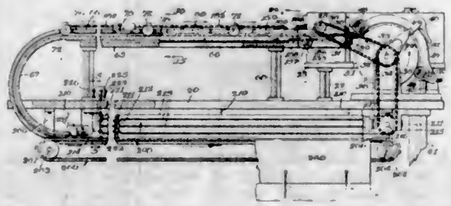
1,677,132. HIGH-PRESSURE POWER PRESS. JAMES G. COLLINS, Kalamazoo, Mich., assignor to Atlas Press Company, Kalamazoo, Mich. Filed Nov. 8, 1921. Serial No. 513,813. 1 Claim. (Cl. 100—8.)

A power press, stop means for controlling the same comprising pivoted latches with beveled ends, a slide for actuating the same alternately, and a rock shaft with arm and slot link connections for raising said latches out of engagement, as specified.



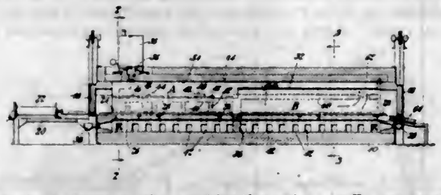
1,677,133. METHOD OF AND MACHINE FOR FEEDING AND WORKING ARTICLES. BEN KING FORD, Oak Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 29, 1924. Serial No. 758,570. 12 Claims. (Cl. 29—33.)

1. A method of preparing and attaching terminals to electrical conductors, which consists in supplying blanks in predetermined numbers to a receiving position from a supply of promiscuously arranged blocks, transferring the received blanks to and uniformly arranging them at a working position, forming the blanks into terminals by preparing them to receive the ends of electrical conductors, transferring the terminals to a heating position and contemporancously therewith changing the arrangement of the terminals, withdrawing soldering material from a supply thereof, severing the withdrawn material from the supply, feeding the severed portion to the prepared portion of the terminal, heating the terminals to fuse the soldering material therein, associating the ends of conductors with the fused solder in the terminals, and transferring the terminals and the conductors from the heating to a cooling position.



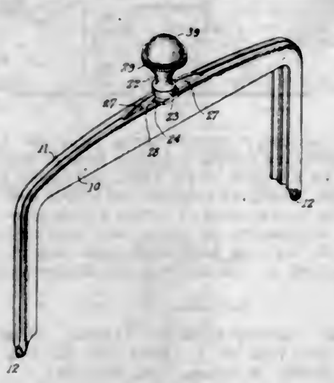
12. In a machine for soldering tips to the ends of electrical conductors, a carrier for the conductors adapted to support the ends thereof to be tipped, solder fusing elements mounted thereon, means for feeding tips and solder to said heating elements at predetermined intervals, and means for projecting at predetermined intervals the ends of the conductor to be tipped into the fused solder and finally removing at predetermined intervals the tipped conductor ends from the heating element.

1,677,134. PULLEY. TRUMAN B. FUNK, Jackson, Mich., assignor to Automotive Fan & Bearing Company, Jackson, Mich. Filed Mar. 4, 1927. Serial No. 172,668. 10 Claims. (Cl. 64—17.)



1. A pulley comprising a cylindrical barrel having an outwardly inclined pulley flange at its outer end, and an inturned attaching flange at its inner end and a lug adjacent its inner end, a sleeve adjustably mounted on said barrel and having an inwardly inclined pulley flange at its outer end and a notch at its inner end, there being projecting flanges at the edges of said notch providing opposed clamping bolt ears, portions of the edges of said notch being inclined, and a bolt disposed through said ears to clamp said sleeve in its adjusted position upon said barrel, said lug being bendable to permit the sleeve being slipped over the lug and the lug bent up to engage the sleeve.

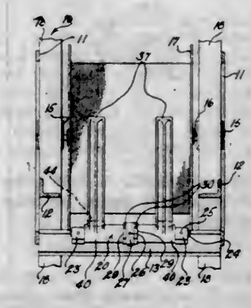
1,677,135. STRAND-WORKING MECHANISM. CARL ODENWALD HAASE, Winnetka, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 20, 1924. Serial No. 757,283. 9 Claims. (Cl. 140—140.)



1. In an apparatus for severing a strand into predetermined lengths, a runway, means for moving the strand along said runway, a rotatable severing mechanism, resilient means actuated by the moving strand for operating the severing mechanism, and means for restoring in said resilient means the energy, dissipated during each operation of the severing mechanism.

1,677,136. CONTINUOUS CARBONIZING FURNACE. WILLIAM M. HEPBURN, Denver, Colo., assignor to Surface Combustion Company, a Corporation of New York. Filed Feb. 15, 1926. Serial No. 88,197. 12 Claims. (Cl. 263—6.)

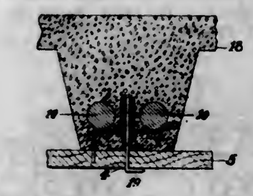
1. In a furnace, the combination of a muffle, an open top heating chamber having heat permeable walls, the floor and walls of said chamber forming a continuation of the floor and side walls of the muffle, a combustion chamber formed beneath the floor of said chamber, ports through which the hot gases from the combustion chamber may pass upwardly exteriorly of the walls of said heating chamber to heat the same, means permitting hot gases to circulate around the muffle, the furnace at a point remote from the muffle having openings through which the spent gases may pass out of the furnace.



1,677,137. BAG FASTENER. WILLIAM C. HERRING, Newark, N. J., assignor to J. E. Mergott Co., Newark, N. J., a Corporation of Delaware. Filed May 25, 1927. Serial No. 193,965. 5 Claims. (Cl. 292—202.)

1. A bag fastener comprising the combination with a pair of hinged frames, of a tiltable post mounted on one of said frames, a torsional spring in the frame to retain said post normally erect, said post having a chambered base, a stud fixed in the other frame, said stud being engageable in the chamber of said post, a knob revolubly mounted on said post, keepers fixed on the stud carried frame, and means on said knob engageable by said keepers when in one position and free therefrom when the knob is in another position.

1,677,138. TENSION DEVICE. JOHN CAMPBELL HODGE, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 30, 1927. Serial No. 187,965. 8 Claims. (Cl. 242—156.)

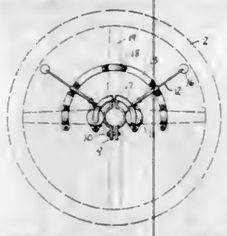


1. A device for maintaining a substantially constant tension in a strand being withdrawn from a supply thereof, comprising a pivotal brake arm for engaging the periphery of the strand supply, resilient means connected at one end to the arm and disposed coaxial with the pivotal portion thereof for maintaining the arm under pressure against the strand supply, an adjustable member coaxial with and connected to the other end of the resilient means for controlling the tension thereof to vary the braking effect of the arm, and a housing for the resilient means extending from the arm and abutting the member to maintain it in predetermined longitudinal relation with the arm.

1,677,139. PROCESS FOR INCREASING THE PERMEABILITY OF SILICON STEEL. JOHN CLARENCE KARCHER, Oak Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 19, 1924. Serial No. 738,714. 9 Claims. (Cl. 148—13.)

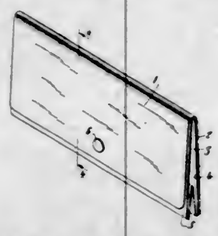
1. A process for increasing the permeability of silicon steel, which consists in heating the silicon steel at a temperature between 1000° C. and 1250° C., cooling at a rate of not more than 10° C. per minute, reheating the silicon steel at a temperature between 550° C. and 800° C., and cooling the steel slower than quenching in water but faster than quenching in open air.

1,677,140. BUILDING CONSTRUCTION. JOHN S. KETTERMAN, Dallas, Tex. Filed Sept. 10, 1927. Serial No. 218,641. 3 Claims. (Cl. 72—118.)



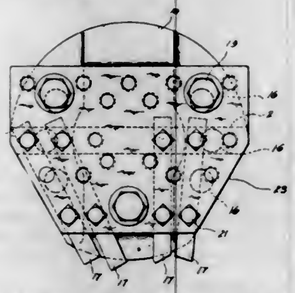
1. In a structure of the kind described, a corrugated nail supporting strip of sheet metal bent upon itself along its center longitudinal line; a rod supporting stool superimposed over the nail supporting strip, and a nail passed through the bights of the two elements.

1,677,141. SIGNAL-CONTROL SWITCH. PAUL KOROKNAY, Houston, Tex. Filed Mar. 23, 1927. Serial No. 177,552. 3 Claims. (Cl. 200—59.)



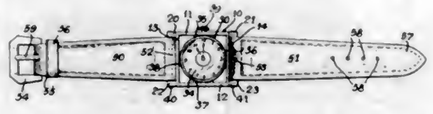
1. A switch attachment for steering wheels including a bracket below said steering wheel, opposite button switches on said bracket controlling the circuit of a lan-

tern, an arcuate frame on said steering wheel, radially extending levers pivotally supported on said frame, handles on said levers adjacent the rim of said steering



wheel, and arcuate extensions on said levers adapted to slidably contact with said button switches when said handles are depressed.

1,677,142. HAND BAG. GEORGE MICHEL ENOEL-KRON, New York, N. Y., and SERGE TREY, Stamford, Conn. Filed July 13, 1927. Serial No. 205,328. 9 Claims. (Cl. 150—2S.)

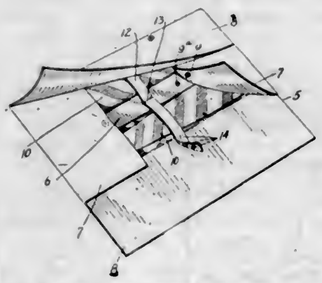


1. In a hand bag, the combination with a receptacle, of a removable cover therefor, a thin metal plate folded upon itself to form two closely spaced members, one of said members being shaped to conform with the walls of said receptacle and the other member being cut into strips projecting tongue-like from the connecting line of said two members, means for holding said first mentioned member on one end portion of said cover, and pockets in one of the walls of said receptacle for the reception of said strips.

1,677,143. MULTIPLE TOOL HOLDER FOR CROSS SLIDES OF LATHES. MAX E. LANGE and ALVA L. EVANS, East Cleveland, Ohio, assignors to The Warner and Swasey Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 14, 1926. Serial No. 122,327. 2 Claims. (Cl. 82—36.)

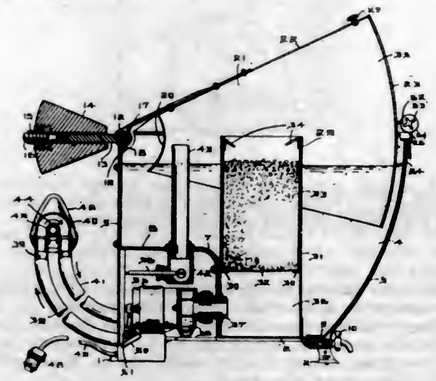
1. A tool holder for the cross-slide of a lathe having a lower portion adapted to be secured to the cross-slide in a plurality of different positions including positions which are complete reversals of others and having an upper tool receiving portion with provision for clamping one or a plurality of tools therein in any one of a number of predetermined positions in definite relation to the different positions of the holder on the cross-slide, said holder being polygonal-shaped with provision for supporting tools so that they may project from any face thereof, and being provided with corners cut away on lines having definite relation to the adjacent parts of the lathe in the different positions in which the holder may be placed on the cross-slide forming faces of different lengths.

1,677,144. WATCHCASE. ABRAHAM LASKA, New York, N. Y., assignor to Hipp. Didisheim Company, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 21, 1925. Serial No. 63,813. 3 Claims. (Cl. 224—4.)



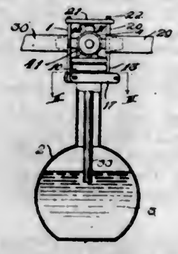
1. In a watchcase construction, an outer, substantially rectangular frame member and an inner watchcase member having a back member and a bezel member, the latter of which is attached to said outer, substantially rectangular frame member at spaced points within the same, the frame member being apertured to admit the passage therethrough of the stem and sufficient clearance being provided between the bezel member and the outer frame member to permit the application and removal of the back member.

1,677,145. GARMENT. FRANK LERNER, New York, N. Y. Filed Sept. 21, 1927. Serial No. 220,862. 2 Claims. (Cl. 2—78.)



1. The method of manufacturing union suit garments, which comprises cutting a tubular piece of fabric transversely for a portion of its width, and thence longitudinally thus forming an extension and a main body portion, narrowing the extension by cutting out marginal portions thereof intermediate its length, and carrying the outer end of the extension back to the main body of the tube and stitching it into position, all substantially as described.

1,677,146. TIE CASE OR CONTAINER. CHARLES LOBNER, New York, N. Y. Filed Jan. 22, 1927. Serial No. 162,859. 6 Claims. (Cl. 150—53.)

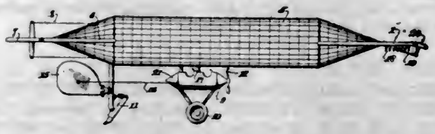


1. A case of the class described comprising an elongated, central body, flaps at the ends of said body and foldable onto one face thereof, means for securing said flaps to said body, other flaps at the sides of said body and foldable onto the first named flaps and said body, said case with the flaps folded thereonto, being folded centrally to bring the side flaps adjacent each other, means for securing said flaps together to close the case, the central inner face of the body being provided with a strap having free end portions extending to the sides of said body, and means for adjustably securing the ends of said strap.

1,677,147. GAS MEASURING. ELMER I. MCKESSON, Toledo, Ohio. Filed Oct. 10, 1921. Serial No. 506,584. 8 Claims. (Cl. 128—191.)

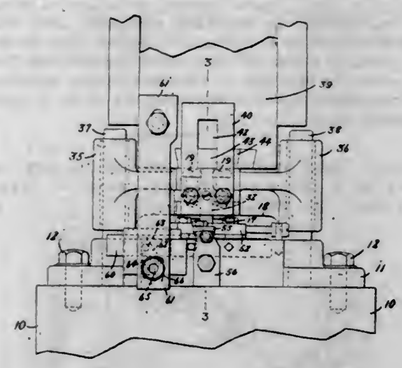
1. Respiration mechanism comprising an inhaler, duct sections to and from the inhaler, a gasometer connecting the ends of the duct sections remote from the inhaler, said gasometer including a liquid reservoir, a float providing a chamber above the liquid level in the reservoir into which chamber above the liquid level the ends of the duct sections project, a fulcrum mounting for the chamber permitting movement thereof as to the reservoir, and chamber operation disclosing means movable on a common axis with said fulcrum.

1,677,148. BY-PASS VALVE FOR GAS-WASHING APPARATUS. RUDOLPH ROSNER, Chicago, Ill. Filed Oct. 29, 1926. Serial No. 145,004. 5 Claims. (Cl. 261—121.)



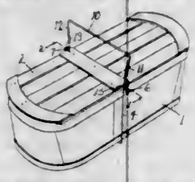
4. In combination, a by-pass valve adapted to be mounted on the top of a neck portion of a container, a tube connected to said valve and extending downwardly through said neck portion and into a liquid in the container, said valve including an inlet adapted to be connected to said tube to deliver gas into said container, and an outlet connected to the interior of the said neck portion of said container for discharging the gas from the container after it has passed through said liquid, said valve having a body including a flange cooperable with the flange on the upper end of the neck portion of the container, and means for clamping said flanges together comprising a pair of cooperable clamp members disposed about said flanges and detachably anchored to each other.

1,677,149. MANUFACTURE OF TEXTILE FIBERS FROM ANIMAL HAIR AND BRISTLES. WILHELM HELMUT SCHWEITZER, Heidelberg, Germany, assignor, by mesne assignments, to American Lanil Corporation, a Corporation of New Jersey. Filed Nov. 17, 1922, Serial No. 601,646, and in Germany Feb. 13, 1922. 2 Claims. (Cl. 8—21.)



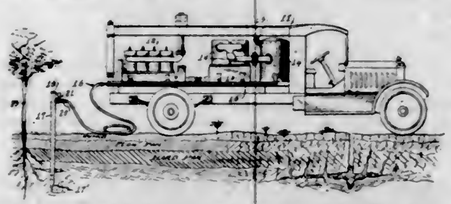
1. A process for the production of animal fibers suitable for use in the production of textile fabrics, which consists in taking animal fibers which have been oxidized and subjecting the same to a bath of caustic soda solution from 0.1% to 0.15% in strength and sufficient to form an alkaline salt upon the fibers whilst insufficient in strength to dissolve the albumin bodies present therein, washing the thus treated fibers and drying the same.

1,677,150. COMBINATION AIRPLANE AND ZEPPELIN. WAYNE F. SHORT, Bloomington, Ind. Filed Feb. 1, 1928. Serial No. 251,205. 1 Claim. (Cl. 244—6.)



In an airship, two wing surfaces one at each end of a rigid gas bag, a front end flap connected to the front wing surface, a rudder pivoted to a shaft, said shaft being connected to the framework of the gas bag and carrying a landing pin, a vertical motion flap located at the rear end of the structure and connected to the rear wing surface, a gondola connected to the gas bag framework and to which two wheels are attached for landing purposes.

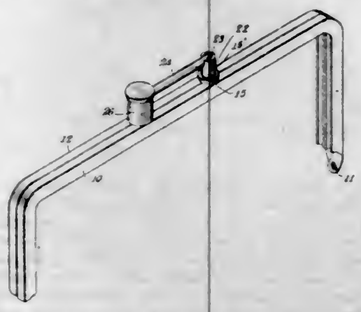
1,677,151. MACHINE FOR MAKING NUT BLANKS AND SIMILAR ARTICLES. HOWARD D. SIMKINS and JOHN BURKHARDT, Cleveland, Ohio, assignors to The Superior Screw & Bolt Manufacturing Company, a Corporation of Ohio. Filed Dec. 9, 1926. Serial No. 153,478. 4 Claims. (Cl. 164—13.)



1. In a machine for making blanks from a strip of metal, the combination of a shearing punch and a co-operating die, means for supporting and positioning the metal strip so that an end portion extends a definite distance over said die, means for actuating said punch to simultaneously sever two blanks and to cause one thereof to be discharged through said die, means for ejecting the other blank, and means whereby said ejecting means is caused to operate in a definite time relation with the operation of said shearing punch.

1,677,152. BASKET HANDLE. BENJAMIN H. SMITH, Niles, Mich., assignor to Michigan Wire Goods Company, Niles, Mich. Filed Apr. 21, 1927. Serial No. 185,465. 8 Claims. (Cl. 217—125.)

7. The combination with a receptacle of a receptacle bail having arms terminating in eyes, one of the eyes having an extension engaged within the rim of the receptacle, and a handle having inwardly converging arms, one of the arms terminating in an outwardly projecting eye engaged in said eye of said bail having the extension, the other arm having an outwardly offset loop pivotally engaged in the other eye of the bail and terminating in a downwardly projecting angled retaining finger engaging within the rim of the receptacle.



1,677,153. METHOD FOR TREATING SOILS TO PROMOTE PLANT GROWTH. CHARLES H. SPENCER, Los Angeles, Calif. Filed Feb. 11, 1926. Serial No. 87,673. 5 Claims. (Cl. 47—48.)

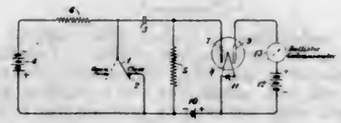
1. The method for treating soils; which method consists in introducing air to the ground at a point below the surface thereof at a moderate pressure until the adjacent ground is charged with air, storing up a volume of higher pressure air, and suddenly releasing the stored volume of high pressure air into the charged ground at a rate sufficient to cause a visible swelling of the surface thereof.

3. The method for internally disrupting soil; which method consists in providing a source of high pressure air, providing a hole in the ground, admitting air from said source to said hole in successive defined injections; each successive injection admitting the air at a higher volumetric rate.

1,677,154. BAG FASTENER. BERNARD STEMBER, New York, N. Y. Filed Feb. 14, 1928. Serial No. 254,207. 7 Claims. (Cl. 292—228.)

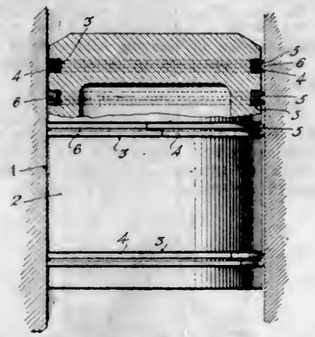
1. A fastening device for a bag having a pair of frame members hinged to each other, said device comprising a spring controlled cap mounted on one frame member and adapted to snap over a lug on the other frame member to close the bag, a rod pivotally connected at one end to said cap, and provided with means at its opposite end to have locking engagement with said frame members.

1,677,155. MILK-BOTTLE CAP. GEORGE L. SWIFT, St. Paul, Minn., assignor to Brown & Bigelow, St. Paul, Minn., a Corporation of Minnesota. Filed Apr. 20, 1925. Serial No. 24,598. 7 Claims. (Cl. 215—38.)



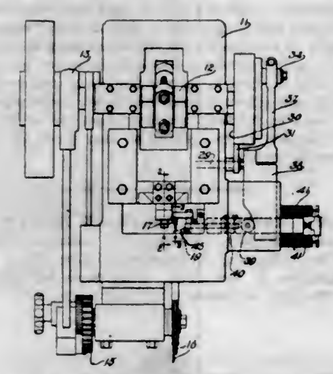
2. A milk bottle cap having ears formed therewith, adapted to be folded beneath the cap when not in use and an order indicating disk pivotally secured to said cap.

1,677,156. APPARATUS FOR BURNING EXPLOSIVE GASEOUS MIXTURES. SIDNEY P. VAUGHN, U. S. Navy, Choctaw County, Miss., assignor to Surface Combustion Company, New York, N. Y., a Corporation of New York. Filed Dec. 23, 1925. Serial No. 77,363. 8 Claims. (Cl. 158—99.)



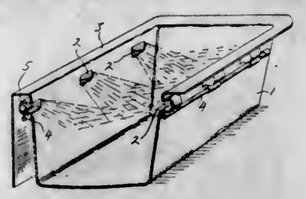
1. In apparatus for burning explosive gaseous mixtures, the combination with a porous and permeable bed of refractory material, of a series of heat-conducting elements in thermal relation with the back of said bed for conducting away therefrom such excess heat as would cause back flash in the mixture supplied to the bed, the passage between said elements being sufficiently free and open to prevent said passage from serving as flame-interrupting passages, and a mixture supply chamber enclosing said elements.

1,677,157. SYSTEM FOR MEASURING CONTACT REBOUNDING. ALLAN WEAVER, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Feb. 25, 1925. Serial No. 11,539. 6 Claims. (Cl. 175—183.)



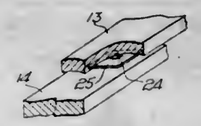
1. As a means for measuring the number of rebounds of contacts, a system comprising a thermionic vacuum tube, a ballistic galvanometer included in the plate circuit of said thermionic vacuum tube, and circuit arrangements whereby each closing of the contacts produces a current impulse in said plate circuit and an opening of the contacts has no effect on said plate circuit.

1,677,158. PACKING RING. JACOB B. WENZEL, Bloom, Colo., assignor to Albert W. Wenzel, Newark, N. J. Filed July 1, 1922. Serial No. 572,251. 1 Claim. (Cl. 74—109.)



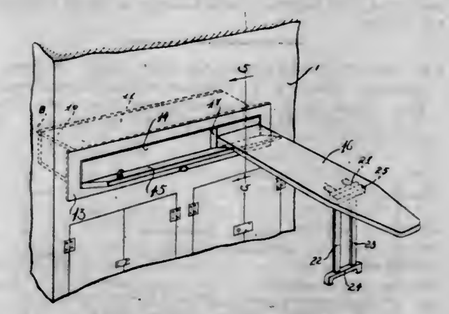
A piston ring which is peripherally and shallowly dished to produce outwardly sloping surfaces terminating in sharp outer edges at the top and bottom of the ring, there being a central groove in the base of the dish with side walls substantially perpendicular to said base, said groove ensuring in the ring when new large storage space from which oil is supplied freely to said sharp outer edges of the ring over the sloping surfaces and providing when the dish is worn away a reduced storage space from which oil is supplied to the substantially cylindrical surface over abrupt right-angular edges to a more restricted extent.

1,677,159. MATERIAL-WORKING MACHINE. BURNS LEE WHITED, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 7, 1924. Serial No. 742,163. 8 Claims. (Cl. 10—25.)



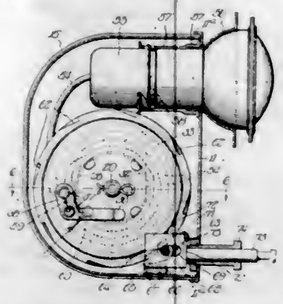
8. In a blank heading apparatus, a multiple heading die, a multiple die block for holding a plurality of blanks in position to be headed thereby, a reciprocating means designed to simultaneously sever the blanks from a plurality of pieces of stock and transfer them to the die block, members carried thereby for retaining the blanks therein during the transfer, said members so mounted as to be independently reciprocable and oscillatable relative to the transfer means, independent resilient means for normally maintaining each of the members in position to retain a blank but permitting a reciprocation thereof relative to the transfer means, and common resilient means for normally maintaining the members against oscillation to cooperate with the independent resilient means to permit the members to oscillate and reciprocate and thereby release the blanks from the transfer means.

1,677,160. BATHTUB. HENRY L. WOOLFENDEN, Detroit, Mich. Filed July 2, 1926. Serial No. 120,122. 5 Claims. (Cl. 4—150.)



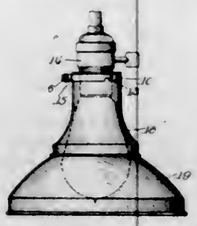
1. The combination with a bath tub having a pocket formed by one of its walls opening into the space between said walls but located exteriorly of said space, said pocket having its top surface formed with grooves extending toward the tub interior, of means for discharging water upon said face, said grooves directing the flow of such water toward the outlet of the pocket.

1,677,161. METHOD OF AND DEVICE FOR ELECTRIC WELDING. ARTHUR HERMAN ADAMS, La Grange, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 25, 1925. Serial No. 32,612. 5 Claims. (Cl. 219—10.)



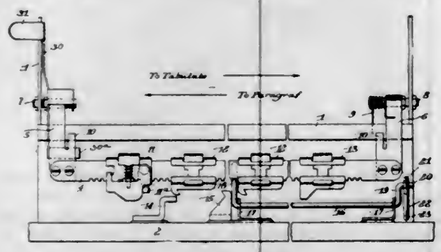
1. In a device for welding two parts, a current localizing member adapted to be placed between the parts to be welded, and a member for attaching the localizing member to one of said parts, said attaching member having a perforation therein to permit contact between the localizing member and one of the parts.

1,677,162. IRONING BOARD AND SUPPORT. CLARA A. ADAMS, Jackson, Mich. Filed Nov. 20, 1926. Serial No. 149,625. 4 Claims. (Cl. 68—10.)



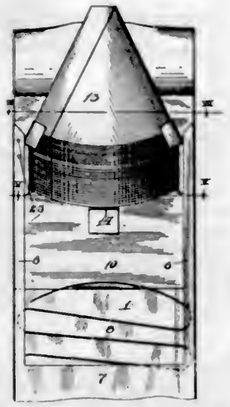
1. A device of the class described comprising a receptacle having an opening in one side thereof; a closure for said opening; an ironing board swingably mounted on said receptacle and adapted for swinging inwardly and outwardly of said receptacle through said opening to an inoperative and an operative position respectively, said closure having a cut away portion to provide an abutment shoulder for engaging one edge of said board and preventing swinging of the same inwardly of said receptacle.

1,677,163. EXTENSION LAMP. ERNST G. APPLETON, ALBERT C. FISCHER, and RAYMOND MOONEY, Chicago, Ill., assignors to Roach-Appleton Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 19, 1923. Serial No. 675,468. 3 Claims. (Cl. 240—8.14.)



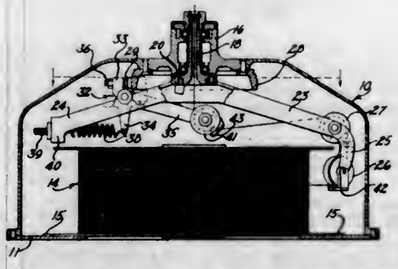
1. In a housing for an electric extension light, a main housing portion having an open side and perforated flanges located adjacent said open side, a removable face plate adapted to close said open side having perforations adapted to register with the flange perforations and having inturned edges on all sides adapted to enclose the flanges and to maintain the parts in registering relation.

1,677,164. ELECTRIC-FIXTURE CLAMP. GEORGE ARAS, Chicago, Ill. Filed June 17, 1926. Serial No. 116,527. 8 Claims. (Cl. 240—129.)



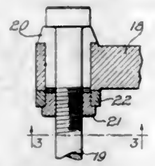
1. A fixture clamp comprising two flexible metal strips secured together at the ends and crossing each other intermediate the ends, a perforated housing through which the strips extend, and fastening means for drawing the connected ends together about a device to which the strips are applied.

1,677,165. TYPEWRITER AND THE LIKE. WALTER E. BARNARD, Ithaca, N. Y., assignor to Barr-Morse Corporation, Ithaca, N. Y., a Corporation of New York. Filed Aug. 4, 1926. Serial No. 127,035. 14 Claims. (Cl. 197—176.)



1. In a typewriting machine, a carriage, a stop, a support for said stop shiftable with the carriage during travel of the latter in both directions, and also independently shiftable laterally of such travel to place the stop in different planes of travel with said carriage, relatively stationary stops with one of which the first stop cooperates, depending upon the plane of travel into which it is shifted, a relatively stationary control element disposed along the path of travel of said support and engageable therewith in all positions of the carriage, and key operated means for moving said control element to cause a shift in the path of travel of said first mentioned stop.

1,677,166. CUP DISPENSER. HUGO J. BAUR, Chicago, Ill., assignor to The Vortex Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Oct. 18, 1924. Serial No. 744,312. 2 Claims. (Cl. 312—43.)

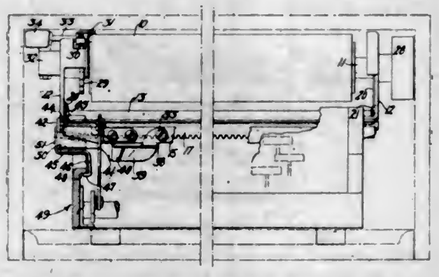


1. A container comprising a front portion, a back portion pivotally secured thereto, said portions being separated at one end to provide a slot through which articles in a stack of articles in the container may be individually removed, spring actuated slidable plates for automatically maintaining an article in position to be removed through said slot, said plates having the upper corners bent to afford a seat to project into the stack of articles, and a bracket secured to the plates to also serve as a seat for the stack of articles.

1,677,167. MATERIAL-UNWINDING DEVICE. SIDNEY ELMER BORGESON, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 30, 1926. Serial No. 138,612. 4 Claims. (Cl. 242—128.)

1. A material unwinding device comprising a housing for enclosing a supply of material, a take-off flier including a rotatable bushing through which material is withdrawn from said housing and a pair of oppositely disposed arms extending transversely from said bushing, material guiding means including a rotatable member carried by one of said arms, and means carried by the other arm for maintaining the material under uniform tension.

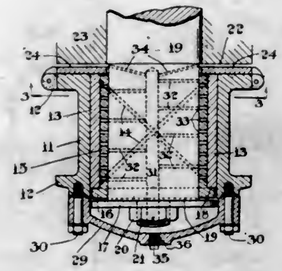
1,677,168. MACHINE FRAMEWORK. ALFRED BRUCE BROWN, Caldwell, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Original application filed Apr. 4, 1924, Serial No. 704,149. Divided and this application filed Dec. 7, 1925. Serial No. 73,690. 8 Claims. (Cl. 207—1.)



6. In an extruding press framework, a column, a cap having an aperture, and a split sleeve adapted to rigidly support said column in the aperture in said cap.

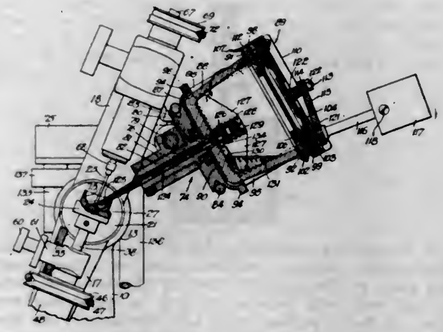
1,677,169. VULCANIZATION OF RUBBER. ALBERT C. BURRAGE, Jr., Hamilton, Mass., assignor, by mesne assignments, to Albert C. Burrage, Boston, Mass. Filed Feb. 8, 1924. Serial No. 691,466. 8 Claims. (Cl. 18—53.)

2. That process of vulcanizing rubber characterized by heating rubber and a vulcanizing agent such as sulphur with a tri-substituted guanidine containing both phenyl and tolyl substitution radicals.



1,677,170. TYPEWRITING MACHINE. GEORGE W. CAMPBELL, Hartford, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 22, 1922. Serial No. 602,509. 28 Claims. (Cl. 197—193.)

1. In a typewriting machine, a platen, a main frame, a case-shift frame thereon, a platen-carriage movable in letter-feed and return directions on the case-shift frame, and a one-piece normally-ineffective locking device mounted for movement on the case-shift frame and shiftable to engage the main frame for holding the case-shift frame against movement, and to engage the platen-carriage to hold the latter against movement on the case-shift frame.

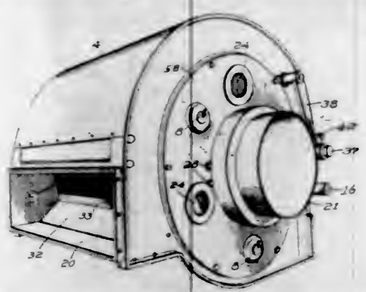


1,677,171. BEARING. WILLIAM F. J. CASEY and GUSTAVE CAVIN, Kingston, Ontario, and CHARLES E. BROOKS, Montreal, Quebec, Canada; said Cavin and said Brooks assignors to said Casey. Filed May 23, 1925. Serial No. 32,373. 4 Claims. (Cl. 308—79.)

1. In an axle bearing for railway equipment, a journal bearing casting, a lubricant reservoir attached to one end of the bearing casting, a bushing rotatably mounted in the bearing, an axle rotatably mounted in said bushing and having limited movement in its longitudinal direction,

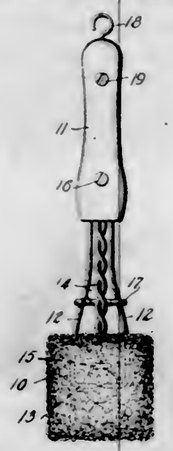
said axle having an enlarged end portion positioned within the reservoir and adapted to circulate the lubricant in the reservoir and force said lubricant between the revolving parts of the bearing.

1,677,172. METHOD OF AND APPARATUS FOR WORKING ARTICLES. FREDERICK WILLIAM COLBECK and SIGURD THRONSEN, Chicago, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 20, 1925. Serial No. 24,357. 6 Claims. (Cl. 51—263.)



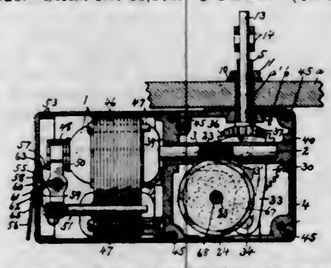
5. In a mechanism for working articles, means for performing work upon an article, a receptacle for containing fluid abrasive material, means for rotating the receptacle around an axis, a conduit having an axis coincident with the axis of rotation of the receptacle for directing the material therefrom to the article being worked, and means controlled by the rotating receptacle for depositing predetermined quantities of the material in the conduit at predetermined intervals and thereafter returning a portion thereof to the receptacle through the conduit and mixing it with the supply contained in the receptacle.

1,677,173. CONDENSER. ROBERT S. CURLEY, Lowell, Mass., assignor, by mesne assignments, to Kitson Machine Shop, a Corporation of Massachusetts. Filed Sept. 26, 1925. Serial No. 58,779. 8 Claims. (Cl. 19—156.)



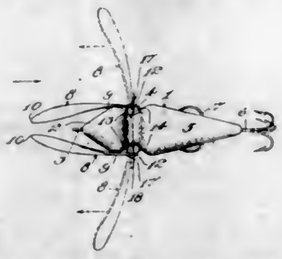
1. In a condenser, the combination of a rotary screen, a casing in which said screen is partly enclosed, said

casing having an inlet opening in one side thereof, a stationary air conduit within said screen arranged to receive the air flowing through the screen and discharge



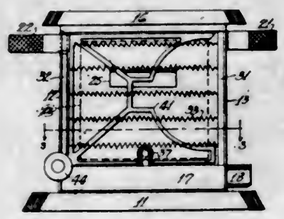
it from the condenser, and stationary dampers between said screen and conduit and between said casing and screen.

1,677,174. SCOURING IMPLEMENT. JOHN D'ALBORA, Yonkers, N. Y. Filed Dec. 27, 1923. Serial No. 682,892. 8 Claims. (Cl. 15—209.)



1. A scouring implement comprising a body of scouring material having a reduced compacted portion, scouring pads at the opposite sides of the same, a holder having jaws lying between the pads in engagement with such compacted portion and a post intermediate the jaws having a thrust transmitting engagement with the compacted portion.

1,677,175. MOUNTING FOR WINDSHIELD CLEANERS. ALBERT E. DOMAN, Elbridge, N. Y. Filed May 22, 1925. Serial No. 32,171. 5 Claims. (Cl. 15—253.)

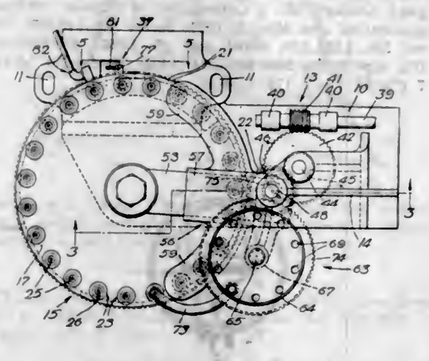


1. In a motor driven windshield cleaner, a flanged plate adapted to be applied to the face of the windshield frame with its flange engaging one of the edges thereof to hold it against turning relatively to the frame, said plate having a vertical slot therein, a gear case having a post adapted to extend through said slot and through an opening in the frame when the cleaner is adjusted for use, means on the front end of the post for engaging the adjacent face of the frame to hold the gear case in engagement with said plate, said gear case having a boss at one side of the axis of the post engaging in the slot of the plate for holding the gear case against turning movement relatively to said plate, a rock shaft extending through the post, a wiper arm actuated by the rock shaft and means for oscillating the rock shaft.

1,677,176. FISH BAIT. JAMES L. DONALY, Newark, N. J. Filed May 28, 1926. Serial No. 112,223. 11 Claims. (Cl. 43—48.)

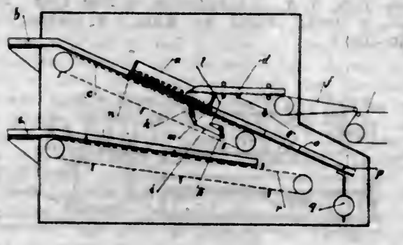
1. A fish bait having a body, lateral wings at opposite sides of said body non-rotatable with respect thereto and adapted to swing between a laterally projecting position and a forwardly folded position, said wings being transversely shaped so as to tend to move vertically in the water when the bait is drawn forward, means for attaching a line to the front of the body, and means for attaching hooks to said body.

1,677,177. ELECTRIC TOASTER. HARCOURT C. DRAKE, Hempstead, N. Y. Filed Jan. 2, 1926. Serial No. 79,022. 5 Claims. (Cl. 219—19.)



1. In a portable bread toaster as described, the combination of a stand having an electric outlet, an electric heating coil connected with said outlet and a source of illumination, said source connected in multiple circuit with a portion of said coil and arranged to illuminate the surface of the bread being toasted by said coil.

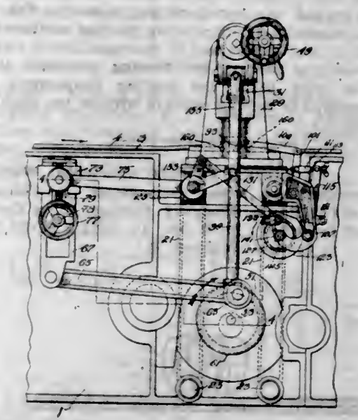
1,677,178. METHOD OF AND APPARATUS FOR ASSEMBLING MEMBERS. JOSEPH WILLIAM FAY, Villa Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 10, 1926. Serial No. 134,746. 10 Claims. (Cl. 29—84.)



6. In apparatus for assembling apertured spherical members with companion members, means having depressions for supporting apertured spherical members in

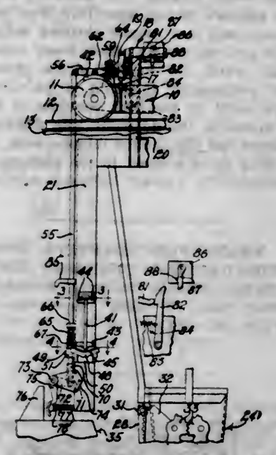
engagement with the upper surface of companion members extending into the depressions, means for indexing the supporting means, and means for engaging the upper surface portion of a supported spherical member for rotating the member to cause the registration of the aperture therewith with the companion member.

7. The method of assembling an apertured member with another member, which consists in associating the surface of the apertured member with the other member, changing the relative positions of the members to present various surface portions of the apertured member to the other member, and causing the assemblage of the apertured member on the other member.



1,677,179. DEVICE FOR DISCHARGING PRALINE CORES FROM THE POWDERING BOX. CARL GÖPEL, Halle-on-the-Saale, Germany. Filed Aug. 7, 1926, Serial No. 127,930, and in Germany Sept. 4, 1925. 2 Claims. (Cl. 107—3.)

1. A device for discharging praline cores from the mold box, comprising an inclined guideway for the box, an endless travelling band for conveying the box down the guideway, a sifting scoop arranged in the path of the box so as to scoop the praline cores out of the latter, means for lifting the front end of the scoop so as to clear the edges of the box, means for shaking the scoop so as to return the molding powder to the box and feed the praline cores along the scoop, and a conveyer band arranged so as to receive the praline cores from the scoop.

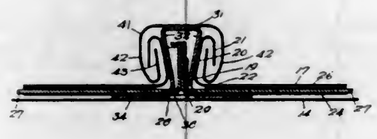


1,677,180. CUTTER MECHANISM FOR PLASTIC MATERIAL. THOMAS L. GREEN and CHARLES H. WILLIAMS, Indianapolis, Ind., assignors to said Thomas L. Green, Indianapolis, Ind. Filed Apr. 13, 1926. Serial No. 101,636. 19 Claims. (Cl. 107—21.)

1. In a machine of the character described, the combination of an apron for receiving and feeding plastic material, a reciprocatory cutter, means for automatically reciprocating the cutter to cause the same to move toward, but not to the material at intervals, and means

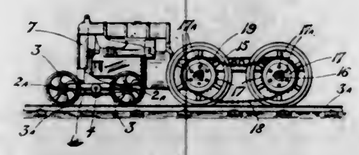
including a rocker member beneath the apron for automatically periodically raising the apron and the material thereon toward the cutter that the latter may cut through the material.

1,677,181. MATERIAL-HANDLING APPARATUS. HANS HENRIK CHRISTIAN GRONDAHL, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 31, 1926. Serial No. 126,166. 12 Claims. (Cl. 188—74.)



1. In an apparatus for handling material, a traveling carriage, manually operable means carried by the carriage for moving the latter in either direction, a brake mechanism operatively connected to the means and normally in braking relationship with the carriage, and means controlled by the movement of the manually operable means in either direction for automatically rendering the brake mechanism ineffective.

1,677,182. METHOD OF MANUFACTURING CEMENTS RICH IN ALUMINA. ALEXANDER HASSELBACH, Dessau, Germany, assignor to G. Polysius, Dessau, Germany, a Partnership. Filed Sept. 27, 1924, Serial No. 740,395, and in Germany Feb. 19, 1924. 2 Claims. (Cl. 106—25.)

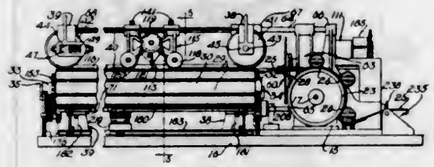


1. The method of manufacturing cements rich in aluminium, consisting in introducing the raw mixture together with a small percentage of fluor-spar into a rotary kiln and carrying through the burning procedure at a temperature lying below the melting temperature at present employed in making cements without the addition of fluor-spar.

1,677,183. CAR ROOF. FRANCIS A. JACOBS, Warren, Ohio, assignor, by mesne assignments, to Chicago-Cleveland Car Roofing Company, Chicago, Ill., a Corporation of Delaware. Filed Oct. 14, 1924. Serial No. 743,520. 19 Claims. (Cl. 108—5.)

1. In a car roof, in combination: roof sheathing, a flashing secured on said sheathing, roof sheets disposed on opposite sides of the ridge of the roof, said sheets having side flanges extending from the ridge to a point short of the eaves edge of the roof, the eaves edges of said sheets terminating in a return underbent portion spaced from the main body of the sheet, a locking strip positioned in the space defined by said return underbent portion of the sheet and projecting upwardly between the edges of adjacent sheets, anchors secured at the eaves edges of the roof between the sides of adjacent roof sheets, said anchors having upwardly bent portions providing a space, said last named portions being connected by a top web and cut away at their lower ends to provide slots through which the locking strips extend, the upwardly bent portions of the said strips terminating in the space provided by the bent portions of the anchors, seam caps enclosing the adjacent side flanges and adjacent roof sheets and the anchor therebetween, and a flashing and holding piece secured to the anchors and having a portion adapted to prevent outward movement of the seam caps.

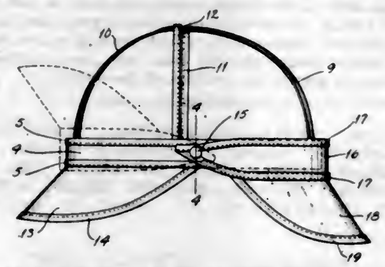
1,677,184. MEANS FOR ADAPTING MOTOR TRACTORS FOR HAULING PURPOSES ON RAIL OR TRAM LINES. ROBERT JOUGHIN, Waikino, New Zealand. Filed Nov. 20, 1925. Serial No. 70,351. 6 Claims. (Cl. 105—62.)



1. Improved means for adapting a motor tractor for haulage purposes on rail or tram lines, comprising the application of fore and rear trucks to the frame of the tractor, the said trucks having four flanged track wheels attached thereto, and means for operating all rear truck wheels to propel the tractor.

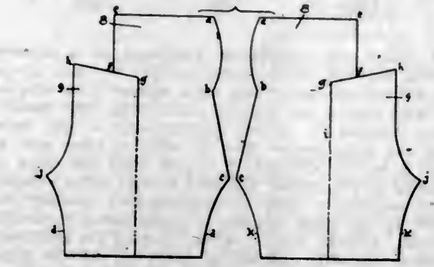
1,677,185. RECEIVER. WILLIAM KAISLING, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Original application filed Mar. 3, 1921, Serial No. 449,396. Patent No. 1,551,310, dated Aug. 25, 1925. Divided and this application filed Mar. 14, 1925. Serial No. 15,440. 7 Claims. (Cl. 179—156.)

1. In a receiver of the character described including a casing, a permanent magnet, a pivot member secured to said casing, means for securing said permanent magnet to said pivot member, a head band, a clip member having integrally formed extensions adapted to encompass the ends of said head band, and a U-shaped spring member pivotally secured to said clip member for engaging said pivot member to pivotally secure said head band by means of said clip on said casing.



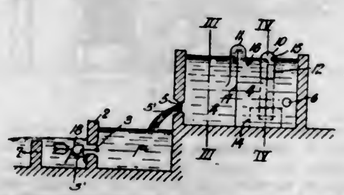
1,677,186. STRAND-WORKING MECHANISM. FREDERIC SHIELDS KOCHENDORFER, River Forest, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 4, 1925. Serial No. 6,912. 8 Claims. (Cl. 140—140.)

1. In an apparatus for severing a strand into lengths, a guideway, a continuously moving belt for moving the strand along said guideway, a strand severing mechanism, means adjustably positioned along the guideway and actuated by the moving strand for controlling the operation of said severing mechanism, and means for moving the guideway to discharge the severed strand therefrom.



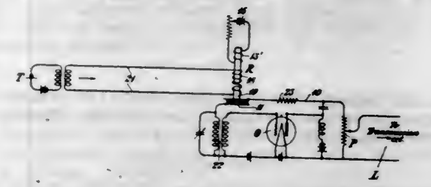
1,677,187. SUN VISOR. SHANE ETHEL LEIBSON, St. Louis, Mo. Filed Mar. 9, 1927. Serial No. 173,866. 1 Claim. (Cl. 2—10.)

A sun visor comprising a head encircling band, a plurality of members having their ends secured to said band at diametrically opposite points so that said bands will cross each other and limit the downward movement of said head band, a visor secured to said band, a second band of less length than said first mentioned band, a visor secured to said second mentioned band, and fasteing devices carried by said first mentioned band and the ends of the second mentioned band for detachably



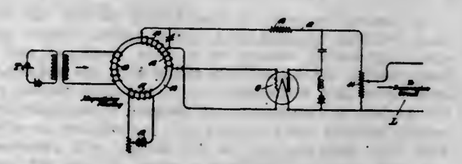
securing said bands together whereby the visor carried by the second mentioned band can be secured in various positions on said first mentioned band.

1,677,188. GARMENT. ISADORE L. LESAVOY, New York, N. Y. Filed July 22, 1924. Serial No. 727,509. 1 Claim. (Cl. 2—78.)



A garment consisting of two sections of material that are substantially duplicates and each of which has its forward edge composed of upper, lower and intermediate portions, and its rear edge also composed of upper, lower and intermediate portions, the front edges of said sections being joined to one another at their upper and intermediate portions and the rear edges thereof being united at their intermediate portions, and the lower front edge portion of each section being joined to the rear edge portion of said section to form legs for the garment, the intermediate rear edge portions of each section being of greater length than the intermediate front edge portions thereof, and each intermediate portion being of greater width than the upper portion, and the two portions being partially separated along an approximately vertical line and along a diagonal line extending upwardly and rearwardly from said vertical line, said diagonal line forming the upper edge of said intermediate portion.

1,677,189. METER FOR FLUIDS. EDWARD SEARLES LINDLEY, Lahore, India. Filed Jan. 19, 1925, Serial No. 3,290, and in India Jan. 21, 1924. 5 Claims. (Cl. 73—51.)

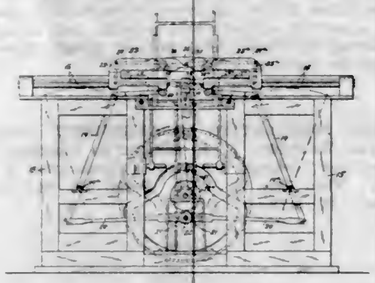


1. Apparatus for rating a meter comprising a tank, a second tank having an orifice in one side thereof, means for altering the effective cross sectional area of said orifice to vary the amount of liquid passing from the second tank to the first through said orifice, a trough having a passage communicating with the first tank in which trough the meter to be rated is adapted to be supported adjacent said passage, and means for maintaining the liquid level in said trough above the level of the passage.

1,677,190. MODULATING ARRANGEMENT. OWEN H. LOYNES, Woodridge, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed May 26, 1923. Serial No. 641,705. 1 Claim. (Cl. 179—171.)

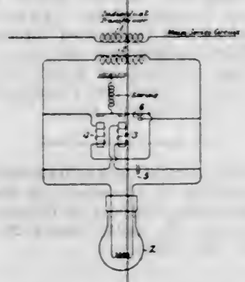
A modulating arrangement comprising a vacuum tube oscillator having a feed-back connection between its plate and grid circuits, and means for modulating the oscillations generated by said oscillator, said means comprising a mechanical repeater having a varible resistance element included in the feed-back circuit so that all of the current transmitted through said feed-back circuit flows through said resistance element, an operating winding energized by modulating currents to vary said resistance element and a magnetizing winding energized by a direct current source.

1,677,191. MODULATING ARRANGEMENT. OWEN H. LOYNES, Woodridge, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed May 26, 1923. Serial No. 641,708. 3 Claims. (Cl. 179—171.)



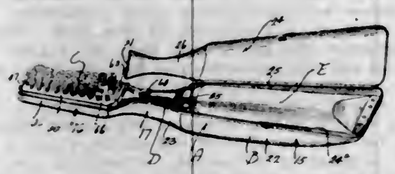
1. A modulating arrangement comprising a vacuum tube oscillator for supplying the carrier currents, a magnetic feed-back coupling for said oscillator including an iron core and means to vary said magnetic coupling in accordance with modulating currents to correspondingly change the frequency of said oscillator.

1,677,192. LOOM. JONATHAN LUCAS, Savannah, Ga., assignor to Lucas-Lamborn Loom Corporation, New York, N. Y., a Corporation of New York. Original application filed May 7, 1924, Serial No. 711,581. Divided and this application filed Feb. 15, 1927. Serial No. 168,256. 4 Claims. (Cl. 139—141.)



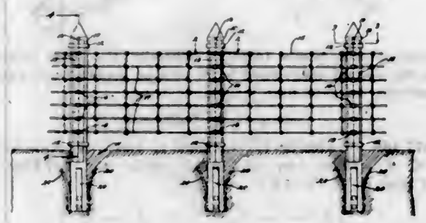
1. A loom comprising a stationary support, a travelling shuttle, guiding devices on said support extending over the operative paths of said shuttle, a pair of carriers arranged to be inversely reciprocated upon said guiding devices for passing said shuttle over said operative paths, a pivoted lever on said shuttle constituting a locking latch, hooks fixed upon said carriers, tripping devices mounted upon said carriers, and mech-

anism independent of said carriers for actuating the tripping devices of said carriers in alternate sequence whereby said lever is rocked, at a predetermined point



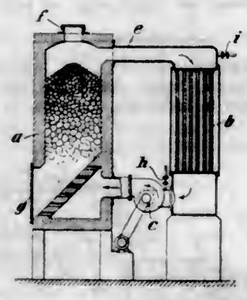
in the operative paths of said shuttle to connect it with one of said hooks and simultaneously disconnect it from the other hook.

1,677,193. SHORT-CIRCUITING SWITCH. RALPH G. MCCURDY, Englewood, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 2, 1927. Serial No. 217,279. 1 Claim. (Cl. 175—374.)



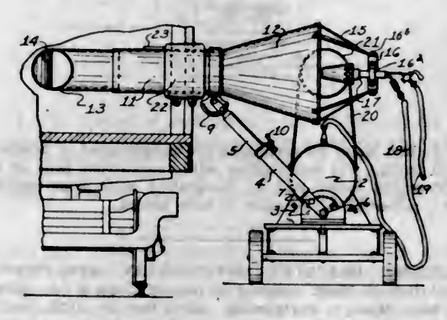
In association with a transformer having its primary winding included in a series lighting circuit carrying alternating current of a given frequency and a lamp having its filament in series with the secondary winding of said transformer, an alternating current relay having an operating coil bridged across said secondary winding and a holding coil, a condenser in series with said operating coil in the bridge, said condenser and said operating coil being tuned to one odd harmonic of the lighting current frequency, and a contact adapted to close when said operating coil is energized and to place a short-circuit around the secondary winding of the transformer through said holding coil.

1,677,194. TOOTHBRUSH. ARNULFO MENDOZA, North Bergen, N. J. Filed July 2, 1926. Serial No. 120,184. 5 Claims. (Cl. 15—135.)



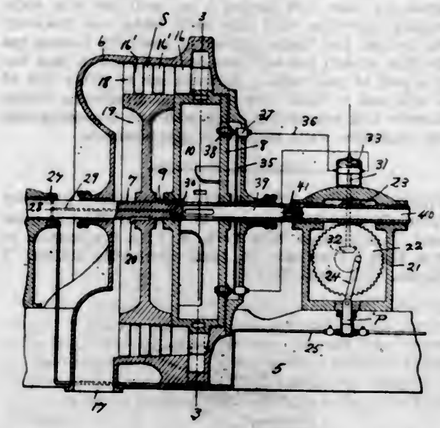
1. In a fountain toothbrush the combination of a brush head including a body portion having upstanding bristles thereon, said body portion having an elongated duct therethrough discharging onto said bristles, a rotatable detachable tube in said duct having a port adapted to be rotated into registration with the port of the body of the brush head, said body of the brush head having a transverse slot thereacross communicating with the tube, and a radially extending pin handle detachably connected with the tube and movable in the slot to permit the rotation of the tube.

1,677,195. FENCE CONSTRUCTION. HUGO MILLER, Colby, Wis., assignor of one-fourth to (Mrs.) Ida Steinert and one-fourth to Emil Meyers, Colby, Wis. Filed Apr. 14, 1924. Serial No. 706,454. 1 Claim. (Cl. 256—52.)



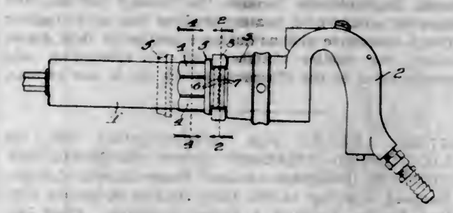
A fence post attachment consisting of a member having two side pieces joined together to form an angle, the end portions of said angle member being adapted to bear against an ordinary fence post, said member being adapted to extend longitudinally of the fence post and being shorter than an ordinary fence post, so that it can be attached to a post after the latter is inserted in the ground, and said member being provided with rectangular slots of approximately one-half the depth of the angle member to accommodate horisontal strands of fence wire, a vertical locking rod positioned between the outer surface of the post and the inner surface of the angle member and exteriorly of and engaging the portions of the horizontal fence strands which enter said slots to removably secure the fencing to the posts, said slots readily accommodating both the fence strand and the locking rod, and means for attaching said angle member to on ordinary fence post, the said member being readily attachable to a fence post of any size or shape.

1,677,196. APPARATUS FOR COOLING INCANDESCENT COKE. ARNOLD MORTTELI, Oberwinterthur, Switzerland, assignor, by mesne assignments, to Dry Quenching Equipment Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 7, 1925, Serial No. 7,519, and in Switzerland Apr. 19, 1924. 4 Claims. (Cl. 202—11.)



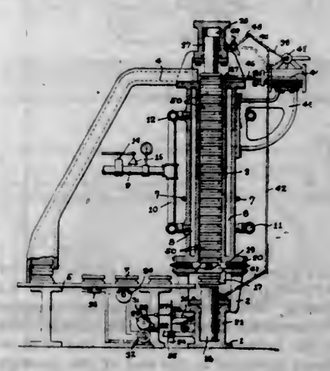
1. Apparatus for cooling incandescent coke comprising a container for the coke, a heat exchanging device connected thereto to form a closed circuit, means for circulating an inert gas in said closed circuit through the coke container and the heat exchanging device, and a valved air inlet adapted to admit a small quantity of fresh air to said closed circuit to cause consumption of any combustible gases given off in the container by insufficiently distilled coke and thereby prevent the formation of an explosive mixture when air is suddenly admitted to the container as by introduction of coke to the container or withdrawal of coke from the container.

1,677,197. PORTABLE DRIER. HARRY E. MYERS, Buffalo, N. Y. Filed Oct. 16, 1926. Serial No. 142,041. 10 Claims. (Cl. 34—18.)



1. A portable drier or heater comprising a wheeled truck, a fuel tank mounted thereon, a pipe adjustably mounted on said truck and adapted to have its discharge end inserted into a car body, a burner adjacent the other end of said pipe and connected with said tank adapted to project a flame into said pipe to create a flow of heated air through said pipe.

1,677,198. INTERNAL-COMBUSTION TURBINE. ELLIS WOOD NAILEIGH, Eureka, Calif. Filed Sept. 27, 1926. Serial No. 137,951. 1 Claim. (Cl. 60—42.)



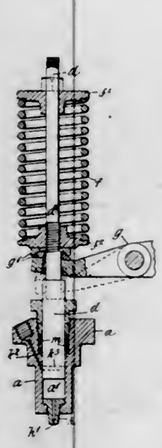
An internal combustion and steam turbine of the class described including, in combination, a stator casing, a hollow shaft journaled through the casing, a hollow rotor fixed to the shaft, the interior of the hollow rotor forming a combustion chamber, said hollow shaft being provided with openings leading into the combustion chamber, a check valve in the hollow shaft, so that combustible fuel may move in one direction to the shaft toward said opening, said stator casing being provided with pockets curved to reverse the gases impinged thereagainst, the rim of said rotor being provided with nozzles for impinging exploded gases against the pockets, means for igniting the explosive mixture in the combustion chamber, the rim of said rotor being provided between the nozzles with vanes curved transversely for reversing gases impinged thereagainst, a plurality of stationary vanes in the stator casing, a wheel fixed to the shaft and having transversely curved vanes to receive gases from the vanes of the rotor and to be directed against the second mentioned vanes of the casing, fins in the combustion chamber for agitating the explosive mixture and to be heated thereby when ignited, and means for injecting water into the combustion chamber to be generated into steam by the fins therein and agitated and mixed with the explosive mixture.

1,677,199. HANDLE LOCK FOR PNEUMATIC TOOLS. JOHN T. NELSON, Aurora, Ill., assignor to Independent Pneumatic Tool Company, Chicago, Ill., a Corporation of Delaware. Filed Jan. 14, 1925. Serial No. 2,369. 5 Claims. (Cl. 121—36.)

1. The combination with two members having screw-threaded connection, of means for locking said members against turning relatively to each other, comprising a polygonal shaped portion on one member, a collar having a complementary bore to fit said polygonal portion, said collar and the other member having engaging teeth about the same, and a clip having flanges engaging grooves in said collar and the last named member for holding the collar engaged therewith.

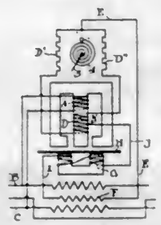
1,677,200. VULCANIZING APPARATUS. CLIFFORD H. OAKLEY, Trenton, N. J. Filed July 13, 1921. Serial No. 484,292. 14 Claims. (Cl. 18—17.)

1. In a vulcanizing apparatus having a heating zone for applying a vulcanizing heat, the combination with means for supporting a series of molds with some of the



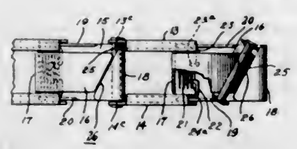
molds within the heating zone comprising guides frictionally engaging the molds with yielding pressure, of means for moving the molds forward along said guides and means for maintaining pressure against the end mold of the series while adding a fresh mold to the series.

1,677,201. APPARATUS FOR CONTINUOUS TREATMENT OF WORK UNDER PRESSURE. CLIFFORD H. OAKLEY, Trenton, N. J. Filed Sept. 11, 1923. Serial No. 662,067. 23 Claims. (Cl. 18—17.)



1. In apparatus of the character described a tubular heating chamber, a series of molds movable therethrough, a series of pistons movable with said molds and arranged to form substantially fluid tight joints with the walls of the tubular chamber, means for forcing said molds and pistons longitudinally through the tubular chamber, and means for admitting a heating medium into said chamber between successive pistons during a portion of their travel through the tubular chamber and for exhausting said pressure prior to the discharge of the molds and pistons.

1,677,202. MEANS FOR INTRODUCING OIL OR LIQUID-FUEL CHARGES INTO INTERNAL-COMBUSTION ENGINES. SIMON DOKK OLSEN, London, England, assignor to The Olsen Engine Syndicate Limited, London, England, a British Company. Filed Jan. 30, 1923, Serial No. 615,921, and in Germany Dec. 27, 1922. 1 Claim. (Cl. 123—33.)

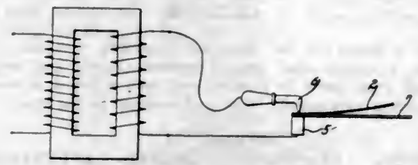


A liquid-fuel injecting arrangement of the kind referred to, in which the charge is formed and injected by a single plunger, working independently in a super-compression chamber (a^1) mounted directly on the cylinder, the connection with the cylinder being through one or more very short and direct passages in the end of the chamber (a^1) and the liquid fuel being fed under high pressure into an annular channel (k^2) surrounding the plunger so as to form a film on the surface of the hot cylinder which is easily and instantly vaporized, substantially as described.

1,677,203. METER FOR COMBINING THE MEASUREMENT OF DEMAND AND ENERGY. LOUIS A. PAINE, Toronto, Ontario, Canada, assignor to The Lincoln Meter Company Limited, Toronto, Canada. Filed Feb. 3, 1927. Serial No. 165,630. 5 Claims. (Cl. 171—34.)

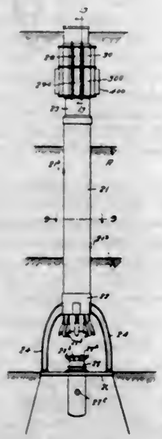
1. In a meter for combining the measurement of demand and energy, the combination with the current coils of a differential meter and an integrating watt hour meter, of a potential coil common to both meters.

1,677,204. BRACELET CONSTRUCTION. AXEL PERSON, Attleboro, Mass., assignor to Harvey Clapp & Co., Attleboro, Mass., a Partnership. Filed Dec. 30, 1926, Serial No. 157,909. Renewed Nov. 30, 1927. 14 Claims. (Cl. 59—79.)



1. A bracelet comprising a plurality of bracelet units connected together, each of said units including, in combination, an outer link having a top wall and side walls depending therefrom, said side walls being bent inwardly at the bottom and thence extending upwardly toward the under side of said top wall and forming beneath said top wall a pair of longitudinal channels one at either side of said link, and an inner link slidable longitudinally within said outer link and having a top wall and depending side walls, said side walls resting in said channels.

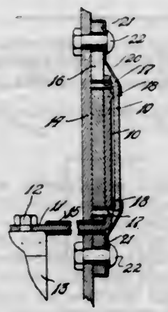
1,677,205. DEVICE FOR WELDING PARTS. EMERSON PUGH, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 25, 1925. Serial No. 32,602. 7 Claims. (Cl. 219—10.)



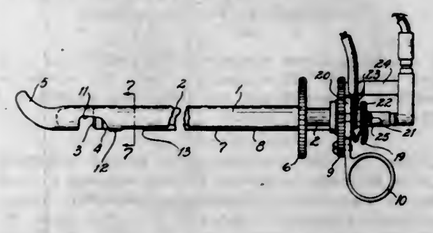
7. A device for localizing the path of an electrical current between two parts during the welding thereof comprising an element having intersecting slits, and the portion lying between the slits formed into a projection.

1,677,206. METHOD OF ELECTRIC WELDING. EMERSON PUGH, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 17, 1926. Serial No. 102,650. 2 Claims. (Cl. 219—10.)

2. The method of welding gold foil, which consists of applying a thin layer of graphite to a metallic electrode, positioning the foil and the electrode in electrically conducting relation separated by the layer of graphite, and passing a current through the electrode and the foil.



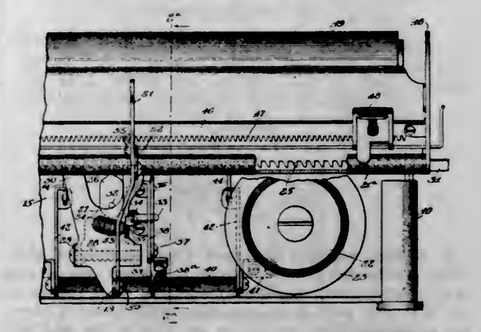
1,677,207. CONTINUOUS VULCANIZER. CARL E. RETT, Akron, Ohio, assignor to Clifford H. Oakley, Trenton, N. J. Filed Jan. 29, 1921, Serial No. 440,886. Renewed Oct. 8, 1921, and renewed Feb. 14, 1923, Serial No. 506,489. 36 Claims. (Cl. 18—6.)



1. The combination of a heating chamber adapted to receive a line or stack of articles to be heated, means to force said articles progressively through the chamber, means to supply a fluid heating medium into the chamber, and means carried with said articles to seal opposite ends of the chamber while said articles are being forced therethrough.

1,677,208. DASHBOARD-TYPE HEAT INDICATOR. WILLIAM L. ROHRER, New York, N. Y. Filed Oct. 25, 1926. Serial No. 143,950. 1 Claim. (Cl. 116—114.)

In a dashboard temperature indicator for internal combustion engines, a base plate, a heat-conducting member having ridges formed thereon, heat responsive paint on the member and between the ridges, a transparent plate engaging said ridges, and a cover housing the said transparent plate, said cover supporting the transparent plate in engaged relation with the ridges of the heat-conducting member.

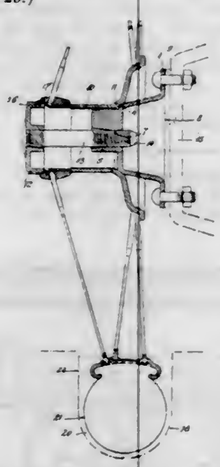


1,677,209. SURGICAL INSTRUMENT. DALTON K. ROSE, St. Louis, Mo., assignor to Joseph H. Zumbalen, St. Louis, Mo. Filed Apr. 21, 1926. Serial No. 103,415. 7 Claims. (Cl. 178—89.)

1. A surgical instrument comprising a support, a cutting tool thereon, an electric heating element adjacent to said cutting tool whereby it may be moved into engagement with the wound by slight continued movement of said cutting tool support after operating said tool and a source of electric current for said heating element, whereby a cut made by the cutting tool may immediately be cauterized.

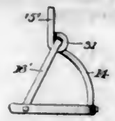
1,677,210. TYPEWRITING MACHINE. GEORGE F. ROSE, Hyndsville, N. Y. Filed Dec. 6, 1921. Serial No. 520,419. 9 Claims. (Cl. 197—193.)

1. A typewriting machine comprising a frame, a work carrage, mechanism for moving said carriage on the frame to feed the work, a cover for the machine, and a locking device on said frame actuated automati-



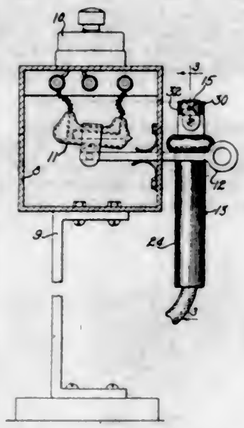
cally by the application of said cover for locking said carriage in any of its substantially central positions to protect the same and said mechanism during movement of the machine.

1,677,211. TOILET-SEAT PROTECTOR. NATHANIEL C. ROSS, Fort Wayne, Ind. Filed July 16, 1927. Serial No. 206,362. 3 Claims. (Cl. 4—245.)



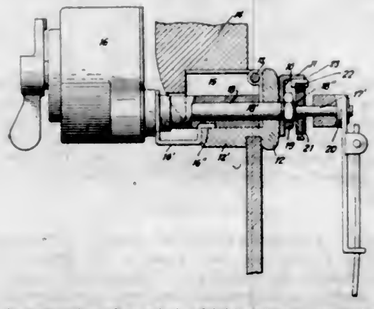
1. A seat protector consisting of a plurality of overlapped sheets of paper narrower than the sheets secured to a strip of paper, the strip being secured to a portion of each sheet only.

1,677,212. FIXED SUPPORT FOR SPARE WHEELS. LOUIS ROUANET, Ivry-Port, France, assignor to Compagnie d'Applications Mecaniques, Ivry-Port, France, a French Company. Filed July 28, 1926, Serial No. 125,505, and in France Aug. 22, 1925. 4 Claims. (Cl. 224—29.)



1. A fixed support for spare wheel, having a truncated conical part for centering the wheel and a rest part, characterized by the fact that the cross section of the said rest part is an arc of a circle situated above the horizontal plane containing the axis of the said support and of which the angle subtended at the center is less than 180 degrees, so as to enable the said rest part to be formed with a substantial axial length while permitting the use of the support on a vehicle of the type having a cup shaped receiving member for the wheel.

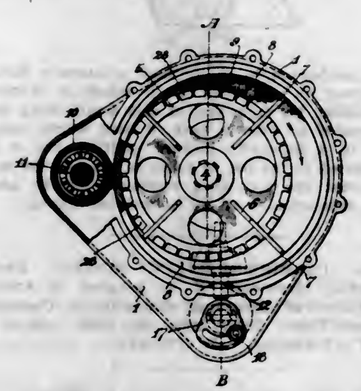
1,677,213. BABY WALKER. OTTO CHARLES SANGER, Hazen, N. Dak. Filed Nov. 19, 1925. Serial No. 70,172. 2 Claims. (Cl. 155—24.)



2. A device of the character described comprising a base, a spring steel upright secured thereto and being coiled upon itself to form a loop, and a brace member extending through the loop and secured to the base.

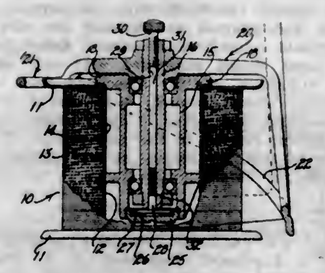
1,677,214. ELECTRICALLY-HEATED APPARATUS. ARTHUR EDWIN SANTSCHI, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 19, 1926. Serial No. 123,423. 6 Claims. (Cl. 219—26.)

1. In an electrically heated apparatus, an electric circuit, an element of high resistance material in said circuit, and means to allow a large initial current to heat said element and reduce the current when the element is sufficiently heated to retain it at the proper temperature.



1,677,215. MOUNTING FOR WINDSHIELD WIPERS. GORDON B. SAYRE, Syracuse, N. Y., assignor to Owen-Dyneto Corporation, Syracuse, N. Y., a Corporation of New York. Filed Jan. 23, 1926. Serial No. 83,263. 13 Claims. (Cl. 15—253.)

1. A mounting for wind shield wipers comprising an elongated body portion shaped to fit against the outer face of a wind shield sash, such body being perforated

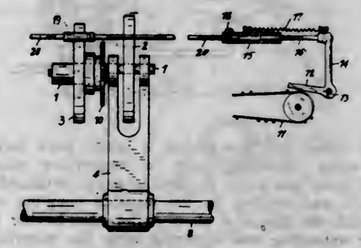


near one end to receive a driving shaft, clamping means on said body near the other end and engaging the upper and lower edge portions of the sash to support said body, and means supported on said body for driving a plurality of wiping elements.

1,677,216. ROTARY COMPRESSOR. PAUL SCHAUER, Zehlendorf, near Berlin, Germany. Filed Oct. 19, 1926, Serial No. 142,677, and in Germany Nov. 9, 1925. 12 Claims. (Cl. 230—152.)

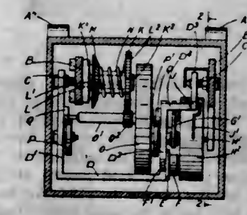
1. A rotary compressor comprising an outer stationary casing; a power-driven shaft journalled in said casing; a rotor mounted on said shaft; an inner cylindrical casing surrounding said rotor and adapted to rotate therewith; a plate for closing the cylindrical casing at one end thereof and adapted to rotate therewith; and a roller in the stationary casing for exerting an axial pressure on the plate thereby causing the plate to contact with the cylindrical casing and one end of the rotor and causing the cylindrical casing and the other end of the rotor to be held in contact with the outer stationary casing.

1,677,217. MATERIAL-UNWINDING DEVICE. JOHN NILSEN SELVIG, Chicago, Ill., assignor to Western Electric Company Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 21, 1926. Serial No. 136,754. 5 Claims. (Cl. 242—128.)



1. A strand unwinding device comprising a member rotatably carried by a supply spool and rotated by the strand being withdrawn therefrom, said member having strand engaging cam portions extending diagonally across the core of the spool and designed so that the strand is withdrawn from the spool substantially at right angles to the axis thereof at all times.

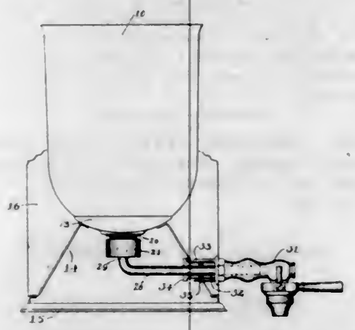
1,677,218. BED. GEORGE SHAND, St. James, Minn. Filed Apr. 28, 1926. Serial No. 105,180. 1 Claim. (Cl. 5—61.)



A bed bottom embodying a frame comprising head, foot and side rails, angle plates pivotally mounted on the head and foot rails, a mattress supporting spring spanning said plates, guides carried by the head and foot rails, arcuate toothed rack bars pivotally connected with said plates and movable through said guides, a hand bar having a mounting on said side rail to permit rocking and longitudinal movement of said hand bar, and operative connections between said hand bar and the arcuate rack bars.

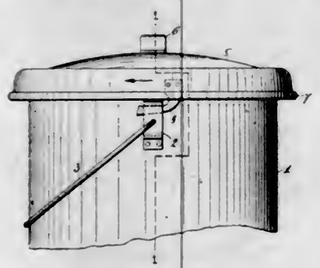
1,677,219. STOCKING FRAME. HUGO SUSSMANN, Chemnitz, Germany. Filed July 12, 1926, Serial No. 121,984, and in Germany June 8, 1926. 1 Claim. (Cl. 66—82.)

In a mesh-regulating device for stocking frames, the combination with the main shaft and with a lever for operating the needle bar, of two cams mounted on said main shaft, axially adjustable rollers held by said lever for cooperation with the cams, the rollers being spaced differently from the cams so that axial adjustment is required for throwing each roller into engagement with its cam, means whereby such adjustment of the rollers can be effected automatically by the machine, and a shaft having an eccentric portion whereon one of said rollers is so supported on the lever that its position can be regulated by a rotary adjustment of said latter shaft.



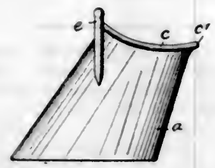
1,677,220. GRADIENT METER. ROBERT AERNOUT, BARON VAN LYNDEN, London, England. Filed Feb. 10, 1927, Serial No. 167,243, and in Great Britain Feb. 23, 1926. 15 Claims. (Cl. 33—220.)

1. In a gradient meter mounted on a moving body, the combination of a gravity-actuated member, an indicator operatively connected to the gravity actuated



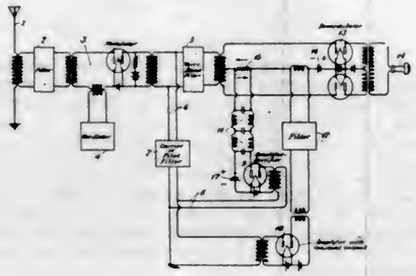
member, a shaft mounted coaxially with respect to the axis about which the gravity-actuated member moves, mechanism for rotating this shaft at a speed proportional to that of the moving body, a driven shaft carried wholly by and swinging with the gravity-actuated member, transmission gearing connecting these two shafts, and a weighted wheel operatively connected to the driven shaft so that its speed is proportional to the speed of such shaft.

1,677,221. COFFEE URN. LEO WERTHEIMER, Buffalo, N. Y., assignor, by mesne assignments, to Amcoin Coffee System Company, Inc., Buffalo, N. Y., a Corporation of New York. Filed Aug. 13, 1924. Serial No. 731,764. 4 Claims. (Cl. 53—3.)



1. A coffee urn comprising a glass liner having a downwardly extending neck, a supporting plate arranged below the liner, a coupling flange arranged about the neck and secured to the plate, a coupling engageable with the flange, a glass outlet pipe having an upwardly extending end engaging with the coupling, and gaskets carried by the coupling for sealing the neck of the liner and the outlet pipe.

1,677,222. PAIL. HORACE E. WHITNEY, Cambridge, Mass., assignor to Dover Stamping & Manufacturing Company, Cambridge, Mass., a Corporation of Massachusetts. Filed Dec. 26, 1924. Serial No. 757,984. 1 Claim. (Cl. 220—58.)

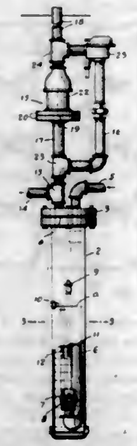


A metallic vessel having vertically disposed, sheet metal, perforated, looped straps or ears formed separate therefrom and permanently attached to the outside thereof near its top, said vessel having a cover provided with depending hooks adapted to be entered beneath the upper parts of said looped straps or ears, and said vessel having also a bail having bent ends inserted through the holes in said perforated straps or ears, said cover having a depending peripheral flange of much greater diameter than the top of said vessel and to the inside of which said hooks are attached so as not to extend outward beyond said cover.

1,677,223. CHAMBER POT. AUGUSTE WITTIG, Eckernforde, Germany. Filed Nov. 6, 1926, Serial No. 146,798, and in Germany Nov. 9, 1925. 2 Claims. (Cl. 4—141.)

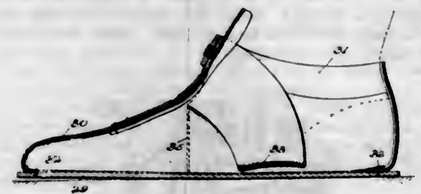
1. A chamber-pot in the form of a laterally flattened ewer having an elongated mouth which is contracted in the middle, the front end of said mouth being raised and extended to form a beak, a base which supports the pot in a forwardly inclined position, and a handle connected to the pot so as to be clear of the mouth and so that the pot, when suspended on the handle, remains substantially at its normal inclination.

1,677,224. CARRIER-RECEIVING SYSTEM. HERMAN A. AFFEL, Maplewood, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Mar. 23, 1926. Serial No. 96,887. 3 Claims. (Cl. 178—44.)



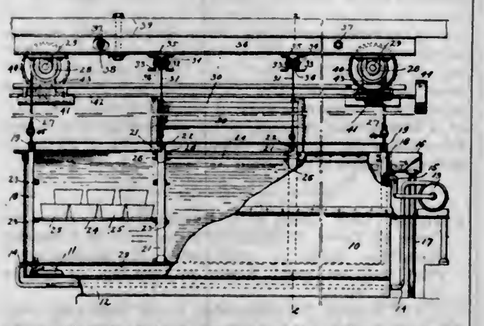
1. The combination of a carrier transmitting station wherein the carrier frequency is only partially suppressed and a carrier receiving station comprising a modulator for reducing the frequency of the incoming signal wave, a selective circuit associated with the output of said modulator and adapted to transmit the side band component of said reduced signal wave, a second selective circuit associated with the output of said modulator and adapted to transmit the carrier component of said reduced signal wave, a demodulator having its input circuit associated with said side band selective circuit, a rectifier associated with said second selective circuit whereby said carrier component may be rectified, and means to apply said rectified carrier component current to the grid circuit of said demodulator so that the voltage of said rectified current will oppose the normal grid voltage.

1,677,225. PROTECTION OF ACETYLENE LINES. JAMES L. ANDERSON, Englewood, N. J., assignor to Air Reduction Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 24, 1924. Serial No. 739,472. 4 Claims. (Cl. 48—192.)



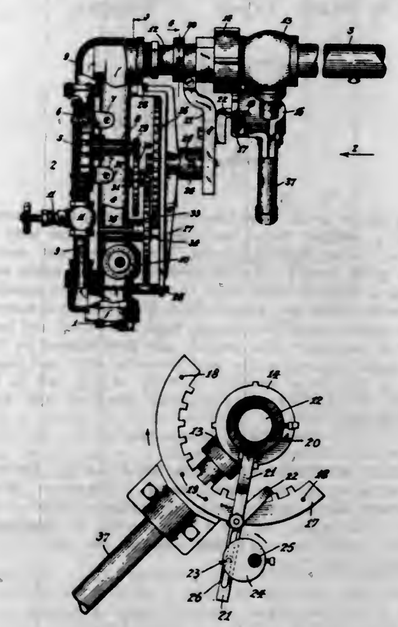
1. A safety apparatus for acetylene gas lines comprising in combination with the line, a water-seal having a gas inlet and an outlet chamber, and a superstructure in free communication with the outlet chamber of the water-seal, said superstructure comprising two normally-closed branches in parallel by one or both of which

excess pressure may open an escape to atmosphere, one of said branches containing a loaded mechanical relief valve adapted to open at a pressure somewhat



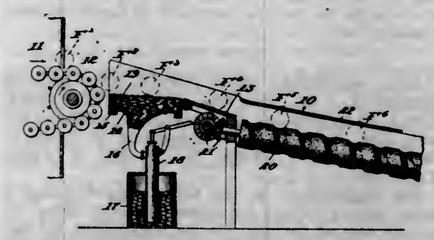
above the normal of the line connected with said outlet chamber, and the other branch being closed by a frangible disk calculated to yield to excessive pressure.

1,677,226. SHOE. MARK BEAL BANKS, Knoxville, Tenn. Filed Mar. 7, 1927. Serial No. 173,533. 10 Claims. (Cl. 36—71.)



9. The combination in a shoe, of a stirrup-like support connected with the upper of said shoe and extending therein freely of the sole to receive an under portion of the foot when the shoe is placed thereon, fastening means on the shoe, and strap-like portions on the stirrup adapted to be connected with said fastening means.

1,677,227. COOKING APPARATUS. FREDERICK BLATTNER, Jr., and EMIL JANKE, Brooklyn, N. Y. Filed Oct. 15, 1923. Serial No. 668,647. 1 Claim. (Cl. 126—346.)

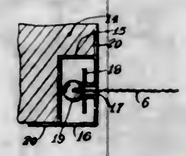


A cooking apparatus comprising an oblong tank, a cradle having four standards at the four corners of the tank and intermediate standards, horizontal shelf-supporting bars extending in vertical series horizontally in the spaces between the adjacent standards and attached to the standards, shelves supported by said bars, the shelves being made of front and back sections, and means for moving the cradle with the shelves vertically into and out of the tank to expose the shelves for access.

1,677,228. IRRIGATING APPARATUS. WALTER H. COLES, Troy, Ohio. Filed Oct. 26, 1921. Serial No. 510,634. 5 Claims. (Cl. 299—67.)

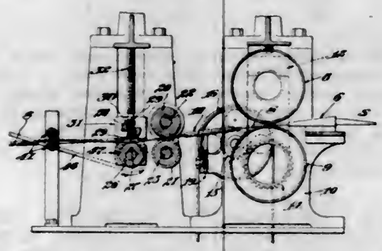
2. An oscillatory sprinkler pipe, a gear sector having a single set of teeth facing both ways, a pivotally supported pawl to engage the gear section to turn the pipe step by step, and means for automatically reversing the position of the pawl by throwing it over its pivotal center when the pipe reaches the end of its turning movement.

1,677,229. FRUIT-TREATING APPARATUS. ARCHIE W. CONKLIN, Winter Haven, Fla., assignor, by mesne assignments, to Brogdex Company, Winter Haven, Fla., a Corporation of Florida. Filed Mar. 6, 1922, Serial No. 541,269. Renewed Mar. 29, 1926. 14 Claims. (Cl. 91—47.)



1. Fruit treating apparatus comprising the combination, with fruit brushing means, and means for feeding fruit

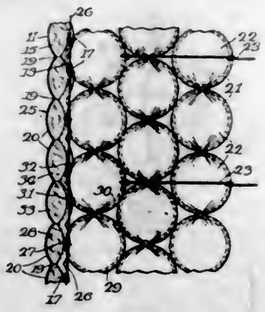
thereto, of means comprising a movable element adapted to be actuated by the fruit in its feeding movement for rendering coating material available in the path of said feeding movement.



10. Fruit treating apparatus comprising a container for coating material, a foraminous member therein depressible by passage of fruit thereover to effect application of such coating material to the fruit, in combination with means for feeding fruit to and across said depressible foraminous member.

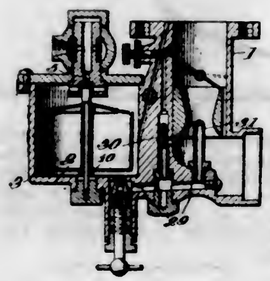
1,677,230. ROLLING WINDOW SCREEN. GIUSEPPE DE MERCURIO, Hammonton, N. J. Filed Feb. 10, 1927. Serial No. 167,230. 1 Claim. (Cl. 156—39.)

In a device of the class described, including a side member in a window frame, said member provided with a rabbeted outer vertical corner, a tubular sheet metal screen guide snugly fitted in said rabbet, the guide embodying a strip of metal bent angularly on eight parallel longitudinal lines into substantially C-shaped cross-section with a narrow guide slot therein from end to end and centrally of the inner side thereof, and ears formed on the guide flush and coextensive with the outer sides and inner walls of the latter adapted to flatly engage and to be secured to adjacent right angular faces of the side frame member.



1,677,231. MACHINE FOR MAKING STRAPS. ERNEST W. DUNBAR, Hudson, and EDMUND J. DEMPSEY, West Medford, Mass., assignors to Cambridge Rubber Company, Cambridge, Mass., a Corporation of Massachusetts. Filed Dec. 31, 1924. Serial No. 759,121. 8 Claims. (Cl. 270—94.)

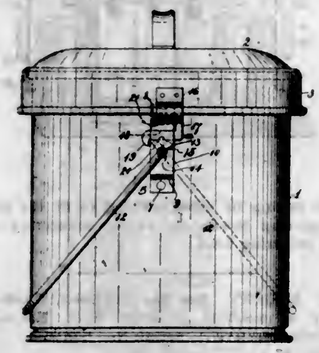
1. In a machine for making straps, the combination of means for feeding a strip of strap stock, and means for cutting nearly through said strip transversely thereof at intervals while the feeding movement is continued uninterruptedly.



1,677,232. MATTRESS OR CUSHION AND BOXING THEREFOR AND PROCESS OF MAKING SAME. JOHN F. GAIL, Evanston, Ill., assignor to Simmons Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 3, 1927. Serial No. 223,606. 5 Claims. (Cl. 5—351.)

1. The improvement in the art of manufacturing a mattress having springs incorporated in the filling adjacent the edge of the mattress for maintaining the verticality of the boxing, which consists in making the boxing, connecting the springs to the inner face of said boxing, completing the formation of the body or filler of the mattress, applying the horizontally extending portion of the mattress casing and then sewing the edge of the boxing thereto.

5. A matress or cushion having a boxing comprising an outer and an inner strip of fabric united together by spaced parallel vertical lines of stitching and resilient filling material contained in and distending the vertical interspaces defined by said lines to substantially the same extent throughout their height, the spacing of said lines being relatively narrow compared with the vertical height of the boxing whereby the horizontal cross section of said interspaces is substantially uniform throughout their height.

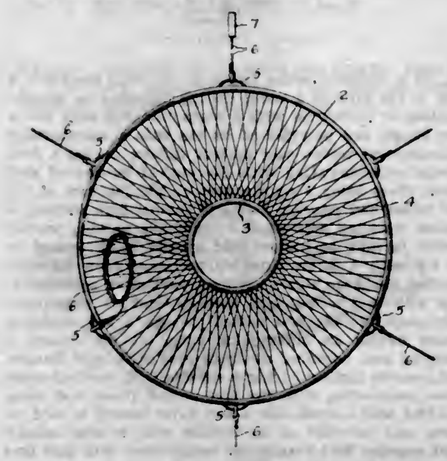


1,677,233. CARBURETOR FOR INTERNAL-COMBUSTION ENGINES. WILLIAM S. GUTHRIE, Los Angeles, Calif., assignor to Marvel Carbureter Company, Flint, Mich., a Corporation of Indiana. Original application filed Apr. 3, 1919, Serial No. 287,277. Divided and this application filed Sept. 8, 1924. Serial No. 736,597. 1 Claim. (Cl. 137—104.)

A carburetor comprising a carbureting chamber and a fuel reservoir connected thereto, a removable cover for said reservoir provided with a fuel inlet passage terminating in an enlarged passage forming a guideway, a valve sea formed at the junction of said passage, lateral branch passages extending from the enlarged passage within said fuel reservoir, a valve mounted in said guideway cooperating with said valve seat and having a reduced portion, a guideway formed in the bottom of said reservoid in which said reduced portion is slidably mounted, a float loosely mounted on the reduced portion of said valve and a pin extending through the reduced portion of said valve below said float.

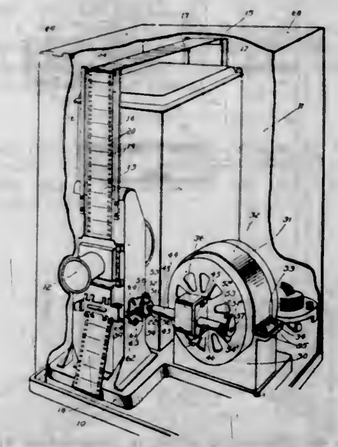
1,677,234. CAN. JOHN E. R. HAYES, Melrose, Mass., assignor to Dover Stamping & Manufacturing Company, Cambridge, Mass., a Corporation of Massachusetts. Filed Mar. 10, 1927. Serial No. 174,169. 4 Claims. (Cl. 220—55.)

1. The combination comprising a can body and cover, the cover having a flange fitting over the top end of the can body, bail mountings on the can body forming sockets within them, a bail pivotally arranged to turn on said mountings and presenting ends within the sockets formed by the respective mountings, said ends of the bail being upturned above the pivotal points of the bail when the bail is occupying its normal downturned position, a stop on the can body, and angular turned members carried by the cover adapted and arranged when the cover is turned



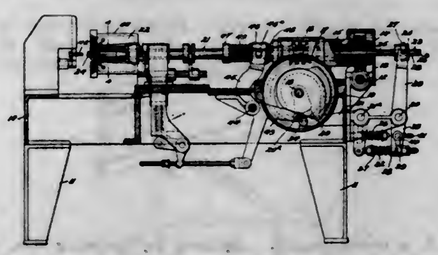
on said body to engage said stop and having lateral entry into the sockets of the respective mountings with extension over the tops of the upturned ends of the bail and with downward projection in part below and back of the same in an amount permitting said upturned ends of the bail being turned below said downward projecting part of said members on lifting the bail.

1,677,235. PROCESS FOR THE VULCANIZATION OF RUBBER AND PRODUCT THEREOF. RALPH V. HEUSER, Elizabeth, N. J., assignor to Albert C. Burrage, Manchester, Mass. Filed June 5, 1925. Serial No. 35,252. 10 Claims. (Cl. 18—53.)



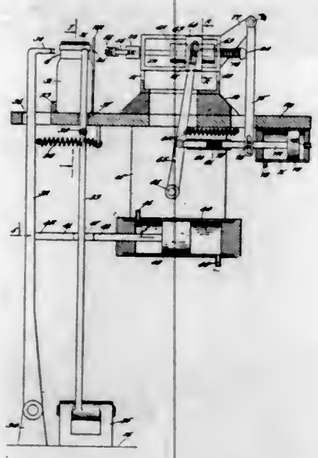
1. A process for the vulcanization of rubber which comprises heating rubber with a vulcanizing agent and a substituted guanidine containing an aryl group in each of the amino positions and a para-substituted aryl group in the imino position.

1,677,236. ICE-RESCUE DEVICE. HARRIETTE ENSLEY HODGSON, New York, N. Y. Filed Mar. 2, 1926. Serial No. 91,662. 2 Claims. (Cl. 9—17.)



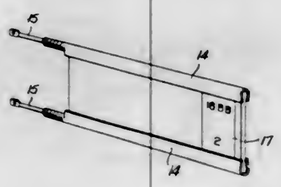
1. An appliance to save persons who have fallen through the ice, comprising a strong, portable, open frame of substantially equally large diameter in two dimensions adapted to be placed as a bridging support over a hole in the ice and affording a central manhole through which the person may escape, and cables attached to various portions of the frame to be held by persons on the ice or shore.

1,677,237. PROJECTING MACHINE. EGBERT C. JENNER, Independence, Mo. Filed May 12, 1926. Serial No. 108,553. 2 Claims. (Cl. 88—18.3.)



1. In a projector, means for advancing a film comprising a motor, a motor support, reduction gearing and shaft carried by said motor, a driving member on each end of said shaft, a film-engaging member, and a member rotating therewith and engageable with either of said driving members, whereby said motor may be inverted in its support to reverse the direction of movement of said film.

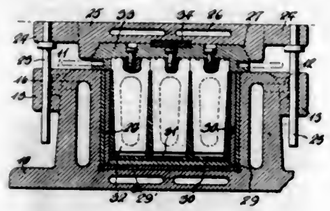
1,677,238. AUTOMATIC POINTING AND THREADING MACHINE. JAMES A. KINNEY, Lebanon, Pa., assignor to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed Dec. 9, 1921. Serial No. 521,218. 3 Claims. (Cl. 10—4.)



1. In a machine for threading and pointing bolts, the combination of a hollow spindle, a threading tool carried by the spindle, a pointing tool, a shank connected to the pointing tool and extending through and beyond one end of the hollow spindle, a member having trunnions capable of relative rotative movement with respect to the shank but fixed against a longitudinal movement with respect thereto, said member being located beyond one end of the hollow spindle, a lever having a yoke provided with open-ended slots for engagement with the trunnions, and means for oscillating the lever including manually releasable means whereby said first means may be disconnected with respect to the lever so that the latter may be disengaged from the trunnions.

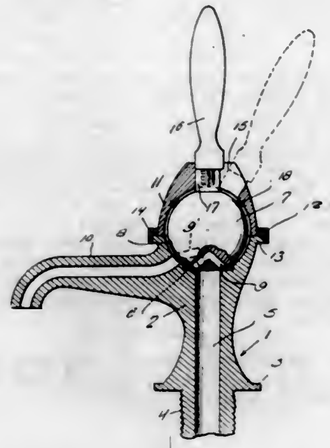
1,677,239. JAR-TRIMMING MACHINE. JOHN L. KIVLAN, Boston, Mass., assignor, by mesne assignments, to William L. Walker, Worcester, Mass. Filed Mar. 4, 1924. Serial No. 696,774. 13 Claims. (Cl. 140—94.)

1. In a jar trimming machine, in combination, a bender for bending the wire of the trimming around the neck of a jar, a spring for forcing said bender against the wire, wipers to complete the bending, and a pusher for retracting said bender, said pusher including a cam bar having a wedge portion for retracting said wipers.



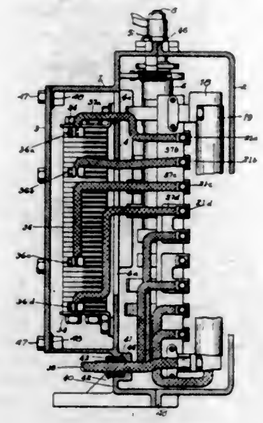
1,677,240. RESISTANCE UNIT. FREDERIC SHIELDS KOCHENDORFER, River Forest, Ill., and TERENCE ALISTER GILL, Shawinigan Falls, Quebec, Canada, assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 27, 1922. Serial No. 609,219. 18 Claims. (Cl. 201—64.)

7. A resistance unit comprising an insulating core, a resistance coil wound thereon, an outer covering therefor comprising two insulating sheets applied one against each side of the coil and having their edges bent over and overlapping the sides thereof to form a beaded portion at each side of the core, a metallic member inserted on each beaded portion, and a terminal post carried by each of said metallic members.



1,677,241. STORAGE-BATTERY MOLD. GEORGE F. LANGERMEIER, Cleveland, Ohio. Filed Oct. 29, 1923. Serial No. 671,445. 3 Claims. (Cl. 18—35.)

1. A mold of the character described comprising a body portion having a form receiving recess, a centering head arranged above the mold, and having a centering recess in the lower face, said centering recess having inwardly converging side walls, cores arranged to be moved into the recess, a head carried upon the upper end of the

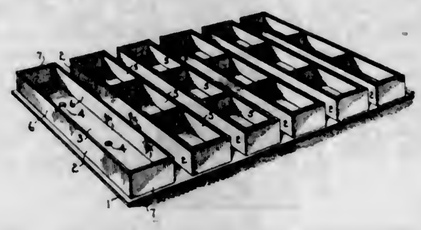


cores, and having its sides bevelled to fit the side walls of the centering recess, means for connecting the core head and centering head.

1,677,242. FAUCET. THOMAS LARRIGAN, Kankakee, Ill., assignor of one-half to Elzie Huot, Kankakee, Ill. Filed July 14, 1927. Serial No. 205,618. 2 Claims. (Cl. 251—95.)

1. In a domestic water faucet of the class described, a body in the form of a metal casting including an upright provided at its bottom with a screw threaded neck and a base flange, and provided at its top with a substantially semi-spherical recess, said upright further having a fluid passage communicating with the central portion of said recess, there being a counter-bore at the juncture of the said recess and passage, and said counter-bore forming a washer receiving depression, a renewable packing washer located in said depression, said upright being formed at its top with a screw threaded portion, and a laterally directed discharge nozzle having a passage in communication with said recess, said passage being at substantial right angles to the first named passage, a ball confining bonnet having an outstanding flange at its bottom, a clamping and retaining nut connected with said flanges, said bonnets further having a substantially semi-spherical recess cooperating with the first named recess and being provided with a guide slot, a ball valve located in said recesses and provided at its bottom with a substantially right angular fluid passage for cooperation with said first named passage and valve seat washer, and a handle connected to said ball valve and slidably mounted in said guide slot.

1,677,243. ELECTRIC CONTROLLER. NILS D. LEVIN, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Dec. 30, 1920. Serial No. 434,075. 21 Claims. (Cl. 201—48.)

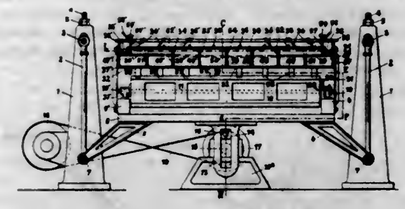


8. The combination of a controller casing having an open front and back with flanged edges, and commutating and resistance element receiving chambers in said casing, journal bearings mounted at the edges of said open front, an apertured resistance supporting wall between said chambers, a front cover plate having flanged edges abutting the flanged edges of said casing to clamp and support said bearings and form a gas and flame proof joint with said casing and said journal bearings, and a back cover plate to close said resistance element chamber with a gas and flame proof joint.

1,677,244. LUBRICATING OIL. JOHN H. MACKLE, Watervliet, N. Y. Filed Mar. 10, 1925. Serial No. 14,560. 2 Claims. (Cl. 87—9.)

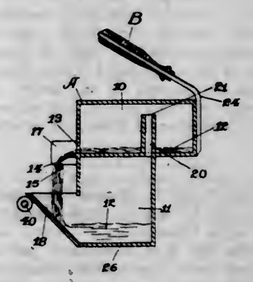
1. A lubricating oil consisting of 60% mineral lubricating oil, 20% corn oil, and 20% castor oil.

1,677,245. PROCESS OF PREPARING CAKE. SAMUEL F. MCDONALD, Memphis, Tenn. Filed May 26, 1922. Serial No. 563,826. 1 Claim. (Cl. 107—54.)



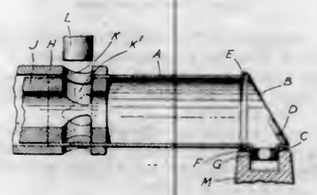
The process of preparing mechanically wrapped cakes which consists in placing a mold of relatively stiff paper in a rigid container having walls conforming to the walls of the mold; filling the mold with dough; baking the dough therein; removing the baked cake with the mold adhering thereto from the rigid container; then completely wrapping the mold with the baked cake therein.

1,677,246. HAIR-WAVING SOLUTION. FRANK J. MCKENNA, New York, N. Y., assignor to Chemical Preparations, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 26, 1928. Serial No. 264,961. 3 Claims. (Cl. 132—36.2.)



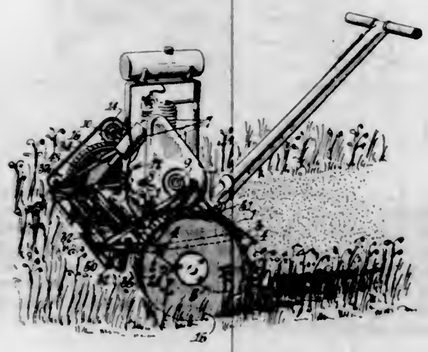
1. As a new product of manufacture, a solution for the curling or permanent waving of hair containing four parts hydrazine hydroxide NH_2NH_3OH by weight and ninety-six part water by weight.

1,677,247. SORTING MACHINE. GOTTFRIED NEUHAUS, Eberswalde, Germany. Filed June 27, 1924, Serial No. 722,838, and in Germany June 27, 1923. 6 Claims. (Cl. 209—498.)



1. In a sorting machine with sorting table and baffle members thereon, a distributing device comprising in combination a box, a horizontal plate in said box, passages between the frontal ends of said plate and the opposite walls of said box, cross walls arranged below said plate and forming chambers in the box, outlet branches below said chambers discharging onto the sorting table, and means adapted to reciprocate said box.

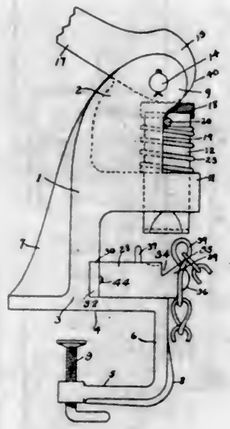
1,677,248. SOLDERING DEVICE. ROBERT REINBOLD, St. Paul, Minn. Filed Sept. 16, 1927. Serial No. 219,894. 12 Claims. (Cl. 219—26.)



9. A soldering device including, compartments for holding melted solder, and electrical heating means positioned within said compartments to keep the solder at a melted temperature.

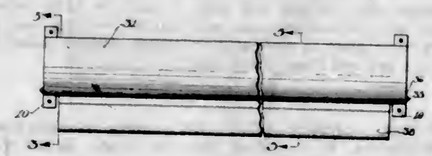
1,677,249. METHOD OF MAKING SLEEVE VALVES. HARRY RALPH RICARDO, London, England. Filed Nov. 6, 1926, Serial No. 146,705, and in Great Britain Dec. 18, 1925. 17 Claims. (Cl. 29—156.7.)

1. The method of forming sleeve valves for fluid pressure engines consisting in pressing out from the wall of a tubular metal blank a boss for a driving connection, and forming a port in the wall.



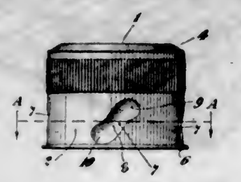
1,677,250. LAWN-MOWER ATTACHMENT. FRANK MONTGOMERY RITTER, Washington, D. C., assignor of three-fourths to James Vansandt Hutchins, Washington, D. C. Filed Aug. 26, 1927. Serial No. 215,720. 7 Claims. (Cl. 56—238.)

6. The combination with a lawn mower having a cutting reel, a frame, and means to impart rotation to the cutting reel; of a topping reel in advance of said cutting reel, trunnions projecting from the topping reel, hanger arms adjustably secured at one of their ends to a part of the frame to project forwardly therefrom, bearings carried by said arms to receive the topping reel trunnions, brace rods connected at their advance ends to the projected ends of the arms and at their other ends to the frame, a ledger bar carried by the hanger arms in coactive relation with the topping reel, and means to transmit rotation to the advance reel from said rotation imparting means.



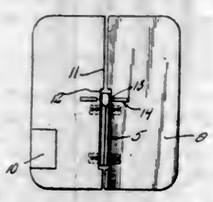
1,677,251. CHAIN TOOL. JAMES WEBB SAFFOLD, Cleveland, Ohio. Filed Sept. 7, 1926. Serial No. 133,758. 11 Claims. (Cl. 81—15.)

1. In a chain link tool adapted to open the eyes of cross chain links of a tire antiskid chain, the combination with a frame having an upstanding head, of a base, a transversely recessed anvil secured to the base, and a plunger adapted for reciprocation in a bored portion of the head towards and away from the anvil, said plunger terminating in a die at its lower end, said anvil having a wedge portion terminating in an edge offset relative to the medial line of the plunger, said anvil having lugs projecting from its top and side portions, said lugs adapted to enter the loops of the links adjoining the link whose eye is being operated upon during the eye opening



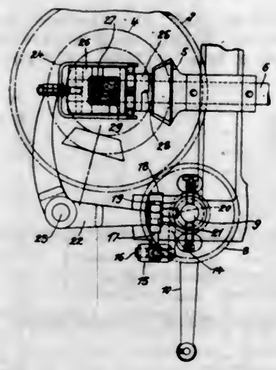
or closing process, said lugs being so positioned upon the anvil that the die will not contact with the links which are held by the lugs.

1,677,252. WINDOW-SHADE CLEANER. HENRY SCHURR, Philadelphia, Pa. Filed Aug. 31, 1927. Serial No. 216,516. 7 Claims. (Cl. 156—10.)



1. In a shade roller housing containing a shade, means for cleaning the shade including a rod mounted in the casing, and a flexible cleansing fabric carried by the rod and engaging the upper half of the rolled portion of the shade.

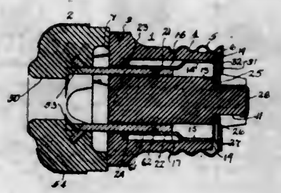
1,677,253. FRICTION CAP FOR BOTTLES AND JARS. EDGAR SCOFIELD, New York, N. Y., assignor to Anchor Cap and Closure Corporation, Long Island City, N. Y., a Corporation of New York. Filed Jan. 28, 1926. Serial No. 84,276. 9 Claims. (Cl. 215—38.)



1. A closure cap of the friction type comprising a cover portion, a substantially cylindrical skirt depending therefrom, and locking lugs in the skirt of said cap, said lugs having end portions having a substantially circumferential direction and an intermediate inclined portion joining said end portions.

1,677,254. SWIMMING DEVICE. CHARLES SPURGES, De Kalb, Ill. Filed Sept. 12, 1927. Serial No. 219,035. 2 Claims. (Cl. 9—21.)

1. A device of the class described, a handle member, a pair of wings hingedly attached thereto, straps connecting the underside of the wings to the handle limiting the outward movement of the wings and a section of relatively soft material provided in one of said wings adapted to prevent injury to the hand of the user upon contact with the wings.

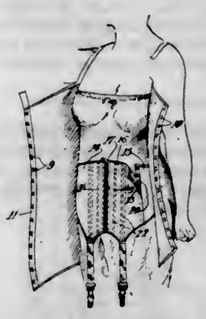


1,677,255. APPARATUS FOR THE DRIVING OF A PATTERN MECHANISM OR SHED-FORMING MACHINE. HUGO STÄUBLI, Zurich, Switzerland, assignor to Gebr. Staubli & Co., Horgen, Switzerland. Filed Feb. 4, 1927, Serial No. 165,978, and in Switzerland May 18, 1926. 12 Claims. (Cl. 139—56.)

1. Hand and power driving device for pattern mechanisms, comprising a power shaft, a shaft on the pattern mechanism, cams on this shaft for producing a reciprocating movement of pattern knives, a releasable clutch adapted to transmit power from the first to the second of said shafts, a gearing through which said cams may be driven in either direction by hand, a hand operated device inserted between said clutch and gearing and adapted to simultaneously disconnect said shafts and connect said gearing.

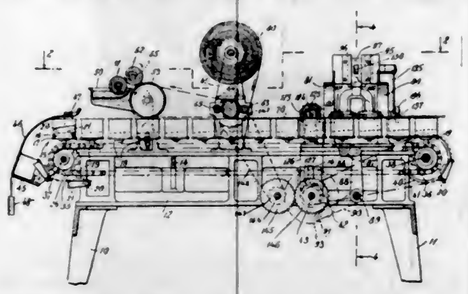
1,677,256. SEPARABLE ELECTRICAL CONNECTION. WILLIAM C. TREGONING, Cleveland Heights, Ohio. Filed Jan. 16, 1923. Serial No. 613,063. 4 Claims. (Cl. 173—343.)

1. In an article of the character described, the combination of a cap section having a pair of contact blades and a base section, said base section having a pair of longitudinal blade contact recesses, seats formed adjacent said recesses, contact elements in said recesses having angular portions adjacent thereto for engagement with



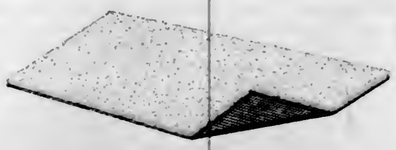
said seats, and a contact shell provided with a straight inwardly extending flange at its upper edge parallel to the angular portions of said contact elements for pressing the same firmly against said seats.

1,677,257. PROCESS FOR THE MANUFACTURE OF ARSENIC ACID. FRITZ ULLMANN, Charlottenburg, and GERT TREWENDT, Berlin, Germany, assignors to J. Michael & Co., Berlin, Germany. Filed June 26, 1923, Serial No. 647,901, and in Germany Mar. 6, 1923. 3 Claims. (Cl. 23—144.)



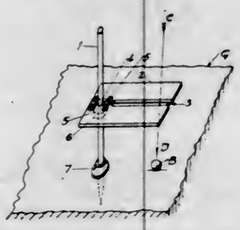
1. The process of making arsenic acid which consists in heating to boiling a solution comprising 10 parts of arsenic trioxide, 20 parts of water and 3.8 parts of potassium chlorate, and then adding thereto a small amount of hydrochloric acid.

1,677,258. GARMENT. ROSANA DE FORA ULMAN, Chicago, Ill., assignor to Anna Rothstein, Chicago, Ill. Filed Aug. 4, 1926. Serial No. 127,016. 3 Claims. (Cl. 2—27.)



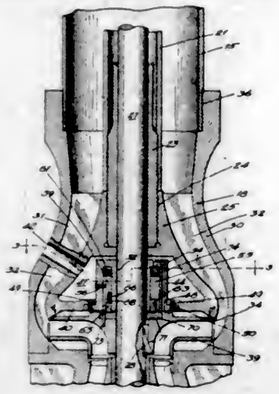
1. A garment of the kind described adapted to encircle the figure, inner flaps extending toward the front of the figure with their edges secured to the garment adjacent the sides thereof, an extension piece detachably fastened to one flap, means securing the extension piece to the other flap comprising an elastic section joined thereto at points remote from the proximate edges of the flap and extension piece, and a backing for the elastic section joined to the flap and extension piece at points close to the side edges of the elastic, the backing having a vertical pleat whereby it may expand within definite limits as the elastic is stretched, substantially as described.

1,677,259. SEALING MECHANISM FOR CONTAINERS. JOHN VAN BUREN, Brooklyn, N. Y. Filed Nov. 5, 1926. Serial No. 146,428. 32 Claims. (Cl. 113—80.)



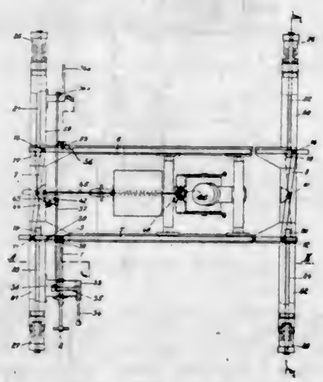
1. In a machine of the character specified, means for supporting and feeding a plurality of containers, means for feeding an elongated strip of material across the ends of the containers and into contact therewith, and means movable with the containers and strip for severing said strip.

1,677,260. BLANKET. HAROLD C. WHITMAN, Bedford, N. Y. Filed Mar. 20, 1926. Serial No. 96,232. 1 Claim. (Cl. 139—391.)



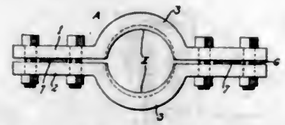
A woven combined bedspread and blanket having a weft consisting of fine hard yarn threads alternating with coarse soft yarn threads, the fine yarn threads being floated over the warp so as to lie mainly on the face of the spread and form a hard wearing surface, the coarse yarn threads being floated under the warp and being teaseled and of such a character as to form a continuously napped warm blanket surface on the back of the spread.

1,677,261. DEVICE FOR IMPROVING STANCE IN CONNECTION WITH THE GAME OF GOLF. ELMO HAMILTON WILLIAMS, Pearl Harbor, Territory of Hawaii. Filed May 7, 1928. Serial No. 275,909. 2 Claims. (Cl. 273—35.)



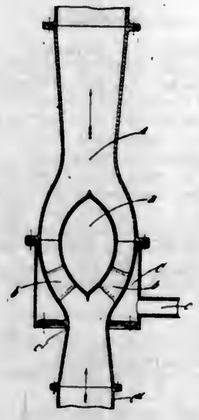
2. In an accessory for guiding vision in playing the game of golf, or the like, a thin opaque, flat or plate-like member with a slot or narrow bifurcation through its thin dimension, means for placing, adjusting, and retaining said flat member and slot in a desired position, and means for rapid disassembly of the device for stowage in the player's club bag or other receptacle.

1,677,262. OIL-TUBE WATER SEAL. JOHN A. WINTROATH, Los Angeles, Calif., assignor to Peerless Pump Company, Los Angeles, Calif., a Corporation of California. Filed Nov. 17, 1925. Serial No. 69,658. 20 Claims. (Cl. 103—102.)



1. In a turbine pump of the class described, the combination of: a pump bowl; a line shaft extending into said pump bowl; a bearing supported in said bowl in which said line shaft journals; an impeller secured to said line shaft in said bowl below said bearing, said impeller forcing water through said pump bowl when said line shaft is rotated; and means between said bearing and said impeller for obstructing a flow of water to said line shaft.

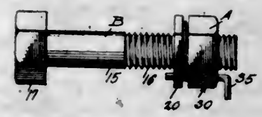
1,677,263. TIPPING CAR. OTTO BALLERT, Berlin, Germany. Filed May 9, 1927, Serial No. 190,062, and in Germany Jan. 9, 1926. 2 Claims. (Cl. 298—18.)



1. A three-way hydraulic tipping device comprising a supporting frame having bearings and body latches; a body having combined pivot and bearing members; spring-actuated locking heads forming parts of said bearings and each having two oblique faces adapted to cause automatic opening of the heads when the body is lifted or lowered, a separate change-position device comprising two parallel, longitudinally movable ledges having holes therein and slots forming extensions of the holes; double-armed levers connecting said ledges with each other to form a cinematic chain; and rods arranged at right angles with respect to the said ledges and having enlarged ends adapted to pass through said holes, said rods being connected with the said locking heads.

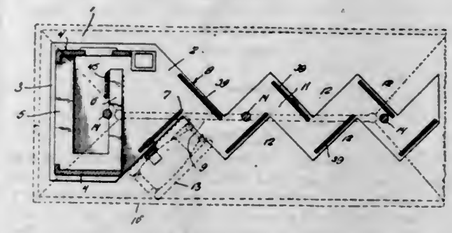
1,677,264. METHOD OF MAKING CLAMPS. WILLIAM R. BARNEY, Tulsa, Okla., assignor to W. C. Norris, Tulsa, Okla. Filed Mar. 23, 1925. Serial No. 17,682. 1 Claim. (Cl. 29—148.)

The method of producing clamps for the support of oil well pipes which comprises forming recesses, smaller than the pipe to be supported, in the inner faces of the clamping members, placing spreaders between said members, machining said inner faces so that spaces of exactly the same diameter as the pipe are provided, then removing said spreaders, and machining the top and bottom faces of said clamping members.



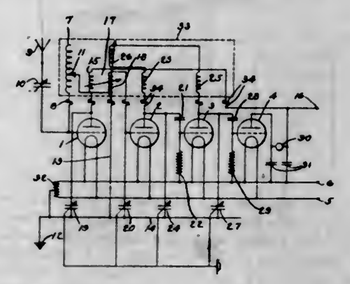
1,677,265. AIR-LIFT PUMP. JENS ORTEN BOVING, Westminster, England. Filed Aug. 27, 1925, Serial No. 52,835, and in Great Britain Aug. 29, 1924. 10 Claims. (Cl. 103—232.)

1. In a liquid pump of the type in which the liquid is raised in an uptake or ascension conduit by means of gas under pressure admitted to this conduit at or near its lower end, the combination with the said conduit of a hollow member disposed within the lower part thereof so as to leave a space between said member and said lower part of the conduit, said member having an inwardly leaning part and said conduit an outwardly leaning part, means for admitting the gas under pressure into said space outwardly through the inwardly leaning part of said hollow member, and means for admitting gas under pressure into said hollow member, and means for admitting gas under pressure into said space inwardly through the outwardly leaning part of the wall of said conduit so that both supplies of gas during their ascent immediately after they enter the liquid pass through the latter at a considerable angle to the direction of flow of the liquid and efficient admixture of the gas and liquid is thereby obtained.



1,677,266. NUT LOCK. IVO GEORGE BRENNEMAN, Blue Ball, Pa. Filed Feb. 1, 1927. Serial No. 165,223. 3 Claims. (Cl. 151—19.)

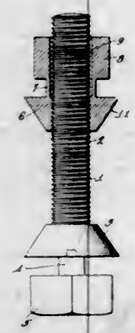
1. A nut lock comprising an inner nut section, an outer nut section, one of the nut sections being threaded upon the other, the bores of the nut sections being enlarged at their inner ends to provide a chamber when the nut sections are fitted together, a split clamping ring disposed in the chamber having internal threads for engaging the bolt, the nut sections and the clamping ring having coacting beveled faces for bringing about the contraction of the ring when one section is threaded upon



the other, each of the nut sections having keyways at one side of the bore thereof adapted to be brought into registration with one another at the split portion of the ring, a removable key fitted in said alined keyways and said split for holding the nut sections and ring against relative movement to one another whereby the nuts can be threaded upon a bolt as a single unit.

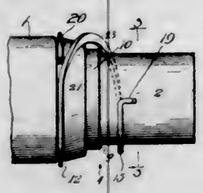
1,677,267. BUILDING CONSTRUCTION. HARRY R. BRISTOL, Findlay, Ohio, assignor of one-half to Jay S. Bristol, Charleston, W. Va. Filed Apr. 9, 1927. Serial No. 182,521. 6 Claims. (Cl. 186—1.)

1. A building construction, comprising a platform, a roof supported on said platform in spaced relation above the same, a tray carrier movably mounted adjacent the edge portion of the platform between the platform and said roof structure, the tray holding means pivotally mounted on said tray carrier for removably receiving the trays.



1,677,268. HIGH-FREQUENCY SIGNALING SYSTEM. WALTER JOHN BROWN, Eversley, England, assignor, by mesne assignments, to Metropolitan-Vickers Electrical Company, Limited, a British Joint Stock Company. Filed June 2, 1924, Serial No. 717,248, and in Great Britain June 9, 1923. 7 Claims. (Cl. 250—20.)

1. A radio receiving system comprising in combination a radio receptor circuit comprising an inductance, a triode amplifier device comprising electron discharge



means and grid and plate inductances electromagnetically coupled and associated with said receptor circuit, additional amplifier means comprising electron discharge means and inductances, a detector, a container, a removable sub-container therewithin, said inductances being positioned therein, and removable therewith, and means whereby the inductances positioned in said sub-container are connected in circuit when the sub-container is inserted into said container.

1,677,269. NONREMOVABLE NUT. THOMAS N. BURGHART, Philadelphia, Pa. Filed Dec. 21, 1925. Serial No. 76,621. 3 Claims. (Cl. 85—32.)

1. A non-removable nut including a body part having a desired outer shape and threaded on the inside, a reduced nonthreaded part integral with said body part having a bore slightly larger than the threaded part of said body part, the center of said bored portion being in line with the center if said threaded part, a wrench-engaging part integral with said reduced part, said reduced part being of comparatively slight construction and adapted to be sheared off upon the application of certain force to said wrench-engaging part.

1,677,270. TOOL RETAINER FOR PNEUMATIC HAMMERS. JOHN M. BUTLER and HARRY A. TORSON, Chicago, Ill., assignors to King Pneumatic Tool Company. Filed Sept. 10, 1923. Serial No. 661,963. 3 Claims. (Cl. 121—32.)

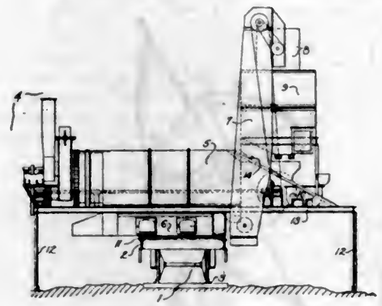
2. A tool retainer for pneumatic hammers comprising a unitary structure capable of flexing longitudinally of its axis and having attaching means for securing it to the hammer barrel and a retaining arm adapted to be sprung laterally to permit attachment or detachment of the tool without disturbing said attaching means, said arm having a forwardly projecting terminal finger adapted to be engaged by a portion of the tool in advance of engagement of the tool with said arm to facilitate attachment of the tool to the hammer.

1,677,271. PANIC BOLT. WILLIAM J. CARROLL, West Haven, Conn., assignor to Sargent & Company, New Haven, Conn. Filed Aug. 29, 1923. Serial No. 659,969. 2 Claims. (Cl. 292—92.)

1. In a panic bar latch mechanism, a keeper plate adapted to be secured to a door frame and provided with a cylindrical rod disposed in a horizontal position, a casing adapted to be secured to a door and having a pivot member extending transversely thereof, a bolt mounted on the pivot member to swing about a horizontal axis, said bolt being provided with a relatively deep slot to receive the rod on the keeper plate, the width of said slot being such as to receive the rod therein substantially without play in a direction transversely of the slot, means for guiding said rod into said slot, and a rod extending longitudinally into the casing and engaging the bolt below the pivot to dog it in door latching position.

1,677,272. PROCESS OF MIXING METALLIC SALT IN ASPHALTIC COMPOUNDS. FRANCIS L. CARSON, Berkeley, Calif. Filed May 13, 1926. Serial No. 108,975. 9 Claims. (Cl. 106—31.)

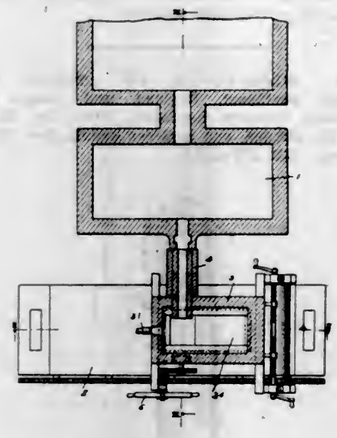
8. In the production of a relatively large quantity of bituminous compound processed with copper sulphate; the steps of forming a solution by bringing water and a known quantity of copper sulphate together; mixing this solution with a small quantity of bitumen to produce a mixture containing an amount of the copper sulphate greatly in excess of that needed to process said small amount of bitumen, allowing the water to evaporate and mixing a known volume of this rich mixture with many times that volume of hot bitumen.



1,677,273. MOTOR FUEL. DAVID COSTAGUTA, Buenos Aires, Argentina. Filed June 1, 1925, Serial No. 34,258, and in Argentina Mar. 10, 1925. 3 Claims. (Cl. 44—9.)

1. An addition agent adapted to be added to gasoline motor fuel and the like comprising trinitrophenol 2%, ethyl ether 3%, naphtha 20%, petroleum ether 60%, Pgroin 15%.

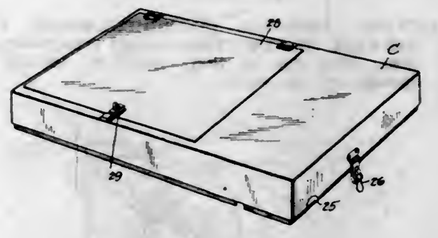
1,677,274. ASPHALT-MIXING PLANT. FREDERICK H. CUMMER, Los Angeles, Calif. Filed Dec. 13, 1926. Serial No. 154,494. 3 Claims. (Cl. 94—43.)



1. In combination, a railway carriage provided with wheels, and a standard road plant mounted thereon, said road plant including the usual drying, elevating, screening, and mixing means, the mixing means discharging by gravity, and said plant being movable on the carriage

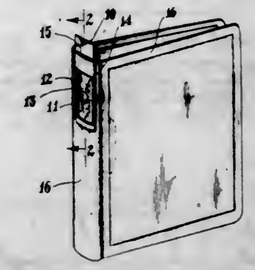
to either of two positions, in one of which all parts of the plant are contained within the railway clearance lines for transportation purposes, and in the other of

which the mixing end of the plant extends beyond the clearance lines to a position where the mixer can discharge by gravity into a container.



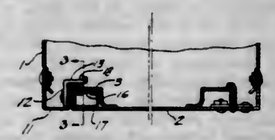
1,677,275. GLASS-TEEMING APPARATUS. HARVEY H. DEULEY, Parkersburg, W. Va. Filed June 28, 1926. Serial No. 117,967. 7 Claims. (Cl. 49—55.)

1. Apparatus for the delivery of molten glass in a succession of unit charges including a ladle pivoted on a horizontal axis asymmetrical in shape with respect to a vertical plane passing through its pivotal axis, its center of gravity when empty lying on one side of such vertical plane and its center of gravity when filled with molten glass lying on the other side of such vertical plane.



1,677,276. FOOD TRAY. LOUIS A. DEICKEN, Los Angeles, Calif. Filed Dec. 29, 1926. Serial No. 157,755. 2 Claims. (Cl. 65—53.)

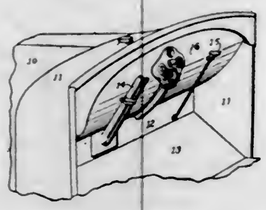
1. A food tray comprising a rectangular tray body having a vertical and double walled transverse partition adjacent one end for dividing the body into a plurality of compartments, one of which is provided with a top wall having food receiving pockets and forming a closed chamber adapted for the reception of a heating fluid by which heating of the pockets and the food contained therein is effected, the other compartment having an open top and adapted for the reception of cold foods, said last compartment having at one end a plurality of cups adapted to receive condiments, a flanged cover having a depending off-



set lip around the free edge of its flange adapted for interfitting engagement within the side walls of the body so as to support the cover on the body, said cover having a dish and cutlery receiving compartment therein accessible from its outer side, and provided with a hinged door.

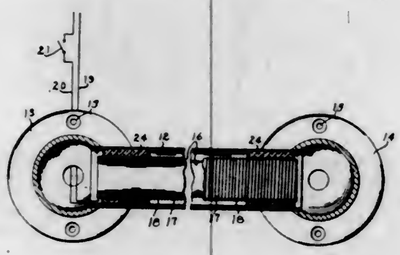
1,677,277. REMOVABLE WINDOW TAG FOR BINDERS. MAX W. FEDERBUSH and JACOB D. FEDERBUSH, New York, N. Y. Filed Nov. 24, 1925. Serial No. 71,070. 4 Claims. (Cl. 129—1.)

3. In a removable window tag structure for binders, or the like, having a slot and an aperture, the combination of a tag engageable in said slot, and extending behind said aperture, and a strip engageable in said slot and having attached thereto a plurality of pieces, in such a manner as to form an outer uneven surface as a means for holding the said tag in place.



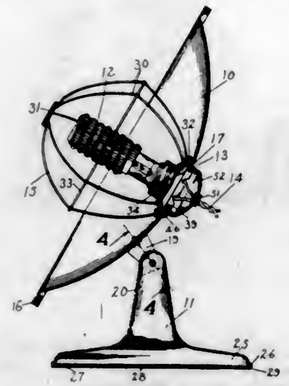
1,677,278. LOCKER LATCH. ARTHUR F. FOEHRENBACH, Canton, Ohio, assignor to The Berger Manufacturing Company, Canton, Ohio, a Corporation of Ohio. Filed Aug. 1, 1927. Serial No. 209,811. 3 Claims. (Cl. 192—162.)

1. Latching mechanism for use in a door having an open-ended tubular housing, comprising, a latching member positioned in the housing and having angularly



projecting hooks adapted to project through slots in said housing, and means insertable through the open end in said housing after said member is positioned in the housing, said means cooperating with said latching member whereby to maintain it in operative position in the housing.

1,677,279. COMBINED INSTRUMENT-BOARD AND GAS-TANK CONSTRUCTION. HENRY FORD, Dearborn, Mich. Filed Feb. 14, 1927. Serial No. 167,912. 4 Claims. (Cl. 180—90.)



1. In a combined instrument board and cowl fuel tank construction, a tank having a recess in its rear wall, and an instrument board having a peripheral flange adapted to co-act with the rear wall of the gasoline tank adjacent to said recess to form a chamber whereby an instrument may be mounted in said chamber.

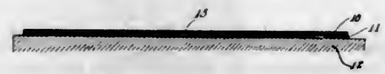
1,677,280. TOWEL BAR. ALFRED C. GILBERT, New Haven, Conn., assignor, by mesne assignments, to The A. C. Gilbert Company, New Haven, Conn., a Corporation of Maryland. Filed Jan. 14, 1924. Serial No. 686,074. 4 Claims. (Cl. 219—19.)

4. The combination with a bathroom wall, of a towel bar structure applied thereto and extending in substantial parallelism therewith, and comprising a hollow towel supporting rod of substantial internal diameter open at the ends only, hollow end brackets having flanges secured to said wall and provided with hollow interior portions in which the ends of said rod are received for holding it in place on the wall, a resistance heater in the form of a coil located within the interior of said rod and extending lengthwise thereof for heating said rod throughout a substantial portion of its length to thereby dry a towel supported thereon, means for insulating the heater coil from said rod, concealed electrical connections passing to said heater coil through a least one of said hollow end brackets, and means for insulating the electrical connections from the structure consisting of the hollow rod and the end brackets, so that the said structure is prevented from being electrically charged by the current passing to said heater coil.

1,677,281. ELECTRIC HEATER. ALFRED C. GILBERT, New Haven, Conn., assignor, by mesne assignments, to The A. C. Gilbert Company, New Haven, Conn., a Corporation of Maryland. Filed Feb. 5, 1926. Serial No. 86,243. 20 Claims. (Cl. 219—34.)

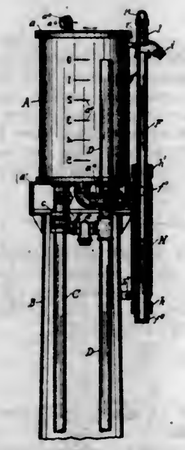
1. In an electric heater of the type described, a reflector having an opening through a portion thereof, a heating element support having a portion presenting a shoulder, said shonider resting upon the reflector about the opening therein, another shoulder upon said support, a member engaging the second mentioned shoulder and having a portion overlying the reflector, and means to secure the portion of said member overlying the reflector to clamp the support to said reflector.

1,677,282. BILLIARD-CUE TIP. THOMAS WHYTE GUTHRIE, Southport, England, and CREBAR GUTHRIE, Yoker, Glasgow, Scotland. Filed Oct. 22, 1927, Serial No. 228,068, and in Great Britain Nov. 12, 1926. 2 Claims. (Cl. 273—70.)



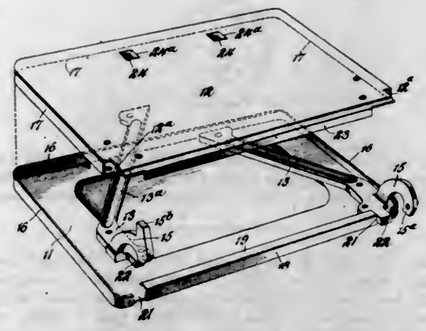
1. In a billiard cue, a tip, a shoulder on said tip, an inner tube, an outer tube embracing the inner tube, flanges on both tubes engaging the shoulder on the tip, means for cushioning the tip against the end of the cue, and means for fixing the outer tube with the cue in such manner as to draw the tip against the end of the cue with the cushioning means between for fastening the tip to the cue.

1,677,283. BLEACHING COMPOSITION. EDGECOMBE M. JONES, Utica, N. Y. Filed Aug. 17, 1925. Serial No. 50,840. 10 Claims. (Cl. 8—2.)



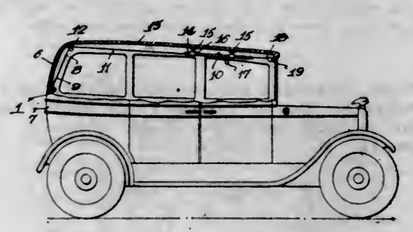
1. In the art of simultaneously bleaching white goods to a true white and incidentally setting any colors present in the goods, the process which comprises the subjecting of the goods to a single boiling treatment while in an iron kier and while subjected to the action of a reagent including sodium silicate, oxalic acid, sodium biborate and sodium perborate, said reagent being capable of bleaching the white areas and setting the colors in the goods and incapable of forming iron rust with the material of the kier.

1,677,284. SHEET MATERIAL AND METHOD OF MAKING AND MOUNTING THE SAME. TOD J. MELL, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Apr. 23, 1926. Serial No. 104,126. 8 Claims. (Cl. 154—49.)



1. Sheet material comprising a sheet of rubber and, vulcanized thereto a backing sheet therefor comprising fibrous material consolidated with a binder adapted to absorb a rubber solvent without swelling.

1,677,285. LIQUID MEASURING AND DISPENSING APPARATUS. CARROLL L. MERRIMAN, Fort Wayne, Ind., assignor to Wayne Company, Fort Wayne, Ind., a Corporation of Indiana. Filed July 24, 1924. Serial No. 727,934. 9 Claims. (Cl. 221—100.)

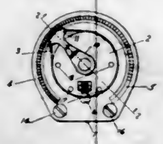


1. In combination with a liquid measuring and dispensing apparatus having an elevated container from which liquid is dispensed, a vertically positioned well through which the liquid dispensed passes, a conduit connecting the bottom of said container with said well, a vertically adjustable outlet tube closed at its lower end and extending through said well, an opening in said tube, at such a position as always to remain within said well to admit liquid from the well to the interior of the tube, vented means secured to the top of said tube adapted to form a cap for same, and a conduit through which liquid may be served from said tube.

1,677,286. STOVE AND OVEN DOOR. WALTER MOLL, Evansville, Ind., assignor to Fred W. Goedeke, Evansville, Ind. Filed Aug. 3, 1926. Serial No. 126,900. 9 Claims. (Cl. 126—190.)

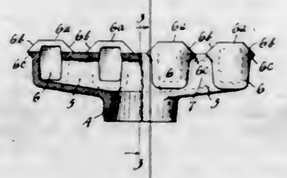
1. In an oven door, the combination of an outer plate and an inner plate spaced apart and having interfitting peripheral flanges, hinge blocks in the space enclosed between the two plates and secured at their lower ends to the inner plate only, means formed on the lower part of the outer plate and invisible from outside the door for receiving and retaining the lower edges of the hinge blocks and inner plate, a handle on the upper part of the door, and unitary means for securing the handle and adjacent portions of the hinge blocks and inner plate to the outer plate.

1,677,287. APPARATUS FOR ADJUSTING AUTOMOBILE CURTAINS. ROBERT E. NAUMBURG, Winchester, Mass. Filed May 13, 1927. Serial No. 191,118. 4 Claims. (Cl. 296—97.)



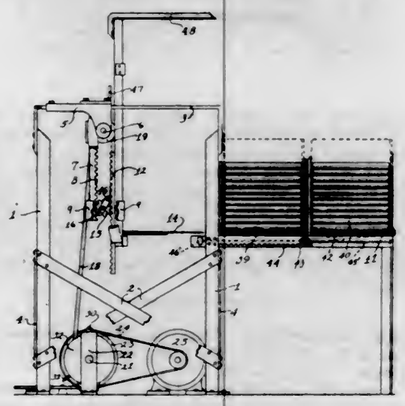
1. Apparatus for adjusting window curtains and the like comprising a stationary curtain roller, a cord roller, a cord having its opposite ends attached to the cord roller and the curtain respectively, take-up springs oppositely connected with the rollers respectively to hold the cord and curtain taut, the cord roller spring tending to unwind the curtain from the curtain roller, and means having sufficient friction to hold the cord and curtain in adjusted position against the unbalanced increment of spring action.

1,677,288. RHEOSTAT. WILLIAM EDWARD NEWMAN, Utica, N. Y. Filed Dec. 27, 1926. Serial No. 157,113. 4 Claims. (Cl. 201—55.)



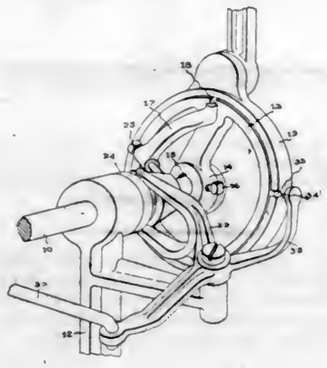
1. A rheostat comprising a base, a shaft rotatably carried by the base and extending therethrough, a resistance unit consisting of an insulator and wire wound thereon arcuately carried on the base in radially spaced relation to the axis of the shaft, a one piece arm carried on the end of the shaft and extending to the re-

sistance unit and a contact band anchored on the base and extending between the end of the arm and the turns of the resistance wire whereby as the arm is moved



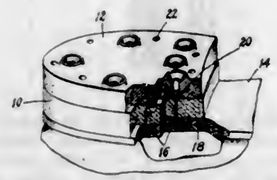
the band is rolled into contact with the wire, said arm being provided with integral means comprising a flexible loop for putting a resilient pressure on said contact band.

1,677,289. GAS BURNER FOR STOVES. WALTER OLSEN and SOPHUS RASMUSSEN, Albert Lea, Minn., assignors to American Gas Machine Company, Albert Lea, Minn., a Corporation of Minnesota. Filed Aug. 3, 1925. Serial No. 47,797. 4 Claims. (Cl. 158—104.)



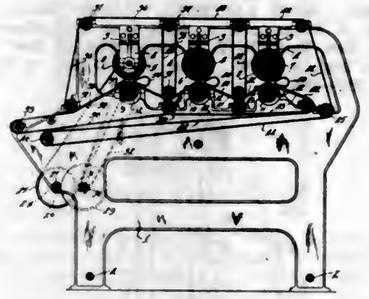
1. A gas burner comprising a plurality of spaced elongated adjacent hollow sections, said sections each having a series of spaced slots extending thereacross, the tops of said sections comprising horizontal flat top portions and side portions inclined downwardly therefrom, the lower edge of said inclined portions terminating substantially at the bottom of said slots, said sections having means below said inclined portions for directing the air away from said inclined portions and slots.

1,677,290. EGG-CASE FILLING AND INVERTING APPARATUS. DONALD PARKER, Fresno, Calif. Filed May 18, 1927. Serial No. 192,465. 6 Claims. (Cl. 226—14.)



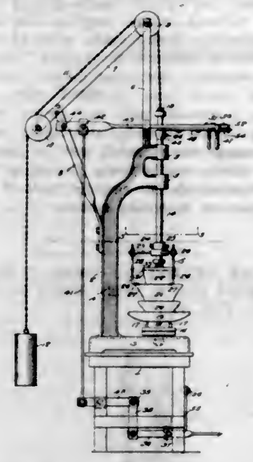
1. An apparatus for filling containers positioned with their filling opening downwardly disposed and thereafter inverting the filled container, comprising a support for the material to be filled into the container and over which the container is positioned with its filling opening downwardly disposed overlying the material, material elevating means, means overlying the container to be filled and providing a stop to limit the elevation of the container and to support the same when inverted, means for operating the elevating means to elevate the material into the container, and move the container into contact with its stop means, and a fixed axis about which said material elevating means and the container stop means revolve as a unit with the container held therebetween to invert the same.

1,677,291. WASHING-MACHINE DRIVE. HALSEY D. PAYNE, Chicago, Ill., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 26, 1924. Serial No. 752,332. 9 Claims. (Cl. 192—17.)



3. A clutch for connecting a driving member to a driven member comprising, in combination, a band connected to one of said members, a split ring disposed in the band, means operable to expand the split ring to grip the band, a pivotally mounted arm adapted to be moved into engagement with the band to lock it in a predetermined position, said arm having a projection formed thereon and said band having an opening formed therein to receive the projection.

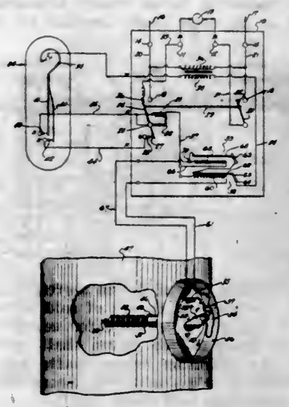
1,677,292. ART OF ATTACHING HEELS. JOSEPH H. POPE, Hamilton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 24, 1921. Serial No. 509,820. 4 Claims. (Cl. 12—147.)



1. That method of attaching a heel to a shoe which comprises pressing upon the shoe a heel base and a rubber top section having washers embedded therein, and driving simultaneously to the same depth a plurality of attaching nails, some of which pass through said washers and some of which do not.

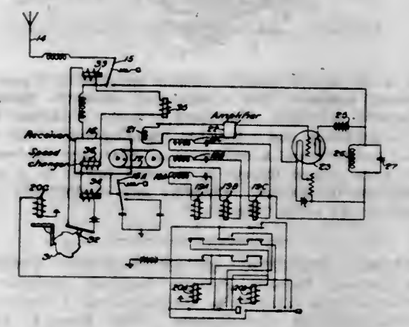
1,677,293. BLANKET-NAPPING MACHINE. HAROLD V. PROTHERS, New York, N. Y., assignor, by direct and mesne assignments, to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Oct. 19, 1925. Serial No. 63,350. 8 Claims. (Cl. 26—32.)

5. A napping machine, comprising a series of successive napping rolls each having interrupted brush portions, and conveyor members for supporting the work and moving the same past said napping rolls, said conveyor members engaging said rolls between the interrupted brush portions thereof.



1,677,294. INSULATOR-ASSEMBLING JIG. JOHN CULLEN ROBERTSON, Annapolis, Md., assignor to Locke Insulator Corporation, Baltimore, Md., a Corporation of Maryland. Filed July 14, 1927. Serial No. 205,830. 19 Claims. (Cl. 18—1.)

1. In an insulator assembling jig, the combination of a support, means on the support for supporting a plurality of insulator sections in nested relation, means for applying pressure upon the insulator sections axially thereof, and means for centering the sections with respect to one another.

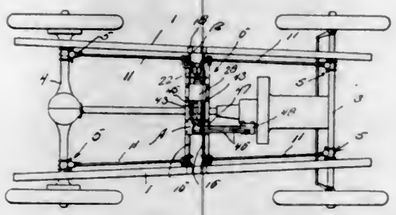


1,677,295. AUTOMATIC SAFETY CONTROL FOR OIL BURNERS. HOMER S. ROGERS and RICHARD RADDATZ, Milwaukee, Wis., assignors to Combustion Fuel Oil Burner Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed May 17, 1926. Serial No. 109,592. 12 Claims. (Cl. 158—28.)

1. In an oil burner system of the character described, the combination with the motor and controlling relay circuit thereof, of a switch, a heat-responsive element subject to the heat of the burner associated with said switch for operating the same, and a pair of thermal switch devices interposed between said relay and said switch and each comprising a heating coil and a switch controlled thereby, one of said devices being responsive to

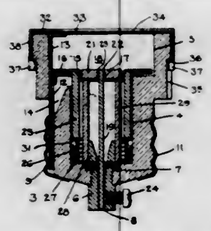
effect opening of the relay circuit upon the existence of a condition of non-combustion at the burner, the other of said devices being responsive to effect opening of the relay circuit in the event of a short-circuit of said first-named switch and its associated connections.

1,677,296. PROCESS FOR WIRELESS TELEGRAPHY AND TELEPHONY. BRUNO ROSENBAUM, Berlin, Germany, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 26, 1921. Serial No. 495,742, and in Germany Aug. 18, 1917. 7 Claims. (Cl. 250—15.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



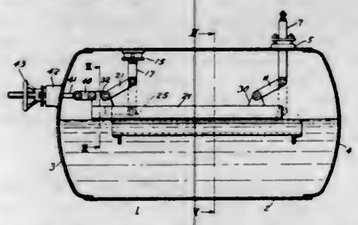
1. In a signal relaying station, a communication circuit, a receiving device, a sending device, means for bringing one or the other of said devices into operative relation with the communication circuit, means responsive to predetermined signals for actuating said first named means, whereby arrival of said predetermined signals will first start the station to sending and repetition of said predetermined signals will prepare the station for receiving.

1,677,297. AUTOMOBILE HOISTING DEVICE. RUDOLPH ROTHER, Tamaqua, Pa. Filed Sept. 15, 1925. Serial No. 56,475. 2 Claims. (Cl. 254—86.)



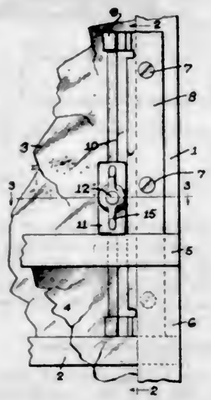
1. In a structure of the class described, a frame adapted to be supported transversely across the intermediate portion of a motor vehicle chassis, a motor ar-

ranged on the frame, the drive shaft of said motor extending longitudinally of the frame in the intermediate portion thereof, a pair of aligned longitudinally extending jack operating driven shafts arranged on one side of the drive shaft, an additional pair of longitudinally extending aligned jack operating driven shafts arranged on the opposite side of the drive shaft, bearings for the inner



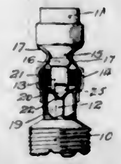
opposed ends of each pair of driven shafts, a gear keyed on the inner end portion of each of said driven shafts, gears slidable on the drive shaft for selective engagement with the gears on the driven shaft whereby any one of said jack operating driven shafts will be actuated or any pair of said shafts, and means for effecting the reverse rotation of said shaft.

1,677,298. THERMAL PLUG CUT-OUT. MAURITS J. SANDIN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 23, 1923. Serial No. 614,379. 12 Claims. (Cl. 200—123.)



1. A cutout for electric circuits comprising a pair of terminal members, and a composite renewable thermal-responsive connector comprising a metal conductor disc for conductively and releasably engaging one of the terminal members and a conductor of relatively high-resistance metal joined thereto by a metal fusible at a relatively low temperature releasably and conductively connected to the other terminal.

1,677,299. ELECTRIC STEAM BOILER. STEPHAN SCHNEIDER, Meissen, Saxony, Germany, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 4, 1927, Serial No. 172,751, and in Germany Mar. 4, 1926. 3 Claims. (Cl. 219—40.)

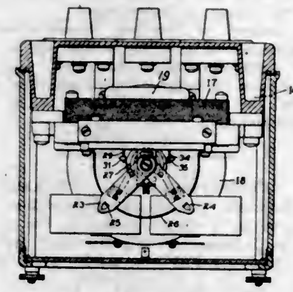


1. In an electric steam boiler, a plurality of electrodes within said boiler, means for pivotally suspending said electrodes from the top of said boiler, means extending through an end wall of said boiler for effecting vertical movement of said electrodes, and means, including said pivoted suspending means, for conducting electric current to said electrodes.

1,677,300. SASH FASTENER. SAMUEL SEGAL, New York, N. Y., assignor to Segal Lock & Hardware Co. Inc., New York, N. Y., a Corporation of New York. Filed Sept. 4, 1924. Serial No. 735,727. 9 Claims. (Cl. 292—305.)

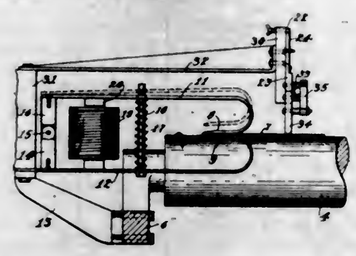
1. In a device of the character described, a support carried by a member and provided with a sharp edge, a fastening device having an opening provided with a rounded wall through which opening said support extends, said fastening device being adapted to engage a second member, to prevent movement thereof in one direction, supplemental fastening means associated with said fastening device and provided with an opening therein having a rounded wall and means for actuating said fastening device whereby the sharp edge of said support will engage the rounded wall of the opening in said fastening device and whereby the sharp edge of said support will also engage the rounded wall of the opening in said supplemental fastening means.

1,677,301. TIRE DEFLATER. EMIEL P. SEGHERS, Chicago, Ill. Filed Oct. 2, 1922. Serial No. 591,733. 2 Claims. (Cl. 152—12.)



1. A tire deflater comprising a shell threaded at one end for engaging a pneumatic valve and having spring clips at the opposite end thereof for engaging a valve stem wrench on a valve cap.

1,677,302. RELAY. HARVEY P. SLEEPER, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 3, 1923. Serial No. 616,755. 4 Claims. (Cl. 175—338.)

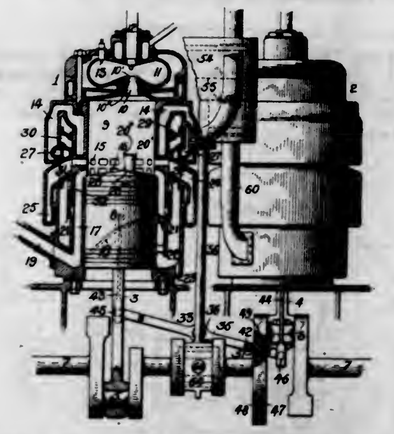


1. In an electric relay, the combination with a movable member movable in response to an electric force provided

with a laterally extending portion, a spring fixed at one end and a stop, the free end of the spring engaging the

stop to maintain a predetermined tension in the spring and disposed in the path of the laterally extending portion of the movable member to be engaged thereby.

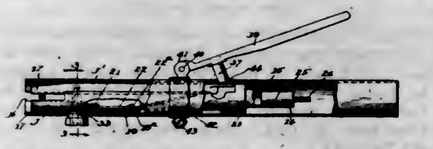
1,677,303. SELVAGE-OPENING DEVICE. HARRY C. SMITH, Arlington, Mass., assignor to Blake Electric Mfg. Company, Boston, Mass., a Corporation of Massachusetts. Filed Sept. 2, 1924. Serial No. 735,325. 12 Claims. (Cl. 26—54.)



1. A means for automatically opening the selvages of cloth comprising a blade located close to the surface of a traveling web of cloth and arranged with its outer extremity near the edge of such web, combined with means for withdrawing said blade from the cloth when a seam in the cloth passes by.

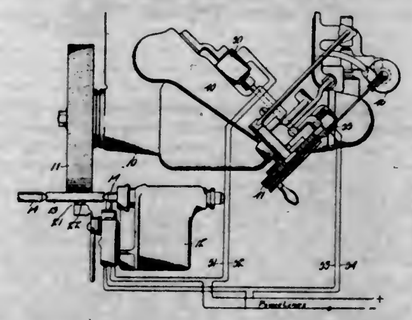
1,677,304. GAS-PURIFICATION PROCESS. FREDERICK W. SPERR, Jr., Pittsburgh, Pa., assignor to The Koppers Company, a Corporation of Pennsylvania. Filed Dec. 31, 1926. Serial No. 158,424. 8 Claims. (Cl. 23—3.)

1. The process of regenerating a liquid previously used for purifying gas from acidic impurities which comprises subjecting it to the action of air in the presence of hemicellulose.



1,677,305. TWO-CYCLE SUPERCHARGING COMBUSTION ENGINE. ELMER A. SPERRY, Brooklyn, N. Y., assignor to The Sperry Development Company, Brooklyn, N. Y., a Corporation of Delaware. Original application filed Aug. 5, 1922, Serial No. 579,863. Divided and this application filed Oct. 7, 1924. Serial No. 742,093. 20 Claims. (Cl. 123—69.)

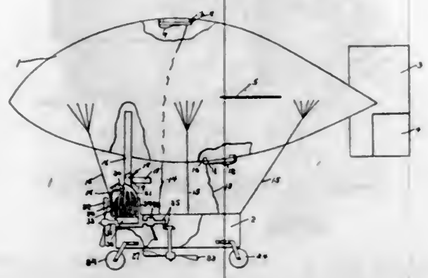
7. A combustion engine comprising in combination a cylinder, a piston, an open air chamber, an exhaust passage, a source of fluid under low pressure, a source of fluid under high pressure, a port for said cylinder controlled at one end by said piston and positioned to be opened as the piston descends, a second port in communication with said source of low pressure fluid controlled by said piston positioned to be opened after the first mentioned port is opened, a third port connecting said source of low pressure fluid to the open chamber, and a sliding valve arranged to reciprocate oppositely to said piston having a port to connect the first mentioned port to the exhaust passage when the second mentioned port is open, a port to connect the first mentioned port to the high pressure fluid source when the second



mentioned port is closed, a port connecting said low pressure fluid source to the open chamber when the second mentioned port is closed in which position the high pressure fluid source is also connected to said open chamber.

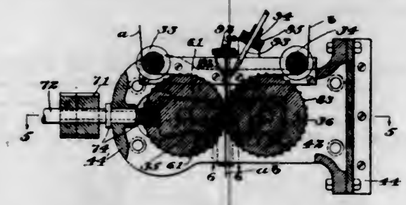
1,677,306. ELECTRIC WELDING TONGS. CLIFTON L. STANCLIFF, Bakersfield, Calif. Filed June 15, 1927. Serial No. 199,029. 8 Claims. (Cl. 219—8.)

1. A pair of welding tongs comprising a casing of insulating material, jaws wholly within the casing, and means exteriorly of the casing and insulated from the jaws for actuating the latter.



1,677,307. AUTOMATIC SIZING DEVICE FOR GRINDING MACHINES. AMOS P. STEINER, Waynesboro, Pa., assignor to Landis Tool Company, Waynesboro, Pa., a Corporation of Pennsylvania. Filed May 7, 1925. Serial No. 28,719. 11 Claims. (Cl. 51—165.)

1. In a grinding machine, a wheel, a rotary work-holder, a diameter gage having an arm swingable on a pivot parallel to the axes of the wheel and the work-

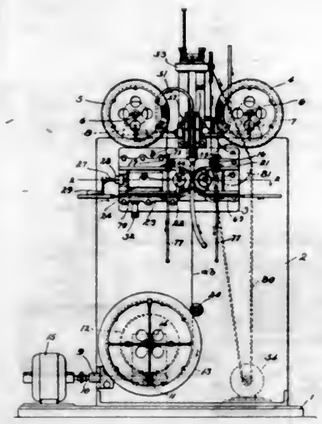


holder said arm being longer than the distance between its pivot and the unfinished work and being biased to move past said work, means for retracting a work center to release the work, and connections therefrom to move the gage into idle position remote from the work, substantially as set forth.

1,677,308. METHOD OF INFLATING AND DRIVING AN AERIAL MACHINE AND MEANS THEREFOR. CHARLES LAWRENCE STOKES, Los Angeles, Calif. Filed July 14, 1925. Serial No. 43,606. 9 Claims. (Cl. 244—6.)

1. The method of inflating a balloon which consists in forcing therein the heated gases from a multi-cylinder engine, part of the gases being burnt in one or more of the cylinders and the balance of the gases being burnt between the engine and the balloon.

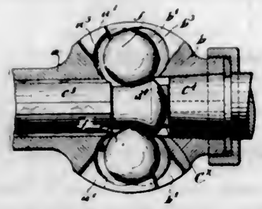
1,677,309. REGISTERING AND CEMENTING CINEMATOGRAPHIC FILMS. LEONARD T. TROLAND, Malden, and JOSEPH A. BALL, Wollaston, Mass., assignors, by mesne assignments, to Technicolor Motion Picture Corporation, Boston, Mass., a Corporation of Maine. Filed Sept. 15, 1921. Serial No. 500,842. 55 Claims. (Cl. 154—42.)



1. Apparatus for bringing cinematographic strips into registered juxtaposition which comprises means for advancing the strips in juxtaposed relationship and means for registering the strips including registering pins recurrently entering the sprocket holes of the strips from opposite sides.

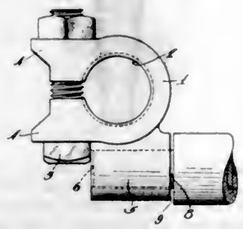
5. Apparatus for bringing cinematographic strips having sprocket holes into registered juxtaposition and subjecting them to pressure comprising means engageable with the sprocket holes in the strips for registering the latter and controlled by the strips, and means for applying pressure to said strips intermediate successive sprocket hole engaging means.

6. Apparatus for sticking two cinematographic strips together comprising means for continuously advancing the strips into registered contact, means for supplying a measured minute supply of liquid to the contacting surfaces of the strips, and means for positively actuating said two means in synchronism.



54. The method of treating cinematographic strips which comprises continuously feeding the strip, pumping liquid upon said strip in synchronism with the feeding operation to apply a uniformly thin coating of liquid upon the strip and then pressing the strip against another strip.

1,677,310. CINEMATOGRAPHIC APPARATUS. LEONARD T. TROLAND, Malden, Mass., assignor, by mesne assignments, to Technicolor Motion Picture Corporation, Boston, Mass., a Corporation of Maine. Filed Jan. 6, 1925. Serial No. 836. 17 Claims. (Cl. 154—42.)

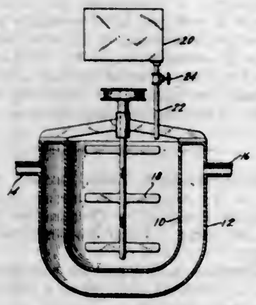


1. Cinematographic apparatus comprising juxtaposed pressure rolls, means for conducting a plurality of cinematographic strips between said rolls, and a distributor adjacent the region where the strips contact in yieldable contact with each of said rolls for applying liquid to said strips.

1,677,311. UNIVERSAL JOINT. CARL W. WEISS, Brooklyn, N. Y. Filed Feb. 18, 1927. Serial No. 169,151. 3 Claims. (Cl. 64—91.)

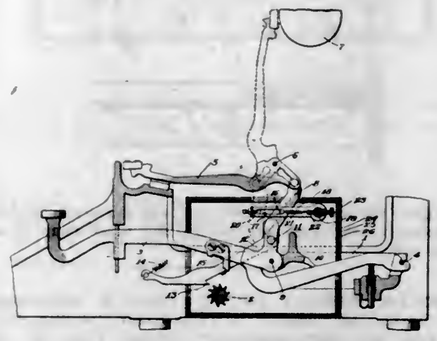
1. A universal joint having two members capable of relative angular displacement and having co-acting portions with their proximate faces formed with non-concentric grooves, two diametrically opposed movable bodies received partly in each of such grooves and through which force is transmitted from one co-acting portion to the other, and a circular abutment forming a bearing for said movable bodies to prevent relative displacement thereof in a radial plane.

1,677,312. BATTERY CONNECTER. JESSEE M. WHITE, Philadelphia, Pa. Filed Mar. 2, 1926. Serial No. 91,682. 3 Claims. (Cl. 173—259.1.)



1. A battery connecter including a clamp; a bolt passing through the ends of the clamp; a sleeve, having a longitudinal slit, formed integral with the clamp; one end of the sleeve engaging the head of the bolt, and the sleeve so positioned that the bolt head partly obstructs one end of the passage through the sleeve.

1,677,313. ELECTRIC HEATING UNIT. JAMES C. WOODSON, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 23, 1925. Serial No. 38,979. 3 Claims. (Cl. 201—63.)



3. An electric heating unit comprising a skeleton metal frame having a plurality of spaced open grooves therein, bars of refractory electric-insulating material, having spaced, laterally-extending grooves in one face, located in said grooves, cooperating bars of refractory electric-insulating material having laterally-extending grooves in one face located on said first bars with the grooves thereon in alined positions, a resistor member extending through said bars and therebetween, and means for clamping said cooperating bars together.

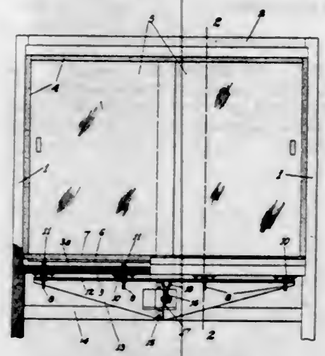
1,677,314. PROCESS FOR MAKING COLD SWELLING STARCH. EUGENE WULKAN, Vienna, Austria, assignor to Haberland Manufacturing Company, Allwood, N. J., a Corporation of New Jersey. Filed Aug. 12, 1924. Serial No. 731,557. Renewed Dec. 7, 1927. 7 Claims. (Cl. 127—33.)

5. A method for the preparation of cold swelling starch, which comprises heating a mass of starch to a temperature at which cold swelling starch would be formed in the presence of water, introducing a reacting liquid in small individual drops or particles into the starch mass whereby individual paste balls are formed as distinguished from mass formation of paste, and thereafter drying the individual paste balls.

1,677,315. TYPEWRITER. CONRAD D. YOUNGBERG, Woodstock, Ill., assignor to Woodstock Typewriter Company, Woodstock, Ill., a Corporation of Illinois. Filed Jan. 2, 1925. Serial No. 30. 9 Claims. (Cl. 197—17.)

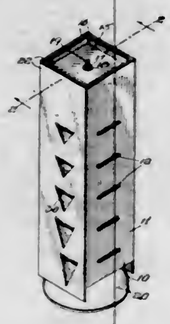
1. In a typewriter, a movable member, a bar having a slot extending longitudinally thereof, a stop on said member arranged to travel in said slot, and a spring for retarding the movement of said stop in said slot.

1,677,316. PHOTOELECTRIC CELL. VLADIMIR K. ZWORYKIN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 13, 1925. Serial No. 43,220. 4 Claims. (Cl. 250—27.5.)



4. In a photo-electric device, an evacuated envelope having a press and an inwardly projecting skirt surrounding said press, a cathode and a control electrode mounted on said press within the envelope, a second control electrode mounted on said skirt within said envelope, a conductive photo-sensitive material coating and a portion of the inner surface of said envelope and the surface of said skirt farthest from said press, a conductive connection between said coating and the second control electrode, a second press and an anode supported thereby.

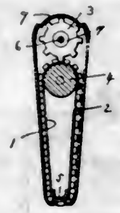
1,677,317. SLIDING-WINDOW HOLDER. RICHARD M. AHRENS, Oakland, Calif., assignor to California Transit Company, Oakland, Calif., a Corporation of California. Filed Oct. 11, 1926. Serial No. 140,760. Renewed June 1, 1928. 5 Claims. (Cl. 292—256.)



1. A sliding window holder comprising a frame structure to receive a pane for horizontal sliding movement, guides for the horizontal edges of the pane, a rigid strip mounted in the frame extending lengthwise of and on which one of said guides is mounted, said strip being

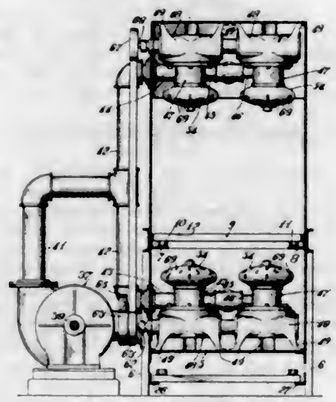
movable to and from the adjacent edge of the pane, yieldable means applied to the strip at different points in its length and acting automatically and independently

to force the strip toward the pane, and a control member applied to the strip for moving the same away from the pane.



1,677,318. DISPLAY DEVICE. HARRY S. ALEXANDER, Chicago, Ill., assignor to Tater-Flakes Company, Chicago, Ill., a Corporation of Illinois. Filed Jan 2, 1926. Serial No. 78,761. 2 Claims. (Cl. 211—58.)

1. In a device of the character described, a vertical support of sheet material provided with a plurality of horizontal slots arranged in a vertical series, and a mounting board having a plurality of tongues extending therefrom and engaging through said slots, one of said tongues having an element normally disposed beneath the upper wall of its cooperating slot and coacting therewith to prevent casual removal of the board from the support.

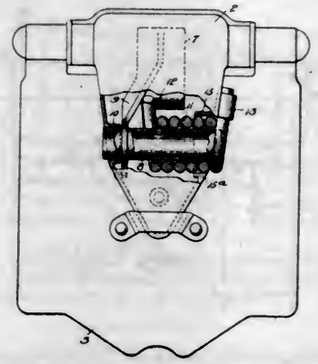


1,677,319. CHANGEABLE-LETTER DEVICE. JOHAN KARL KRISTIAN ANDERSEN, Brooklyn, N. Y. Filed May 7, 1927. Serial No. 189,595. 3 Claims. (Cl. 701—111.)

1. In a changeable device, in combination, a shaft, a plurality of toothed discs mounted loosely on said shaft, spacing means on the shaft and between the discs, a cylinder in parallelism with the shaft, a guide member spaced from the cylinder and convexed on its outer side, a plurality of side by side endless flexible bands on said cylinder and guide member and each having a plurality of spaced projections adapted to cooperate with the teeth of a disc and to bear letters, numerals, or other characters, and a casing comprising a top wall concavo-convex in cross section, end walls supporting said shaft, cylinder and guide member, and side walls having arms pivotally connected to said shaft and also having means for detachably holding them to the end walls and further having inwardly directed edge portions adapted to rest at opposite sides of a row of projections on the endless

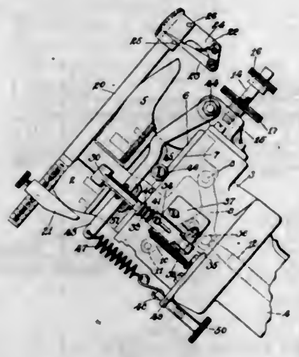
band to expose said projections and to cooperate with the projections in preventing casual movement of the bands, one of the side walls when swung to open position affording access to the toothed disc for adjustment purposes.

1,677,320. WASHING MACHINE. GEORGE P. ANSTISS, Oak Park, Ill., assignor to G. S. Blakeslee & Co., Cicero, Ill., a Corporation of Illinois. Filed Oct. 30, 1923. Serial No. 671,738. 3 Claims. (Cl. 141—1.)



1. In a washing machine, the combination with a washing compartment having means therein for supporting the articles to be washed, of water distributing members arranged oppositely to each other, respectively above and below said supporting means, each of said distributing members comprising a stationary base having a water passage therein, a rotating head revolubly supported by said base and communicating with said water passage, said head having perforations for the discharge of water therefrom, and means mounted on the base operable to rotate said head, and means for supplying water to the water passages of said distributing members.

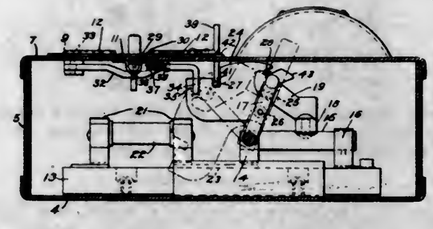
1,677,321. JOURNAL-BOX LID. DONALD S. BARROWS, Rochester, N. Y., assignor, by mesne assignments, to The Symington Company, a Corporation of Maryland. Filed Feb. 20, 1924. Serial No. 693,986. 9 Claims. (Cl. 308—47.)



1. The combination with a journal box having a hinged lid, of means maintaining said lid in a plurality of positions, said means including a lug on the journal box having a plurality of faces, a lever provided with a portion adapted to cooperate with said surfaces and another portion forming a pivot, a torsion spring mounted on

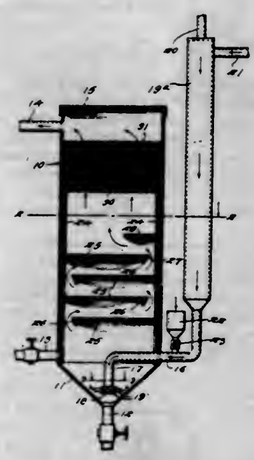
the pivot portion of said lever and having one end operable against said lever and the other end pressing outwardly on said lid, and bearings provided on the lid

adapted to respectively support one end of the pivot portion of the lever and surround a portion of the torsion spring at the other end of the pivot member.



1,677,322. MACHINE FOR OPERATING ON SHOES. ARTHUR BATES, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 23, 1921, Serial No. 524,422, and in Great Britain Mar. 2, 1921. 23 Claims. (Cl. 12—51.)

1. A boot or shoe shaping or stretching machine comprising, in combination, an expansible form, means yieldingly to expand the form lengthwise of a shoe, and a stop for positively limiting the extent of expansion by said means, the stop and expanding means being constructed and arranged for preliminary relative adjustment to vary the extent of expansion allowed by the stop according to the size of shoe.

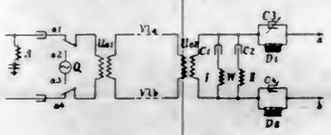


1,677,323. SWITCH MECHANISM. HAROLD G. BAXTER, Baldwin, N. Y., and HUBERT K. KRANTZ, Wilkinsburg, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 25, 1921. Serial No. 464,168. 2 Claims. (Cl. 200—50.)

2. In combination, a switch box having a movable cover, a latch for said cover and interlock members connected to said cover and said latch, a switch having a plate member movable therewith, said plate member having a plurality of recesses therein, certain of which register with the cover interlock member in both the open

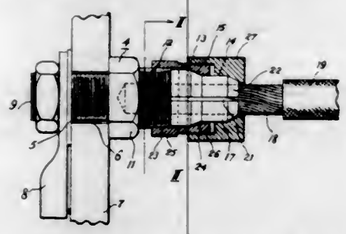
and the closed position of the switch and one of which registers with the latch interlock member in the open position only of the switch.

1,677,324. GASOLINE CLARIFIER. ARLIE C. BECK and ALVIE S. MORNINGSTAR, Bentonville, Ark. Filed Oct. 21, 1926. Serial No. 143,201. 1 Claim. (Cl. 210—44.)



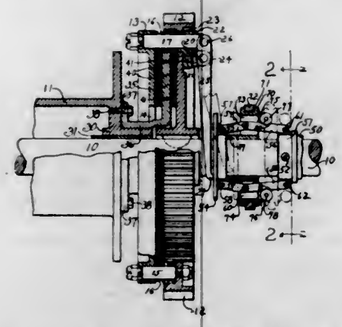
A gasoline clarifier comprising a casing having a funnel-shaped bottom wall, a filter disposed across the upper part of the casing, a conduit pipe passing through the side of the casing, and having an end extension disposed co-axial with relation to the funnel-shaped wall of the casing, a distributing head located in the funnel-shaped wall of the casing and attached to the extension of said conduit, radially disposed nozzles carried by the head, a vertically disposed stack for supplying gasoline to the conduit, said stack having its upper portion disposed above the level of the filter, and means for supplying an alkali to the conduit between the stack and the casing.

1,677,325. TELEPHONE SYSTEM. HANS VON BECKERATH, Berlin, Germany, assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt, near Berlin, Germany. Filed Apr. 30, 1927, Serial No. 187,812, and in Germany Nov. 25, 1926. 3 Claims. (Cl. 179—16.)



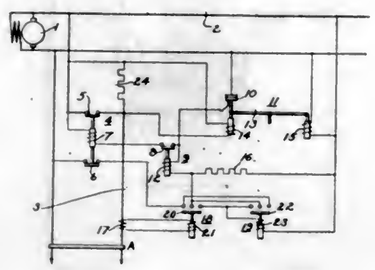
1. In a telephone system, a trunk line, means for transmitting alternating current impulses over said trunk line, an alternating current relay bridged across said

trunk line at the distant end for receiving said impulses and for repeating them to a switching device for extending the trunk line, a blocking circuit inserted in each



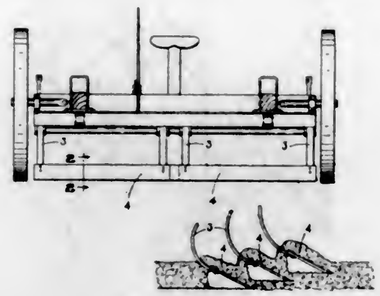
trunk conductor between the said relay and said switching device, and means for tuning each blocking circuit to the frequency of said alternating current.

1,677,326. CONNECTER. DUDLEY A. BOWEN, New York, N. Y. Filed Sept. 28, 1923. Serial No. 665,371. 6 Claims. (Cl. 173—303.)



1. The combination with a connecter for a rod-like member, said connecter having a tubular socket member for receiving the said member and provided with movable clamping jaws, of plural cooperating means adjustably connected to the socket member and independently operable for engaging the same clamping jaws at different points axially thereof and for moving them into clamping engagement with the said rod-like member.

1,677,327. CLUTCH MECHANISM AND CONTROL THEREFOR. MERRILL I. BRADLEY, Detroit, Mich., assignor to Universal Power Shovel Company, Highland Park, Mich., a Corporation of Michigan. Filed Jan. 24, 1927. Serial No. 162,964. 5 Claims. (Cl. 192—99.)

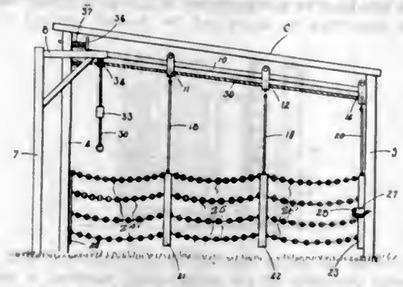


1. In combination, a shaft having a collar slidable thereon, links pivoted to said collar, a collar fixed on the shaft, other links pivoted to the first ones and to said fixed collar, all said links being extended at an angle to the axis of the shaft, means for varying the angles of the links to thereby vary the span of the same and slide the first collar on the shaft, clutch operating levers operable by the movement of the sliding collar, and means for limiting the variation of the angles of said links comprising a part carried by the first mentioned means adapted to engage said slidable collar.

1,677,328. AUTOMATIC RECLOSING CIRCUIT INTERRUPTER. CHARLES A. BUTCHER, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 25, 1921. Serial No. 464,268. 5 Claims. (Cl. 175—294.)

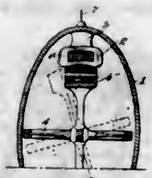
1. An automatically reclosing circuit-interrupting device comprising means for connecting two circuit conductors, an operating coil therefor, a switch in circuit with the coil, and means for controlling the switch comprising a resistor connected directly across the terminals of the interrupting device and means responsive to the potential difference thereacross when the switch is open.

1,677,329. CULTIVATOR. PAUL CANTIN, Eastburg, Alberta, Canada. Filed Mar. 11, 1927. Serial No. 174,674. 1 Claim. (Cl. 27—144.1.)



A cultivator provided with a frame; sets of curved legs extending downwardly from a common support carried from said frame; the lower ends of the legs of each set being in transverse alignment; cutting blades attached to said lower ends of the legs of each set and the length and curvature of the legs of each succeeding set being greater than the preceding set.

1,677,330. GATE CONSTRUCTION. CARL ARVID CARLSON, Edmonton, Alberta, Canada. Filed Sept. 9, 1927. Serial No. 218,485. 1 Claim. (Cl. 39—86.)



A gate comprising uprights suitably braced at their upper ends; an inclined track supported between the upper ends of said uprights; hangers reciprocally mounted on said track; cables extending through said hangers and one end secured to the outer one of said hangers; the said cables extending through pulleys supported on one of said uprights adjacent the upper end of said track; brackets supported on uprights spaced equidistant from said last mentioned upright; pulleys supported from

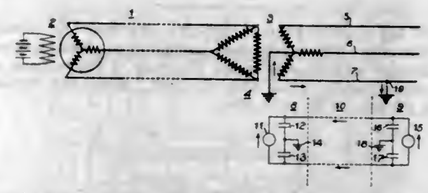
each of said brackets; the ends of said respective cables extending through these respective pulleys and suspending downwardly therefrom; suspension member supported

from said hangers; gate uprights supported from the lower end of said suspension members and flexible connection means between said gate uprights.

1,677,331. GYROSCOPIC APPARATUS. ALEXANDER CHESSIN, New York, N. Y. Filed Dec. 23, 1919. Serial No. 346,921. 19 Claims. (Cl. 33—204.)

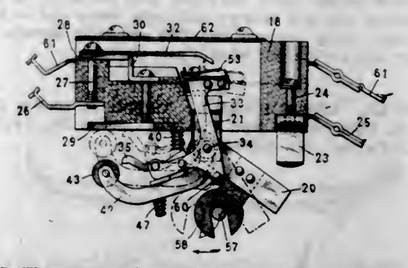
1. A gyroscopic compass comprising a frame suspended for rotation about a vertical axis, a gyroscope mounted in said frame to tilt about a horizontal axis, and means to spin said gyroscope, which means exert a torque on the gyroscope about said horizontal axis to resist the tilting thereof.

16. An apparatus comprising a frame mounted for rotation about an axis, and an electric motor, the stator of said motor being attached to said frame, and the rotor being mounted therein to tilt relatively to said stator.



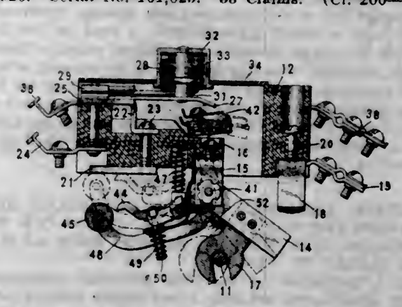
1,677,332. LINER FOR ELECTRICAL CONNECTERS. MARTIN M. CLAYTON, Baden, Pa., assignor to National Metal Molding Company, a Corporation of Pennsylvania. Filed June 7, 1926. Serial No. 114,099. 1 Claim. (Cl. 247—25.)

The combination with an electrical connecter having a hollow cylindrical portion adapted to receive a conductor and a radial slot in its side wall, of a liner arranged between the conductor and the inner wall of the connecter and having a lug projecting laterally through said slot and bent into binding engagement with the outer wall of the connecter.



1,677,333. ELECTRICAL PROTECTIVE SYSTEM. CHARLES LE G. FORTESCUE and ROBERT D. EVANS, Pittsburgh, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 29, 1922. Serial No. 591,269. 2 Claims. (Cl. 175—30.)

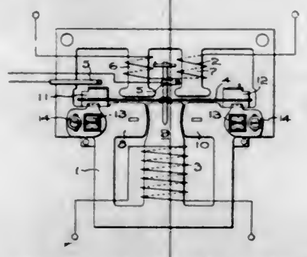
1. The combination with a two-conductor telephone circuit subject to induced voltage disturbances, of an acoustic-shock preventing means comprising two similar autovalve arresters, one of said arresters being connected between each conductor and ground, each of said autovalve arresters being characterized by having two



high-resistance plates spaced by a gap of the order of 3 mils in air, the resistivity of said plates being sufficiently high to prevent concentration of the brush discharge into an arc during ordinarily expectable induced voltage disturbances.

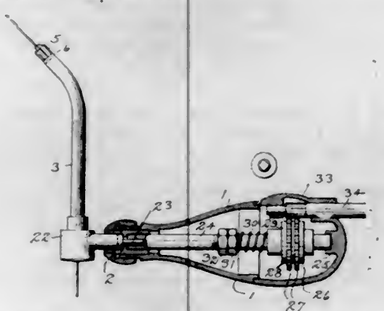
1,677,334. THERMOSTATIC OVERLOAD SWITCH. BENJAMIN E. GETCHELL, Plainville, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a Corporation of Connecticut. Filed Apr. 10, 1926. Serial No. 101,024. 15 Claims. (Cl. 200—3.)

15. The combination with a manually operable main switch, of an auxiliary protective switch, together with appurtenant contacts for said switches, a thermostatic latch to hold said auxiliary switch in an inactive position on normal load conditions and to release said auxiliary switch on a predetermined overload and means of connection between said switches whereby the circuit may be opened by the opening movement of either of said switches and whereby the said auxiliary switch may be moved to closed position by the opening movement of said manually operable switch.



1,677,335. AUTOMATIC ELECTRIC SWITCH. BENJAMIN E. GETCHELL, Plainville, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a Corporation of Connecticut. Filed Apr. 10, 1926. Serial No. 101,025. 33 Claims. (Cl. 200—88.)

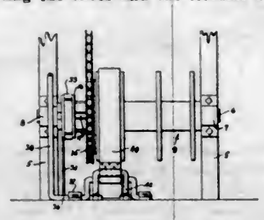
1. The combination with a quick break switch of a thermally bendable element for latching said switch in closed position and a magnetically operable release device



having a coil in an electrical circuit with said element and having an armature directly associated with said element and cooperating therewith to release said switch on excessive overload in the circuit.

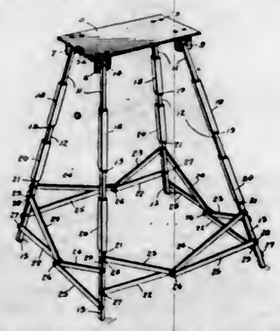
1,677,336. INDUCTION RELAY. SHIRLEY L. GOLDSBOROUGH, Pittsburgh, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corpoartion of Pennsylvania. Filed May 25, 1925. Serial No. 32,544. 6 Claims. (Cl. 175—338.)

1. An induction relay comprising a magnetizable core member having upper and lower pole pieces, a movable armature disposed between said pole pieces and a magnetizable shunt for said armature extending between an upper and a lower one of said pole pieces.



1,677,337. ANTRUM DRILL. THOMAS E. GROVE, Dayton, Ohio. Filed Sept. 27, 1924. Serial No. 740,314. 22 Claims. (Cl. 128—305.)

1. In a surgical drill for entering the maxillary antrum through the nares or the like, the combination with a mounting including a revoluble drive shaft, of a tubular cannula laterally bent adjacent to its extremity, a revoluble cutting burr mounted in the end of the bent portion of the cannula, the cannula being shaped and proportioned to follow the burr into any passage traversed by such burr, a shank for said burr, a head on the inner end of the shank having a plurality of radially disposed teeth, a spindle revolubly mounted in the cannula with its axis angularly disposed in relation with that of the burr, said spindle having at its extremity teeth operatively connected with those of the burr, the other end of the spindle being operatively engageable with the power shaft of the mounting.

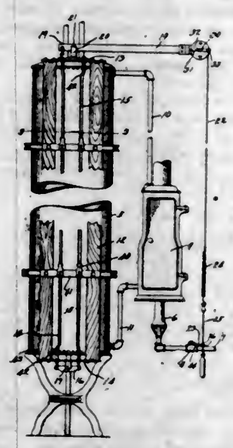


1,677,338. COMBINED CLUTCH AND BRAKE MECHANISM FOR HOISTING DRUMS. SAMUEL OTIS HALE, Whittier, Calif. Filed May 23, 1925. Serial No. 32,340. 2 Claims. (Cl. 192—17.)

1. A mechanism of the class described comprising a shaft mounted for rotation, a reel rigidly secured to said shaft for rotation therewith, said reel provided on one side with a brake drum, a sleeve having a plurality of keyways loosely mounted on said shaft, a driving gear secured to said sleeve having a circular flange projecting from one of its faces, a shifting collar provided with keys engaging the keyways on said sleeve, a plurality of segmental clutch shoes arranged on the periphery of the gear flange, toggle links connecting the shoes and the circular shifting collar

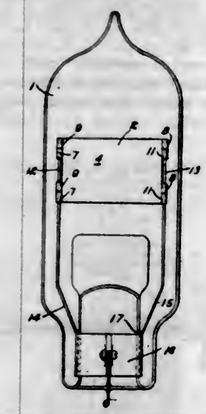
for forcing the shoes into frictional engagement with the internal periphery of the brake drum, whereby to rotate the drum, a brake band enaging the brake drum, means engaging the shifting collar to actuate the brake shoes, and a single lever mechanism for operating the clutch and brake mechanisms alternately.

1,677,339. POCKET FOLDING STOOL. THEODORE N. HANSEN, Seattle, Wash. Filed Dec. 15, 1926. Serial No. 154,933. 1 Claim. (Cl. 155—151.)



A pocket folding stool comprising a seat, four depending lugs for the seat having inverted keyhole slots, four legs each comprising three foldable sections pivotally connected, slidable sleeves adapted to hold said sections in rigid set-up position, the uppermost of said sections having square bolts adapted to fit snugly within the upper rectangular portions of said keyhole slots in the set-up position, means for locking said bolts in said rectangular slot portions, said bolts adapted to be shifted to pivotal disposition within the lower round portions of said slots, four K-braces each comprising four pivotally connected members, the end of one member of each of said K-braces pivotally secured to the lowermost of each of said leg sections, means for fastening the ends of the other three brace members to the two adjoining lowermost leg sections in the set-up position, each of said K-braces adapted to be folded in compact alignment against its associated leg section, a casing for the stool in its folded position, and the seat arranged to serve as the bottom of the casing in the folded position.

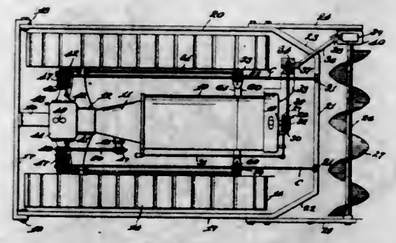
1,677,340. THERMOSTATIC REGULATOR. CLARENCE H. HAPGOOD, Toledo, Ohio, assignor, by mesne assignments, to The C. H. C. Co., Toledo, Ohio, a Corporation of Ohio. Filed May 2, 1925. Serial No. 27,358. 11 Claims. (Cl. 236—33.)



1. The combination with a reservoir adapted to contain heated liquid, a burner aranged to supply heat to the liquid, and a valve for controlling the admission of fuel to the burner, of thermostatic means for controlling the valve comprising a substantially non-expansible frame

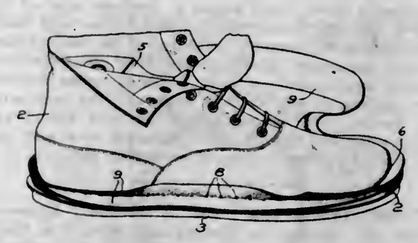
adapted to be clamped around the exterior of the reservoir, metallic rods mounted upon the frame, connecting levers pivoted on the frame and arranged to transmit the expansive and contractive movements of one rod to

its next adjacent rod, a multiplying lever fulcrumed upon the frame and arranged to be actuated by the movements of said rods, and operative connections between the multiplying lever and said valve for opening or closing the valve in accordance with the movements of said lever.



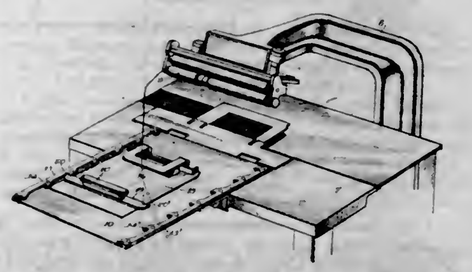
1,677,341. ELECTRODE FOR EVACUATED ELECTRIC DEVICES. PAUL M. HENGSTENBERG, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 7, 1921. Serial No. 506,157. 4 Claims. (Cl. 250—27.5.)

1. In an evacuated electric device, an electrode comprising a plurality of sheet-metal plate members and means, including pivot pins, whereby the opposite edges of one member may be hinge-connected to the corresponding edges of another member, said pivot pins also serving as supporting rods for said electrode.



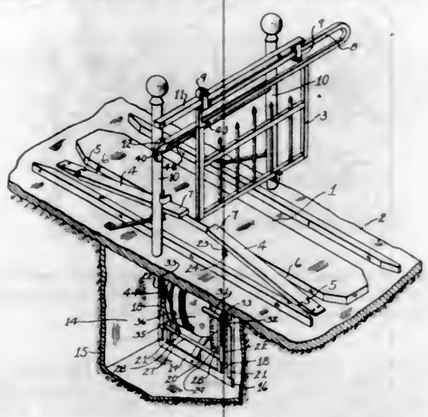
1,677,342. BACK FILLER FOR DITCHES. JAMES H. HODGEN, Los Angeles, Calif. Filed May 4, 1927. Serial No. 188,706. 4 Claims. (Cl. 37—144.)

1. The combination with a tractor having a power take-off crank shaft and differential housing, of a crossbar attached to said differential housing, a frame pivoted to said cross-bar, an auxiliary transmission assembly mounted on said differential housing, a drum comprising an element of said assembly, a cable attached to said



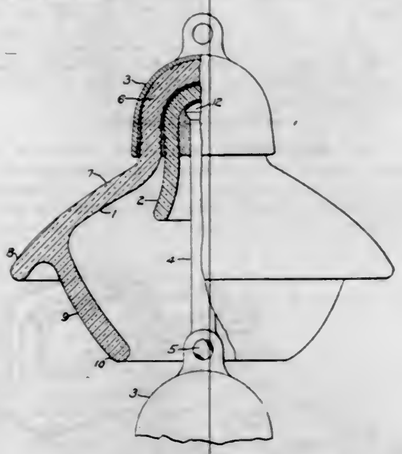
frame and extending around said drum, and a screw conveyor mounted for rotation on said frame, and means for rotating said drum from said power take-off.

1,677,343. STITCH-DOWN SHOE AND PROCESS OF MAKING SAME. ROBERT E. HOWLETT, Malden, Mass. Filed Nov. 18, 1924. Serial No. 750,568. 7 Claims. (Cl. 36—16.)



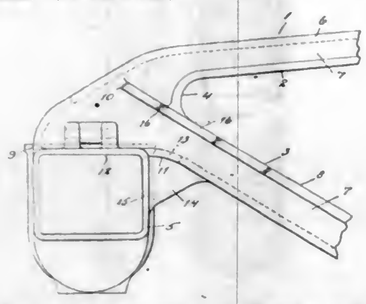
1. A stitch down shoe comprising an insole, an upper having an outturned marginal portion lying on the margin of the insole, a folded welt on said outturned margin of the upper, a series of staples securing the welt, upper and insole together, said staples engaging the welt between the folds thereof and being clinched on the lower surface of the insole, and an outsole secured to said welt.

1,677,344. ADDRESSING MACHINE. HENRY E. HUBBARD, Chicago, Ill., assignor, by mesne assignments, to Addressograph Company, Chicago, Ill., a Corporation of Delaware. Filed Oct. 18, 1926. Serial No. 142,178. 5 Claims. (Cl. 101—47.)



1. An attachment for addressing machines comprising a supporting plate, a cord plate narrower than the supporting plate and movable unrestrictedly on the supporting plate between the side margins thereof, means for registering the card plate in a progressively advanced position on the supporting plate, and means on the card plate for holding a card blank.

1,677,345. AUTOMATIC VEHICLE GATE. ALFRED L. HUGHES, Colorado Springs, Colo. Filed Aug. 29, 1927. Serial No. 216,039. 2 Claims. (Cl. 39—18.)

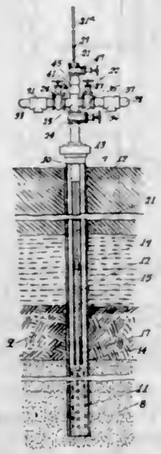


2. In combination with a vehicle gate slidabaly mounted across a drive, tread boards at opposite sides of the gate at one end thereof and adapted for vertical movement; means for normally maintaining the tread boards in their uppermost position; rack bars connected with the said tread boards; a shaft journaled across the rack bars; pinions on said shaft in mesh with the rack bars; gate opening and closing pulleys on said shaft; and gate opening and closing cables mounted over said pulleys and operatively connected with said gate.

1,677,346. INSULATOR. RAY P. JACKSON, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 2, 1922. Serial No. 591,736. 3 Claims. (Cl. 173—318.)

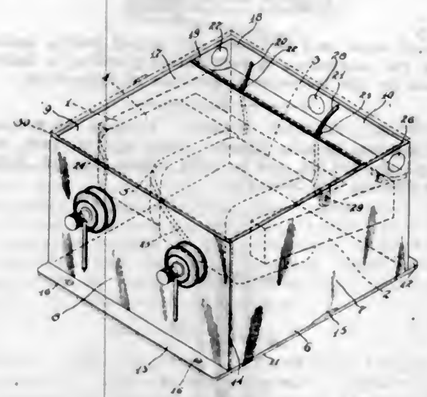
1. An insulator comprising an insulating member including a head, a portion having an annular water-shed surface diverging from the lower end of the head and a lower portion having an annular creepage surface of relatively great length and area sloping inwardly and downwardly from a position closely adjacent to the outer perimeter of said water-shed surface in such position as to receive driving rain directly, said water-shed surface portion projecting only slightly beyond the upper end of said lower portion to provide a water-drip portion preventing the passage of a continuous stream of water along the water-shed and creepage surfaces but permitting the washing of the major portion of said creepage surface by driving rains.

1,677,347. SIDE FRAME. BYERS W. KADEL, Baltimore, Md., assignor to The Symington Company, New York, N. Y., a Corporation of Maryland. Filed June 2, 1925. Serial No. 34,422. Renewed Dec. 19, 1927. 15 Claims. (Cl. 105—205.)



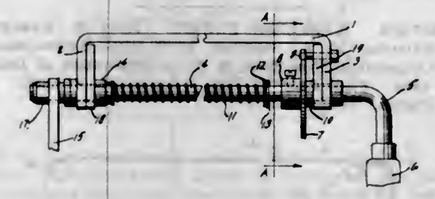
1. A car truck side frame comprising a compression member and a tension member, said members converging at their ends and united together, and the junction between said members being reinforced by flanges from the sides of the tension member extending in line with the top of said member and merging into the side of the compression member below the upper edge thereof.

1,677,348. PROCESS OF TREATING STARCH. JULIUS KANTOROWICZ, Breslau, Germany, assignor to William H. Fain, Greenwich, Conn. Filed Aug. 16, 1921, Serial No. 492,799, and in Germany May 31, 1918. Renewed Dec. 7, 1927. 8 Claims. (Cl. 127—33.)



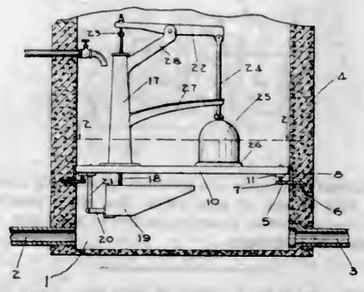
1. The process of preventing the formation of lumps when starch which swells in cold water is added thereto, which consists in adding cold water to a mixture of a starch which swells in cold water and a substance which retards such swelling.

1,677,349. APPARATUS FOR LIFTING OIL IN OIL WELLS. THEOPHILUS KALLMEYER, Wilmington, Calif. Filed May 29, 1924. Serial No. 716,697. 4 Claims. (Cl. 166—1.)



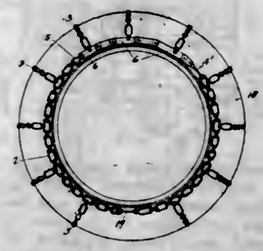
3. In an oil production apparatus the combination of a stationary tube, a pipe open at the bottom and closed at the top slidably disposed within said tube, means closing the lower end of the tube about said pipe, said pipe being provided with an opening above said closing means and a second opening near the upper end, means for forcing a fluid into said tube to displace the circulatory fluid therein and force the same through said pipe upwardly and out through the opening at the upper end of said tube.

1,677,350. CASING FOR ELECTRICAL APPARATUS. ARTHUR C. KLECKNER, Racine, Wis., assignor to Webster Electric Company, Racine, Wis., a Corporation of Wisconsin. Filed Aug. 26, 1926. Serial No. 131,562. 3 Claims. (Cl. 247—9.)



1. In a casing for electrical apparatus, having certain plane sides at right angles, a main chamber for said apparatus having an open face and a secondary chamber in said casing for enclosing electrical connections, said secondary chamber being formed by a partition extending at right angles to certain opposite walls and diagonally from another wall to the plane of said open face, said secondary chamber having openings for the passage of electrical conductors through said partition and through an exterior wall of said secondary chamber.

1,677,351. AUTOMOBILE SIGNALING DEVICE. ISAAC G. KRIEGER, Lodi, Calif. Filed May 10, 1927. Serial No. 190,183. 3 Claims. (Cl. 116—52.)



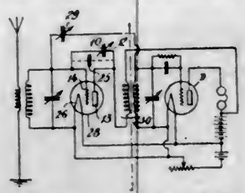
1. In a vehicle signal, a one-piece U-shaped bracket having arms and a connecting portion capable of attachment to the frame of a vehicle, a shaft rotatably and slidably mounted in the arms of said bracket, a coil spring under compression on said shaft, a notched disk fixed to said shaft adjacent to one of the bracket arms, a pin on the adjacent arm in position to normally engage one of the notches in the disk, a semaphore on one end of said shaft, means for holding the semaphore and shaft against relative movement, and a handle at the other end of said shaft for operating the latter, said disk being moved relatively to said pin during the adjustment of said signal.

1,677,352. AUTOMATIC SEWER FLUSHER. CHARLES R. LION, Los Angeles, Calif. Filed June 20, 1927. Serial No. 200,034. 3 Claims. (Cl. 182—5.)

1. In a sewer flusher, a frame having an internal flange, a floor having straps secured thereto on the under surface, adjusting bolts extending through said straps and resting on the flange, and a flushing mechanism on the floor.

1,677,353. ANTISKID DEVICE. ROYAL E. MARTIN, Mansfield, Ohio. Filed Oct. 4, 1927. Serial No. 223,920. 1 Claim. (Cl. 152—14.)

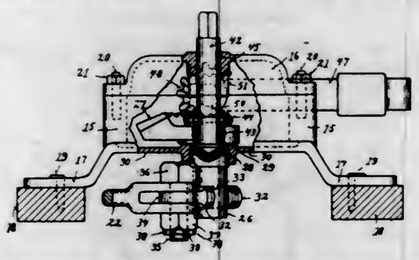
In an anti-skid device, side chains, cross chains connecting the side chains, and a member forming part of the length of one of the side chains, said member including a series of movably interconnected parts adapted for relative folding in one direction, said members being formed to prevent relative movement in the opposite direction beyond a line conforming substantially to the curvature of the tire, whereby the member when in operative relation defines a curved member rigid in one direction and relatively foldable in the opposite direction.



1,677,354. BONDING METAL. FREDERICK C. MATHISON, Chicago, Ill., assignor of one-third to Casper L. Redfield, Chicago, Ill. Filed Sept. 2, 1924. Serial No. 735,517. 2 Claims. (Cl. 22—204.)

1. The process of bonding a bearing metal having a lead base to an iron or steel body, which consists in depositing a coating of copper on said body, in applying a film of tin on said copper, and in using the babbitting process to deposit the body of bearing metal on the tinned face.

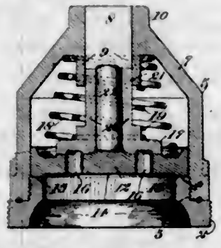
1,677,355. ELECTRON-DISCHARGE DEVICE. WILLIAM A. MACDONALD, Little Neck, N. Y., assignor to Hazeltine Corporation, Jersey City, N. J., a Corporation of Delaware. Original application filed Apr. 9, 1926. Serial No. 100,826. Divided and this application filed June 21, 1927. Serial No. 200,391. 8 Claims. (Cl. 179—171.)



1. An amplifying system embodying a plurality of vacuum tubes, each of said tubes having a grid and a plate between which inherent capacity exists, an input

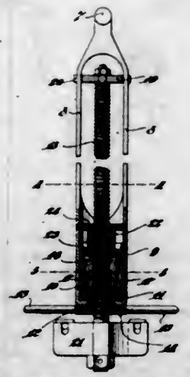
circuit connected to the grid and an output circuit connected to the plate of each tube, a condenser supplementing said inherent capacity connected in parallel thereto,

and a second condenser, one terminal of which is connected to the grid of one of said tubes, the other terminal of said second condenser being connected to the input circuit of another of said tubes.



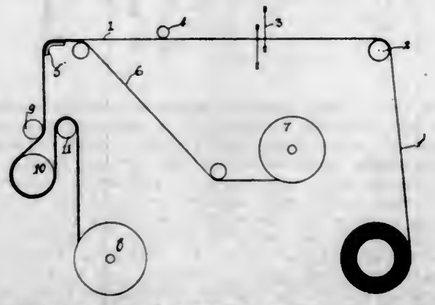
1,677,356. RAILWAY-SWITCH STAND. JOHN T. MCGARRY, Cincinnati, Ohio, assignor to The American Valve and Meter Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Apr. 11, 1927. Serial No. 182,933. 4 Claims. (Cl. 246—411.)

1. A railway switch stand comprising a switch stand housing, a vertically disposed shaft having a gear segment formed integral therewith and having a transverse threaded perforation in its lower end, said vertically disposed shaft being journaled to said switch stand at a point intermediate of said gear segment and said perforation with its lower end projecting downwardly from the bottom of said housing, a crank arm located below said housing threaded into and rotatably adjustable relative to the perforation in said vertically disposed shaft, a connecting rod having one end thereof forked and adapted to operatively connect the free end of said crank arm to a switch, a connecting bolt adapted to pivotally and detachably connect the forked end of said connecting rod to the free end of said crank arm, the relations of said crank arm, said switch stand housing, said connecting rod and said connecting bolt being such that the assembled connecting rod crank arm and bolt can only be rocked relative to said housing a fraction of a revolution from a substantially horizontal to a substantially vertical position, and said bolt can only be inserted from one direction in a substantially horizontal position to connect said connecting rod to said crank arm, and when rocked to a vertical position and said connecting rod connected operatively to a switch, said connecting bolt is prevented by said housing from being withdrawn from its position relative to said connecting rod and crank arm.



1,677,357. VALVE. ALEXANDER MCGREGOR, Burlingame, Calif. Filed May 16, 1924. Serial No. 713,827. 2 Claims. (Cl. 277—44.)

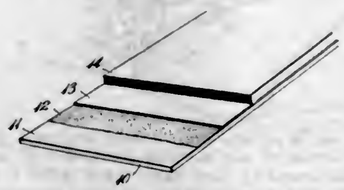
2. A doubly guided double valve comprising in combination with a metallic seat, of a metallic faced disc valve having a stem and a port, a second metallic faced disc valve arranged to overlie said port and having a tubular stem slidably receiving the stem of the first valve, independent spring means normally operating each valve to seated position, and a cage having peripheral guiding means for the periphery of the first valve, and a central guiding means for the tubular stem of the



second valve, said peripheral and central guiding means and the cooperation of both valves providing a double guide for the independent operation of each valve.

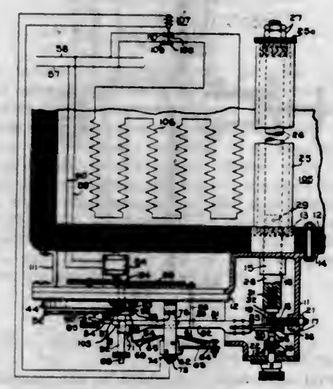
1,677,358. TEMPER SCREW. LAMBERT MCKILLOP, Capetown, Ontario, Canada. Filed Apr. 15, 1927, Serial No. 184,158, and in Great Britain Apr. 19, 1926. 6 Claims. (Cl. 255—15.)

6. In a device of the kind described, a tapered screw-engaging nut comprising two axially divided halves, a bowl internally tapered, a suspension means therefor, antifriction bearings in the suspension means upon which the bowl can rotate, combined spring and anti-friction bearing means urging the nut halves into the bowl in order to rotate therewith, and keys between the nut parts and bowl to prevent relative rotation therebetween.



1,677,359. WEFTLESS FABRIC. FRED B. MANLEY, Paterson, N. J., assignor to Textiles Development Corporation, New York, N. Y., a Corporation of Delaware. Filed July 2, 1923. Serial No. 648,860. 3 Claims. (Cl. 28—32.)

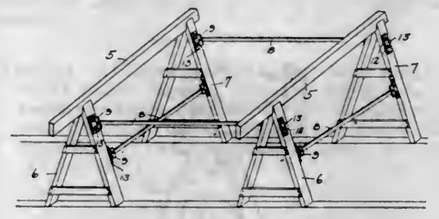
1. The method of preparing weftless fabric which comprises, passing a plurality of parallel strands free



of filling over the breast beam of a loom, simultaneously passing a strip of cloth over the breast beam, and uniting the cloth and strands into a roll.

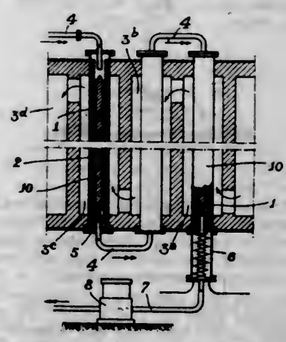
1,677,360. COMPOSITE PRODUCT AND METHOD OF MAKING SAME. ALLAN B. MERRILL, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed June 13, 1927. Serial No. 198,694. 5 Claims. (Cl. 18—59.)

1. In the art of making composite products of rubber and metal, the process which comprises coating the metal with a tough heat plastic isomer of rubber, superposing a sulfur-containing rubber composition on the coated metal with an intervening barrier layer of a composition adapted to inhibit migration of sulphur therethrough from the sulfur-containing rubber composition to the metal, and subjecting the assembled product to vulcanization temperatures.



1,677,361. TEMPERATURE TIME-CONTROL DEVICE. AUGUST J. MOTTLAU, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 28, 1927. Serial No. 187,284. 16 Claims. (Cl. 236—46.)

1. A time-temperature control device comprising a switch, switch-actuating means, a thermostat for actuating said means and time controlled means for rendering the actuating means operative during a certain portion of its travel and inoperative during another portion of said travel, said portions being effective for intervals of time proportional to the total time required for the completion of one cycle of said travel.



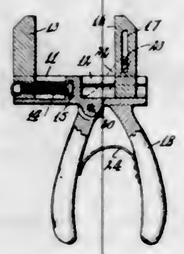
1,677,362. PORTABLE BLEACHER. HENRY D. OBERDORFER, Champaign, Ill. Filed Jan. 31, 1925. Serial No. 6,005. 3 Claims. (Cl. 304—1.)

3. In a portable stand structure, a pair of spaced supporting jacks each having pairs of opposite angularly disposed legs, the opposite legs of the jacks being inclined away from each other, and means for bracing and spacing the jacks apart comprising projec-

tions at the outer sides of the opposite legs, and a cross bar with slots at the ends of the bar to engage the projections.

1,677,363. PROCESS OF TREATING METHANE GAS. GEORGES OLIVIER, Asnieres, France, assignor to Societe Anonyme le Petrole Synthetique, Asnieres, France. Filed June 3, 1926, Serial No. 113,554, and in France Feb. 3, 1926. 6 Claims. (Cl. 260—170.)

1. A process of converting methane gas into hydrocarbons of higher carbon content, consisting in gradually heating a thin stream of methane to a temperature not exceeding 950° C. which will form ethylene and ethylenic compounds, subjecting the products formed to a vacuum, and suddenly and completely cooling said products down to atmospheric temperature.



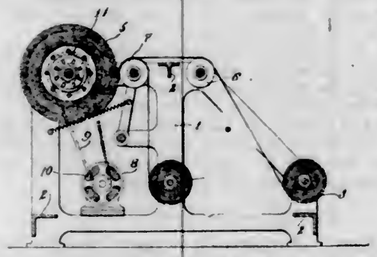
1,677,364. METHOD OF TREATING FISH. DAVID D. PEEBLES, Eureka, Calif. Filed Sept. 7, 1927. Serial No. 217,968. 5 Claims. (Cl. 99—11.)

5. A method of treating raw fish after it has been cleaned and washed which consists in perforating the fish, passing the fish through a zone where it is subjected to sufficient heat to dry off the wash water and partially dry and harden the skin, then subjecting the fish to a broiling action to shrink the fish, further set the skin, broil the flesh, and partially render the oil, and then subjecting the fish to a cooling action.

1,677,365. ADJUSTABLE PLIERS. EDWARD PECK, New York, N. Y. Filed Nov. 2, 1927. Serial No. 230,428. 6 Claims. (Cl. 294—42.)

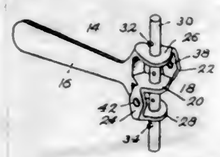
1. An adjustable plier comprising a jaw body having a groove at one end and a second groove at the other end, a jaw slidably arranged in the first groove, means for holding the jaw in adjusted positions, a second jaw

slidably arranged in the second groove, and formed with an elongated slot, a plier handle firmly connected with the jaw body, a second handle pivotally connected with



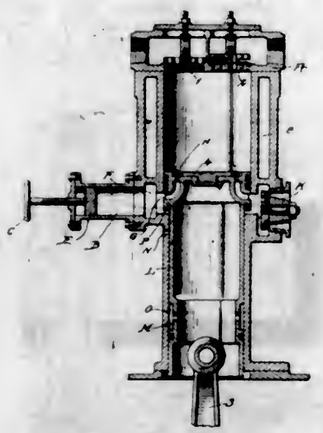
the jaw body, and a pin engaged in the said elongated slot, and secured to the top end of the second mentioned handle.

1,677,366. PLASTERER'S FLOAT. JOSEPH W. PICKERING, Topeka, Kans. Filed Mar. 15, 1926. Serial No. 94,834. 1 Claim. (Cl. 72—136.)



In a float, a base having laterally extending sides, pins laterally extending inward and positioned near both ends of the laterally extending sides, blades having sharp edges and laterally positioned springs adjacent the ends thereof, a curvature centrally positioned on the springs in which the pins will seat, and a curvature on the outwardly extending ends of the springs as free sliding means therefor on the base, the said member adapted to engage with the said pins at the ends of the float as tensioning and holding means for a carpet stretched on the plane of the base.

1,677,367. CLOTH SPONGING AND SHRINKING MACHINE. MARTIN E. POPKIN, Baltimore, Md., assignor of one-half to J. Schoeneman, Incorporated, Baltimore, Md., a Corporation of Maryland. Filed Aug. 16, 1927. Serial No. 213,262. 9 Claims. (Cl. 26—50.)



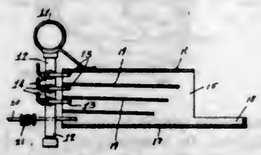
1. The combination in a sponging and shrinking machine of a steaming cylinder, means for rotating the same, a leader and means for feeding the cloth and leader to the cylinder, a cylinder comprising walls of rigid porous material, the pores being open at the outer and inner surfaces of the walls.

1,677,368. TOP AND SPINNER THEREFOR. FRANK X. RENETZKY, Kansas City, Mo. Filed June 20, 1927. Serial No. 200,059. 3 Claims. (Cl. 46—32.)

1. A top, a primary tubular shaft projecting from the upper portion of said top and provided with a slot, a reversible secondary shaft either end of which is adapted to enter said primary shaft, elements projecting from said secondary shaft and either of which is adapted to enter said slot, a support for the secondary shaft, and two cords attached to said secondary shaft and either of which may be wound thereon while the other is unwound therefrom to effect rotation of said secondary shaft and the spinning of the top.

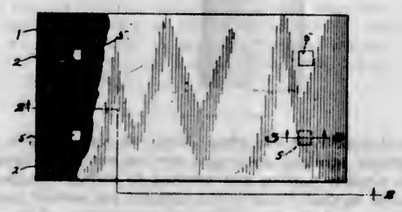
1,677,369. FLUID COMPRESSOR. EDWARD A. RIX, Oakland, Calif. Filed June 13, 1927. Serial No. 198,391. 10 Claims. (Cl. 230—183.)

1. A fluid compressor comprising in combination a cylinder and a piston in said cylinder dividing the same into a main compression chamber and an auxiliary compression chamber, said piston being operable during the major portion of the extension stroke to compress fluid in the auxiliary chamber and discharge the same into the main chamber, only at or near the beginning of the compression stroke and means for varying the pressure of the fluid in the auxiliary chamber.



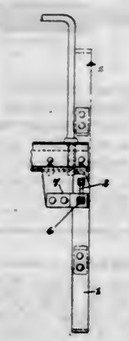
1,677,370. FOOTBALL SHOE. EDWARD E. ROEWADE, Chicago, Ill., assignor to Wright & Ditson-Victor Co., New York, N. Y., a Corporation of Massachusetts. Filed Oct. 25, 1926. Serial No. 143,830. 2 Claims. (Cl. 36—77.)

1. A kicking shoe having a square toed sole, a stiffener reinforcing the upper at the end only of the toe, the top of the toe portion of the shoe being soft, said reinforced end of the toe portion of the upper following the



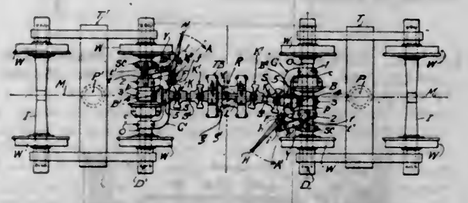
contour of the toe part of the sole, and a cap covering the portions of the upper at the toe and the outer side of the foot substantially to the shank.

1,677,371. OIL BURNER. ELWOOD WILLIAM ROTHER, Indianapolis, Ind. Filed Dec. 10, 1926. Serial No. 153,904. 3 Claims. (Cl. 158—91.)



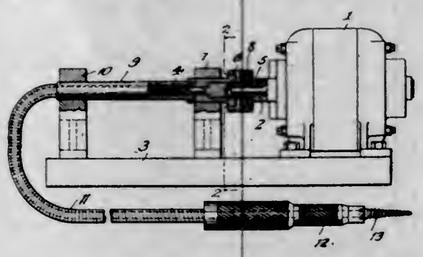
1. A burner of the character described including a tubular casing having an open end from which flames are adapted to discharge, a plurality of superposed plates in said casing, each extending in substantially the same direction and forming a plurality of superposed passageways therebetween and in the casing, each superposed plate projecting beyond the end of the next lower plate at the flame discharge end of the passageways, a fuel supply for each passageway and discharging therein at the opposite end thereof, said casing and plates at said opposite and fuel supply end of the passageways being arranged for the admission of air thereto.

1,677,372. SHEET RUBBER. BERNARD A. RUHLING, Elkhart, Ind. Filed May 18, 1927. Serial No. 191,234. 2 Claims. (Cl. 20—7.)



1. As a new article of manufacture, a solid sheet of rubber having wire netting embedded in its interior and provided with polygonal interstices, and a fastener member embedded in said sheet of rubber and projecting to the exterior thereof, said fastener member having a polygonal shank engaging in one of the netting interstices.

1,677,373. ADJUSTABLE SILL STEP FOR RAILWAY DUMP CARS. ALFRED C. SCHMOHL, Beaver Falls, Pa., assignor to Koppel Industrial Car and Equipment Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed June 2, 1927. Serial No. 195,903. 5 Claims. (Cl. 105—443.)

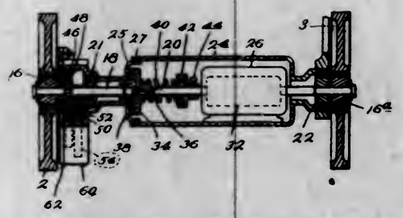


1. In a dump car, an adjustable sill step composed of vertical and transverse members, said step being fulcrumed at one end to permit swinging upwardly and outwardly to a clearance position and integral means on said step and car for automatically securing said step in clearance position.

1,677,374. MEANS FOR CONTROLLING THE DRIVING GEAR OF LOCOMOTIVE CRANES. HENRY G. STEINBRENNER, Cleveland, Ohio, assignor, by mesne assignments, to Industrial Brownhoist Corporation, a Corporation of Ohio. Filed Aug. 6, 1927. Serial No. 211,135. 2 Claims. (Cl. 105—117.)

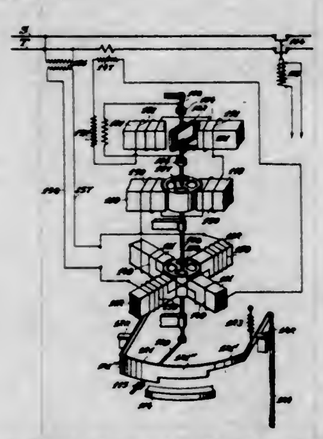
1. In combination with the driven axle of the truck of a locomotive crane, a bracket-like part, or casting, slidably connected at its ends to the same, a bevel-bear fixedly mounted on the axle between the points of said connection, with its face, or teeth, fronting toward the median line of the truck, a journal, in line with and jointedly coupled to the power-transmission shaft of the crane, extending through and within said bracket-like part in bearing contact with the same and in front of the bevel-gear, a bevel-pinion adapted to mesh with said gear, fixedly mounted on said journal, and means for reciprocating said part along said axle to an extent to carry said pinion in or out of mesh engagement with said bevel-gear, substantially as shown and described.

1,677,375. METAL-FINISHING MACHINE. OSBORNE F. TAPLEY, New York, N. Y. Filed Mar. 24, 1927. Serial No. 178,116. 4 Claims. (Cl. 64—12.)



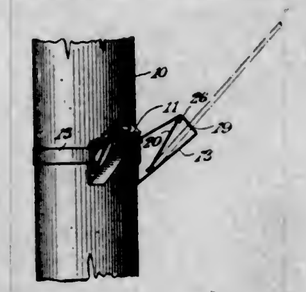
1. In a metal finishing machine, a base, a motor secured to one end thereof, spaced bearing supports mounted on said base one adjacent said motor and one removed therefrom, a flexible shaft operatively connected to said motor and passing through said supports and a rigid tube surrounding said shaft between said supports and rigidly connected thereto.

1,677,376. WIRE COUPLER. JOHN ZILLIOX, Orchard Park, N. Y., assignor to Park Metalware Company, Orchard Park, N. Y., a Corporation of New York. Filed Oct. 22, 1925. Serial No. 64,283. 3 Claims. (Cl. 287—49.)



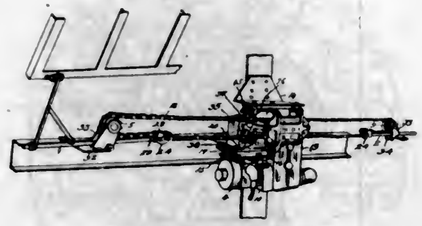
1. A wire coupler comprising a tie rod, an inner clamping plate mounted on the central part of said tie rod and adapted to be engaged on its opposite sides by the inner sides of wires to be coupled, outer clamping plates independent of the inner clamping plate mounted on said tie rod and adapted to engage with the outer sides of the wires to be coupled, and screw means for pressing said outer clamping plates toward opposite sides of said inner clamping plate, said tie rod being constructed of bendable material.

1,677,377. LAWN MOWER. WILLIAM H. ADKINS, Kansas City, Mo. Filed Dec. 6, 1926. Serial No. 152,886. 1 Claim. (Cl. 56—26.)



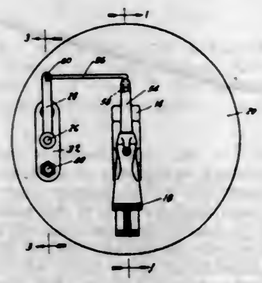
In combination with a lawn-mower equipped with a frame, a cutter, and carrier wheels, a gear case secured to one side of said frame, a horizontally disposed tubular housing exteading transversely across the lawn-mower and secured at one end to the frame and at its opposite end to said gear case, a motor provided with a shaft journaled in said housing and extending freely through the hub of one of the carrier wheels, a shaft section arranged in axial alinement with the motor shaft and journaled in said housing, said shaft section extending freely through the hub of another carrier wheel, means through which the motor shaft drives said shaft section, and gearing in the gear case and through which said shaft section drives the cutter.

1,677,378. DEVICE FOR INDICATING THE QUOTIENT OF TWO ELECTRICAL QUANTITIES. DIETER ALBRECHT, Berlin, Germany, assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed Oct. 20, 1926, Serial No. 142,877, and in Germany July 4, 1925. 5 Claims. (Cl. 171—95.)



1. In a device for determining the quotient of two physicial quantities, in combination, a pointer spindle, driving means adapted to set said pointer spindle according to the quotient of two electric currents, a hollow drum of metal connected with said pointer spindle, and an electromagnet adapted to generate eddy currents in the said hollow drum, said electromagnet being energized in proportion to the value of one of said electric currents.

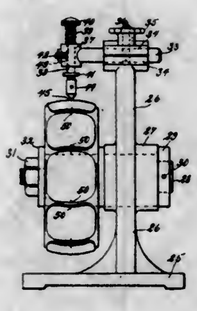
1,677,379. FLAG HOLDER AND SUPPORT THEREFOR. LOUIS ANNIN AMES, New York, N. Y. Filed July 1, 1927. Serial No. 202,804. 3 Claims. (Cl. 248—37.)



1. A holder of the class described comprising a substantially straight portion, a portion extending back on said straight portion and adapted to clamp a supported member against the straight portion, the second portion having a slot for the partial accommodation of the supported member, and a portion connecting the aforesaid portions, said portion having an opening through which the supported member extends.

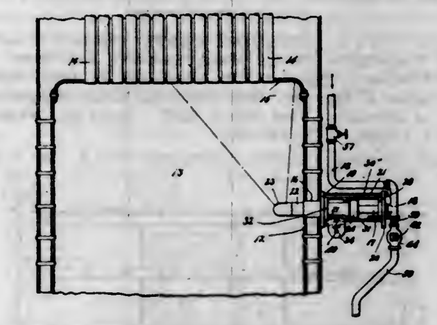
1,677,380. SASH-OPERATING MECHANISM. GUSTAF IVAR BARCLAY, Detroit, Mich., assignor to Detroit Steel Products Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 6, 1926. Serial No. 152,977. 16 Claims. (Cl. 268—19.)

1. In sash operating mechanism, the combination with a motor operatively connected to a sash, of a switch for controlling the operation of said motor and an adjustable and yieldably movable device carried by the connection between the motor and sash dependent upon the operation of said motor for actuating said switch.



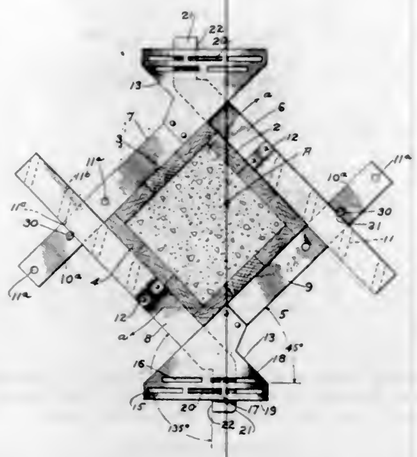
1,677,381. BRAKE-OPERATING MEANS. VINCENT BENDIX, Chicago, Ill., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 8, 1927. Serial No. 159,807. 12 Claims. (Cl. 188—194.)

1. Retarding mechanism for a swivelled wheel comprising, in combination, a brake swivelling with the wheel, an applying device for the brake, a support for the applying device which is shiftable in a direction paralleling the swivelling axis of the wheel to permit the applying device to center itself, and brake-operating mechanism including a joint substantially in said swivelling axis when the brake is applied, to permit swivelling of the wheel, and acting on the applying device substantially at right angles to the direction the support is shiftable, so that the application of the brake does not tend to shift the support.



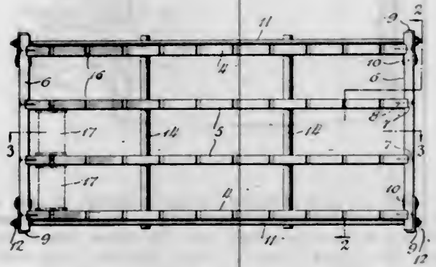
1,677,382. PROCESS OF MAKING AND MARKING TORIC AND LIKE LENSES. LUCIAN BUGBEE, Indianapolis, Ind., assignor, by mesne assignments, to Continental Optical Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 24, 1925. Serial No. 71,257. 3 Claims. (Cl. 51—278.)

1. The process of making and marking toric and like lenses, which process consists in securing a lens blank on a lens holder, grinding the blank into a lens by forming a toric surface thereon, marking the said lens while still on the holder with an axis mark coinciding with



the equatorial line of the said toric surface as indicated by the equatorical line of the holder, and then removing the lens from the holder on which it was ground.

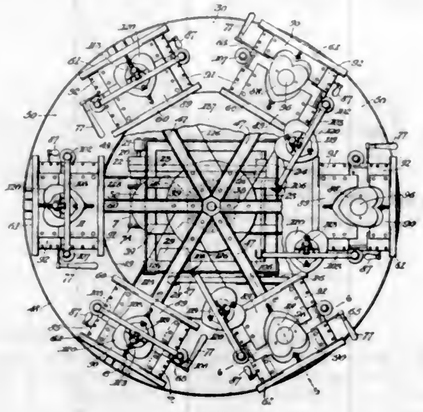
1,677,383. SOOT BLOWER FOR STEAM BOILERS. CHARLES A. CLAFLIN, Medford, Mass., assignor to Superior Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 5, 1921. Serial No. 505,505. 15 Claims. (Cl. 122—391.)



1. For use with a boiler having a passage in one of its walls, a soot-blower comprising a supporting frame attached to and projecting from the boiler wall at the outer end of said passage; a fixed internally unobstructed conduit terminal, connected with a source of steam supply, and attached to said frame; a movable nozzle surrounding a portion of said terminal, and adapted to rotate and move endwise on the terminal in said passage, said nozzle having a lateral jet-emitting outlet, and projecting inward from the terminal, the fixed terminal being located within the nozzle, so that a portion of the bore of the nozzle constitutes an enlarged extension of the bore of the fixed terminal, and another portion of the nozzle bore cooperates with the external surface of the terminal in forming a close joint, a portion of the external surface of the nozzle being exposed in said frame; and manually operable nozzle-operating mechanism, associated with the exposed external portion of the nozzle, and including means for moving the nozzle endwise to project and retract it, and means for turning the nozzle on the fixed terminal, to vary the angular direction of the emitted jet.

1,677,384. FORM CLAMP. JAMES F. COSTELLO, San Francisco, Calif. Filed May 11, 1925. Serial No. 29,300. 5 Claims. (Cl. 144—291.)

1. In a clamp of the character described, a clamping section comprising a pair of arms adapted to be connected at one end, and means at the connected ends of the arms for maintaining the arms at right-angles to each other, said means permitting a free spreading movement of the arms at the connected point in the opposite direction.



1,677,385. STEAMING CRATE. PETER DAUGERT, Wilkes-Barre, HENRY FREY, Kingston, and JOHN J. DUNLEAVY, Plymouth, Pa., assignors to Hess, Goldsmith & Co., Inc., New York, N. Y., a Corporation of Delaware. Filed May 5, 1927. Serial No. 188,967. 5 Claims. (Cl. 28—58.)

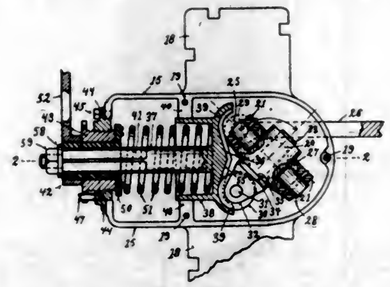
1. A steaming crate for use in treating threads wound upon bobbins, including a framework consisting of outer and intermediate spaced longitudinal members upon which a plurality of bobbins are adapted to be supported, the intermediate members being of greater length than the outer members, end members joining adjacent extremities of said longitudinal members, and tie rods connecting the extremities of said end members.

1,677,386. AUTOMATICALLY-OPERATING PAPER-BOX SHAPING AND FINISHING MACHINE. IRVING A. DELINE, Denver, Colo. Filed May 16, 1927. Serial No. 191,784. 12 Claims. (Cl. 93—55.)

12. In mechanism of the character described, the combination with parallel track members, of cooperating dies slidably mounted on said track members, a support and a form thereon between said dies, a rotatable element on said support, means connecting said dies

and said rotatable element, whereby when said element is turned said dies are drawn toward said form, and resilient means for normally forcing said dies apart.

1,677,387. COMBINATION PENCIL CONTAINER AND LEAD MAGAZINE. ALONZO F. GAIDOS, Oakland, Calif. Filed May 18, 1926. Serial No. 109,848. 2 Claims. (Cl. 120—9.)

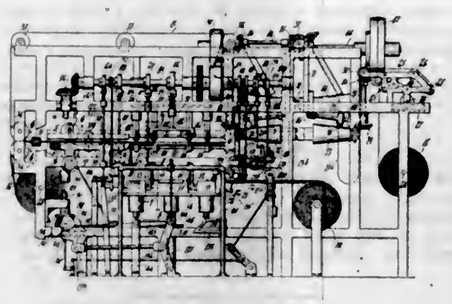


1. A device of the class described, comprising an elongated container terminating in a tapered perforated end portion and open at the opposite end to receive a pencil, and permitting the lead of the pencil to project through the perforated tapered end, a shell secured within the container in spaced relation with the walls thereof and terminating at its front end at the tapered end portion, the rear end of the container being extended beyond the shell, and a cap fitting within the extension of the container and closing the space between the shell and the container for confining lead therein, said cap having an opening in alignment with the shell to permit the pencil to be passed through the cap and the shell without removing the cap from the container.

1,677,388. AUTOMATIC SWITCH STAND. WALLACE M. GRAY, Cincinnati, Ohio, assignor to The American Valve and Meter Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Jan. 3, 1927. Serial No. 158,538. 5 Claims. (Cl. 246—411.)

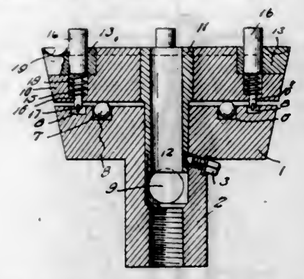
1. An automatic switch stand comprising a casing, a vertical shaft journaled to said casing and operatively connected to actuate a switch, a horizontal shaft journaled to said casing and movable endwise relative to said casing, means to resiliently tension said horizontal shaft against movement in one direction endwise, means to positively limit the movement of said horizontal shaft endwise in the opposite direction, a cam carried by said horizontal shaft, a rocker arm pivotally attached to said vertical shaft upon an axle transversely to said vertical shaft, a cam roller carried by said rocker arm

and held resiliently in engagement with the cam of said horizontal shaft, whereby said vertical shaft may be actuated through the switch by a locomotive to shift



the switch to open position independently of rotation of said horizontal shaft, and whereby said vertical shaft may be manually actuated to shift the switch in either direction through rotation of said horizontal shaft.

1,677,389. CYLINDER-OIL COMPOSITION AND METHOD OF PREPARING SAME. RAYMOND T. HOWES, Wilmington, Calif., assignor to Pan American Petroleum Company, Los Angeles, Calif., a Corporation of California. Filed Jan. 5, 1927. Serial No. 159,244. 1 Claim. (Cl. 87—9.)

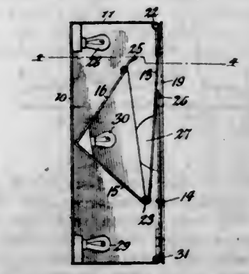


A process of reducing the surface tension of cylinder oil made from California crude petroleum stock, for use in hydrostatic sight-feed lubricators, which consists in mixing with the cylinder oil approxmately two and one half per centum of Turkey red oil.

1,677,390. MACHINE FOR MAKING COVERED BOXES. ALBERT F. JONES, Salem, Mass.; Mabel J. Downs executrix of Albert F. Jones, deceased. Filed Oct. 22, 1926. Serial No. 143,403. 14 Claims. (Cl. 93—40.)

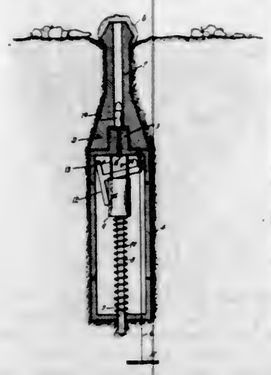
14. In a machine for making covered boxes comprising means for making a blank having mitred notches in one edge, a longitudinal crease extending across the apexes of the notches and transverse creases extending from the notches across the blank, means for partially bending said blank on two of the transverse creases, said means including a fixed table, and a reciprocating head having bending rolls adapted to bend portions of the blank across the table, and means for bending the blank on the other transverse creases, the last-mentioned means including oscillatory jaws adapted to remove the partially bent blank from the table, a form arranged to receive the blank from said jaws, and mechanism cooperating with the form in completing the bending of the blank.

1,677,391. FLOWERPOT-BASE FORMER. JOSEPH KELSO, Bellevue, Iowa, assignor to Joseph R. Frailey, Fort Madison, Iowa. Filed Sept. 17, 1927. Serial No. 220,213. 6 Claims. (Cl. 25—22.)



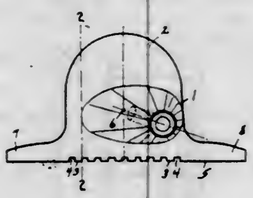
1. A base former for forming the base of a flower pot blank with a plurality of drain openings therethrough and adapted for association with the mold and core structure for forming the body thereof, a stationary base, a rotatable plate adapted to rotate upon said stationary base, and projecting construction associated with the top of said rotatable plate for forming openings in the base of a flower pot blank.

1,677,392. WATER-SOLUBLE ORGANIC COMPOUND OF ARSENIC AND PROCESS OF PRODUCING IT. MORRIS S. KHARASCH, College Park, Ind. Filed Jan. 22, 1927. Serial No. 162,925. 34 Claims. (Cl. 260—14.)



1. The step in the method of producing water-soluble compounds of organic arsenious compounds, which comprises treating, in a solvent, an arsenious compound in which at least one valence bond of the arsenic is attached to an inorganic radical of other than the sulphur family (sulphur, selenium, and tellurium) and at least one valence bond of the arsenic is directly attached to a carbon atom of an organic radical, with an organic compound containing both an acid radical and a sulfhydryl group and having the sulfhydryl group directly attached to a carbon atom.

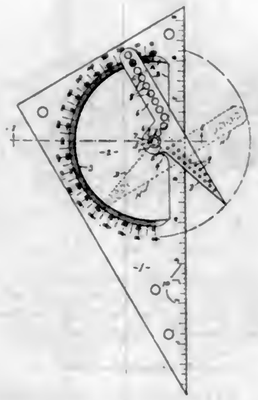
1,677,393. BATH CABINET. ROBERT J. KIDENEY, Buffalo, N. Y. Filed Oct. 2, 1926. Serial No. 139,186. 3 Claims. (Cl. 174—87.)



1. A bath cabinet comprising a compartment having a rear wall provided at its opposite vertical edges with forwardly extending side flanges and at its upper edge with a forwardly extending top flange, two side walls pivotally connected at their rear edges with the front edges of said flanges, a forwardly dished front wall connected at one vertical edge with the front edge of one of said side walls and detachably connected at its opposite vertical edge with the front edge of the other side wall, a fixed top secured to the upper end of said front wall, and a movable top pivotally connected at its rear edge with the front edge of said top flange and engaging its side and front edges with said side walls and said top of the front wall.

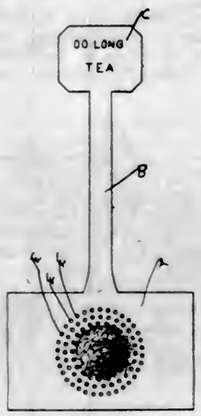
1,677,394. TRAP GUN. ALBIN MAKI, Toivola, Mich. Filed Aug. 23, 1924. Serial No. 733,758. 1 Claim. (Cl. 43—84.)

A trap-gun comprising a casing, a cone-shaped barrel member detachably mounted upon the casing, the larger end of the barrel member being of the same diameter as the adjacent end of the casing, the barrel member being provided at its upper end with an externally disposed enlargement adapted to form a bait holder, the bore of the barrel member adapted to receive a cartridge, a pin movably mounted in the casing, a spring supported weight held in the casing, a trigger pivoted in the casing and engageable with the weight to hold the same away from the pin and against the tension of the spring and a cord connected with the trigger and passing through the end of the casing and having an anchor adapted to be embedded in the earth.



1,677,395. GO[illegible] Warren, Ohio. [illegible] 3 Claims. (Cl. 273—77.)

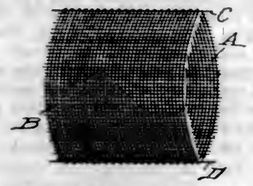
1. In a device of the class described, a body portion provided with the relatively enlarged rear extension, construction of said body portion such that the mass is equally divided on either side of the central point of a striking face, said point being a horizontal center of mass having a common point above described in combination with a plurality of ribs and depressions centrally located on striking face of said body portion, a detachable handle for said body portion substantially as described for the purpose set forth.



1,677,396. TRIANGLE. CLIFFORD G. MICKEL, Berryton, Kans. Filed June 7, 1926. Serial No. 114,177. 2 Claims. (Cl. 33—93.)

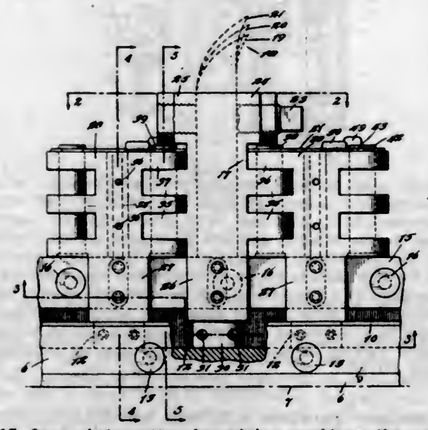
1. In a triangle, a drafting instrument having an arcuate opening, a beam having a laterally extending member provided with an aperture, the center of the aperture being in alignment with the straight edge of one end of the beam, there being a bevel on the peripheral edge of the arcuate opening, said bevel having degree graduations thereon to provide a protractor the aligned edge of the beam with the said aperture comprising radial means for finding the degree of an angle, there being cross lines on the laterally extending member of the beam,

said lines being transversely positioned to each other adjacent the pivot and functioning as a cross hair for centering the aperture on a given point when the straight side of the beam is rocked to alignment with its respective plane of the triangle.



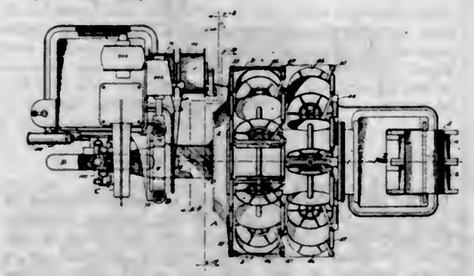
1,677,397. TEA BAG. HUGO MOCK, New York, N. Y. Filed May 10, 1928. Serial No. 276,537. 4 Claims. (Cl. 53—3.)

1. The process of making tea bags by cutting a blank from a single sheet of paper, folding and twisting one end thereof to enclose a quantity of tea and forming a handle and label-portion for said tea bag integral with the bag holding portion.



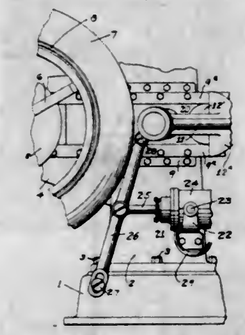
1,677,398. TUBULAR GAUZE FABRIC. JOHN V. MOORE, Pawtucket, R. I., assignor to Moore Fabric Company, Pawtucket, R. I., a Corporation of Rhode Island. Filed Nov. 2, 1925. Serial No. 66,161. 3 Claims. (Cl. 139—388.)

1. A tubular gauze fabric comprising two separate pieces of plain gauze fabric arranged in superposed relation, a thread connecting the filling loops in two adjacent selvages of said pieces of fabric to join two adjacent



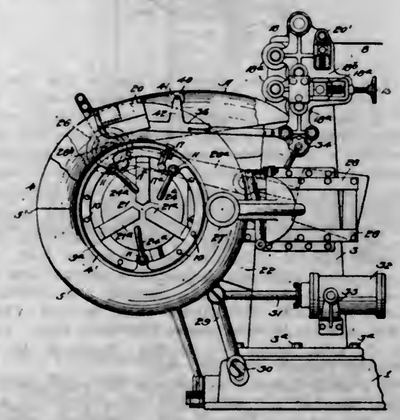
edges thereof, said thread being separately woven therein, and a draw thread joining the two opposite edges of said fabrics and conveniently removable therefrom.

1,677,399. CHAIN CUTTER AND METHOD OF CUTTING KERFS. EDMUND C. MORGAN, deceased, New York, N. Y., by Olive Eugenie Morgan, New York, N. Y., executrix. Filed Aug. 13, 1923. Serial No. 656,987. 24 Claims. (Cl. 262—33.)



17. In a chain cutter for mining machines, the combination with a plurality of pivotally connected links, of bit sockets carried by some of said links, and a plurality of cutters carried by the successive bit sockets, one cutter being shaped to cut a deep central groove narrow in width, and other cutters following and shaped to cut angular grooves into the side walls of the first groove to widen the kerf gradually.

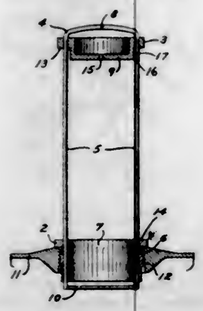
1,677,400. CORD-FABRIC AND TIRE MAKING MACHINE. HOWARD I. MORRIS, Cleveland, Ohio, assignor to The Cord Tire Machine Company, Cleveland, Ohio, a Corporation of Arizona. Filed Aug. 8, 1918, Serial No. 532,039. Renewed Jan. 26, 1922. 56 Claims. (Cl. 154—11.)



1. In a machine of the character disclosed, means for supplying tire material, a core upon which the tire is to be formed of such material, means for rotating the core, and means upon which the tire material supplied to said core exerts a tension, whereby the means for rotating said core is varied as to positiveness of its action.

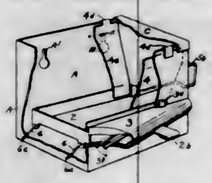
1,677,401. APPARATUS FOR MAKING TIRES OR TIRE CARCASSES. HOWARD I. MORRIS, Cleveland, Ohio, assignor to The Cord Tire Machine Company, Cleveland, Ohio, a Corporation of Arizona. Filed Sept. 6, 1924. Serial No. 736,349. 11 Claims. (Cl. 154—10.)

1. In apparatus of the class described, the combination with a rotatable former on which the material is wound, of a frame supported so as to be movable toward and from the former, a positioning device carried by the frame arranged to engage with the material upon the former, rolling down means supported directly in the frame and located on either side of the positioning device, automatically operating means arranged to move the rolling down means to positions out of contact with the material on the former when the positioning device comes into engagement with the material supported on the former, and means under the control of the operator to force the rolling down means into engagement with the material after the frame has been advanced to bring the positioning device into contact with the material.



1,677,402. APPARATUS FOR MAKING TIRES OR TIRE CARCASSES. HOWARD I. MORRIS, Cleveland, Ohio, assignor to Cord Tire Machine Company, Cleveland, Ohio, a Corporation of Arizona. Filed Dec. 20, 1924. Serial No. 757,136. 20 Claims. (Cl. 154—10.)

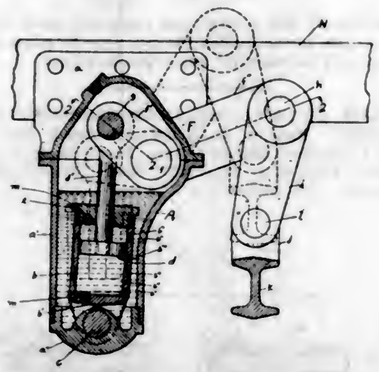
16. In apparatus of the class described, the combination of a frame, means on said frame for feeding and supply-



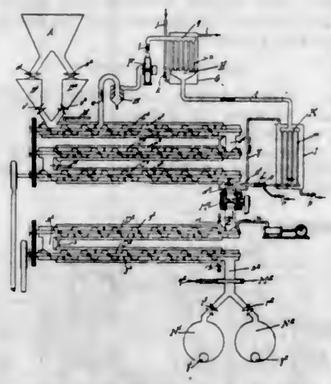
ing tire forming material, a chuck rotatively mounted on said frame, a core structure mounted on said chuck on which the material is convolutely wound, said core structure having bead rings disposed at opposite sides of the core body and forming therewith bead pockets, means for removably clamping said bead rings in fixed relationship to said core body, and a clamping device carried by each bead ring and arranged to engage the free end of the material at one side and secure it to the under side of the core body, said clamping devices being disposed in angular relationship to each other.

1,677,403. CLOSURE CAP. WILLARD L. MORRISON, Melrose, Mass. Filed Apr. 25, 1925. Serial No. 25,733. 12 Claims. (Cl. 220—24.)

1. In combination, an annular element having external screw threads and a central opening, a closure cap movable toward and away from said opening, and guide means comprising parallel rod portions carried by said cap and frictionally engaging said element beyond the periphery of said opening.



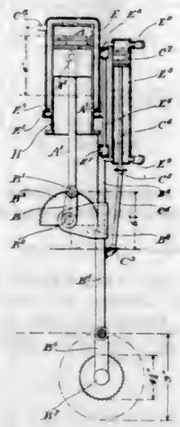
1,677,404. SERVER OF HOUSEHOLD ARTICLES. JOHN O. NASLIN, Seattle, Wash. Filed May 6, 1926. Serial No. 107,202. 5 Claims. (Cl. 221—146.)



1. In a server of household articles, a case and an outlet opening therein, a bottom member adapted for vibrating movements in said case and opening, means swingingly supporting said bottom in said case for such movements, a diaphragm whereby over said bottom a changeable opening is formed in line with said outlet opening, means for raising and lowering said diaphragm, diaphragms for shaping and limiting the room in said case, a service member in front of said opening and means for moving said bottom back and forth.

1,677,405. SHOCK ABSORBER FOR MOTOR VEHICLES. GORDON R. PENNINGTON, Cleveland, Ohio. Filed Jan. 5, 1922, Serial No. 527,228. Renewed Apr. 7, 1927. 13 Claims. (Cl. 188—88.)

1. In a shock absorber for vehicles, the combination of a casing forming a substantially liquid-tight chamber; a body of liquid in said chamber; a shaft extending from the outside to the inside of said casing through the wall thereof and rotatable in relation thereto; and double acting liquid forcing means in said casing comprising two liquid chambers and piston means movable therein and operatively connected to the said shaft, said liquid forcing means being provided with means affording and controlling liquid inlet to and outlet from the said chambers, the said chambers in the normal operation of the device having communication with the said body of liquid and the said means affording and controlling liquid inlet to and outlet from the said chambers adapting the said forcing means to resist the relative rotation of the said shaft in one direction by a force which is relatively small during movement from one extreme to the intermediate normal position of said shaft and which increases to a maximum at a predeterminable relative rate as the rotation proceeds from said normal position to the opposite extreme, and to resist the relative rotation of the said shaft in the opposite direction by a force which increases at a predeterminable relative rate from a relatively small value in that position in which the resisting force is a maximum for the first-named movement, said forces varying furthermore with the speed of rotation of said shaft.

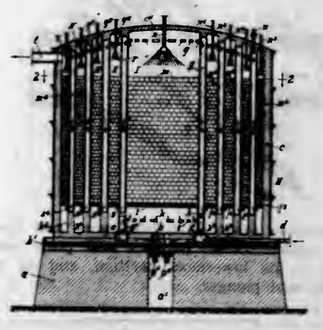


1,677,406. PROCESS FOR THE SACCHARIFICATION OF CELLULOSE BEARING MATERIAL. JOHN PERL, Los Angeles, Calif., assignor to M. M. Cory, San Diego, Calif. Filed July 3, 1925. Serial No. 41,246. 4 Claims. (Cl. 127—37.)

1. The herein described process of saccharification of the cellulose component of cellulose bearing material, with anhydrous hydrochloric acid gas consisting in subjecting disintegrated cellulose bearing material to a counter current of said acid gas mixed with diluent cooled inert gas, wherein the cooled gas of the highest acid content meets the cellulose bearing material in motion of the highest acid saturation and continues until it contacts with the fresh cellulose bearing material when said gas mixture is in a partly exhausted acidic condition.

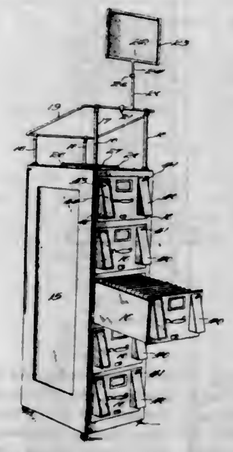
1,677,407. INTERNAL-COMBUSTION ENGINE. ALVAH LEIGH POWELL, Cleveland, Ohio, assignor, by mesne assignments, to The A. L. Powell Power Company Incorporated, a Corporation of Montana. Original application filed Dec. 8, 1920, Serial No. 429,167. Divided and this application filed Oct. 2, 1924. Serial No. 741,226. 1 Claim. (Cl. 123—173.)

In combination with an internal combustion engine cylinder, a cooling jacket partly surrounding the cylinder, an inlet port for the jacket, a pipe extending above and below the said port and communicating therewith, an auxiliary cylinder having its ends connected with the ends of the pipe, a check valve in each end of the pipe, inlet valves for the auxiliary cylinder, a double acting piston slidable within the auxiliary cylinder, and means whereby the same may be actuated, said means including a connecting rod, a piston rod, and a universal joint between the connecting rod and the piston rod.



1,677,408. FASTENER. GEORGE E. PRENTICE, Berlin, Conn. Filed May 7, 1925. Serial No. 28,569. 7 Claims. (Cl. 24—205.)

5. A slider for fasteners of the class described comprising spaced substantially parallel front and rear plates having means defining guide channels for fastener elements, said channels in transverse section, being broader at one end than at the other, the broader end of one channel section being opposed to the narrow end of the other channel section.

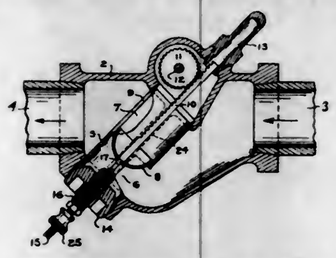


1,677,409. ABSORPTION PLANT FOR GASES AND VAPORS. FRITZ ROTTMANN and FRIEDRICH BROHMEYER, Bovinghausen, Germany. Filed July 6, 1925, Serial No. 41,723, and in Germany July 10, 1924. 5 Claims. (Cl. 261—98.)

5. A compact absorption plant including a substantially cylindrical casing having a roof and a floor section, a plurality of spaced substantially cylindrical partitions extending from the roof of said casing to the floor thereof defining a cylindrical central tower, a plurality of annular towers surrounding said cylindrical tower and a plurality of annular hollow mantles separating said towers, means for introducing a gaseous medium to one of said towers, means for introducing an absorbing fluid

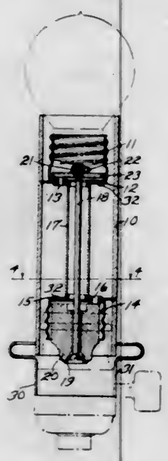
to each of said towers, said partitions being apertured alternately at the top and bottom thereof whereby a zig-zag course for said gaseous medium is provided, a grate in each of said towers for supporting a column of porous material and conduits for removing the medium-laden absorbing fluid.

1,677,410. CABINET. EDWARD L. SCHWAB, Chicago, Ill. Filed Oct. 20, 1922. Serial No. 595,733. 4 Claims. (Cl. 129—16.)



1. In a device of the class described, the combination of a base, a frame comprised of separable sections adapted to be detachably secured together, supports for said frame, said supports being connected to said frame to allow said supports to be moved from their frame-supporting position to a position substantially parallel with the base.

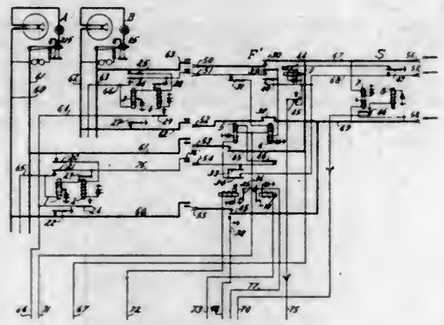
1,677,411. FLOW METER. EUGENE M. SCOVILLE, Milwaukee, Wis., assignor of one-half to Floyd L. Swanberg, Pittsburgh, Pa. Filed Sept. 13, 1924. Serial No. 737,635. 3 Claims. (Cl. 73—167.)



1. In combination, a main casing forming a through conduit and having a bore extending diagonally across the axis of said conduit, a reversible tubular member

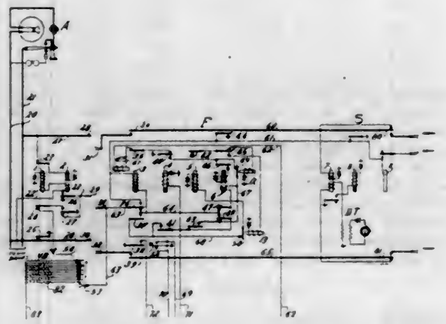
fitting said bore so as to prevent flow through said casing around said member and having staggered inlet and discharge ports communicating with said conduit at opposite sides of said member, a plunger slidable within said

tubular member above said inlet port and formed to intercept communication between said ports when said plunger is in its lowermost position, and an indicator operable by said plunger.



1,677,412. IMITATIVE CANDLE FITTING. RAYMOND D. SMITH, Pleasantville, N. Y., assignor, by mesne assignments, to Tremont Products Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 29, 1923. Serial No. 615,711. 14 Claims. (Cl. 173—344.)

12. A fastening device for effecting the rigid assembly of an interior body structure and a surrounding casing therefor embodying a deformable plate receivable inside said casing with its edge closely adjacent the interior wall of said casing, said plate having its central and peripheral portions disposed in a substantially common flat plane and having a portion intermediate said central and peripheral portions dented whereby the flattening of said dented portion forces said plate edge into engagement with said casing in a plane of movement coincident with the said plane in which said central and peripheral plate portions were originally disposed.

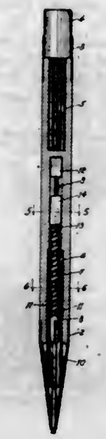


1,677,413. AUTOMATIC TELEPHONE SYSTEM. RUDOLPH F. STEHLIK, Chicago, Ill., assignor to Reserve Holding Company, Kansas City, Mo., a Corporation of Delaware. Filed May 23, 1927. Serial No. 193,432. 17 Claims. (Cl. 179—18.)

1. In a telephone system, a group of lines, a plurality of groups of finder switches having access thereto, said lines being divided into subgroups each of which is first choice to one of said groups of finders, and means responsive to the initiation of a call on any line for start-

ing and directively controlling a finder switch in the group to which the subgroup containing said line is first choice.

1,677,414. AUTOMATIC TELEPHONE SYSTEM. RUDOLPH F. STEHLIK, Chicago, Ill., assignor to Reserve Holding Company, Kansas City, Mo., a Corporation of Delaware. Filed May 25, 1927. Serial No. 193,960. 14 Claims. (Cl. 179—18.)



1. In an automatic switch mechanism, two driving magnets each controlling an interrupter spring, an interrupter relay common to said magnets, a circuit for said relay including said interrupter springs in series, wipers on said switch, contacts accessible to said wipers, means for energizing said relay over said circuit to operate the first of said magnets under the control of a certain one of said wipers and interrupter springs, means operated through said certain wiper to shunt said certain interrupter spring and to render said second magnet and interrupter spring operative to position said wipers upon certain ones of said contacts.

1,677,415. MECHANICAL PENCIL. JOHN STRAKA, Chicago, Ill., assignor to The Wahl Company, Chicago, Ill., a Corporation of Delaware. Filed Apr. 28, 1922, Serial No. 557,199. Renewed Nov. 10, 1924. 11 Claims. (Cl. 120—18.)

6. A pencil comprising a barrel, a tip rotatably and removably engaging said barrel, a lead support having a non-circular head, screw threaded engagement means operated by the relative rotation of said barrel and said tip for imparting longitudinal movement to said lead support, a lead ejector engaging said lead support and

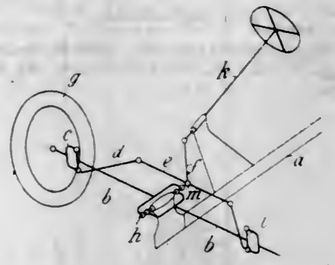
having a non-circular head, and means cooperating with said threaded engagement means and said non-circular heads and operated by relative rotation of said barrel

and said tip for advancing said lead ejector at the end of the longitudinal movement of the lead support in one direction.

1,677,416. ORE CONCENTRATION. BURNELL R. TUNISON, Elizabeth, N. J. Filed Feb. 9, 1924. Serial No. 691,810. 4 Claims. (Cl. 209—166.)

1. A process of effecting the concentration of minerals by froth flotation, which comprises subjecting to froth flotation a mineral pulp in the presence of the extracted oily sulfurous component of a sulfurous petroleum oil, said extracted component being soluble in caustic and insoluble in water.

1,677,417. RESINOUS COMPOSITION AND PROCESS OF MAKING SAME. VICTOR H. TURKINGTON, Caldwell, N. J., assignor to Bakelite Corporation, New York, N. Y., a Corporation of Delaware. Filed July 7, 1927. Serial No. 204,144. 14 Claims. (Cl. 134—26.)

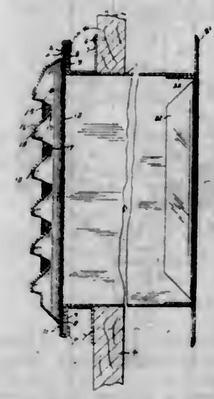


1. A resinous composition comprising a phenol-fatty oil-methylene reaction product in conjunction with a sufficient proportion of non-phenolic resin to function as a blending agent and to prevent the separation of insoluble reaction products.

1,677,418. LANDING GEAR. EBER HARLEY VAN VALKENBERG, McKeesport, Pa., assignor of one-half to Oscar Silverstein, Spokane, Wash. Filed Oct. 23, 1926. Serial No. 143,622. 3 Claims. (Cl. 244—2.)

1. In a landing gear for aeroplanes, the combination with a rigid structure, of a divided axle having a central pivot point, a toggle connection between said point and the rigid structure, a shock absorbing device in connection with said toggle connection, and lateral means for suspending the divided axles from the rigid structure.

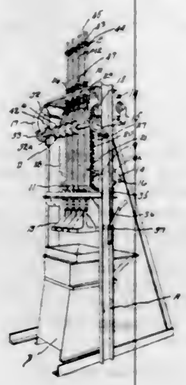
1,677,419. STEERING GEAR. MAX WAGNER, Mannheim, Germany, assignor to Benz & Cie. Rheinische Automobil- u. Motoren-Fabrik Aktiengesellschaft, Mannheim, Germany, a Corporation of Germany. Filed Apr. 28, 1923, Serial No. 635,341, and in Germany May 1, 1922. 5 Claims. (Cl. 280—87.)



1. In a vehicle, the combination with the frame, of a front axle comprising a pair of complemental axle sections, a pivotal connection between said axle sections and said frame, said pivotal connection being common to both of the axle sections and being disposed longitudinally of the vehicle in registry with the median plane thereof, yielding means tending to force said axle sections downwardly, a steerable wheel mounted upon each axle section to swing relatively thereto about a vertical axis, and steering mechanism operatively connected with said steerable wheels.

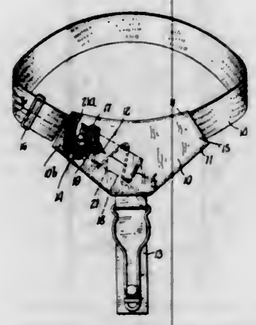
1,677,420. MANUFACTURE OF IRON. MARK G. WOODMAN, Chicago, Ill., assignor of one-third to David G. Fisher and one-third to Vivian F. Shantz, Chicago, Ill. Filed May 16, 1927. Serial No. 191,937. 2 Claims. (Cl. 75—49.)

2. An improvement in the art of making iron castings which consists in adding to the iron while in a molten state a quantity of salicylic acid in proportions ranging from one to three pounds per ton of iron.



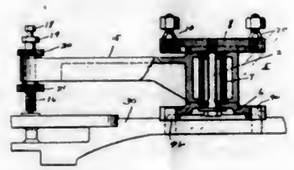
1,677,421. LOUVER VENTILATOR. RALPH C. YAGER and GEORGE L. YAGER, Oakland, Calif., assignors to Yager Sheet Metal Company, Oakland, Calif., a Copartnership. Filed Jan. 11, 1926. Serial No. 80,519. 1 Claim. (Cl. 98—29.)

A device of the type described comprising a casing adapted to be placed in an opening in a wall construction, said casing to have a first flange thereon, a trough-



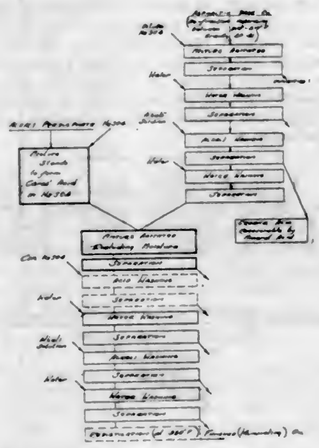
shaped member secured to said first flange and providing means for permitting said casing to be secured to the wall, said trough-shaped member being of sufficient width to receive the wiring and stucco carried by the wall, and a second flange carried by the other end of said casing and being adapted to lie flush against the inner surface of the wall.

1,677,422. TAMPING MACHINE. JOHN D. ABRAM, Detroit, Mich. Filed Mar. 1, 1926. Serial No. 91,647. 33 Claims. (Cl. 25—41.)



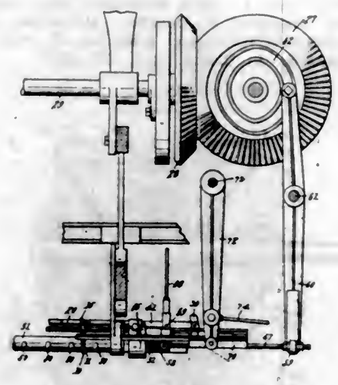
1. A tamping machine comprising a reciprocable tamping rod, means retaining the tamping rod in inoperative position, an actuating mechanism for imparting movement to the tamping rod and movable in a predetermined path so as to engage the tamping rod to impart sufficient momentum thereto to move the rod into the aforesaid inoperative position, and a safety device for also maintaining the tamping rod in inoperative position when the rod is not moved sufficiently to cause its engagement with the said retaining means.

1,677,423. GARTER. GABRIEL ABRAHAM, New York, N. Y. Filed Apr. 7, 1927. Serial No. 181,624. 2 Claims. (Cl. 241—6.)



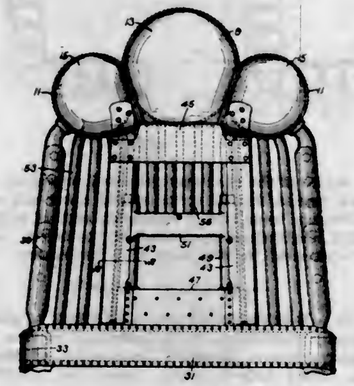
1. A garment supporter as set forth comprising a pad composed of a plurality of plies fastened together all round their periphery and spaced from each other within the central portion, the front portion of the pad being provided with an opening, a band fastened at one end of the pad, an attachment loop connected to the other end of the band, and metallic spring mechanism carried within the pad and comprising two principal parts,—a plate and a compression spring, one end of the spring having abutment relation with the end of the pad remote from where the band is attached, the plate being held by the spring spaced from the abutment point and having a head projected outward through said opening for co-operation with the attachment means carried by the band.

1,677,424. GAUGE. GERALD H. ALLEN, Detroit, Mich. Filed May 20, 1925. Serial No. 31,693. 7 Claims. (Cl. 33—180.)



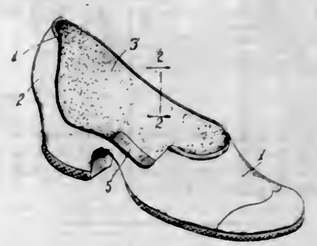
1. A gap gauge comprising a standard having upper and lower parallel faces adapted to contact with the faces to be gauged, an arm extending from said standard, said arm carrying a pin substantially perpendicular to the planes of said parallel faces, which pin exceeds in length the distance between said parallel faces by a predetermined amount.

1,677,425. PROCESS FOR THE REFINING OF PETROLEUM FRACTIONS. FRANK C. AXTELL, South Pasadena, Calif., assignor to Axtell Research Laboratories, Inc., Los Angeles, Calif., a Corporation of California. Filed Sept. 24, 1925. Serial No. 58,327. 1 Claim. (Cl. 196—42.)



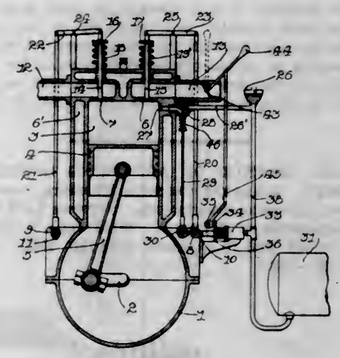
In refining petroleum oils, the treatment thereof with sulphuric acid solutions of persulphuric acid and Caro's acid, substantially as herein set forth and described.

1,677,426. ACTUATING MECHANISM IN ORIENTAL-RUG LOOMS. MARIUS A. BAUER, Worcester, Mass., assignor to M. J. Whittall Associates, a Voluntary Association of Massachusetts. Filed May 18, 1927. Serial No. 192,444. 8 Claims. (Cl. 139—4.)



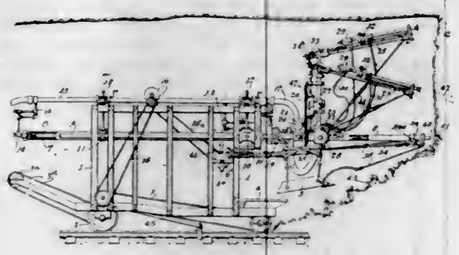
1. In a loom for weaving oriental rugs, plier-actuating mechanism comprising a longitudinally movable rod for opening and closing a series of yarn pliers, a bell crank, a link directly connecting said bell crank to the adjacent end of said rod, a second bell crank having a cam roll thereon, a cam effective to intermittently actuate said cam roll and bell crank, and a second link directly connecting said two bell cranks.

1,677,427. LOCOMOTIVE BOILER. WILLIAM L. BEAN, West Haven, Conn., assignor to McClellon Locomotive Boiler Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 21, 1923. Serial No. 633,632. 5 Claims. (Cl. 122—94.)



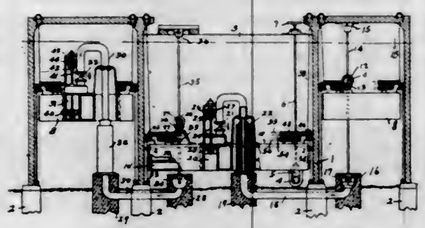
1. A locomotive boiler comprising a barrel and a firebox comprising a crown chamber communicating at its forward end with said barrel and supported in part thereby, a foundation chamber also communicating at its forward end with said barrel, water tubes extending between foundation and crown and providing the walls of the firebox and pillars exterior of the walls extending between foundation and crown at the rear of the latter and supporting the rear portion of the crown independently of said tubes.

1,677,428. FOOTWEAR LINING. CHARLES E. BRADLEY and CLAUDE D. MASON, Mishawaka, Ind., assignors to Mishawaka Rubber and Woolen Manufacturing Company, Mishawaka, Ind., a Corporation of Indiana. Filed May 19, 1927. Serial No. 192,591. 5 Claims. (Cl. 36—5.)



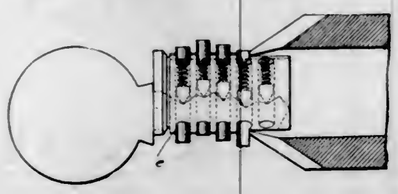
1. In an article of footwear, the combination of an upper composed entirely of elastic rubber composition with a lining of comminuted fibers applied to the inner surface thereof so that the extensibility of the lining is limited solely by the elasticity of the rubber composition.

1,677,429. INTERNAL-COMBUSTION ENGINE. DON COLE, Chicago, Ill., assignor of one-half to John A. Dienner, Chicago, Ill. Filed Sept. 9, 1918, Serial No. 253,141. Renewed June 16, 1924. 5 Claims. (Cl. 123—31.)



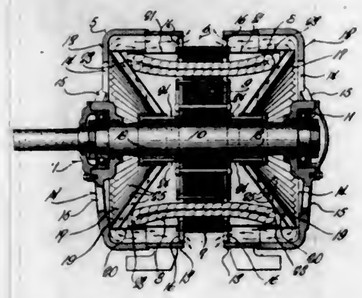
1. The method of promoting combustion in an internal combustion engine which consists in periodically supplying fuel from a source of supply to a reservoir of capacity suitable for one charge, creating a relatively high vacuum in the cylinder of the engine and then admitting the fuel substantially unmixed with air from said reservoir into said relatively high vacuum and admitting air at the end of the suction stroke only.

1,677,430. MULTIPLE-AIR-DRILL TUNNELING MACHINE. WILLIAM R. COLLINS, Georgetown, Colo. Filed Feb. 1, 1926. Serial No. 85,396. 9 Claims. (Cl. 262—5.)



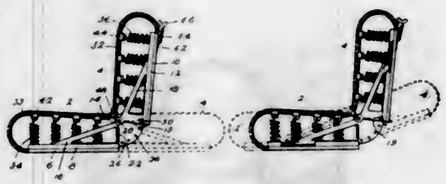
1. In a tunneling machine, the combination of a carriage propelled by its own motor, containing within its frame conveyor belts and mucking reels, and supporting three parallel pneumatic tubes.

1,677,431. HYDRAULIC MOTOR. IVAR CORNELIUSSEN, Galveston, Tex. Filed Nov. 10, 1924. Serial No. 748,865. 7 Claims. (Cl. 60—6.)



1. A device of the character described including an enclosed chamber, a float therein, an inlet water conduit entering said chamber and provided to deliver water into the chamber beneath the float, power delivery mechanism carried by the float, means mounted on the float and actuated by the flow of fluid through said conduit and operatively connected with said mechanism to drive the same.

1,677,432. METHOD OF ADJUSTING LOCKING CYLINDERS. JOHANNES CRONING, Hamburg, Germany, assignor, by mesne assignments, to Crown Lock Company, a Corporation of Delaware. Filed June 3, 1925, Serial No. 34,652, and in Germany Sept. 30, 1924. 2 Claims. (Cl. 29—148.)

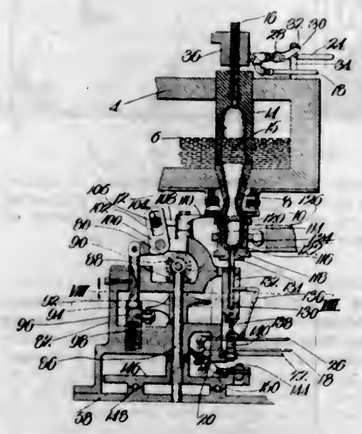


1. A method of adjusting the locking pins of cylinder locks to a particular key, comprising inserting the pins in a plug blank of larger diameter than the finished plug, inserting the key in the keyway of the plug to move the pins to their position in the unlocked lock and rapidly rotating the plug blank in contact with tools to turn down the plug blank and pin ends to the diameter of the finished plug.

1,677,433. ELECTRIC MOTOR AND DYNAMO MACHINE. CARL L. DAUN, Milwaukee, Wis., assignor to Silcock Airadiator Corporation, Milwaukee, Wis., a Corporation of Wisconsin. Filed Jan. 26, 1928. Serial No. 249,709. 21 Claims. (Cl. 172—36.)

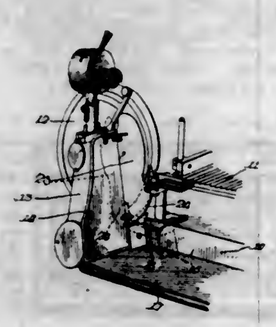
1. In an electric motor and dynamo machine including a rotor and a stator, means protecting the live parts of the machine from contact with extraneous matter in the atmosphere and including a pleated member rotatable with the rotor, the pleats of said member providing a relatively large air contact surface to insure the dissipation therethrough of heat generated by the machine.

1,677,434. ADJUSTABLE SEAT. JOHN M. DORTON, Bonner Springs, Kans. Filed June 29, 1925. Serial No. 40,375. 2 Claims. (Cl. 155—179.)



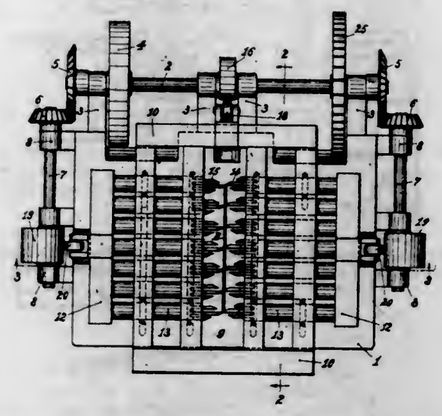
1. A device of the character described consisting of seat and back frames, flexible strips spaced apart and secured to said frames, loops loosely embracing each of said strips to permit longitudinal movement of the latter, and coil springs connected to said loops and the frames.

1,677,435. WATERPROOFING LEATHER. HENRY V. DUNHAM, Bainbridge, N. Y., assignor to Van Tassel Company, Boston, Mass., a Corporation of Massachusetts. Filed July 6, 1926. Serial No. 120,877. 19 Claims. (Cl. 134—9.)



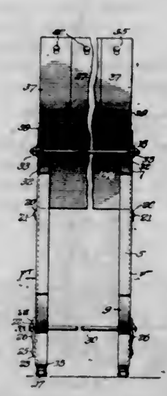
1. A method of waterproofing leather which comprises thoroughly incorporating between 5% and 50% of rubber with molten paraffin wax at about 150° C., until a uniform smooth mixture is obtained, which mixture, if cooled to room temperature is a firm waxy solid, and thereafter impregnating the leather with said mixture, in the absence of volatile solvents, while such mixture is in a hot molten state.

1,677,436. GLASS FEEDING AND DELIVERING MECHANISM AND PROCESS. ENOCH T. FERNGREN, Beaver, Pa., assignor, by mesne assignments, to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Sept. 29, 1913, Serial No. 276,175. Renewed Feb. 10, 1919. 67 Claims. (Cl. 49—55.)



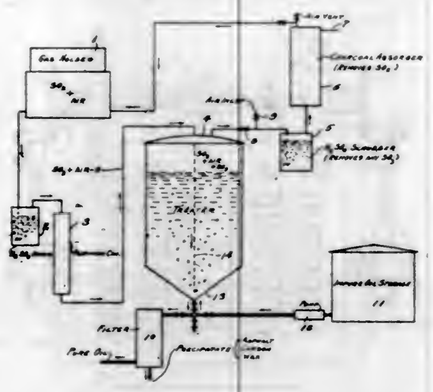
20. In apparatus for separating charges of molten glass, a container having a discharge outlet, a charge shaping transfer cup adapted to form a pneumatic working connection with the outlet, means for producing an abnormal pressure in said cup when in charge-receiving position at the outlet, means for supporting the cup and for oscillating the same laterally toward and away from the outlet, and mechanically operated shears arranged to meet between the cup and the outlet to sever the glass in timed relation with the movement of the cup.

1,677,437. SLICING MACHINE. JOSEPH FOLK, La Porte, Ind., assignor to U. S. Slicing Machine Company, La Porte, Ind., a Corporation of Indiana. Filed Jan. 29, 1926. Serial No. 84,591. 8 Claims. (Cl. 146—102.)



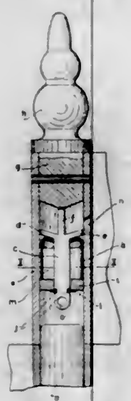
1. The combination with a slicing machine having a rotary slicing knife and a reciprocating table for moving material toward the cutting side of said knife, of a scrap pan disposed beneath said knife, said pan being removable at the side of said knife adjacent the cutting side thereof.

1,677,438. APPARATUS FOR PRODUCING MESHED SHEET METAL, FLAT BARS, AND HOOP IRON. HEINRICH FROHNHAUSER, Dortmund, Westphalia, Germany. Filed Nov. 10, 1924, Serial No. 748,877, and in Germany Feb. 26, 1924. 14 Claims. (Cl. 164—65.)



13. The method of producing expanded metal, which consists in first producing registering notches or recesses in opposite faces of a blank so as to leave between such recesses, webs of a thickness smaller than the original thickness of the blank, and then perforating said webs and expanding the blank at the perforations thus made.

1,677,439. PORTABLE SUPPORT. LE ROY M. FULTON, Chicago, Ill. Filed Sept. 13, 1923. Serial No. 662,493. 2 Claims. (Cl. 211—71.)

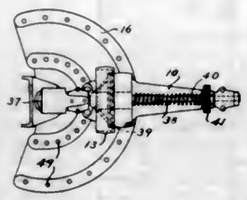


1. In a supporting device, a pair of standards including angle bars notched at a plurality of points and bent at said notches to form complemental top divergent supporting portions, intermediate substantially parallel relatively spaced standards, divergent legs and spaced foot portions in planes substantially parallel with said intermediate standards, and transverse bars connected to said standards for spacing same apart whereby a polygonal container, may be supported in said top divergent supporting portions.

1,677,440. PROCESS OF TREATING PETROLEUMS. WRIGHT W. GARY, Los Angeles, Calif., assignor of one-half to Charles O. Middleton, Los Angeles, Calif. Filed June 7, 1926. Serial No. 114,078. 7 Claims. (Cl. 196—42.)

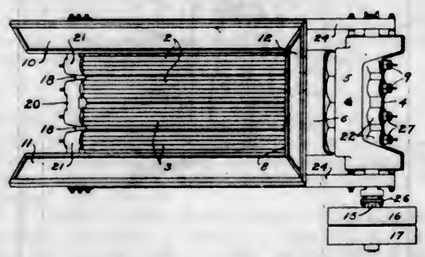
1. The process of treating petroleum, comprising, passing therethrough sulfuric anhydride maintained in a dry and gaseous state.

1,677,441. AUTOMATIC LUBRICATING DEVICE FOR HINGES OF DOORS AND WINDOWS. IGNATZ GONYK, Ljubljana, Yugoslavia. Filed Mar. 10, 1927, Serial No. 174,361, and in Germany Mar. 17, 1926. 4 Claims. (Cl. 16—161.)



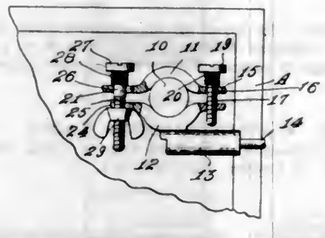
1. A lubricating device for hinges of doors or windows, comprising a container for the lubricating agent adapted to be inserted into the hollow part of the knuckle and consisting of a vessel with funnel shaped cover, a bottom piece of porous material adapted to close said vessel from the under side and to fit exactly into the hollow part of the knuckle so as to be able to support the container and through which the lubricant may very slowly penetrate, and a central pin adapted to engage the cover and the porous bottom of said container to hold said parts together.

1,677,442. INDOOR GOLF APPARATUS. JOHN C. HALL, Whiting, Ind. Filed Apr. 16, 1928. Serial No. 270,174. 11 Claims. (Cl. 273—35.)



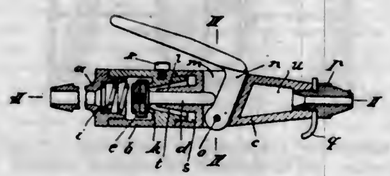
1. Indoor golf apparatus comprising a plurality of separate target curtains, and means for suspending said curtains in an arrangement to form a plurality of horizontal sets and a plurality of vertical sets.

1,677,443. CAN WASHER. OSWALD H. HANSEN, Port Washington, Wis., assignor to Hansen Canning Machinery Corporation, Port Washington, Wis. Filed Sept. 22, 1922. Serial No. 589,888. 7 Claims. (Cl. 141—7.)



1. In a can washer, a cleansing chamber, can cleansing means within said chamber, a can transporting rotor within said chamber having a series of can hooks for transporting cans in proximity to said cleansing means, and a can discharge rotor adjacent to said transporting rotor, said discharge rotor having can hooks cooperable with said transporting rotor hooks to form substantially cylindrical successive can receiving pockets.

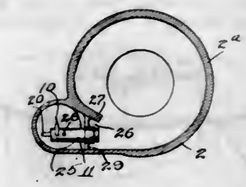
1,677,444. BEET TOPPER. OSWALD H. HANSEN, Port Washington, Wis., assignor to Hansen Canning Machinery Corporation, Cedarburg, Wis., a Corporation of Wisconsin. Filed Sept. 14, 1925. Serial No. 56,127. 8 Claims. (Cl. 146—85.)



1. In combination, a pair of cooperating rolls rotatable in opposite directions to remove appendages from objects traveling therealong and inclined to deliver the treated objects over the lower ends thereof, means providing supporting bearings located entirely within said rolls and shielded from contact with the objects treated, and means for effecting movement of said bearings along the roll axes.

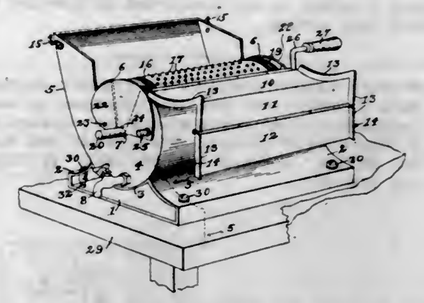
1,677,445. BATTERY-TERMINAL CLAMP. GEORGE HARDOS, Dunmore, Pa. Filed July 26, 1926. Serial No. 125,068. 1 Claim. (Cl. 173—259.)

A battery terminal clamp comprising companion sections having their intermediate portions oppositely curved to conform to the post of the battery which they are adapted to embrace, the adjacent end portions of the respective sections being extended in spaced parallel relation, two of said ends having aligned openings, one of which is threaded, a bolt passing through said openings and threaded into the latter mentioned opening, the other end of one section having a slot, the adjacent end of the other section having an opening, a bolt passed through said slot and opening and having a squared portion arranged in the slot, a thumb nut associated with the bolt, coiled springs surrounding both of said bolts and exerting pressure against one of said sections to permit yielding movement thereof with relation to the other section while the clamp is being attached to the post, and a sleeve-like member carried by one of said sections and arranged at a right angle thereto.



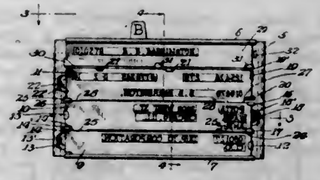
1,677,446. BLOWER. ERNST HARTMETZ, Oberesslingen-on-the-Neckar, Germany. Filed May 12, 1927, Serial No. 190,856, and in Germany May 17, 1926. 2 Claims. (Cl. 251—134.)

1. A blower comprising a valve casing, means for supplying fluid under pressure to said casing, a nozzle support on said valve casing having a fluid passage way, a bushng projecting from the rear end of said support, a control valve in said valve casing, a spindle secured to said valve and carried in said bushing, said control valve being arranged longitudinally with respect to said blower and so as to be held on its seat by the pressure of the fluid, the body of said blower containing a slot, and an operating lever in contact with said spindle and arranged pivotally within said slot.



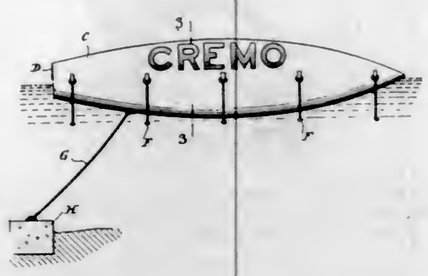
1,677,447. HYDROCARBON BURNER. FRANK HIGGINS and ARTHUR E. NORDSTROM, Princeton, Ill. Filed June 22, 1925. Serial No. 38,942. 2 Claims. (Cl. 158—28.)

1. In an oil burning system, a substantially cylindrical fire pot having an offset portion, with a deflector upon the inner side of said offset portion, the outer wall of said offset portion forming a parti straight continuation of the wall of the cylinder, and a fuel nozzle



so located in said offset portion as to direct the fuel tangentially of the wall of the fire pot to produce a swirl beyond said offset portion.

1,677,448. GRATER. AUGUSTA DU BUISSON HOPKINS, New Orleans, La. Filed Dec. 5, 1927. Serial No. 237,736. 2 Claims. (Cl. 146—91.)

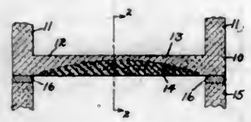


1. In an apparatus of the class described, the combination of a casing provided with ends, said ends provided with shaft receiving slots, a cylinder with shafts seated in said slots, end latches on the ends of said casing and normally straddling said shafts and entirely closing said receiving slots, and a cover for said casing normally closing over and bearing upon said end latches for holding them in a locked position.

1,677,449. PRINTING DEVICE. HENRY E. HUBBARD, Chicago, Ill., assignor, by mesne assignments, to Addressograph Company, Chicago, Ill., a Corporation of Delaware. Filed May 5, 1927. Serial No. 188,884. 3 Claims. (Cl. 101—370.)

1. A printing device of the character described comprising a frame, and three separate printing plate sections removably secured in place thereon one above the other in edge contact one with the other, said frame having retaining means stamped therefrom to engage and hold the plate sections, the middle section being insertable in and removable from the frame at one end thereof and the upper and lower sections being insertable in and removable from the frame at the other end thereof.

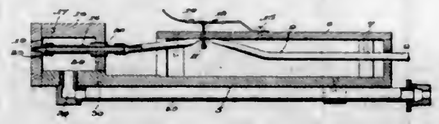
1,677,450. FLOAT. MAX WILHELM IDEN, Altona, Germany. Filed May 28, 1926. Serial No. 112,239, and in Germany August, 1925. 5 Claims. (Cl. 9—11.)



1. A float comprising an envelop provided with a double wall at its lower portion, to form a pocket, a filling of ballast in said pocket, and an inflatable bag within said envelop.

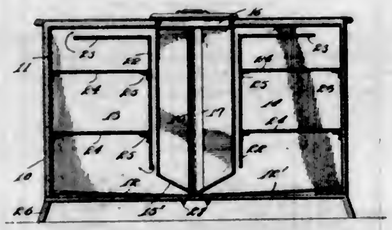
1,677,451. SEMIAUTOMATIC TELEPHONE SYSTEM. EMIL JACOBSEN, New York, N. Y., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Mar. 13, 1919. Serial No. 282,442. Renewed Aug. 26, 1927. 29 Claims. (Cl. 179—27.)

1. In a telephone system, a directively controlled automatic switch, lines accessible thereto, a variable impulse sender common to said lines, an automatic non-numerical switch individual to said switch, means for operating said first switch to extend a connection to one of said lines, other automatic switches, means controlled over the called line exclusive of the said impulse sender for operating said non-numerical switch to extend the connection to one of said other automatic switches, and means controlled by said impulse sender for operating the seized automatic switch to extend the connection in the direction of another called line.



1,677,452. SAGGER. JOSEPH A. JEFFERY, Detroit, Mich., assignor to Champion Porcelain Company, a Corporation of Michigan. Filed Jan. 2, 1926. Serial No. 79,018. 17 Claims. (Cl. 25—153.)

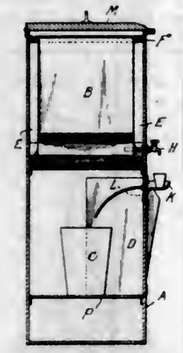
1. A silicon carbide body covered by a refractory alumina-silica compound which does not change materially in volume from the green state in which the compound is applied to the body when fired to a high



temperature, the layer of the alumina-silica compound being of sufficient thickness to be injured by any material change in volume relative to the silicon carbide.

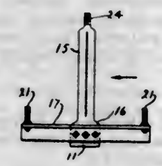
1,677,453. COATING MACHINE. CARADOC L. JONES, Chicago Heights, Ill. Filed Apr. 14, 1925. Serial No. 23,107. 3 Claims. (Cl. 251—5.)

1. In a spray apparatus a housing, a plurality of flexible conduits extending through said housing, a movable member in said housing and supporting said conduits therein, and manually releasable tension means on said housing and in operative connection with said movable supporting member to maintain said conduits closed by compression between said member and a portion of the housing.



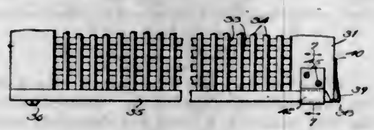
1,677,454. REFRIGERATOR. JOSIAH L. JONES, St. Petersburg, Fla. Filed Aug. 19, 1927. Serial No. 214,139. 1 Claim. (Cl. 62—58.)

A refrigerator comprising an outer case of standard construction, an uninsulated ice chamber disposed centrally of said casing in such a manner that said ice chamber forms a practical airtight partition dividing said casing into two oppositely disposed storage compartments, said ice chamber insertable inwardly of an opening in the top of said casing, fitted snugly and made fast thereto, a closure for said opening, a faucet attached to the lower part of said ice chamber and extending through the front walls of said casing, said ice chamber having along the vertical centers of its front and rear walls channels formed to extend outwardly of said ice chamber to provide a clearance for the passage of ice-hooks therein to facilitate the placing of ice within the container without injury to same.



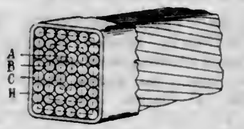
1,677,455. MELTED-ICE-WATER COOLER. JOSIAH LUCUS JONES, St. Petersburg, Fla. Filed Aug. 19, 1927. Serial No. 214,140. 1 Claim. (Cl. 62—142.)

A melted-ice-water cooler comprising an outer casing, a V-shaped transverse partition in said casing dividing it into an upper and lower compartment, a removable water cooler in the upper compartment and having a V-shaped bottom, said cooler being spaced from the walls of said casing and said partition, a faucet attached to the lower



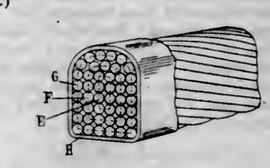
part of said tank and extending through the front walls of said casing, a drain beneath said faucet leading to a receptacle within said casing.

1,677,456. POLE TOP FIXTURE FOR TRANSMISSION LINES. WINFORD GLADSTONE MILNE, Hamilton, Ontario, Canada, assignor to The N. Slater Company, Limited, Hamilton, Canada. Filed May 23, 1927. Serial No. 193,645. 2 Claims. (Cl. 189—33.)



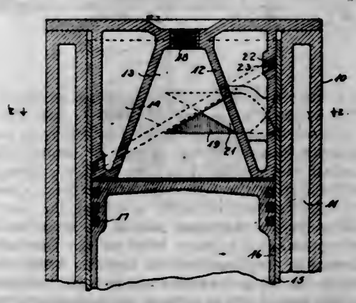
1. A pole top fixture comprising two superimposed arms overlapping each other and disposed angularly with respect to each other, one of the arms located at the end of the other arm, the latter arm being of angle section with the apex directed towards the former arm, said latter arm flattened at one end to form a flange in alignment with the edges of the legs of the angle, the former arm bearing against said flange, the extremity of the flattened flange bent towards the former arm to form a seat upon which the edge of said former arm rests, and means securing said arms together at their overlapping portions.

1,677,457. HEAT-EXCHANGE UNIT. ARTHUR B. MODINE, Racine, Wis. Filed May 28, 1926. Serial No. 112,376. 4 Claims. (Cl. 257—124.)



1. A radiator core comprising spaced tanks, tubular members extending between the tanks and communicating therewith, a reinforcing member having one of its ends rigidly secured to one of the tanks and having the other of its ends provided with a relatively flexible portion adapted to engage the other tank, and means secured to said other tank for retaining said flexible end in close proximity to said other tank.

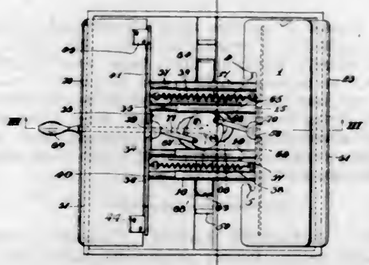
1,677,458. STRANDED CABLE. CHARLES ALGERNON PARSONS, JESSEL ROSEN, ARTHUR WALLACE GREY, and RONALD WALTER MIDGLEY, Newcastle-on-Tyne, England; said Rosen, Grey, and Midgley assignors to said Parsons. Filed May 1, 1922, Serial No. 557,677, and in Great Britain May 17, 1921. 3 Claims. (Cl. 173—264.)



1. A method of manufacturing a flat-surfaced stranded electric conductor of rectangular cross-section which consists in helically laying in situ a basic series of strands in a two-line rectangular formation as seen in cross-section at recurrent intervals lengthwise of the conductor and helically laying in situ on said basic series a succession of rectangularly-disposed series of strands, each series being one-strand thick and having eight more strands than the subjacent series.

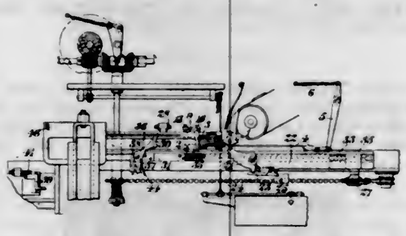
1,677,459. STRANDED CABLE. CHARLES ALGERNON PARSONS, JESSEL ROSEN, ARTHUR WALLACE GREY, and RONALD WALTER MIDGLEY, Newcastle-on-Tyne, England; said Rosen, said Grey, and said Midgley assignors to said Parsons. Filed Oct. 3, 1927, Serial No. 223,805, and in Great Britain May 17, 1921. 4 Claims. (Cl. 173—264.)

1. A method of manufacturing a stranded electric conductor of D-section, which consists in helically laying in situ a basic series of strands in a two-line rectangular formation as seen in cross-section at recurrent intervals lengthwise of the conductor and helically laying in situ on said basic series a succession of series of strands in D formation, each series being one-strand thick and having seven more strands than the subjacent series.



1,677,460. VALVE MECHANISM. ARTHUR W. POPE, Jr., Waukesha, Wis., assignor to Waukesha Motor Co., Waukesha, Wis., a Corporation of Wisconsin. Filed July 21, 1926. Serial No. 123,968. 3 Claims. (Cl. 123—190.)

1. In an engine, the combination of a cylinder having a combustion chamber, a rotary valve having a port adapted to communicate with said combustion chamber

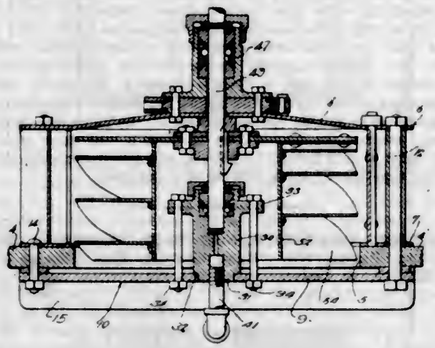


during the intake and exhaust strokes of the engine, and a unipianar sealing ring engaging said valve, the plane of said ring being at an angle with the cylinder axis and the ring being positioned to pass entire below the valve port and to seal the valve port from the combustion chamber during the compression and firing stroke.

1,677,461. LOOSE-LEAF-SECURING MECHANISM. RICHARD FITZ POWER, London, England, assignor to Morland & Impey Limited, Birmingham, England. Filed Jan. 29, 1926, Serial No. 84,599, and in Great Britain May 25, 1925. 17 Claims. (Cl. 129—1.)

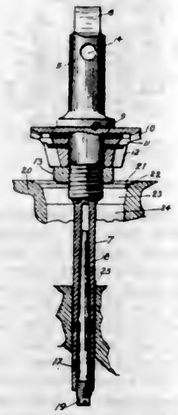
1. In a loose leaf securing system in which the leaves are secured by a binding mechanism having spring-controlled anchoring bars reciprocable against the spring action, the combination of a base frame, a pair of abutment plates supported in the said base frame, and mechanical means adapted to reciprocate the said abutment plates when operated with the binding mechanism placed on the said base frame, whereby to effect the movement of the anchoring bars and the release of leaves contained in the said binding mechanism.

1,677,462. MATRIX-SETTING AND TYPE-LINE-CASTING MACHINE. KARL RÖGER, Berlin, and HANS SCHOENLEBEN and FRITZ WALTHER, Plauen, Germany. Filed Dec. 27, 1927, Serial No. 242,862, and in Germany Apr. 18, 1925. 23 Claims. (Cl. 199—26.)



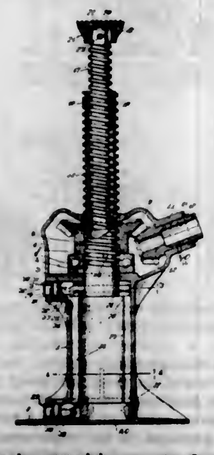
1. In a matrix-setting and line casting machine, mechanism for building up a line of matrices and for transferring it towards casting position, comprising in combination, an assembling-abutment, means for feeding the matrices against said abutment so that it moves toward casting position during the formation of said line, a rearward transferring abutment arranged to engage the rear end of a completed line of matrices, means for withdrawing the assembling-abutment from in front of the line when the line is complete and for returning it to its initial position, a forward movable transferring-abutment arranged to support the end of the line freed by said assembling-abutment which two transferring abutments are arranged to convey the line of matrices between them toward the casting position.

1,677,463. TOY WOODPECKER. JAMES W. SNEDEKER, Adrian, Mich., assignor to Page Steel & Wire Company, a Corporation of New Jersey. Filed July 20, 1926. Serial No. 123,606. 2 Claims. (Cl. 46—40.)



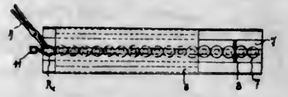
1. A toy comprising a rod, and a member simulating a bird, having a body with a head provided with a beak directed toward the rod, and a connector extending from the body in a position corresponding to the feet of the bird and mounted slidably upon said rod and adapted to support said body closely adjacent to the rod, and so that the beak oscillates toward and away from said rod, as said connector moves lengthwise along said rod, simulating the action of a bird pecking at a tree.

1,677,464. WATER WHEEL. STEPHEN H. TAYLOR, Ludlow, Ky. Filed July 3, 1923. Serial No. 649,348. 1 Claim. (Cl. 253—117.)



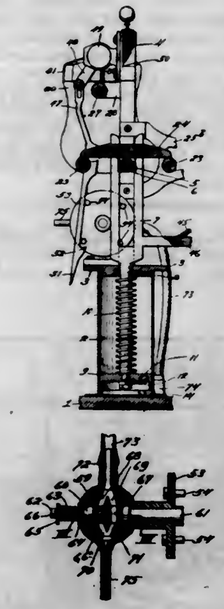
In a device of the class described, a base having an opening, an inverted channel bar extended across the opening and including a body and depending flanges, a frame including a top plate and a bottom ring resting on the base, a securing element connecting the top plate, the bottom ring, and the base, with the body of the channel bar, a securing element connecting the bottom ring and the base with the body of the channel bar, a bearing supported on the body of the channel bar, a securing element connecting the bearing with the body of the channel bar, an oil pipe connected to the lower end of the bearing, the juncture between the oil pipe and the bearing and the lower ends of all of the securing elements specified, being housed between the depending flanges of the channel bar, a shaft journaled in the bearing, and a water wheel carried by the shaft, the water wheel including a tubular part into which the bearing extends.

1,677,465. VALVE-SEAT REAMER. MAXIMILIAN W. THAETE, Denver, Colo., assignor of one-half to Millie J. Thaete, Denver, Colo. Filed Apr. 19, 1926. Serial No. 103,026. 2 Claims. (Cl. 90—12.5.)



1. In a reamer, a shaft, a valve seat cutter mounted thereon, a pilot cutter also mounted on the shaft and adapted to cut prior to the reaming by the valve seat cutter to direct the first-mentioned cutter and to keep same in alinement while the reamer is in operation, and means at the lower portion of the shaft below the cutters to hold the reamer vertical while reaming.

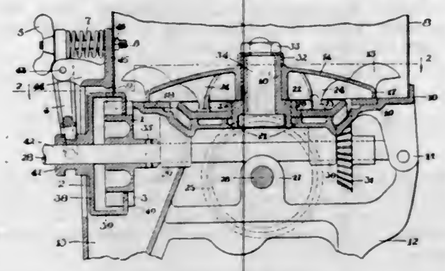
1,677,466. LIFTING JACK. WARREN H. WALKER, JOSEPH J. MIZER, and IRWIN E. DEARSLEY, Racine, Wis., assignors to Walker Manufacturing Company, Racine, Wis., a Corporation of Wisconsin. Filed Oct. 1, 1924. Serial No. 740,958. 21 Claims. (Cl. 254—102.)



1. A lifting jack comprising a standard, a rotatable interiorly threaded driving member mounted in the standard, an exteriorly threaded sleeve meshing within the driving member and having an interiorly threaded nut in its upper portion, a screw meshing within this nut, a projection extending laterally from the lower end of the sleeve, vertically extending guiding means in the standard preventing rotation of the projection during the vertical travel of the sleeve, the projection passing out of engagement with the guiding means when the sleeve reaches one limit of its vertical travel, and a pawl positioned adjacent this end of the guiding means cooperating with the projection to prevent rotation of the sleeve in one direction only.

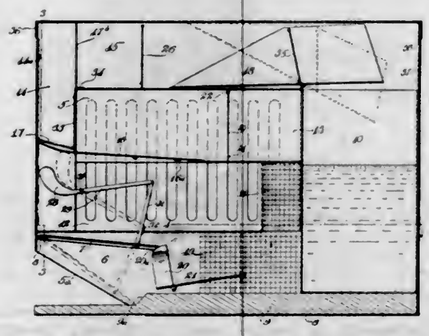
1,677,467. FURNACE FOR HEATING RIVETS BY MEANS OF OXYGEN AND ACETYLENE GASES. FERNAND BOURLEAUX, St.-Quentin, France. Filed Feb. 5, 1927, Serial No. 166,230, and in France Feb. 22, 1926. 7 Claims. (Cl. 263—9.)

1. In a furnace for heating rivets, a tunnel-furnace, means to introduce rivets into the same at one extremity thereof and an oxy-acetylene blow pipe at the other extremity of the tunnel to direct its flame through the tunnel.



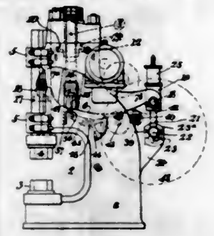
1,677,468. PERFUME-VENDING MACHINE. SAMUEL M. COFFMAN, Kansas City, Mo., assignor, by mesne assignments, to Old World Parfum Company, Kansas City, Mo., a Corporation of Missouri. Filed Nov. 9, 1925. Serial No. 67,943. 8 Claims. (Cl. 299—96.)

1. In a machine of the character described, a valve casing having an upright port, an inverted air-tight liquid-container clamped on the casing in communication with said port, the casing also having an air-supply port disposed angularly with respect to the liquid-supply port and a discharge port, a rotatable valve mounted in the casing and provided with a pair of independent diametric ports angularly-disposed relatively to each other for



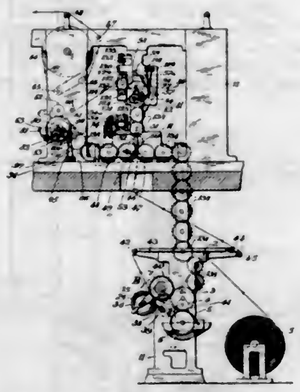
alternately establishing communication with the liquid-supply port and between the air-supply port and discharge port, means for rotating the valve to effect the adjustments mentioned, and means for supplying air under pressure to the air-supply port after each rotary adjustment of the valve to effect the discharge in atomized condition, of the liquid contained in the valve port, at such time, in communication with the discharge port.

1,677,469. COTTON PLANTER. SAMUEL K. DENNIS, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Sept. 13, 1926. Serial No. 134,997. 21 Claims. (Cl. 221—125.)



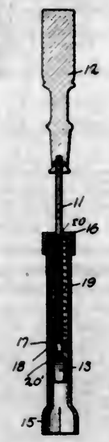
16. A seed feeding mechanism for cotton planters comprising, in combination, an upright cylindrical hopper having a discharge outlet at one side, an agitator rotatable within the hopper to maintain a supply of seeds at the outlet, a toothed picker wheel having seed engaging teeth the points of which are curved forwardly in the direction of rotation of the wheel, means for so mounting the picker wheel that the seed engaging teeth pass through the hopper outlet in proximity to the outer parts of the agitator, a cup-shaped feed regulator adapted to substantially enclose the picker wheel, inwardly extending scalloped portions on the feed regulator closely fitting the toothed portions of the picker wheel, and spring resisted operating means for sliding the feed regulator lengthwise of the teeth of the picker wheel so as to uncover or cover more or less of the seed engaging teeth.

1,677,470. ANIMAL TRAP. MAX E. DORSCH and FLORENCE G. DORSCH, Chicago, Ill. Filed Feb. 12, 1926, Serial No. 87,885. Renewed Dec. 14, 1927. 4 Claims. (Cl. 43—76.)



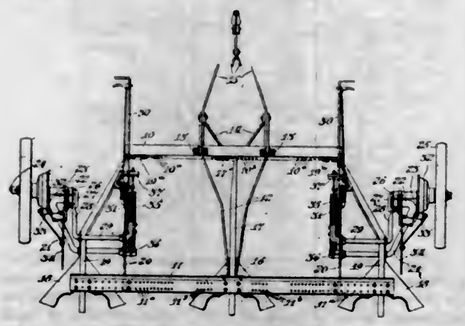
4. In an animal trap having an entrance chamber and a communicating passageway, a door for said entrance chamber, animal actuated means operable in said passageway to open said door, said passageway having a restricted outlet adjacent said animal actuated means and said outlet being so positioned with respect to said animal actuated means as to assure the operation of the latter by the animal in forcing himself through said passageway.

1,677,471. ELECTRICALLY-DRIVEN FORGING PRESS. AUGUST FRIEDERICI, Cologne-Mulheim, Germany, assignor to Max Friederici, Steubenville, Ohio. Filed May 13, 1926, Serial No. 107,807, and in Germany July 14, 1925. 2 Claims. (Cl. 78—32.)



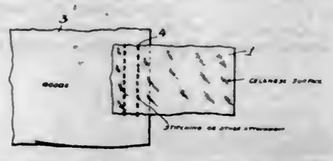
1. In a forging press having an anvil and a reciprocatory ram, a rocking lever for reciprocating said ram, a vertically adjustable fulcrum for said rocking lever, a crank shaft, overpressure relief means operatively connecting said crank shaft and said lever, and adjustable means for limiting the downward movement of the end of said lever opposite from said ram, said means including a cam shaft, a cam on said shaft adapted to engag and limit the downward movement of said lever, and means operable by the vertical movement of said fulcrum for rotating said cam shaft to vary the position of said cam and thereby vary the downward movement of said lever.

1,677,472. MULTICOLOR ROTARY PRINTING PRESS. FRIEDRICH FUCHS, Zofingen, Switzerland, assignor to the Firm Ringler & Co. Verlagsanstalt & Vereinigte Buch- & Steindruckereien, Zofingen, Switzerland. Filed Nov. 11, 1926, Serial No. 147,725, and in Switzerland Oct. 8, 1926. 9 Claims. (Cl. 101—152.)



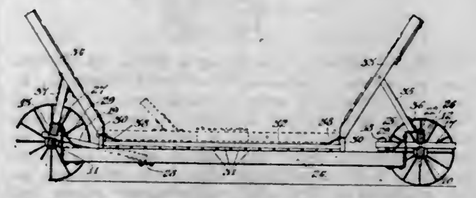
2. A mechanism for automatically regulating the register with multicolor rotary printing presses, comprising in combination a number of printing mechanisms for different colors each provided with an impression cylinder, two feelers provided in front of every printing mechanism except the first and adapted to cooperate with holes in the web, one of said feelers being swingably mounted about an axis arranged in the transverse direction of the web, and the other feeler being swingably mounted about an axis arranged in the longitudinal direction of the web, means adapted to vary the tension of the web, means adapted to cause an axial displacement of an impression cylinder and a displacement of said feelers in the transverse direction of the web, and relay means controlled by said feelers and controlling the operation of said means.

1,677,473. SOCKET WRENCH AND SCREW DRIVER. WILLIAM WALTER GAST, Baltimore, Md. Filed Jan. 12, 1927. Serial No. 160,712. 2 Claims. (Cl. 7—1.)



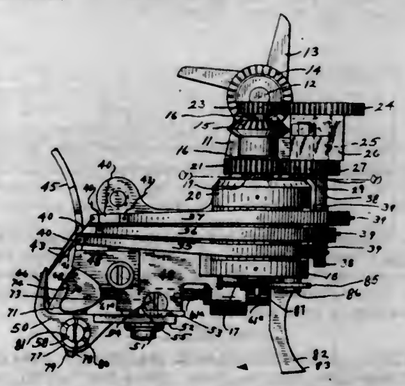
1. In a tool of the class described, a shank having a screw-engaging bit at one end and a handle at the other end, a tubular body enclosing the shank, a cap at one end of the body having an opening slidably accommodating the said shank a collar secured within the body intermediate the ends thereof and guiding the shank in its sliding movement, the said body having a polygonal nut-engaging socket at its other end, an abutment element upon the shank, and a spring upon the shank within the body bearing at one end against the collar and at its other end against said abutment element and yieldably holding the shank retracted within the said body.

1,677,474. TRACTOR LISTER. WILLIAM S. GRAHAM, Canton, Ill., assignor to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed Feb. 6, 1924. Serial No. 690,898. 10 Claims. (Cl. 97—234.)



1. A convertible lister comprising the combination of front and rear transversely extending frame bars with the rear bar extending beyond the front bar at each side, a centrally located plow carrying beam removably secured to the bars, and a plow carrying units mounted between the respective outer portions of said bars and adjustable to selective portions towards and from the middle thereof, each unit comprising a supporting wheel carried on a forwardly inclined crank axle adjustably journaled on the unit and located on the outer side of said beam and towards the forward end thereof.

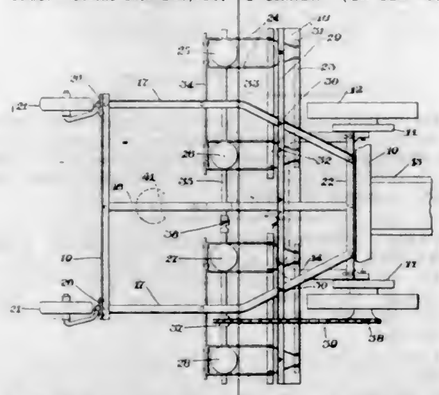
1,677,475. LABEL OR TAB FOR USE WITH GOODS WHICH HAVE TO BE DYED. OSWALD GUNNELL, Bottle, near Liverpool, England. Filed May 9, 1924, Serial No. 712,170, and in Great Britain May 10, 1923. 1 Claim. (Cl. 40—2.)



The improved method of identifying goods which have to be dyed which consists in attaching to the said goods an identifying tab or label composed of a fabric tape of Celanese and cotton yarn, so that the surface is mainly composed of Celanese.

1,677,476. CONVERTIBLE RUNNING GEAR FOR WAGONS. CLINTON A. HAGADONE, Western Springs, Ill., assignor to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed Jan. 10, 1924. Serial No. 685,347. 6 Claims. (Cl. 296—3.)

2. In an attachment for the running gear of a wagon having front and rear bolsters and front and rear bounds, a plurality of spaced body supporting sills connected to the bolsters, and a cross plate on said sills for supporting the rear bound thereon.



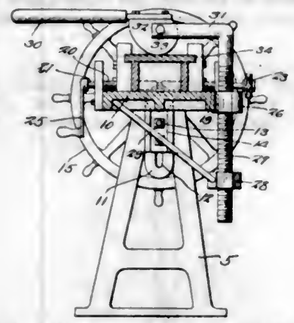
1,677,477. STRIPING ATTACHMENT FOR KNITTING MACHINES. LEON S. HERBERT, Cynwyd, Pa. Filed Mar. 2, 1923. Serial No. 622,303. 2 Claims. (Cl. 66—140.)

1. In a striping attachment for circular rib knitting machines having a circular series of needles, a pattern member and an actuating device between said member and said attachment, a frame, a yarn binder fixed to said frame, said binder consisting of a bracket fixed to said frame, a rod in said bracket, a pair of finger

blades engaging said rod and said bracket means for elastically holding said blades normally together, a tucking blade adapted to tuck yarn between said finger blades, there being registering edges on said finger blades adapted to grip said yarn after the same has been tucked by said tucking blade between said edges and a guard blade having a notched bend in its yarn contacting edge.

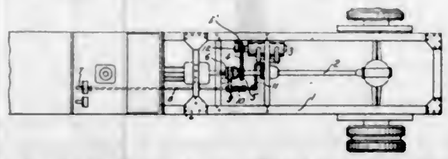
1,677,478. TRACTOR PLANTER. JAMES L. HIPPLE, Canton, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Oct. 11, 1926. Serial No. 140,713. 4 Claims. (Cl. 111—59.)

1. The combination comprising a vehicle having rear traction wheels, a horizontally extending arched bar between the wheels the arms of which are pivoted to the vehicle for free vertical movement, a transverse frame member secured to the bight of the arched bar and extending laterally beyond the traction wheels, rearwardly extending frame members secured to the transverse bar and supported at their rear ends on caster wheels, said caster wheels being on the tread line of the traction wheels and tillage implements secured in spaced relation throughout the length of the transverse frame member and symmetrically disposed at each side of the tread line of said wheels.



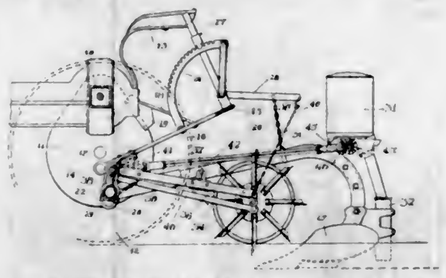
1,677,479. KAFIR-CORN-CUTTING ATTACHMENT. ANDREW L. JOHNSON, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Sept. 25, 1925. Serial No. 58,513. 10 Claims. (Cl. 56—298.)

1. The combination with a platform comprising a frame having a conveyer thereon, of a cutting mechanism rigidly carried at the front side of the platform and disposed in a vertical plane, and means for operating the cutting mechanism in such position.



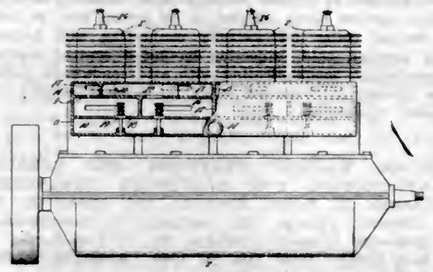
1,677,480. CONCRETE-BLOCK MACHINE. BENJAMIN F. KREHBIEL, Wichita, Kans. Filed July 7, 1927. Serial No. 204,106. 5 Claims. (Cl. 25—41.)

1. An apparatus for molding plastic material including supporting members having bearings, shafts resting in the bearings, arms on the shafts and having elongated openings, a base plate having depending arms formed with openings, bolts extending through the elongated openings and openings of the arms of the base plate to adjustably support the base plate, adjustable side members forming



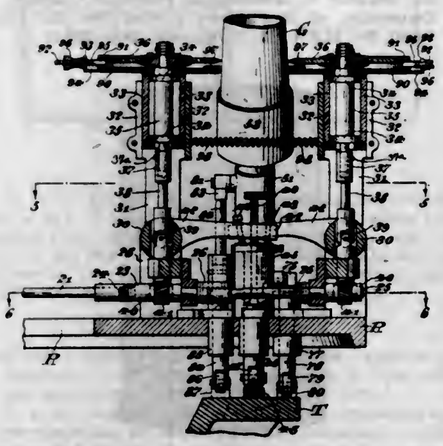
a part of the mold, a pallet for the mold and an adjustable pressing member contacting with the pallet to removably secure the pallet to the side members.

1,677,481. VEHICLE BRAKE. BERT A. LAREVA, Spokane, Wash. Filed Mar. 23, 1927. Serial No. 177,568. 2 Claims. (Cl. 188—99.)



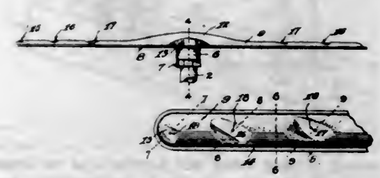
1. In a fluid braking system the combination with its crank shaft having a sprocket wheel, of a vehicle propeller shaft having a friction clutch, a sprocket wheel and a chain connecting said wheels, a pedal actuated control lever and a valve for the fluid braking system, operating means for the clutch and means for normally holding the clutch open, and means connecting the clutch operating means with the control lever.

1,677,482. TRACTOR ATTACHMENT. ALEXUS C. LINDGREN, Chicago, and ARTHUR D. GALLAGHER, Canton, Ill., assignors to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed Sept. 17, 1926. Serial No. 136,072. 5 Claims. (Cl. 111—63.)



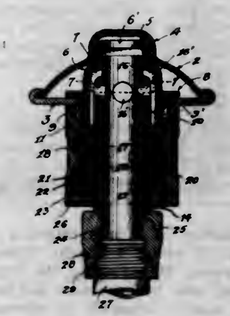
1. The combination with a tractor, of an implement attachment comprising a transverse draft bar, means for pivotally supporting said draft bar on the tractor, an implement beam secured to each outer portion of said draft bar, a driven implement carried thereby, a trailing frame pivoted on the central portion of said draft bar, a ground engaging drive wheel journaled in said frame, driving connections between said wheel and implement, means on the tractor for lifting and lowering each implement beam individually, and means for lifting and lowering the trailing frame upon actuation of either beam lift.

1,677,483. ENGINE. DANIEL MAGUSIAK, Detroit, Mich. Filed May 31, 1927. Serial No. 195,558. 2 Claims. (Cl. 123—59.)



2. A two cycle engine of the class described comprising a pair of cylinders, each provided with an enlarged inner portion forming a compression chamber, a piston in each cylinder having an enlarged lower end operating in the compression chamber, a casing arranged at one side of the cylinders, horizontal partitions in the chamber dividing the same into three compartments, means for connecting the lower compartment to a carbureter, vertical partitions in the central compartment dividing the same into lower intake chambers, the lower horizontal partition having ports therein connecting the chambers with the manifold, spring pressed valves normally closing said ports, each cylinder having a port therein for connecting each intake chamber with its compression chamber, vertically arranged Z-shaped partitions in the top compartment dividing the same into upper intake chambers and the upper horizontal partition having ports therein, each of which connects the upper chamber of one cylinder with the lower chamber of the next cylinder, each cylinder having an inlet port leading to the upper intake chamber and an exhaust port, the inlet and exhaust ports being uncovered when the piston reaches the end of its downward stroke, a crank shaft and means for connecting the pistons thereto.

1,677,484. GRINDING APPARATUS. JOHN A. MILLIKEN, Ambler, Pa., assignor to John E. Marsden, Philadelphia, Pa. Filed Apr. 17, 1923. Serial No. 632,749. 58 Claims. (Cl. 51—107.)

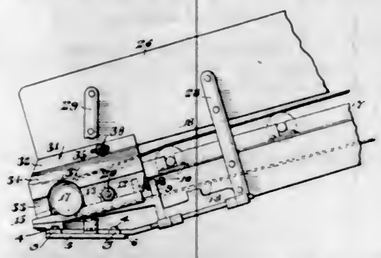


1. A grinding apparatus of the character described comprising relatively spaced rotatable grinders, a rotatable work holder interposed between said grinders, a power shaft for actuating said grinders, and means whereby the grinders may be adjusted with respect to the power shaft and axially of said work shaft.

1,677,485. SPRINKLER. LEWEN R. NELSON, Peoria, Ill. Filed June 9, 1924. Serial No. 718,721. 14 Claims. (Cl. 299—69.)

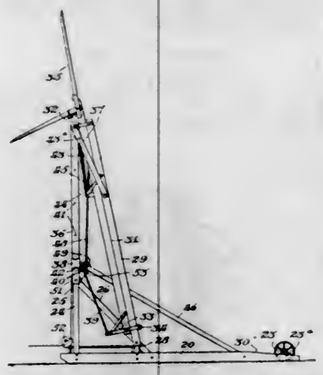
14. A sprinkler comprising a supporting pipe and a head rotatably mounted on said pipe, said head including a tube extending laterally of said pipe and having a plurality of discharge openings along the length thereof, the axes of the bores of successive openings from the center of rotation outward intersecting the plane of rotation of the tube at progressively decreasing angles, said axes lying in different planes normal to the plane of rotation, the outlets of said openings being in substantial alignment.

1,667,486. LAWN SPRINKLER. LEWEN R. NELSON, Peoria, Ill. Filed Dec. 16, 1925. Serial No. 75,729. 11 Claims. (Cl. 299—69.)



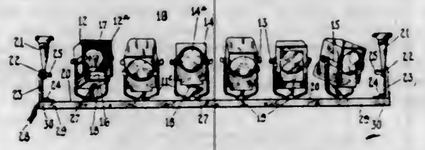
1. A sprinkler adapted for rotation including in its construction a hollow relatively long and narrow head made from a stamping and comprising an upper longitudinally domed wall and a lower separate wall the edges of which walls are lapped one upon the other, a tubular member enclosed between the walls of the head terminating at one end within the upper domed wall and opening into the head, said member having a flange to engage upon the inner surface of the lower wall and at its other end extending through said lower wall, and a part outside the head engaging with the member and clamping the lower wall between itself and the flange of said member.

1,677,487. CONVEYER. JOSEPH F. NOECKER, Bloomfield, Nebr. Filed Nov. 8, 1926. Serial No. 147,061. 5 Claims. (Cl. 198—230.)



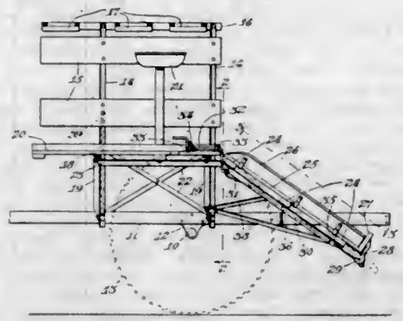
1. A means for shielding the lower end of an endless conveyer belt from mud and dirt in a conveyer of the type including a pair of side plates and lower roller bearing plates arranged below the lower ends of the side plates, comprising a pair of oppositely disposed

guards, each of said guards consisting of a lower end portion for connecting to a bearing plate, an upper end portion for connection to a side plate and inset



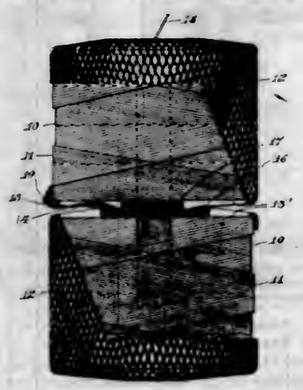
with respect to said lower end portion and an inwardly extending and inwardly inclined intermediate portion integral with said end portion.

1,677,488. STACKER. CHARLES PEARSON, Chicago, Ill., assignor to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed May 16, 1923. Serial No. 639,243. 9 Claims. (Cl. 214—141.)



1. The combination of a base frame, a lifting frame pivoted thereon to swing vertically through a predetermined arc, means for swinging the lifting frame, a spring carried on said lifting frame and bodily movable therewith, and means actuated by movement of said frame for putting the spring under tension at both ends of the arc of movement of the frame.

1,677,489. MOUNTING FOR LANTERNS. WILLIAM E. PRICE, White Plains, N. Y. Filed Sept. 19, 1924. Serial No. 738,644. 1 Claim. (Cl. 240—3.)

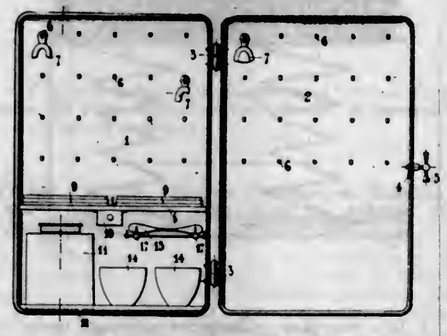


In a lighting unit, a frame member of U-shaped section having a cover portion fitted over the upturned edges thereof to form a conduit, a series of electrically lighted lanterns each supported between the forked arms of a bracket, a swivel mounting for connecting each bracket to the frame member, and feeder conductors carried in said conduit to supply power to the lanterns, said mounting comprising an anchoring projection having its free end portion reduced in cross-section to form a shoulder, and a supporting frame member having an opening therein to receive said reduced end portion to extend through said member, said reduced portion being adapted to be peened over to form a flanged collar for swivelly connecting said bracket and member, said projection having a central opening therethrough communicating with said conduit to permit the passage of conductor wires for connection with the feeder conduitors.

1,677,490. BAGGING PLATFORM AND CARRIER ATTACHMENT FOR HARVESTER THRASHERS. CLEMMA R. RANEY, Riverside, and ARNOLD E. W. JOHNSON, Chicago, Ill., assignors to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed Jan. 21, 1926. Serial No. 82,693. 2 Claims. (Cl. 214—65.)

1. The combination with a harvester thrasher having a transverse axle and a frame, of a bagging platform and a bag carrier attachment therefor, said attachment comprising a horizontally disposed operator's platform carried on the frame substantially entirely forwardly of the axle and an inclined chute disposed substantially rearwardly of the axle, a normally locked tail board for the chute, and means for releasing the tail board to dump the load from the chute.

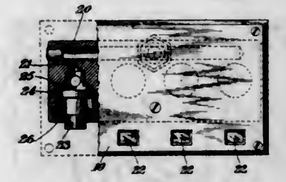
1,677,491. TWINE BALL. GEORGE L. RICE, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Oct. 12, 1925. Serial No. 61,874. 1 Claim. (Cl. 242—159.)



As an article of manufacture, a ball of twine having a cylindrical body and flat ends and having a cylindrical axial opening therethrough, and having a cover winding which at one end of the ball is spaced from the edge of the opening to leave an uncovered area surrounding said opening, the cover winding at the other, end of the ball extending to the edge of the opening.

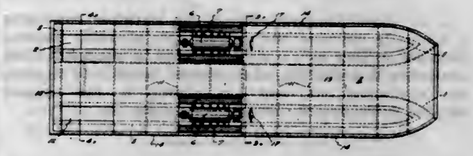
1,677,492. APPARATUS FOR HEATING SHEET MATERIAL IN PREPARATION FOR FOLDING. GEORGE RITTER, Woodbridge, N. J., assignor to The Barber Asphalt Company, Philadelphia, Pa., a Corporation of West Virginia. Filed Dec. 26, 1925. Serial No. 77,810. 3 Claims. (Cl. 263—2.)

1. In apparatus for heating bituminous roofing material in preparation for folding, the combination of a table having one side recessed and over which the material is continuously passed, and heating means including opposed jet burners accommodated in the table recess and between which the material is passed edgewise for heating over a limited lateral area in the line of travel.



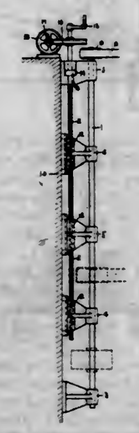
1,677,493. CONTAINER FOR DENTAL IMPRESSION OUTFITS. GEORGES ROBINET, Paris, France. Filed Nov. 22, 1924, Serial No. 751,596, and in France Nov. 28, 1923. 2 Claims. (Cl. 312—175.)

1. In a container for dental impression outfits embodying a pair of hinged shells, a spatula rack, means projecting from the wall of one shell, means connecting the rack to the projecting means whereby the rack is movable outwardly and inwardly of the shell, and inclined slots in the rack adapted for the reception of spatulas.



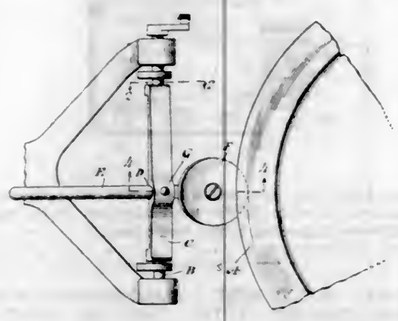
1,677,494. MOTOR-INDICATING SYSTEM. EDWARD A. ROCKWELL, New York, N. Y. Filed Mar. 3, 1924. Serial No. 696,493. 11 Claims. (Cl. 116—118).

7. A level indicating device for internal combustion engines comprising an indicating means comprising a vacuum-operated plunger, a connection therefrom to a source of vacuum, a level registering device comprising a float positioned according to a liquid level in the engine equipment, a vacuum connection between the level registering device and the indicating means communicating with said first mentioned connection between the source of vacuum and the plunger and a vent having an outlet above the



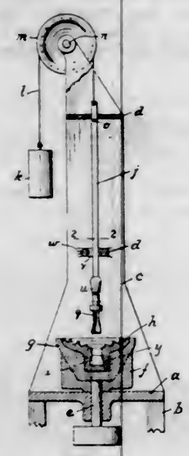
highest liquid level adapted to be thrown into and out of communication with the vacuum connection by the registering device according to the liquid level.

1,677,495. MOTOR BOAT. HENRY SCHMITT, Detroit, Mich. Filed Mar. 14, 1927. Serial No. 175,155. 6 Claims. (Cl. 114—66.5.)



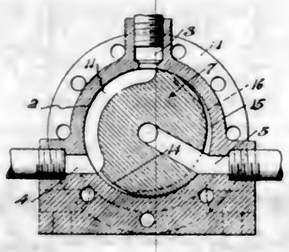
1. A boat including a plurality of hulls and a rearwardly and downwardly inclined deck for said hulls rigidly connecting the same and having an under smooth surface forming an air-plane between said hulls when the boat is proceeding forwardly.

1,677,496. CRITICAL-SPEED CONTROL. CHARLES ROBERT SESSIONS, San Francisco, Calif., assignor of one-half to John A. Dent, Lawrence, Kans. Filed May 29, 1922. Serial No. 564,665. 7 Claims. (Cl. 308—31.)



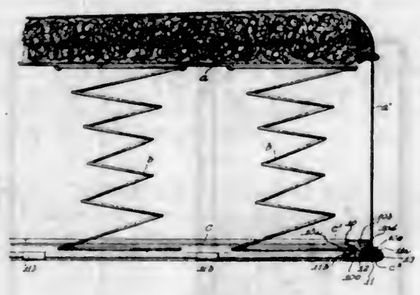
2. An apparatus to control the frequency of vibration of a driven shaft comprised of a bearing arranged adjacent an end of the shaft in proximate contact therewith; and means to move the bearing axially relative to said shaft as the critical speed of the shaft varies.

1,677,497. ABRADING DEVICE. PETER SIVERTSEN, New York, N. Y. Filed Nov. 24, 1925. Serial No. 71,062. 2 Claims. (Cl. 51—248.)



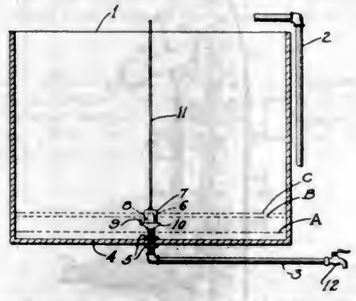
1. An abrading device for slicing machines combining a manually operable bar, a rotatable abrading element mounted on said bar, a stationary bar, a support having oppositely disposed dependent flanges adapted to straddle the stationary bar, and an opening in the support adapted to receive the manually operable bar.

1,677,498. APPARATUS FOR UNDERCUTTING PIN-HOLES IN THE CENTER SHELLS OF INSULATORS. WILLIAM HENRY SMITH, Norristown, Pa., assignor, by mesne assignments, to Electric Service Supplies Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 11, 1927. Serial No. 160,508. 10 Claims. (Cl. 25—3.)



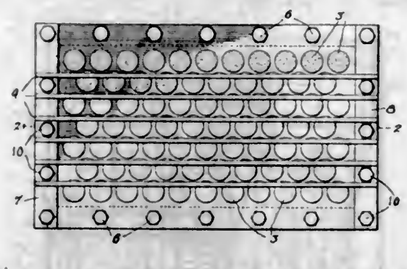
1. In apparatus for undercutting the pin holes of center shells for insulators, in combination, a support for a center shell and a cutting tool supported for vertical and transverse movement relative to said support, and means associated with said tool for preventing the material removed from interferring with the cutting edge of said tool.

1,677,499. ROTARY VALVE. WILLIAM J. SMITH, Philadelphia, Pa. Filed Nov. 19, 1927. Serial No. 234,839. 5 Claims. (Cl. 251—104.)



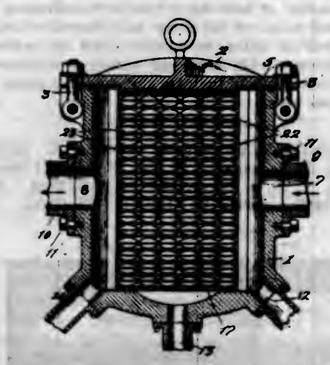
1. A valve comprising a casing provided with an inlet port and with discharge ports, and a rotary valve provided with an inlet passage and with a return conduit, and with tapering grooves communicating respectively with the inlet passage and with the return conduit.

1,677,500. RIM-FRAME CONSTRUCTION. DOUGLAS S. STILES, Detroit, Mich., assignor to Premier Cushion Spring Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 2, 1923. Serial No. 655,191. 2 Claims. (Cl. 155—180.)



1. In a rim frame assembly for upholstery spring constructions, an element of sheet metal having a shaped cross-section in which an intermediate portion is of channel formation with the channel located between a pair of parallel walls forming the upper and lower faces of the element, the margins of such walls being bent inwardly toward a medial plane parallel to such walls to secure a filling strip between such margins and the bottom of the channel, the upper and lower margins extending on different planes relative to a vertical plane through the filling strip to form a face extending on different planes, the lower margin projecting outward beyond the upper margin, a sheet metal element having a cross section to produce a portion underlying and in contact with the bottom wall of the first element and a portion adapted to overlie the lower margin of the first element in spaced relation to produce with such margin a curtain-margin receiving cavity, the spacing being determined by the dimensions and form of the curtain margin, and means for securing the elements together to maintain the cavity dimensions.

1,677,501. LIQUID DRAW OFF. GEORGE B. STONE, Los Angeles, and FRED D. MICHAELS, Fresno, Calif. Filed May 17, 1927. Serial No. 191,985. 3 Claims. (Cl. 210—51.)

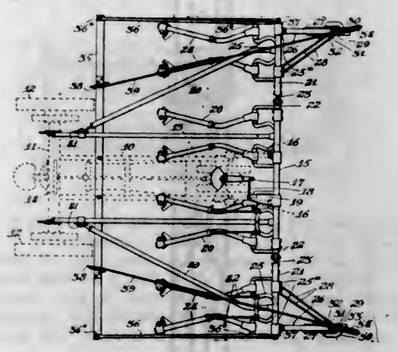


1. A draw off for liquid storage tanks, constructed as a unit and comprising a nipple, an open bottomed bell covering said nipple, and a guard surrounding the lower end of the bell.

1,677,502. GAS DIFFUSER. ERNEST J. SWEETLAND, Montclair, N. J. Filed Dec. 19, 1919. Serial No. 346,148. 6 Claims. (Cl. 261—121.)

1. A gas diffusing unit comprising a porous block having the pores thereof treated with, but unobstructed by a preserving substance.

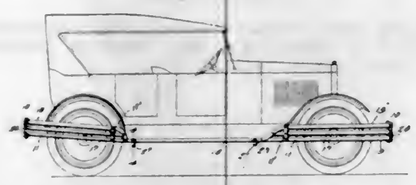
1,677,503. FILTER. ERNEST J. SWEETLAND, Montclair, N. J. Filed Jan. 22, 1920. Serial No. 353,219. 12 Claims. (Cl. 210—178.)



1. A filter comprising a one-piece casing provided with oppositely disposed channels, and a folded filter member within said casing having its lateral edges extending within said channels and folded therein to seal the edges of said filter member against the flow of solids therethrough without sewing or cutting said member.

1,677,504. SOFT COLLAR. GEORGE T. SWEETSER, Bronxville, N. Y. Filed Aug. 1, 1927. Serial No. 209,790. 3 Claims. (Cl. 2—141.)

1. A turn down collar comprising a neckband and an attached outer fold, one of said members having relatively narrow tabs at its opposite ends, each tab having a button hole, and means on the other member cooperating with each tab for connecting the said members, said tabs constituting the sole connecting means for attaching the ends of the collar to a collar button.



1,677,505. TRACTOR CULTIVATOR ATTACHMENT. CLARENCE YOUNG THOMSON, Sr., Chapman Ranch, Tex., assignor to International Harvester Company, a Corporation of New Jersey. Filed Jan. 6, 1927. Serial No. 159,268. 7 Claims. (Cl. 97—47.)

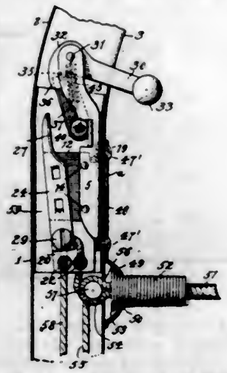
1. The combination with a tractor cultivator having a rigid frame member extending laterally therefrom to a point beyond the tractor wheel tread, of an extension for said member comprising a bar hinged to the end of said member for vertical movement, a caster wheel supporting said bar, and cultivating tools having beams connected to the bar.

5. An auxiliary gang attachment for tractor cultivators having widely spaced rear traction wheels, a rigid frame member extending across the front of the tractor and spanning the space between said wheels and cultivating tools carried by each end of said member within said space; said auxiliary attachments comprising extensions for the ends of said member each extension comprising a bar adapted to be hinged to the end of the member for vertical movement, a supporting bracket projecting from the forward side of said bar, a caster wheel swiveled in a bearing on said supporting bracket, cultivator beams connected to and trailing at the rear of said bar, a secondary frame bar adapted to be connected across the tractor on the rear thereof, and a thrust bar loosely connecting the end of the extension bar with said secondary frame member.

1,677,506. BUMPER. HENRY M. VICKERY, Oakland, Calif. Filed July 18, 1925, Serial No. 44,556. Renewed Dec. 16, 1927. 5 Claims. (Cl. 293—55.)

1. In combination with a motor vehicle, front and rear bumpers secured to and extending across the front and rear ends of the vehicle, side bumpers extending along the entire opposite sides of the vehicle, means connecting the opposite ends of the side bumpers to the front and rear bumpers and means secured to and extnding laterally from the frame of the vehicle to support the intermediate portions of the side bumpers.

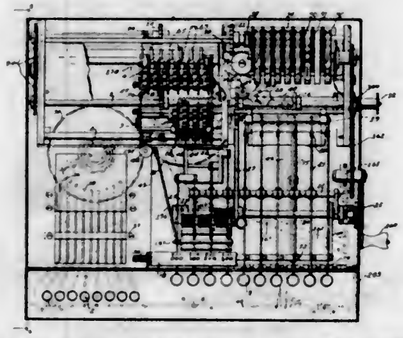
1,677,507. CASING CUTTER. WILLIAM A. VOCK, Redondo Beach, and HARRY E. LYNN, Torrance, Calif. Filed May 12, 1925. Serial No. 29,737. 10 Claims. (Cl. 81—195.)



1. In a well casing cutter operable to cut by rotation, a body, a cutter carried by the body, a retaining member for the cutter, and means normally yieldingly holding the member in position to hold the cutter unactuated.

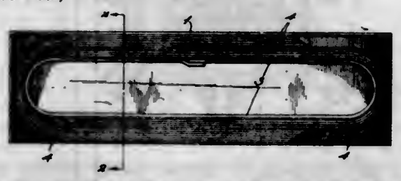
1,677,508. ART OF DYEING FIBERS. ALEXANDER WINOGRADOFF, New York, N. Y., assignor to Inecto, Inc., New York, N. Y., a Corporation of Delaware. Filed July 11, 1925. Serial No. 43,020. 11 Claims. (Cl. 8—5.)

1. In the art of dyeing fibers, treating the fibers with a solution of an inorganic iodide where the color is developed by the oxidation of a leuco-compound.



1,677,509. ELECTRIC SWITCH. MORRIS S. WRIGHT, Worcester, Mass. Filed Oct. 3, 1921. Serial No. 505,069. 18 Claims. (Cl. 200—67.)

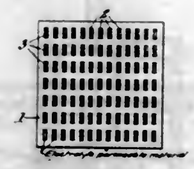
1. An electric switch comprising a base, having horizontal flanges extending therefrom, stationary contacts carried by the base, a lever connected to the base, a movable arm operable by the lever, and rotatable contact points carried by the movable arm and adapted to engage the horizontal flanges of the base when the circuit



is broken and the stationary contacts when the circuit is made, the contact points being rotated upon each operation of the lever.

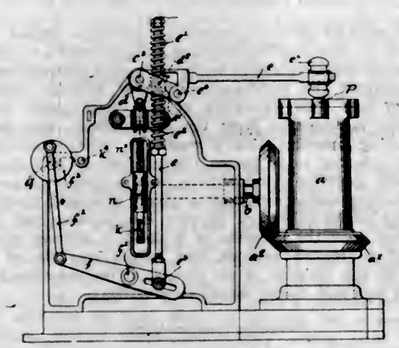
1,677,510. CASH REGISTER. SVEN ARTON, Chicago, Ill. Filed May 15, 1922. Serial No. 560,967. 5 Claims. (Cl. 235—23.)

1. A machine of the class described comprising accounting and indicating devices, an operating mechanism for said devices, a set of keys for controlling said operating mechanism, said accounting and indicating devices, operating mechanism and keys being so arranged that successive depression of said keys results in changing the denominational value of the entry and likewise changing from one class of entry to another, and an indicator extending across all the keys and having a step-by-step movement to successively indicate the changing value and function of the keys.



1,677,511. COLLAR PACKAGE. DONALD B. BECKER, Watervliet, N. Y., assignor to Geo. P. Ide & Company, Inc., Troy, N. Y., a Corporation of New York. Filed Apr. 20, 1926. Serial No. 103,348. 1 Claim. (Cl. 206—46.)

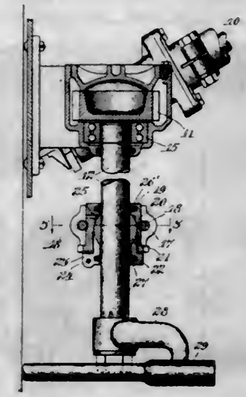
A collar package for laundered turn down starched collars comprising an elongated box, of an elongated



spacer in said box of less length and width than said box, and a series of separate sets of laundered turn down starched collars in flat or opened condition disposed between said spacer and the walls of the box, with the ends of one set adjacent one end of the box and the ends of another set adjacent the other end of the box.

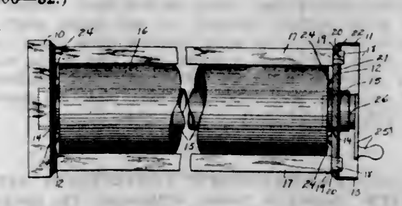
1,677,512. SEPARATOR. RAYMOND C. BENNER, Bayside, N. Y., assignor, by mesne assignments, to Prest-O-Lite Storage Battery Corporation, a Corporation of Indiana. Filed Mar. 30, 1923. Serial No. 628,843. 4 Claims. (Cl. 136—146.)

1. A separator comprising a fibrous material bonded with an acid-resistant plastic and having pores obstructed with a material capable of yielding a gelatinous, acid-proof decomposition residue permeable by electrolyte.



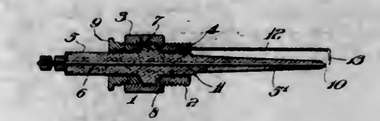
1,677,513. APPARATUS FOR BEATING GOLD LEAF OR SHEETS OF OTHER METAL AND SUCH LIKE. WILLIAM BLACKER, Stalybridge, England. Filed June 3, 1925, Serial No. 34,595, and in Great Britain Jan. 30, 1925. 4 Claims. (Cl. 78—100.)

1. An apparatus of the character described, comprising in combination, a rotatable work support, means for rotating said support, a hammer mounted for vertically swinging and laterally reciprocating movement above said support, means for swinging said hammer, a pivoted lever for imparting lateral motion to the hammer, means for swinging said lever thereby to move the hammer laterally, and means for changing the ratio of distance between the fulcrum of the lever, the point of application of the swinging means and the point of application of the lever thereby to multiply the action of said lever-swinging means.



1,677,514. SELF-ALIGNING BEARING FOR SHAFTS. HARRY E. DERR, Sr., New York, N. Y., assignor to International Harvester Company, a Corporation of New Jersey. Original application filed Sept. 28, 1923, Serial No. 665,270. Divided and this application filed Jan. 12, 1925. Serial No. 1,766. 3 Claims. (Cl. 308—72.)

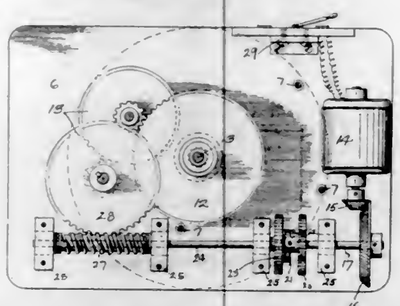
1. The combination of a steering shaft and a bearing therefor carried intermediate its ends and supported in a bracket mounted on the vehicle frame, said bearing comprising a concentric ball through which said shaft is slidable, an eccentric socket member housing said ball, a stud member threaded into said socket member for



preventing dislodgement of said ball, and means cooperating with the bracket and socket member for preventing rotative movement of the socket member.

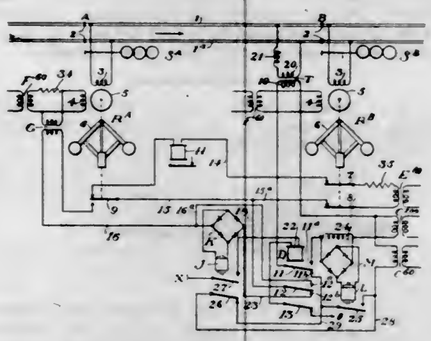
1,677,515. PACKAGE FOR PILE FABRICS AND THE LIKE. ANTOINE M. DURAND, New Haven, Conn. Filed Aug. 18, 1927. Serial No. 213,716. 9 Claims. (Cl. 206—52.)

1. A package for pile-fabrics and the like, comprising a pair of end-members; a fabric-mounting core extending between the said end-members; means for fastening the opposite ends of a roll of fabric to the respective end-members; and a plurality of spacing-bars extending between the said end-members to hold the same in spaced relation, and to prevent the fabric from crumpling.



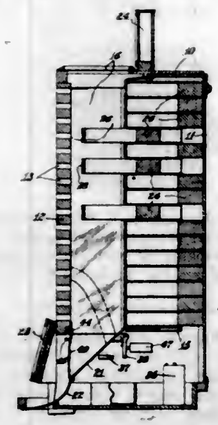
1,677,516. SPARK PLUG. IRVING W. FARQUHARSON, Media, Pa. Filed Jan. 24, 1925. Serial No. 4,413. 2 Claims. (Cl. 123—169.)

1. In a spark plug, a bushing the inner end of which has an unflanged, plane annular surface, an insulator core having an electrode therein carried by said bushing, a portion of said core being cylindrical and the major portion tapering at its inner end, and being exposed throughout said major portion, the juncture of said cylindrical and tapered parts forming a raised annular part 11 which is positioned immediately adjacent said bushing and said tapered part of the insulator core being at least twice the length of said bushing, and an additional electrode carried by the bushing the major portion of which parallels the tapered part of the core electrode and



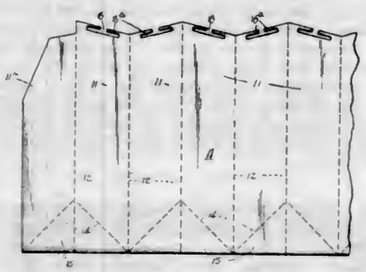
is of substantially the same length as said tapered part, the terminal of which is bent laterally at right angles toward the sparking point of the core electrode, but which does not extend therebeyond.

1,677,517. POWER-DRIVEN FRUIT PRESS. JOHN P. FERRARI, San Francisco, Calif. Filed Aug. 3, 1925. Serial No. 47,749. 2 Claims. (Cl. 74—7.)



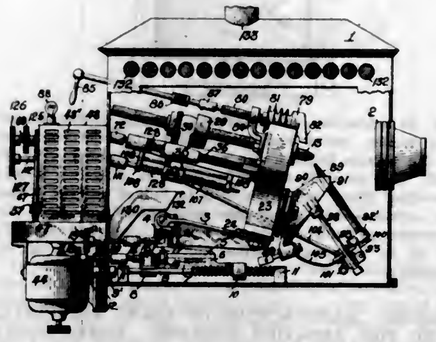
1. A device of the character described comprising a drum; a threaded shaft extending upwardly from said drum; a collar threaded on said shaft; a base plate secured to said collar; a reducing speed gear train, a gear mounted on the collar, said gear meshing with said reducing speed gear train mounted on said base plate; a worm shaft, a shaft journaled on said base plate; connected driving gears fixed on the shaft, change of speed gears movably mounted on said worm shaft, a worm on the end of the worm shaft; a worm gear in the gear train, said worm meshing with said worm gear, and a reversible motor for driving said first mentioned shaft to cause said collar and base plate to descend upon said threaded shaft.

1,677,518. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. ROBERT M. GILSON, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Sept. 14, 1926. Serial No. 135,405. 10 Claims. (Cl. 246—34.)



1. In combination, a section of railway track, a track relay having two windings one of which is energized from the track rails of the section, two sources of alternating current differing in frequency, means for constantly supplying current to the rails of said section from the first of said sources when said relay is closed and for supplying current alternately from the first and second sources to the rails when the relay is open, means for normally supplying the second winding of said relay with current of the frequency of said first source, and means for discontinuing the supply of current to said second winding when current is being supplied to the rails from said second source.

1,677,519. VENDING MACHINE. WALTER GOODCHILD and NATHAN SCLAR, Hoboken, N. J., assignors to Magic Device Corporation, Hoboken, N. J., a Corporation of New Jersey. Filed Mar. 24, 1925. Serial No. 17,868. 12 Claims. (Cl. 194—7.)



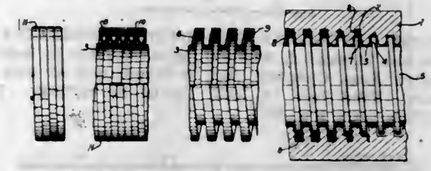
1. A vending machine embodying therein a casing, a plurality of merchandise receiving compartments, a slide containing electro-magnetic material in each compartment and engaging the merchandise therein, whereby movement of said slide outwardly of the compartment will eject the merchandise from the compartment, said casing having openings therethrough, an electro-magnetic plunger adapted to be passed through any of said openings into operative relation to a slide, a source of electrical supply, means arranged in circuit with said plunger and said source of supply whereby said plunger may be energized upon the insertion of a check, a delivery shelf adapted to receive articles, and means operable as a result of the delivery of an article by the machine for making said last named means inoperative.

1,677,520. EMERGENCY UMBRELLA. HERMAN O. GOTTESMAN, New York, N. Y. Filed Sept. 14, 1927. Serial No. 219,385. 7 Claims. (Cl. 135—20.)

4. An umbrella having a cover folded from a blank comprising a straight strip of material provided with substantially parallel spaced score lines disposed transversely of the length of the blank, the spaces between the score lines being provided with a T-shaped slot at the end forming the center of the cover, a tubular connection and guide projecting through said slots about which guide the plaits are unfolded in a rotary direction to form a circular device, and a stick insertable into said tubular connection, the portion of the cover material beyond the said slots being wedged between the stick and the interior wall of the tubular connection.

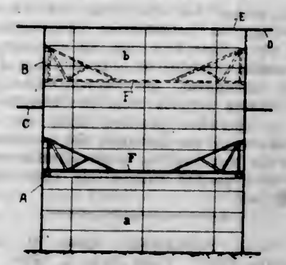
1,677,521. PROJECTOR LAMP. THEODORE HALL, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Aug. 24, 1921. Serial No. 494,818. 15 Claims. (Cl. 176—51.)

1. In an arc lamp, a metallic member having a seat for receiving a portion of an electrode adjacent the arcing end thereof, an arm for supporting the opposite end portion of said electrode, a support to which said arm is pivotally connected, a spring cooperating with said arm to maintain said electrode in firm contact with said seat, means for leading electric current to said seat and means for circulating a current of air under said seat to cool the same.



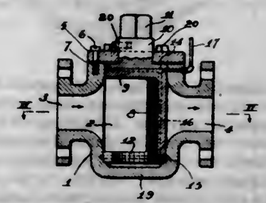
15. In an arc lamp, the combination with a pair of electrodes and separate feed control means for each electrode, of a motive means, a member continuously oscillated thereby, a pair of pawls moved by said member, the position of one of said pawls being controlled by the feed control means of one electrode, and the position of the other of said pawls being controlled by the control means of the other of said electrodes, a ratchet mechanism operated by each pawl for feeding the respective electrode, and a third continuously acting pawl and ratchet means operated thereby for rotating at least one of said electrodes.

1,677,522. TIE FOR BOX STRAPS. LEO M. HARVEY, Los Angeles, Calif. Filed Mar. 14, 1927. Serial No. 175,395. 7 Claims. (Cl. 24—20.)



1. A tie for connecting the overlapping ends of flat box bands, consisting of two coaxial rolls with the edges of bands disposed adjacent to each other on the same side of the axis of the rolls, the walls of said rolls on the side of the axis opposite to the said edges having offset portions operating to stiffen the rolls to prevent the same from opening, and forming a plurality of shoulders on the rolls interlocking with each other to prevent longitudinal movement of the roll with respect to the other.

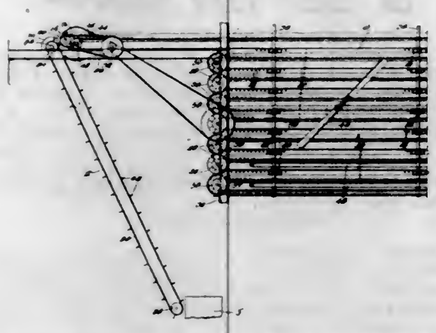
1,677,523. SOLIDIFIED-SEAM TUBE. WILLIAM K. HERBST, Hillside, and R. HARRY STONE, Irvington, N. J., assignors to Titeflex Metal Hose Co., a Corporation of New Jersey. Filed June 18, 1924. Serial No. 720,785. 3 Claims. (Cl. 113—35.)



1. A flexible tube formed of a helically disposed strip, said strip having a longitudinal fold or groove adapted, in the completed tube, to form a corrugation to provide flexibility by relative movement of the corrugation sides, the edges of adjacent convolutions of said strip being interfolded to form a joint and a solidifying substance in said joint introduced therein as a fluid and hardened in the joint for rendering said joint immovable.

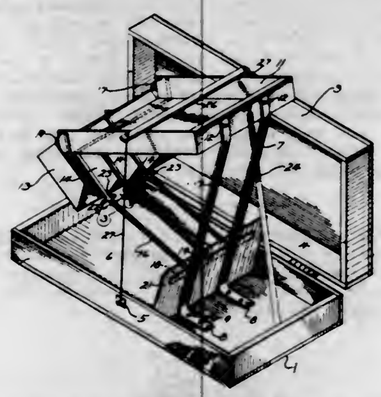
1,677,524. GASOMETER. KONRAD JAGSCHITZ, Mainz, Germany, assignor to Maschinenfabrik Augsburg-Nuernberg A. G., Nuremberg, Bavaria, Germany, a Corporation of Germany. Filed Feb. 26, 1926. Serial No. 90,980. 1 Claim. (Cl. 48—176.)

A gasometer of the disk type, comprising a shell having a movable disk closure therein, a stiffening member attached to and extending externally on said shell and capable of supporting an additional shell section superposed on said shell and attached thereto to thereby increase the capacity of the gasometer, and a sealing disk located within said shell member, there being no permanently necessary reinforcing means extending within said shell member, so that said disk may be raised without permanent necessary obstruction to a position within said additional section.



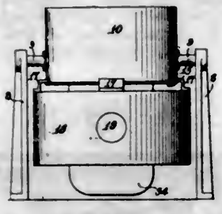
1,677,525. LUBRICATED PLUG VALVE. HALBERT P. MACGREGOR, Clayton, Mo., assignor to MacGregor Valve Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 5, 1927. Serial No. 181,114. 8 Claims. (Cl. 251—98.)

1. In combination, a valve body having a bore therethrough and a passage for liquid, and a shell of tubular shape, but cut away longitudinally so that its side



edges are free to move relatively, mounted for rotation in the bore with its outer surface fitting against the inner surface of the bore, and means for applying fluid under pressure between said surfaces so as to spring the shell slightly away from said surface of the bore.

1,677,526. CONVEYING AND DRYING APPARATUS. NORMAN MARSHALL, Waltham, Mass., assignor to Remington Arms Company, Inc., a Corporation of Delaware. Filed June 15, 1921. Serial No. 477,849. 7 Claims. (Cl. 198—20.)

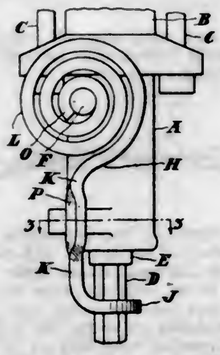


1. An apparatus for conveying and drying tubular articles having, in combination, an overhead dryer, comprising an endless link belt, an elevator for raising successive tubular articles to near the top of the dryer, transferring mechanism for automatically picking off successive tubular articles from the elevator and placing them in operative position upon the dryer, and means for operating the elevator, the transferring mechanism and the link belt in timed relation whereby the tubes will be deposited successively upon the adjacent links of the belt.

1,677,527. NAIL STRIPPER. FRED. M. MURAKOSHI, San Leandro, Calif. Filed June 1, 1926. Serial No. 112,816. 3 Claims. (Cl. 1—49.7.)

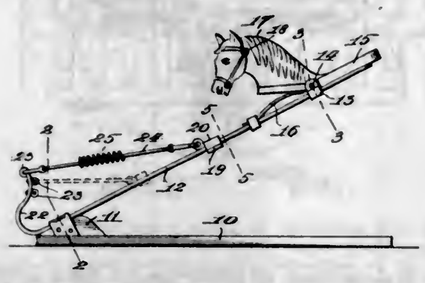
1. A nail stripper of the character described, comprising a box open at one end thereof, elastic elements engaging the opposite end for supporting the box and formed to allow the box to slant downwardly from the supported end, the lower open end being unsupported, a grooved guide arranged relative to the lower end of the box so as to receive and arrange nails dropping therefrom and to guide the same downwardly, and parallel guide rods communicating with the grooves allowing the heads of the nails to ride thereon while the shanks are suspended, the rods being looped at the joint to allow a line of nails to be withdraw thru the loops.

1,677,528. ROTARY-FIELD INDUCTION FURNACE. EDWIN F. NORTHRUP, Princeton, N. J., assignor to The Ajax Metal Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 12, 1924. Serial No. 698,579. 24 Claims. (Cl. 266—1.5.)



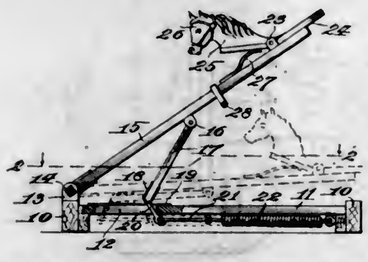
1. In operating an induction furnace having a pool and molten metal resistors within channels connected at the bottom beneath the pool and connected with the pool, the method which consists in utilizing a surrounding rotary induction field to induce current within the resistors and using the resultant torque upon the resistors to drive the metal against the channel walls so as to cause circulation along the lengths of the resistors.

1,677,529. MANUFACTURE OF YEAST, ESPECIALLY BY THE AERATION PROCESS. ALFRED POLLAK, Vienna, Austria. Filed Mar. 23, 1923, Serial No. 627,145, and in Austria Apr. 4, 1922. 6 Claims. (Cl. 195—20.)



5. In the art of yeast manufacture the process of producing yeast which comprises preparing a yeast nutrient solution, propagating yeast therein with aeration and adding at the period of the yeast development, at which the reproduction has considerably slowed down a second portion of culture yeast whose assimilative properties for nitrogeneous compounds had been increased by subjecting the yeast to a treatment with a solution containing in addition to albumin-digesting enzymes also enzymes capable of decomposing hemi-cellulose, and thereafter to a preliminary fermentation, spent-wash resulting from an alcoholic fermentation being added to the preliminary mash or wort.

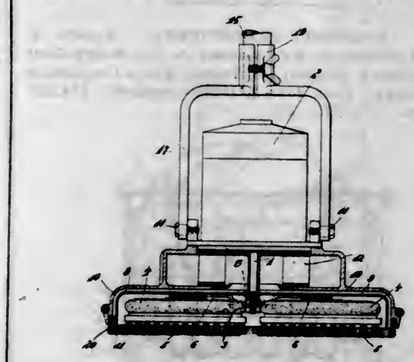
1,677,530. STEEL RETAINER. WILLIAM PRELLWITZ, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Mar. 12, 1928. Serial No. 260,925. 3 Claims. (Cl. 121—32.)



1. In a steel retainer for rock drills, the combination of a front head having grooves in opposite sides, a drill steel extending into the front head, trunnions on the front head, a retainer comprising a piece of rectangular wire bent to form a yoke adapted to act as an abutment for the drill steel, side arms on the yoke having integral spiral springs, the innermost coils of said springs being adapted to pivotally receive the trunnions, and locking portions on the side arms twisted about the longitudinal axis of the side arms to enable a corner of said locking portions to lie in the grooves for locking the retainer in the retaining position.

1,677,531. SPRING TEETERING TOY. IRA A. SHANTON, St. Petersburg, Fla. Filed Dec. 24, 1925. Serial No. 77,504. 7 Claims. (Cl. 272—55.)

1. In a spring teetering toy the combination with a base, of a spring arm mounted on said base and extending upwardly at an angle relative thereto, a seat carried by the free end of said spring arm, a relatively short spring arm projecting upwardly from the lower end of the first mentioned spring arm and a flexible connection between said relatively short spring arm and the upper portion of the angularly disposed spring arm.

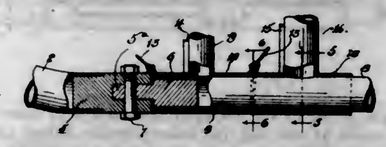


1,677,532. EXERCISING PLAYTHING. IRA A. SHANTON, Hollywood, Calif. Filed Oct. 22, 1926. Serial No. 143,312. 7 Claims. (Cl. 272—55.)

1. An exercising toy comprising a base, an arm hinged to one end of said base and extending upwardly therefrom at an angle, a spring arranged beneath said base and a non-rigid connection between said spring and arm whereby the movement of said arm in one direction is yieldingly resisted a part of which connection is mounted so as to move freely upon the base when swinging movement is imparted to said arm.

1,677,533. ELECTRICALLY-ACTUATED SURFACING MACHINE. GUSTAV STAEHLE, Stuttgart, Germany, assignor to "Cyklop" Akt. Ges., Schaffhausen, Switzerland, a Firm. Filed May 4, 1926, Serial No. 106,687, and in Germany Mar. 9, 1926. 1 Claim. (Cl. 15—7.)

A cleaning machine comprising a casing; a motor mounted on said casing; a pair of brushes rotatably mounted in the lower part of said casing; a shaft for said motor adapted to rotate said brushes; a fan mounted on the shaft of the motor for creating a suction action; a curtain member in the form of a brush mounted on the outer lower edge of the casing and adapted to contact with the surface to be cleaned; and a bell-shaped casing mounted within and in spaced relation to the first-named casing to form a passage for the suction air from the curtain member to the fan, said passage limiting the suction

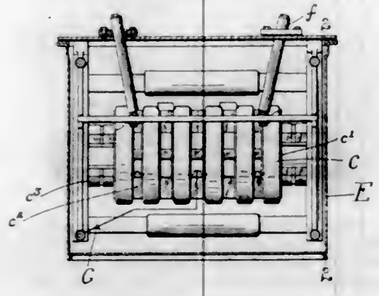


action to the curtain member, and said curtain member preventing the particles loosened by the brushes from flying outwardly beyond the suction zone and creating a uniform distribution of the air of the suction action.

1,677,534. METAL COMPOUND OF AZO DYESTUFF AND PROCESS OF MAKING SAME. FRITZ STRAUB, Basel, HERMANN SCHNEIDER, Riehen, near Basel, and JOSEPH SPIELER, Basel, Switzerland, assignors to Society of Chemical Industry in Basle, Basel, Switzerland. Filed Apr. 7, 1925, Serial No. 21,440, and in Switzerland Apr. 20, 1924. 8 Claims. (Cl. 260—12.)

1. As a step in the manufacture of azo dyestuffs containing metals the herein described process for the manufacture of azo-dyestuffs, by coupling hydroxynaphthalene-monosulfamides other than the 1 : 8-hydroxynaphthalene-sulfamide with ortho-hydroxydiazo-compounds.

1,677,535. FUSELAGE FOR AEROPLANES. WILLIAM F. VAN CLEAVE, Dallas, Tex., assignor of one-half to Richard M. Barnhart, Dallas, Tex. Filed Mar. 7, 1927. Serial No. 173,276. 1 Claim. (Cl. 244—31.)



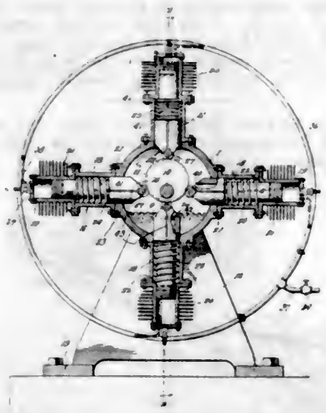
A fuselage for flying machines comprising an engine frame, a plurality of steel rods forming longéron rods spaced apart and including strut rods with sleeve portions and guy wires for holding said longéron rods in rigid spaced relation; each of said longéron rods removably connected to said engine frame and capable of being removed without disarranging or taking down the covering or other parts of said fuselage in renewing or replacing broken or damaged longéron rods.

1,677,536. 1-METHYL-2.5.6-TRICHLORO-3-AMINOBENZENE-4-SULPHONIC ACID AND PROCESS OF PREPARING THE SAME. HERMANN WAGNER, Bad Soden-on-the-Taunus, and BARTHOLOMÄUS VOSSEN, Hochst-on-the-Main, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 13, 1927, Serial No. 212,850, and in Germany Sept. 11, 1926. 3 Claims. (Cl. 260—129.)

3. As a new product, 1-methyl-2.5.6-trichloro-3-aminobenzene-4-sulphonic acid, being a whitish powder, very

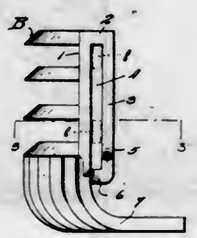
sparingly soluble in water, insoluble in alcohol and ether, and dissolving in concentrated sulphuric acid to a slightly yellowish solution, from which it is reprecipitated on dilution with water.

1,677,537. ELECTRIC TRANSFORMER. WILBUR S. WERNER, Covington, Ky., assignor to The Kelley-Koett Manufacturing Company, Covington, Ky., a Corporation of Kentucky. Filed June 2, 1921. Serial No. 474,440. 3 Claims. (Cl. 175—361.)



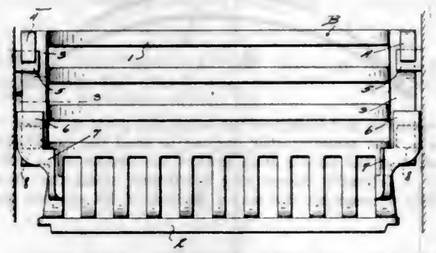
1. In a transformer the combination of a core having a body and branches, a main primary winding on the body and an auxiliary primary winding on each of the branches, a secondary winding about the body of the core intermediate the branches, and a switch adapted to selectively connect the primary windings with a primary electrical circuit.

1,677,538. PRESSURE-CONTROL DEVICE FOR USE IN COUPLING OIL-WELL CASING. EMERY GRACEY WHALEY, Enid, Okla., assignor of one-half to Frank Edward Sackrider, Enid, Okla. Filed Feb. 11, 1926. Serial No. 87,696. 2 Claims. (Cl. 265—47.)



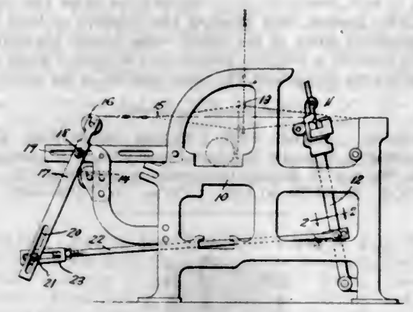
1. In a device of the character described, a cylinder or barrel closed at one end and longitudinally slotted adjacent to its opposite end, a coupling member carried by the last mentioned end of the cylinder or barrel, a cross head slidably interfitting the barrel and having projecting side portions extending through the slots thereof, a piston rod connected at one end centrally of said cross head and guided thereby axially of the cylinder, a piston at the other end of the rod movable toward and away from the closed end of the barrel or cylinder and forming therein an air pressure chamber, a pressure indicator carried by the barrel or cylinder in communication with the said chamber, connecting bars extending along opposite sides of the cylinder and connected at one end to the projecting side portions of the cross head and projecting at their opposite ends beyond the closed end of the barrel or cylinder, a coupling member carried by the last mentioned ends of the said connecting bars, said piston having a valvular movement longitudinally of the rod and said connecting bars closely embracing the sides of the barrel or cylinder and transversely curved to present inner concave faces conforming to the contour of the cylinder, whereby to act as guides for the last mentioned coupling member and cooperating with the guiding cross head in use.

1,677,539. AIR COMPRESSOR. HARRY P. WOLLMAN, Washington, D. C. Filed Oct. 6, 1927. Serial No. 224,433. 5 Claims. (Cl. 230—187.)



1. In a compressor, the combination of a casing, a driving eccentric rotatable in the casing, cylinders carried by the casing and communicating with the interior thereof, pistons reciprocable in the cylinders, said cylinders and pistons having opposed shoulders, springs encircling the pistons and having their respective terminals engaged with the shoulders to normally urge the pistons inwardly towards the eccentric, and driving means between the pistons and eccentric, as and for the purpose set forth.

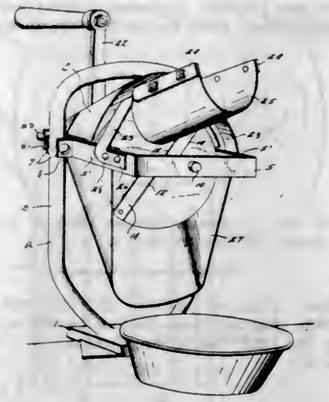
1,677,540. FIREPLACE BASKET. WILLIAM T. BAILEY, Nashville, Tenn. Filed Jan. 29, 1927. Serial No. 164,616. 1 Claim. (Cl. 126—165.)



A fireplace basket comprising a body having an upstanding front portion and a substantially horizontal bottom portion, the bottom portion terminating inwardly of the ends of the front portion, rearwardly disposed lugs carried by those upper portions of the front portion which extend beyond the ends of the bottom portion, arms depending from said lugs and spaced from the adjacent extended extremities of the front portion to provide slots adapted to readily receive the conventional fireplace frame lugs, the lower portions of the arms being continued by extension arms disposed inwardly of the front portion and terminating in lugs attached to the basket at points inwardly of the first named arms thus leaving open the lower ends of the slots provided between said first named arms and the adjacent extremities of the front portion of the basket, said open slots permitting the frame lugs to readily enter within the slots without interference by the bottom portion upon substantially direct downward movement of the basket.

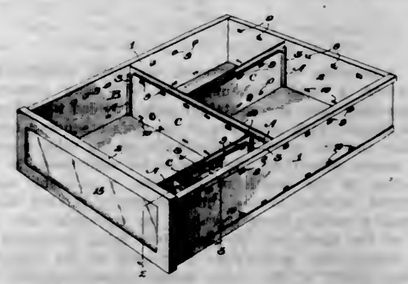
1,677,541. FIREPLACE BASKET. WILLIAM T. BAILEY, Nashville, Tenn. Filed Jan. 24, 1928. Serial No. 249,167. 3 Claims. (Cl. 126—164.)

1. A fireplace basket having an upstanding front portion and a substantially horizontal bottom portion, hook members carried by the opposite extremities of the upstanding front portion, a hook at each end being vertically spaced and disposed inwardly, the bills of the hook members at each extremity being disposed one toward the other.



1,677,542. LOOM. EDWARD BAUER, West New York, and PHILIP MIOZZI, Union City, N. J. Filed Aug. 5, 1926. Serial No. 99,887. 1 Claim. (Cl. 139—115.)

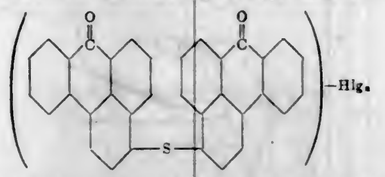
A loom comprising a slotted frame, a swingable lay having legs pivotally connected at their lower ends to said frame, arms remote from the lay and pivotally connected at intermediate points in their lengths to the slotted frame and having longitudinally-slotted lower portions, a whip roller mounted between the upper ends of said arms, and rods connected to and adjustable on the legs of the lay and the lower portions of the arms and interposed directly between said legs and arm portions.



1,677,543. VEGETABLE CUTTER. JOSEPH A. BOGDONAWICH, Ringtown, Pa. Filed Jan. 14, 1928. Serial No. 246,888. 5 Claims. (Cl. 146—114.)

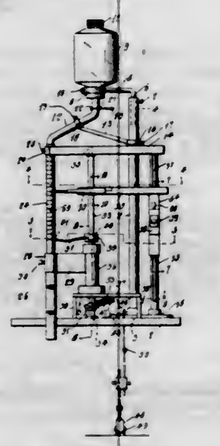
1. A vegetable cutter comprising an upstanding frame including side members, anchoring means for said frame, brackets secured to the side members of the frame and positioned fore and aft thereof, a shaft rotatably supported by said brackets, a cutting element rotating with

the shaft, upwardly disposed arms carried by one of the brackets, and a feed chute supported by said arms and disposed toward the cutting member.



1,677,544. ADJUSTABLE-COMPARTMENT METAL DRAWER. GEORGE C. BRAINARD, JASON A. FITCH, and GLENN T. GOURLEY, Youngstown, Ohio, assignors to The General Fireproofing Company, Youngstown, Ohio, a Corporation of Ohio. Filed July 12, 1926. Serial No. 121,965. 6 Claims. (Cl. 45—7.)

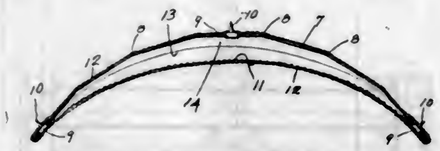
1. An all-metal adjustable compartment metal drawer including the side and end walls of the drawer having through openings therein, a metal partition holder having locking projections for engaging and interlocking with said openings and provided with a partition receiving groove, and a partition member adapted to engage said holder, said member being provided with through openings to receive the locking projections of other partition holders.



1,677,545. HALOGEN DERIVATIVE OF THE BENZANTHRONE SERIES AND PROCESS OF MAKING SAME. OTTO BRAUNSDORF and EDUARD HOLZAPFEL, Hochst-on-the-Main, and PAUL NAWIASKY, Ludwigshafen-on-the-Rhine, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 23, 1926, Serial No. 96,869, and in Germany Mar. 27, 1925. 7 Claims. (Cl. 260—61.)

7. As new products, halogenated sulfur compounds of the benzanthrene series having the type formula:

wherein Hlg represents halogen and n represents a whole number not greater than 3.

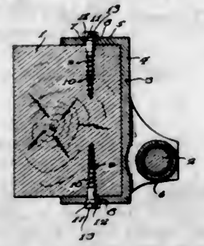


1,677,546. PILL COUNTING AND DISPENSING MACHINE. ROBERT KLOTZ CLAUSS, Lehighton, Pa. Filed July 28, 1927. Serial No. 209,045. 4 Claims. (Cl. 226—2.)

4. A machine of the character set forth, comprising a container, a tube communicating with and extending downwardly from the container and provided in different sides thereof with slots, one of the slots extending transversely and the other longitudinally of the tube, a member, means supporting the member for adjustment in the direction of the length of the tube, a rotatable shaft arranged parallel to the tube, angularly related valves extending radially from the shaft for movement into and out of the slots, one of the valves being connected to the member for adjustment therewith in the direction of the length of the tube, means associated with the shaft for normally holding one of the valves in closed position, and means associated with the shaft by which it may be rotated to move said valve into opened position and to move the other valve into closed position.

1,677,547. HAT PAD. LEON COHEN, St. Louis, Mo. Filed Oct. 19, 1925. Serial No. 63,279. 2 Claims. (Cl. 2—185.)

1. A hat pad comprising an arcuate flexible flat strip, fastening prongs projecting from the convex face thereof, an elastic of less length than said strip and of greater width than said flexible strip having its ends secured to said flexible strip whereby said strip is bowed outwardly from said elastic strip, a fabric covering for said strip and said elastic for drawing in said



elastic so as to concave the same and place it under tension, said covering also adapted to bend the longitudinal edges of the elastic strip toward the flexible strip whereby a laterally convex face is formed along the elastic strip throughout the major portion of its concave face.

1,677,548. HAT-SIZE REDUCER. LEON COHEN, St. Louis, Mo. Filed Sept. 8, 1927. Serial No. 218,124. 3 Claims. (Cl. 2—185.)

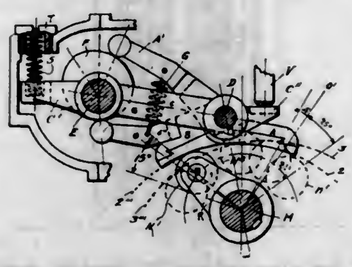
1. A hat size reducer comprising an arcuate flexible flat strip, a metallic strip located on the inside of said flat strip, fastening prongs projecting from the convex face of said metallic strip and through said flexible strip, an elastic of less length and of greater width than said flexible strip having its ends secured to said flexible strip whereby said strips are bowed outwardly, and a fabric covering for said strips and said elastic for drawing in said elastic so as to concave the same and place it under tension, said covering also adapted to bend the longitudinal edges of the elastic strip toward the flexible strip whereby a laterally convex face is formed along the elastic strip throughout the major portion of its length.

1,677,549. SCREW FOR CENTER BEARINGS FOR LOOMS. WILLIAM E. CRAIN, Greenville, S. C., assignor to William H. Bahan, Greenville, S. C. Filed Feb. 27, 1926. Serial No. 91,169. 1 Claim. (Cl. 139—345.)

The combination with a loom lay and a lay center bearing fitting against the lay and having attaching portions overlapping opposed faces of the lay and formed with fastener receiving openings, each opening having its outer portion flared to provide a countersink, of screws for securing said bearing to the lay each comprising a threaded shank having a conical head and a polygonal head integrally formed thereon and projecting from the conical head, the said screw being engageable through a fastener receiving opening and adapted to have its conical head received within the countersink of the opening with the polygonal head projecting beyond the

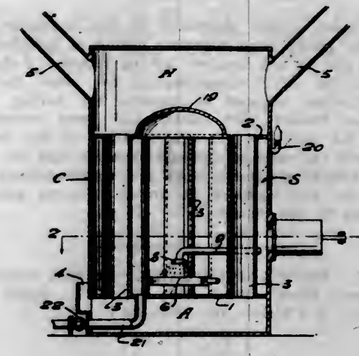
surface of the attaching portion, the outer end of the conical head of the screw being circular and of a diameter not less than the maximum transverse dimension of the polygonal head whereby segmental portions of the outer end of the said conical head will project beyond the side faces of the polygonal head to constitute abutments for a wrench applied to the polygonal head and prevent disengagement of the wrench therefrom.

1,677,550. SANITARY FIXTURE. RAYMOND E. CRANE, Kittanning, Pa. Filed Aug. 23, 1927. Serial No. 214,848. 5 Claims. (Cl. 4—105.)



1. In a sanitary receptacle made of ceramic materials, the combination of a main wall, side walls made integral with and extending outwardly from said main wall, end walls integral with said main and side walls and longitudinal tubular supports made integral with and supporting the junction between the main wall and the side walls.

1,677,551. PROCESS FOR PRODUCING IN A SOLUTION THE CRYSTALLIZATION OF THE BODY DISSOLVED THEREIN. ALBERT DELAS, Paris, France, assignor to Société des Condenseurs Delas, a Corporation of France. Filed July 25, 1925, Serial No. 46,187, and in France Aug. 6, 1924. 8 Claims. (Cl. 23—1.)

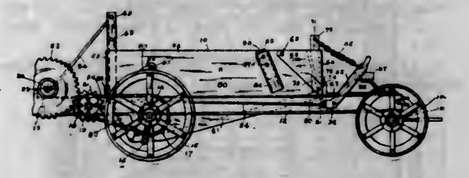


1. The method of producing the crystallization of a substance in a solution in which it is dissolved, which comprises furnishing the necessary cold by vaporizing a volatile body intimately incorporated with the solution.

1,677,552. VALVE-CONTROLLING DEVICE FOR ENGINES AND MOTORS. SIGISMONDO DIAMANT, Genoa, Italy, assignor of one-half to Carlo Scotti, Genoa, Italy. Filed Nov. 5, 1924, Serial No. 747,958, and in Italy May 9, 1924. 10 Claims. (Cl. 123—90.)

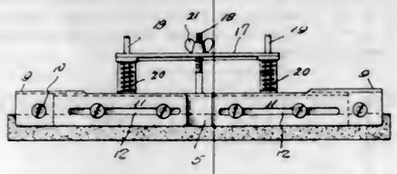
1. Internal combustion engine valve controlling mechanism comprising a valve operating lever, a regulating shaft on which said lever is pivotally mounted, a cam fast to said shaft, a pair of crossed controlled levers pivotally connected together at their point of intersection, said controlling levers bearing at one end on said cam at points on opposite sides of said regulating shaft and being provided at their opposite ends with slides, a distribution shaft, and means on said distribution shaft to consecutively contact with said slides and thereby actuate said controlling levers and hence said valve operating lever.

1,677,553. AIR HEATER. THOMAS B. DISSETT, East St. Louis, Ill. Filed June 21, 1927. Serial No. 200,451. 2 Claims. (Cl. 219—34.)



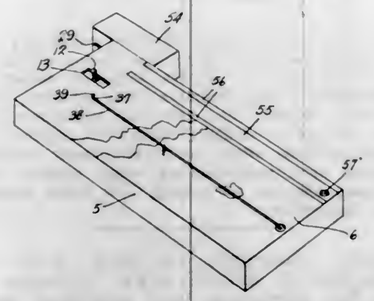
1. A heater of the class described comprising a casing, spaced partitions within the casing dividing the same into a cold air chamber, a hot air chamber and an intermediate steam chamber, tubes extending through the steam chamber and affording communication between the cold air chamber and hot air chamber, steam generating means within the steam chamber, and means operating upon predetermined steam pressure within the steam chamber for making said steam generating means inoperative.

1,677,554. COMPOUND OF GALL ACIDS AND PROCESS OF MAKING SAME. ALPHONSE GAMS and PAUL SCHEIDEGGER, Basel, Switzerland, assignors to the Firm Society of Chemical Industry in Basle, Basel, Switzerland. Filed July 31, 1926, Serial No. 126,335, and in Switzerland Sept. 2, 1925. 15 Claims. (Cl. 260—124.)



1. Process for the manufacture of compounds of gall acids by causing an acylated aliphatic diamine to react with a gall acid.

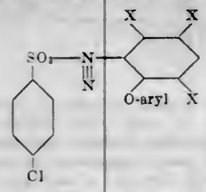
1,677,555. DUMP WAGON. FRED W. GARVIN, Jamestown, N. Y. Filed Nov. 19, 1925. Serial No. 70,121. 4 Claims. (Cl. 37—4.)



3. A dumping wagon including a frame, a body pivotally mounted on said frame adapted to assume a scraping and carrying position and means for moving said body, said body comprising a box, a front gate pivoted upon said box and a rear gate and means on said front gate for engaging said frame, as said body assumes the scraping position, and swinging the lower edge of said gate on its pivots away from said box.

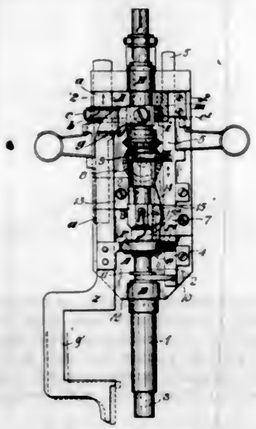
1,677,556. LAWN-MOWER SHARPENER. JOHN H. GROETSCH, Gaylord, Minn. Filed Mar. 13, 1926. Serial No. 94,527. 1 Claim. (Cl. 51—250.)

In a lawn mower sharpener of the character described, an emery block receiving boxing of inverted U-shape, a pair of end members having inverted U-shaped body portions with extensions on the sides thereof, said extensions adapted to straddle the boxing, said extensions formed with slots, and bolts extending through the slots and through openings in the boxing to contract the sides of the end members and the boxing for holding an emery block and simultaneously for holding the end members in proper adjusted position in relation to the boxing.



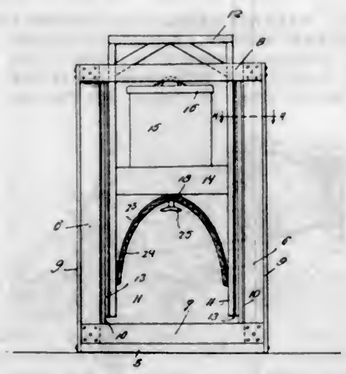
1,677,557. INDOOR GOLF GAME. RUSSELL JOHNSON, Pittsburg, Kans. Filed Nov. 19, 1927. Serial No. 234,480. 8 Claims. (Cl. 273—35.)

1. In a game device of the class described, a rotatable shaft, a ball attached thereto and arranged for rotation thereabout, a carrier arranged for movement along a horizontal plane and means operatively connecting said shaft for the actuation of said carrier.



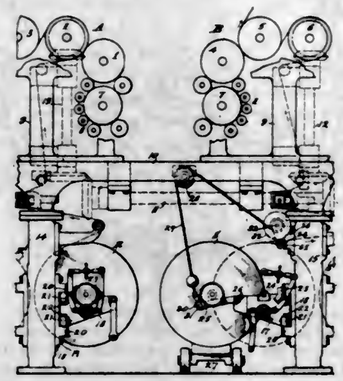
1,677,558. SOLID DIAZOSALTS OF ORTHO-AMINOPHENOLARYLETHERS. FERDINAND KELLER, Offenbach-Main-Burgel, and KARL SCHITZSPAHN, Offenbach-on-the-Main, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 11, 1927, Serial No. 167,581, and in Germany Feb. 12, 1926. 4 Claims. (Cl. 260—69.)

1. As new compounds solid diazosalts of ortho-aminophenolarylethers of the general formula:



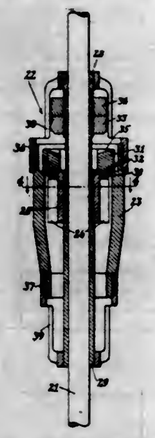
wherein the X's stand for hydrogen atoms, of which one or more may be replaced by chlorine and "aryl" represents an unsulfonated arylresidue, which diazosalts are whitish to yellowish to brownish colored and soluble powders, being substantially identical with products obtainable by double decomposition reaction of mineral acid diazosalt solutions of ortho-aminophenolarylethers either with a para-chlorobenzene sulfonic metal salt or with free para-chlorobenzene sulfonic acid.

1,677,559. COMBINED GUIDING AND FEEDING DEVICE FOR CRANK EMBROIDERY MACHINES AND THE LIKE. ALOYS KOCH, Berlin, Germany, assignor to the Firm of Perliner Stickmaschinenfabrik Schirmer, Blau & Co. G. m. b. H., Berlin, Germany. Filed Feb. 27, 1925, Serial No. 12,068, and in Germany June 25, 1924. 4 Claims. (Cl. 112—98.)



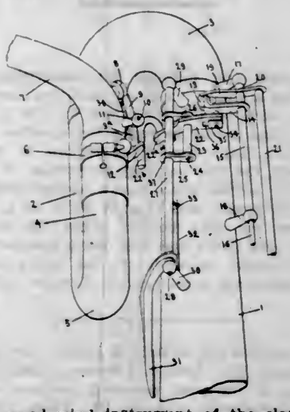
1. In a sewing or embroidering machine, the combination with a feed slide, needle holder tube, bearing block therefor, and feed lever connected to the block, of a bracket extending outwardly from the feed slide, and eccentric means for pivotally supporting the block on the bracket so as to be capable of adjustment.

1,677,560. HOG-OILING DEVICE. ALVIN J. KOERNER, Freeman, S. Dak. Filed Mar. 26, 1927. Serial No. 178,564. 1 Claim. (Cl. 119—157.)



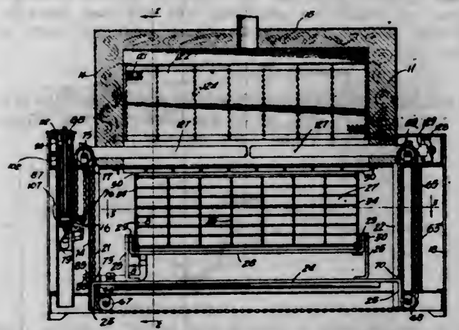
In a hog oiling device of the character described, a base, a pair of spaced parallel standards rising from intermediate portions of the side edges of the base, braces connected to the upper ends of the standards and extending downwardly and fixed to the ends of the base, a brace connecting the lower ends of the standards, a pair of spaced parallel braces connecting the upper ends of the standards, a frame between the standards, a tongue and groove slidable connection between the frame and the standards, said frame comprising a pair of side bars and an upper cross bar and an intermediate cross bar, a tank fixed on the intermediate cross bar and having a pipe depending therefrom through the intermediate cross bar, and an oil applying means with which the pipe is connected.

1,677,561. WEB-ROLL RELOADING MECHANISM. FREDERICK LAMATSCH, Grantwood, N. J., assignor to R. Hoe & Co., Inc., New York, N. Y., a Corporation of New York. Filed Feb. 5, 1925. Serial No. 6,937. 3 Claims. (Cl. 242—58.)



1. In a printing machine, the combination of a plurality of printing couples, of spaced framing supporting the couples, web roll supports secured on adjacent sides of the framing and extending outwardly therefrom facing each other with a clear space between them, and means for swinging the supports at an angle to the framing to form a clear path for the roll so that a roll may be entirely moved past the support for positioning therein without interfering with a roll running in the opposite support.

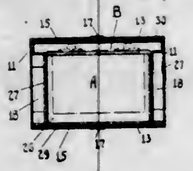
1,677,562. VALVE EQUIPMENT FOR OIL-WELL PUMPS. CHARLES B. LEWIS and EDGAR D. ROBERTSON, Los Angeles, Calif. Filed June 8, 1927. Serial No. 197,308. 2 Claims. (Cl. 103—180.)



1. A standing valve for deep well pumps comprising a tubular body adapted to seat in a pump-tube coupling, a concentric sleeve held in said tubular body by radial partitions so as to form a series of vertical openings terminating in an annular passage in the upper end thereof; guide sleeves fixed in said concentric sleeve so as to extend above and below said tubular body, said guide sleeves being adapted to receive a polished rod extending from a pump plunger through the valve; a ring flapper encircling the upper of said guide sleeves and serving as a closure to said annular passage; a stop nut adjustably fixed on said upper guide sleeve to limit the movement of said flapper and cages fixed on the upper and lower ends of said tubular body so as to embrace the ends of said guide sleeves.

1,677,563. OCTAVE KEY MECHANISM FOR WOOD-WIND INSTRUMENTS. ALLEN LOOMIS, Elkhart, Ind. Filed Nov. 17, 1926. Serial No. 148,783. 9 Claims. (Cl. 84—385.)

2. In a wood wind instrument of the class having a body tube with portions side by side, a springless octave key and a floating lever carrier pivotally mounted on one of said portions, a floating lever pivotally carried by said carrier and having two arms, one of which is coupled with said octave key, a spring acting on said carrier tending to depress the pivot of the floating lever, the second arm of which reacts against the adjacent part of the body, a second octave key mounted on an adjacent portion of the body beside the part above specified, and an extension from the second named arm of the floating lever crossing the space between the adjacent parts of the body into position for applying pressure to the second named octave key.

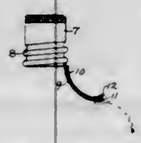


1,677,564. AUTOMATIC COOKER. HOWARD S. MURRAY, Los Angeles, Calif. Filed Jan. 16, 1924, Serial No. 686,523. Renewed Jan. 9, 1928. 13 Claims. (Cl. 126—41.)

1. In a cooker, the combination of: walls forming a cooking chamber having an opening in the lower wall thereof: a carrier; substantially vertically extending

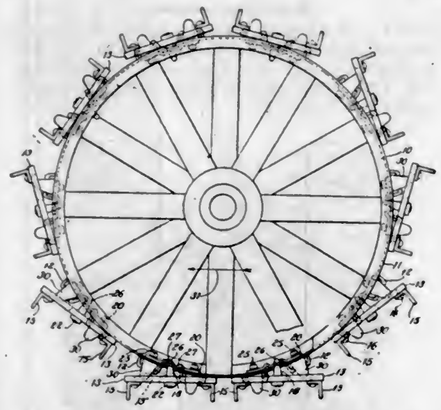
guide means for directing said carrier between lowered position beneath said chamber and raised position within said chamber; and means for causing and controlling a gradual egression of said carriage from said cooking chamber.

1,677,565. CONTAINER. FERDINAND S. OPPENHEIM, New York, N. Y. Filed Sept. 10, 1924. Serial No. 736,806. 6 Claims. (Cl. 229—14.)



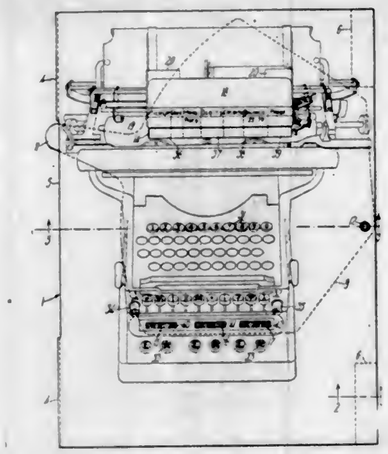
1. A packing and shipping box comprising an outer casing having a single removable partition liner arranged therein for each of the sides and for the top wall of said casing, and a tray having a top opening, side walls and a bottom, said tray being formed to support an article within the tray on the rim portion of said opening, the tray bottom extending a spaced distance from the article to permit said tray to serve as a cushioning means when the tray bottom abuts the bottom side of the box, said liners and tray being adapted to secure the article against movement in the casing for protecting and cushioning same against damage during transportation.

1,677,566. GOGGLES AND THE LIKE. GUST A. PETERSON, Chicago, Ill.; Georgia Peterson, administratrix of said Gust A. Peterson, deceased, assignor of one-half to Gust E. Sellstrom, Chicago, Ill. Filed Oct. 24, 1924. Serial No. 745,539. 8 Claims. (Cl. 2—14.)



6. An eye protector, comprising a pair of eye cups connected by a nose engaging member, and a split ring forming a lens-holding rim secured in the cylinder of each eye cup, said rings having inwardly opening grooves, a lens in said grooves, the rear walls of said grooves providing a flange abutting the forward edges of the eye cups, said rings extending in cylindrical form from said grooves into said eye cups to provide sufficient space to receive an additional lens and then being inwardly flanged for retaining such additional lens in position.

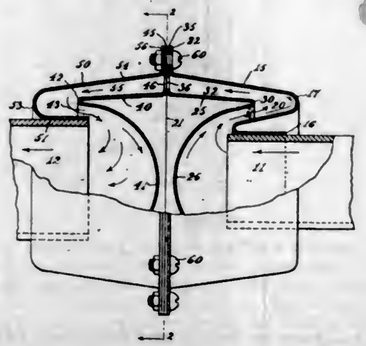
1,677,567. MEASURING CAP FOR BOTTLES. JOHN A. REISER, Port Jervis, N. Y. Filed Jan. 22, 1926. Serial No. 82,921. 1 Claim. (Cl. 215—57.)



A dosage measuring device comprising a cap, screw threaded means for retaining it over the mouth of a bottle and a closure therein and an extended handle formed integral with said measuring device, said handle being in two parts, hingedly connected and extending down the neck of the bottle.

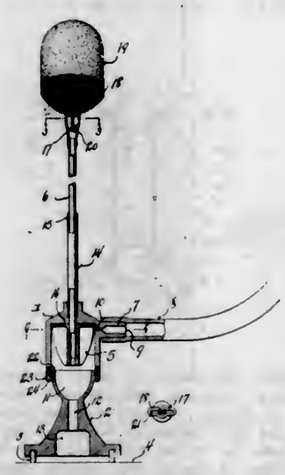
1,677,568. TRACTION WHEEL. LOUIS E. SLAUSON, Rock Island, Ill. Filed Jan. 14, 1924. Serial No. 686,050. 5 Claims. (Cl. 305—13.)

2. The combination with the rim of a wheel, of teeth on the outer faces of the rim, a detent member on the inner face of the rim, and a traction shoe having openings to receive said teeth, and means to engage the detent member to loosely secure the shoe to the rim so that it may have freedom of bodily movement radially or peripherally of the wheel within limits determined by the teeth and the detent member.



1,677,569. ACCOUNTING-MACHINE DEMONSTRATION CHART. JESSE A. B. SMITH, Stanford, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed May 19, 1925. Serial No. 31,258. 13 Claims. (Cl. 35—16.)

1. A device for demonstrating the operation of an adding and typing machine comprising a frame having a top and a bottom layer hinged at one edge, on the face

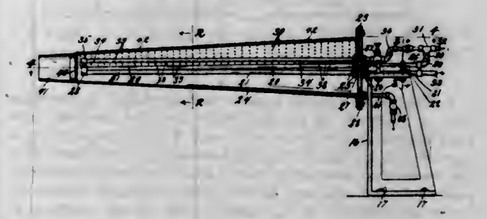


of one layer appearing the representation of the adding and typing machine the operation of which is to be demonstrated, the layer on which the representation appears having sight openings therein, one opening being located in the printing zone of said representation to disclose the number supposed to be typed on the typing machine and another opening in said layer at the counter cover represented in said representation, and a pivoted segment between said layers having numerals thereon arranged to be exposed to view in said sight openings on manipulation of said pivoted segments.

1,677,570. MUFFLER. CHARLES E. STADE, New York, N. Y. Filed June 25, 1924. Serial No. 722,294. 7 Claims. (Cl. 137—160.)

1. A muffler of the class described, comprising, in combination with spaced ends of two pipes, a substantially cylindrical outer casing; and a spaced inner baffle member, the last mentioned member having reversed semispherical walls therein and having cylindrical walls spaced within the outer casing and having means thereon to engage the casing for intermediate support.

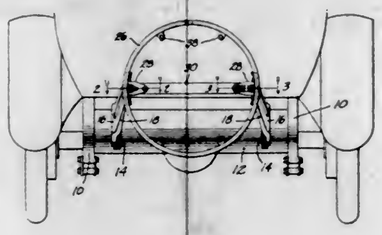
1,677,571. BOTTLE WASHER. WALTER SKWIERAWSKI, Milwaukee, Wis. Filed May 2, 1927. Serial No. 188,226. 2 Claims. (Cl. 15—99.)



1. A bottle washer comprising a casing having a base provided with a constricted discharge aperture, said casing having a pipe receiving portion provided with an inlet aperture, a rotor mounted adjacent said inlet aperture and positioned within said casing and spaced above the bower portion of said casing, a hollow spindle rigidly attached to said rotor and projecting upwardly from said casing, means carried by said spindle for preventing downward motion thereof, and a brush provided with a shank attached to the upper end of said spindle, said spindle having a discharge portion located immediately adjacent said brush, said casing converging towards its lower end and having a base provided with a discharge aperture.

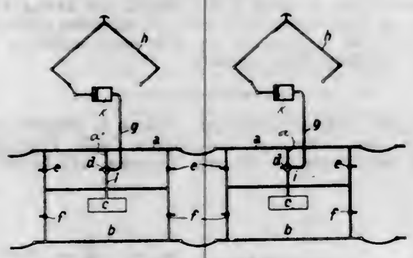
1,677,572. SCREW DRIVER. LUCIUS V. WALKLEY, Plantsville, Conn. Filed Dec. 27, 1926. Serial No. 157,132. 7 Claims. (Cl. 145—50.)

1. A screw driver having a body portion formed to provide a bit, a shank, and a handle, and having adjacent the lower end of the handle and extending across the screw driver a relatively broad flattened surface to receive the finger of the operator.



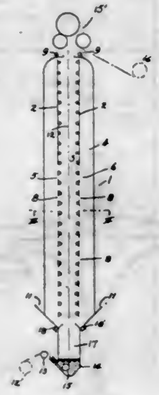
1,677,573. FABRIC PUFFER. HAROLD L. WATKINS and LA VERE J. EVELAND, Los Angeles, Calif. Filed Jan. 8, 1927. Serial No. 159,892. 7 Claims. (Cl. 68—9.)

1. A fabric puffer including a support; a conical steam shell having a flanged end secured to said support and having perforations through a portion thereof; means for supplying dry steam to the interior of said shell; a fine mesh wire screen having its edges soldered to the



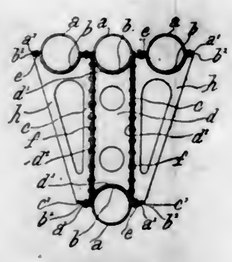
shell and arranged over the perforated portion thereof to evenly spread the steam discharging from the shell, and means within said steam shell for closing a portion of the perforations through said shell.

1,677,574. TIRE CARRIER. ALBERT B. WERDEHOFF, Birmingham, Mich., assignor to Chrysler Corporation, Detroit, Mich., a Corporation of Delaware. Filed June 26, 1926. Serial No. 118,836. 2 Claims. (Cl. 224—29.)



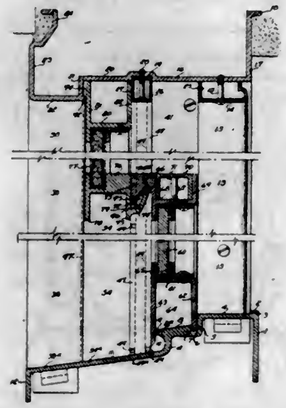
2. A tire carrier of the class described comprising a pair of stamped brackets each comprising a single element having a channel shaped portion, an inwardly extending portion adapted to close one end of said channel portion, a convex portion at right angles to said inwardly extending portion, and means carried by said convex portion for securing a tire rim in position on said brackets.

1,677,575. PNEUMATIC CONTROL APPARATUS. ALFRED WICHERT, Mannheim-Neuostheim, Germany, assignor to Aktiengesellschaft Brown, Boveri & Cie, Baden, Switzerland, a Joint Stock Company. Filed Apr. 29, 1926, Serial No. 105,613, and in Germany May 11, 1925. 3 Claims. (Cl. 303—28.)



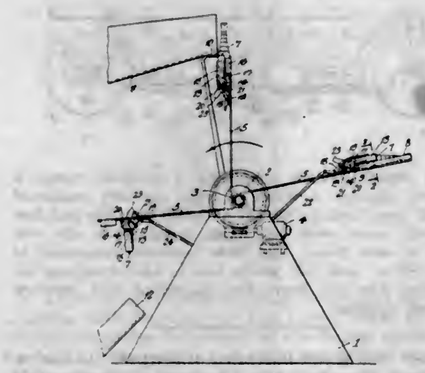
2. Pneumatic control apparatus comprising, in combination, a plurality of pneumatically operated devices, pressure reservoirs associated with said devices respectively, a control line arranged for communicating connection with the reservoirs, automatic valves associated with respective reservoirs and operated devices, said automatic valves operable by pressure in the control line to one position to establish communication between the associated reservoirs and operated devices and the control line, said automatic valves effective in another position to vent the operated devices and cut off communication between the reservoirs and control line, and a control valve effective in one position to vent the control line and in another position to establish communication between a reservoir and the control line.

1,677,576. APPARATUS FOR PRODUCING GLASS SUBSTITUTE. ADOLPH ZIMMERLI, New Brunswick, N. J., assignor, by mesne assignments, to Acetol Products, Inc., a Corporation of Delaware. Filed May 29, 1924. Serial No. 716,553. 5 Claims. (Cl. 91—55.)



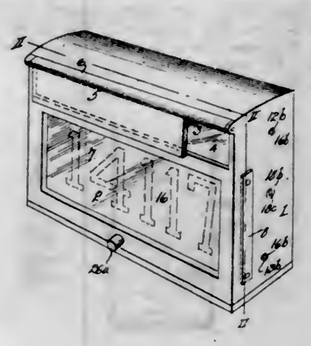
1. An apparatus for manufacturing glass substitutes, comprising an enclosure divided vertically into a drying chamber and a condensing chamber, said chambers being in communication with each other, a liquid container, a saturation chamber joining said container and enclosure, and means for passing a wire cloth through said container, thence through said saturation and drying chambers.

1,677,577. FRAME COMPONENT. FELIX AMIOT, Colombes, France, assignor to "Société d'Emboutissage et de Constructions Mécaniques," Colombes, Seine, France, a French Society. Filed Jan. 28, 1924, Serial No. 688,985, and in Belgium Apr. 6, 1923. 2 Claims. (Cl. 189—37.)



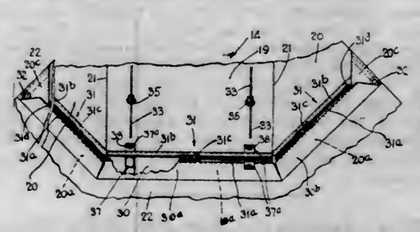
1. A frame component or spar, comprising opposing spaced cheeks, opposing elements each provided with a plurality of mating channels forming together tubular members and with companion flanges on opposite sides of said channels, the cheeks being secured to the flanges on opposite sides of one of said tubular members, at one end, a connecting member secured to the other ends of the cheeks, and webs or buttresses connected to the outer faces of said cheeks, to said connecting member, and to said channeled elements.

1,677,578. DOUBLE-HUNG WINDOW. SIDNEY U. BARR, Brooklyn, N. Y. Filed Mar. 16, 1927. Serial No. 175,679. 2 Claims. (Cl. 189—72.)



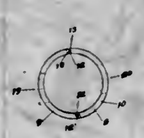
1. In a double hung, metallic sash and window frame structure, an outward, metal frame comprising a horizontal, flat top portion having at each end a straight, flat portion extending downwardly to the window sill, and also having an upward vertically and horizontally extending, integral portion, the metal at the junction of said top portion and its upward extension being extruded horizontally forward into a horizontal joint forming rib; each downwardly extending portion having a lateral, vertical integral portion, the metal at the junction of each downwardly extending portion and of each laterally projecting portion being extruded forwardly to form a joint forming rib; the front surfaces of the ribs being in alignment one with another and flat for contact with rear, flat surfaces of the top and side members of the rear window sash.

1,677,579. MEANS AND METHOD OF TREATING CRUSTACEA. JAMES J. BARRY, Gloucester, Mass. Filed Apr. 30, 1927. Serial No. 187,785. 9 Claims. (Cl. 17—9.)



1. A machine having an obstruction, and means for retaining a portion of an article to be broken and throwing said article forcibly against said obstruction thereby breaking said article and separating the broken parts.

1,677,580. DEVICE FOR DISPLAYING AUTOMOBILE NUMBERS. RICHARD S. CARTY, Detroit, Mich., assignor of one-half to Charles B. Robinson, Detroit, Mich. Filed Jan. 10, 1927. Serial No. 160,128. 14 Claims. (Cl. 40—10.)



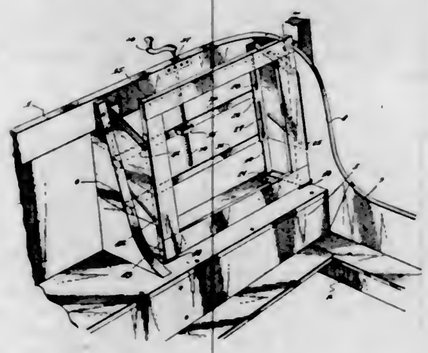
1. In an apparatus of the kind described, the combination of a sheet bearing a number and an automatic means actuated by stored power for destroying the material bearing said number.

1,677,581. AWNING CONSTRUCTION. BENJAMIN COHEN, Brooklyn, N. Y. Filed Apr. 2, 1928. Serial No. 266,537. 5 Claims. (Cl. 156—15.)

1. A device of the character described adapted to extend from a building over an opening therein comprising, a cover having a pocket formed along an edge portion thereof, adapted to enclose a stretching frame, and a hookless closure fastener means incorporated to extend throughout the length of said pocket structure to facilitate the assembly and dismounting of the cover from the frame.

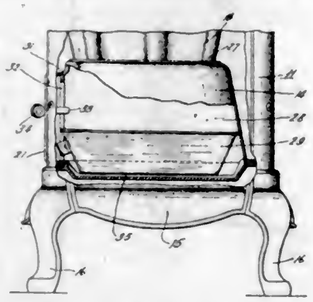
1,677,582. SEGMENTAL-SLEEVE-VALVE ENGINE. PHILO H. CONKLIN, Toledo, Ohio. Filed Apr. 6, 1927. Serial No. 181,346. 2 Claims. (Cl. 123—75.)

1. In an internal combustion engine, a segmental sleeve having openings at its upper end, crank shafts and links for operating the segments of the sleeve to produce registration between the openings of the sleeve and the ports



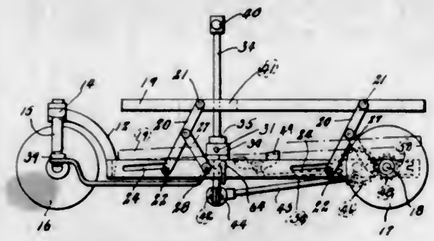
of the engine, the edge portions of the segments having interfitting ridges and grooves, the engine having a head extending into the upper end of the sleeve and having sealing rings for sealing the interior of the sleeve.

1,677,583. COAL BAG. WILLIAM KENNEDY CROMWELL, Jr., Lake Roland, Md., assignor to The Gaudy Belting Company, Baltimore, Md., a Corporation of Maryland. Filed Nov. 13, 1926. Serial No. 148,191. 1 Claim. (Cl. 150—48.)



A coal bag having side walls and a bottom consisting of a single strip of canvas folded about the center of its length, the two halves of each lateral edge being sewed together forming side seams, a rectanglar reinforcing strip covering the bottom and giving the bottom a rectangular shape, the said rectangular strip being sewed to the bag as to two of its longitudinal edges, said edges forming the bottom corner edges of the bag extending in the direction of the length of the bottom, the ends of the reinforcing strip being each folded to a point which is sewed to the corresponding end wall of the bag at the bottom, covering the bottom ends of the side seams and making the ends of the bag square, handles formed of double strips of material, the strips extending vertically along the sides of the bag, one part of each double strip being on the inside and the other on the outside, a reinforcing strip encircling the top of the bag and sewed to the handle strips, a reinforcing strip sewed to the bag and encircling the bag intermediately and crossing and secured to the outside handle strips near the center.

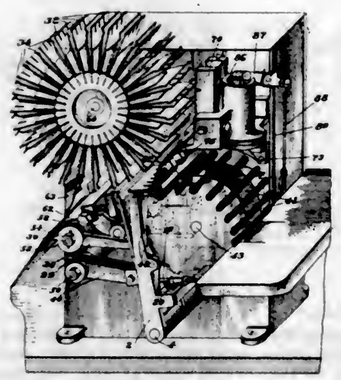
1,677,584. ADJUSTABLE SEAT STRUCTURE FOR AUTOMOBILES. CARL G. CRONWALL, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed June 30, 1927. Serial No. 202,512. 18 Claims. (Cl. 155—158.)



15. An automobile seat comprising in combination a main seat back and a seat cushion, the seat back being stationary with respect to the automobile body, an ancillary seat back arranged to be substantially coextensive vertically with respect to the main seat back, adjustable operating mechanism for projecting or retracting the ancillary seat back from the main back both at top and bottom, and a handle journaled in the main seat back and arranged to drive the operating mechanism which projects or retracts the ancillary seat back.

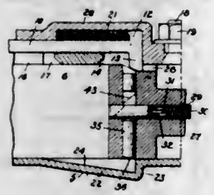
1,677,585. STOVE CONSTRUCTION. CLAUDE M. DIBBLE, Joliet, Ill., assignor to Moore Brothers Company, Joliet, Ill., a Corporation of Illinois. Filed Oct. 13, 1926. Serial No. 141,262. 6 Claims. (Cl. 126—67.)

1. A stove structure, comprising, a stove housing, means in said housing providing a combustion chamber, means for supporting said parts in said housing, said means comprising a base part supported in the housing and arranged to provide an ash pit having a substantially vertical front wall provided wtih an opening for the removal of an ash pan and a plurality of walls disposed at an angle with said vertical wall, and a door hinged to the front wall of said ash pit and swinging in a horizontal plane to close said opening.



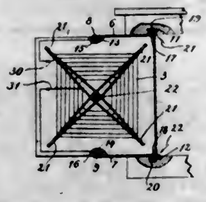
1,677,586. CHILD'S VEHICLE. HARRY H. EDELE, St. Louis, Mo. Filed Sept. 13, 1926. Serial No. 135,081. 4 Claims. (Cl. 208—113.)

1. A child's vehicle comprising a wheeled frame, a platform therefor, a series of arms pivotally connected at their upper ends to the sides of said platform and having their lower ends adjustably mounted in the side pieces of said frame, and links pivotally connected at their ends to said side pieces and to said arms and cooperating with the latter for supporting said platform in raised position.



1,677,587. PACKAGE-BANDING MACHINE. ANALDO M. ENGLISH, Brookline, Mass., assignor to Cynthia Mills, East Boston, Mass., a Corporation of Massachusetts. Filed July 16, 1926. Serial No. 122,811. 27 Claims. (Cl. 93—93.)

8. In a package wrapping machine, receiving means adapted to receive and press upon a banded package, inserting means for placing a package in said receiving means while wrapping the same and adapted to cooperate with said receiving means to complete the wrap of a

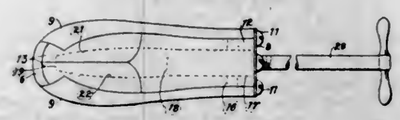


flexible band about a package after placing said package in said receiving means, and means to eject said wrapped package from said receiving means.

1,677,588. SEAR MECHANISM. WALTER T. GORTON, U. S. Army, Springfield, Mass. Filed July 11, 1924. Serial No. 725,441. 20 Claims. (Cl. 89—27.) (Granted under the provisions of the act of Mar. 3, 1883, 22 Stat. L., 625.)

17. The combination with a firing pin, of a combined sear and pin cocking element movable at right angles to the pin.

1,677,589. RADIO APPARATUS. JOSEF HENRIK HALLBERG, New York, N. Y. Filed Nov. 18, 1922. Serial No. 601,796. 3 Claims. (Cl. 250—33.)



1. An antenna for radio receiving apparatus comprising a carrier having parallel top and bottom edges, an electrically conducting loop wound on the carrier, conducting bearings at mid-points on the top and bottom edges of the carrier upon which the carrier can freely rotate, connections from the conducting loop to said bearings and links hingedly mounted on a support for said antenna having pivoting means thereon whereby said loop is rotatably mounted and conductively connected to said support.

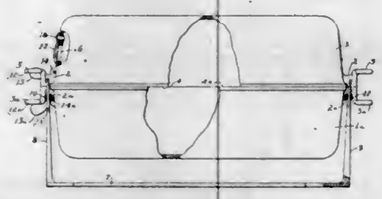
1,677,590. PRISM-LENS UNIT. CHARLES FRANCIS JENKINS, Washington, D. C. Filed July 1, 1925. Serial No. 40,839. 1 Claim. (Cl. 178—7.)

In apparatus of the class described, a fixed source of light, a screen, a lens for concentrating a point of light from the light source in a focal plane, means for scanning the screen with the said point of light as a spot on the screen comprising a prismatic ring located in the optical axis of the lens, a rotatable carrier having a plurality of lenses, each of which is succession moves across the optical axis of said first lens, and means for rotating said prismatic ring and lens carrier in synchronism.

1,677,591. SHOE STRETCHER. BENJAMIN LAVIANO, JOSEPH ALESSE, and SALVATORE CAMPAGNA, San Jose, Calif. Filed July 18, 1927. Serial No. 206,585. 5 Claims. (Cl. 12—128.3.)

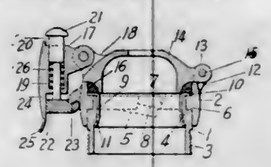
1. A shoe stretcher comprising a base, an upstanding resilient plate mounted on one end thereof, a pair of opposed spreader elements connected to the plate and normally paralleling the sides of the base, a spreader elemeut mounted on the top of the base and connected to said plate, and means for spreading the elements against the tension of the resilient plate.

1,677,592. SNAP HOOK. RICHARD B. LLOYD, Aneroid, Saskatchewan, Canada. Filed Apr. 21, 1926, Serial No. 103,640. Renewed June 1, 1928. 3 Claims. (Cl. 24—233.)



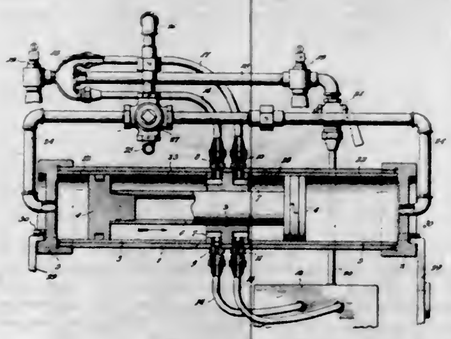
1. A snap hook including a hook member having a body and a bill, superimposed retaining tongues carried by the body of the hook and engaging the inner and outer faces of the bill of the hook, respectively, and means on the tongues adapted to be grasped to flex the tongues out of engagement with the said bill.

1,677,593. COOKING UTENSIL. JAMES MCEWAN, Palo Alto, Calif. Filed Aug. 27, 1927. Serial No. 215,860. 3 Claims. (Cl. 53—6.)



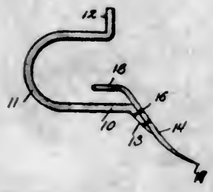
1. A device of the character described, comprising a pair of pans arranged in opposed relation to each other to form a closed receptacle, opposed complemen-

tary trunnion portions mounted on the pans, opposed and spaced finger plates mounted on the trunnion portions, detent members mounted in the opposed trunnion



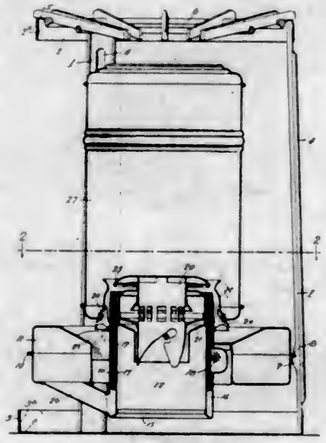
portions and finger plates, and supports for the said trunnions provided with means for engaging the detent members.

1,677,594. RADIATOR CAP. HENRY J. MESCHER, Dayton, Ohio. Filed Nov. 12, 1926. Serial No. 147,897. 2 Claims. (Cl. 220—24.)



1. In a radiator cap, a tubular member having a circumferential shoulder, a collar having a part engaging said shoulder to support said collar thereon, and a sleeve arranged within the upper portion of said tubular member, having at its upper end a flange overlapping said part of said collar to retain the same on said tubular member and having its lower portion expanded into gripping contact with said tubular member to retain said sleeve within said tubular member.

1,677,595. SUPERPRESSURE LUBRICATOR. FRANK WESLEY PARKER, Boise, Idaho. Filed Mar. 26, 1927. Serial No. 178,746. 6 Claims. (Cl. 184—55.)

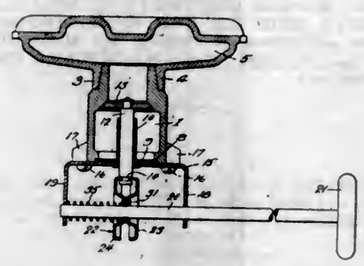


1. A lubricator of the character specified comprising a cylinder, a partition dividing the cylinder into chambers, tubes snugly fitted within the chambers and confining the partition between their inner ends, pistons in the chamber, means connecting the pistons and passing through the said partition, means for supplying pressure to opposite ends of the cylinder, induction and eduction pipes connected with the inner ends of the said chambers, valves for controlling the flow through the induction and the eduction pipes, and a distributing pipe in communication with the said eduction pipes.

1,677,596. CULTIVATOR TEETH. ALFRED J. PETERSON, Eland, Wis. Filed Sept. 25, 1926, Serial No. 137,739. Renewed June 7, 1928. 5 Claims. (Cl. 97—201.)

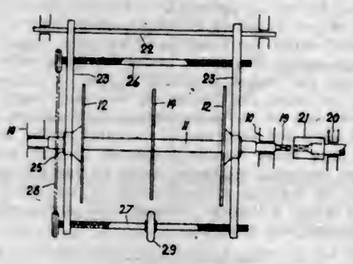
1. A device of the character described comprising a support standard having an intermediate portion offset rearwardly, and a sub-surface blade rigidly secured to the lower forward end of the standards disposed at an angular position having its lower end sharpened and projecting forwardly and its upper end extending rearwardly and disposed in a horizontal plane.

1,677,597. OIL STOVE. MARC RESEK, Cleveland Heights, Ohio, assignor to Perfection Stove Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 12, 1925. Serial No. 1,819. 5 Claims. (Cl. 126—45.)



1. A stove comprising a top member, a bottom member, legs having their upper and lower ends detachably connected to said members, and a burner structure supported solely by and between the legs and detachably connected thereto, said burner structure serving to maintain the legs in such position as to prevent their disconnection from the top and bottom members.

1,677,598. VALVE. MARC RESEK, Cleveland Heights, Ohio, assignor to Perfection Stove Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 21, 1927. Serial No. 162,529. 20 Claims. (Cl. 251—40.)

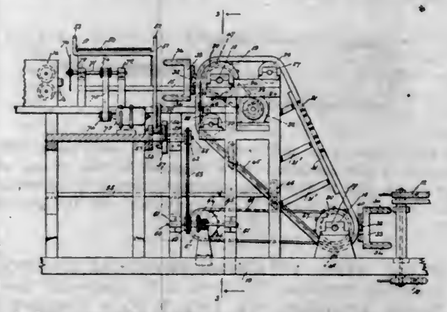


10. In a device of the character set forth, the combination of a reciprocable stem, a valve member having connection therewith, a spindle supported transversely

of the axis of reciprocation of said stem, a cam on said spindle comprising opposed sections having inwardly directed peripheral flanges, the spindle having

a groove in which said flanges engage, and means tending to urge the cam into frictional engagement with the stem.

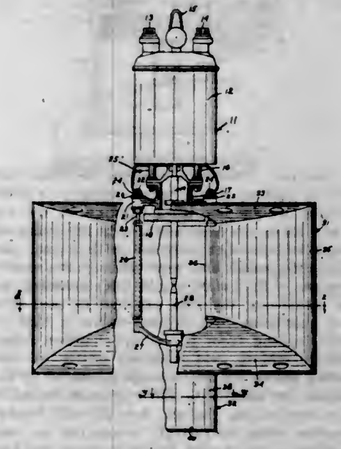
1,677,599. METHOD AND MACHINE FOR THE PRODUCING OF TIGHTLY-COILED PAPER. FREDERIK SCHADE, Copenhagen, Denmark. Filed Feb. 9, 1927, Serial No. 166,889, and in Denmark Feb. 9, 1926. 6 Claims. (Cl. 242—55.)



1. The method of producing tightly wound rolls of paper, which comprises coiling one end of the paper web on a rotating core of fixed diameter to form a compact central portion, and exerting lateral pressure on both edges of the outer convolutions of the web to retard the rotation of the outer convolutions until the pull exerted by the compact central portion of the web is sufficient to overcome said lateral pressure.

1,677,600. CONSTRUCTION OF STREET PAVEMENTS. AUGUST E. SCHUTTE, Northboro, Mass., assignor to Warren Brothers Company, Cambridge, Mass., a Corporation of West Virginia. Filed Sept. 10, 1925. Serial No. 55,619. 3 Claims. (Cl. 94—23.)

1. A method of constructing a roadway by laying upon a suitable foundation, a relatively thick layer of a mixture composed of a mineral aggregate and bitumen, capable of supporting the load to which it is subjected, rolling, tamping and consolidating this layer until cold and solid and incapable of being further distorted; then melting by heat the superficial layer of this lower layer and then placing upon it a wear resisting thin layer, and again rolling it into unison and close contact with the bottom layer, thus producing a roadway having a lower course relatively thick and heavily compacted, an upper course relatively thin, bound and cemented together into one inseparable layer.

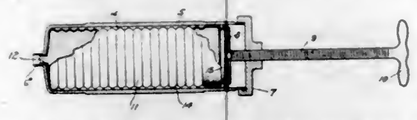


1,677,601. TRANSFER MECHANISM FOR SUGAR CANES. HENRY O. SCRANTON, Lafayette, La. Filed Oct. 12, 1926. Serial No. 141,085. 10 Claims. (Cl. 146—81.)

1. In a transfer mechanism, a conveyer device operating to move the cover longitudinally of the machine, and a rocking distributing device arranged to the rear of the conveyer device and operating to slide the canes laterally to the right and to the left of the machine alternately when discharged by the said conveyer device.

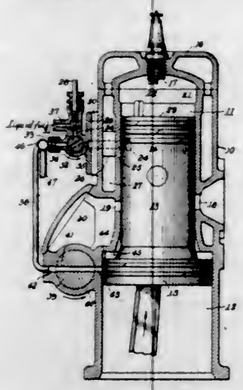
5. A transfer mechanism as set forth in claim 1, and having also mean for cutting off the tops of the canes while being slid laterally.

1,677,602. ARC LAMP. WILLIAM C. SPIETH, Geneva, Ohio. Filed June 24, 1927. Serial No. 201,154. 19 Claims. (Cl. 240—103.)



1. A reflector for use with an arc lamp of a type having vertically extending members flanking the arc on the two sides of the arc, comprising a top, a base, and a lateral wall connecting said top and said base, and provided with resilient fingers adapted to resiliently clamp said members to hold said reflector supported on said lamp quickly detachable therefrom.

1,677,603. GREASE-GUN GREASE CONTAINER. SVEND A. STEEN, Milwaukee, Wis., assignor to Wadhams Oil Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 3, 1924. Serial No. 747,569. 1 Claim. (Cl. 206—56.)



A grease gun grease container, comprising a cylindrical tubular lubricant container entirely closed at one end and formed of easily collapsible metal, said container having

one end closed and at its opposite end having a nozzle of a size and shape to fit within the nozzle of the grease gun but not extending therethrough, said container also having circumferential fold creases which engage the inner wall

of the grease gun and with the closed end outer side portion of the container being engaged by the piston of the grease gun to force the lubricant from said container and through the nozzle of the container and the grease gun.

1,677,604. FUEL INTAKE FOR TWO-CYCLE ENGINES. ALBERT B. STREETER, New York, N. Y., assignor to Dual Motors Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 7, 1925. Serial No. 13,671. 1 Claim. (Cl. 123—67.)

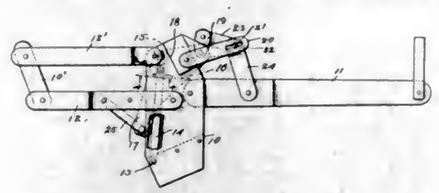
In an internal combustion engine, the combination of an explosion chamber and a pump chamber, a differential piston having its smaller head working in the explosion chamber and its larger head working in the pump chamber, said combustion chamber provided with a fuel inlet port intermediate its length and controlled by the smaller head of the piston, a fuel metering device including a rotary valve for measuring the fuel supplied to said inlet port, means for supplying fuel to said valve, a high pressure air conduit leading from the pump chamber adjacent its high pressure end to said metering device to blow from the metering device the fuel charge measured by the valve and to eject the same into the explosion chamber, a rotary valve controlling the air flow in said conduit, said rotary valves being operatively connected to operate in timed relation to the piston travel to cause the high pressure air to eject the fuel into the explosion chamber when the fuel inlet port is uncovered.

1,677,605. SOUND REPRODUCER. GASTON STROBINO, Paterson, N. J. Filed Feb. 17, 1926. Serial No. 88,835. 14 Claims. (Cl. 179—116.)

12. The combination of a resonating structure including a resonant hollow casing and an elastic vibratory element contained in the space of said casing and forming a projection therefrom vibratory independently thereof, means to vibrate said element and thereby the casing, and adjustable means to tension the casing and said element.

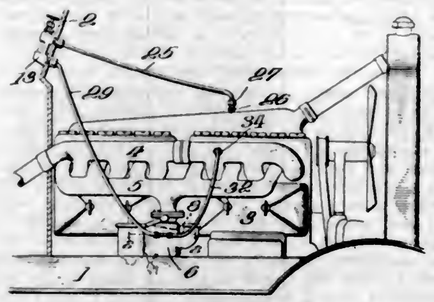
1,677,606. METHOD FOR PRODUCING WELLS AND STRAINER SHOE FOR THE SAME. THOMAS W. THORPE and GEORGE E. THORPE, Des Moines, Iowa. Filed Jan. 20, 1926. Serial No. 82,446. 6 Claims. (Cl. 166—21.)

1. The method of producing a well comprising the inserting in the ground of an outer casing until it reaches the desired depth, the inserting of an inner casing within the outer casing, the inner casing having a shoe at its lower end, the bottom of which is open, a strainer carried by the shoe, the forcing of the inner casing below the lower end of the outer casing until the strainer is exposed below the lower end of the outer casing, the withdrawal of a water bearing formation through said shoe and then removing the inner casing leaving the shoe and strainer for forming a continuation of the outer casing whereby water withdrawn through said outer casing will pass through said strainer.



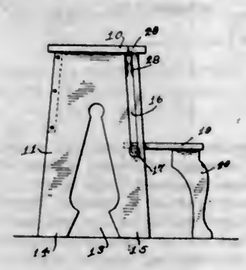
1,677,607. LOCK AND SEAL FOR SCREWS. FREDERICK H. WOOD, Chicago, Ill. Filed Sept. 24, 1926. Serial No. 139,567. 1 Claim. (Cl. 85—41.)

A staple for use in connection with a standard screw head with the usual cross slot and under cut periphery, comprising a head adapted to fit snugly into the cross slot, and prongs extending at an angle therefrom through the ends of said slot, each of said prongs having a hump on one side, and said head forming a projection on the opposite side, the projection forcing the hump into engagement with the undercut wall of the screw head.



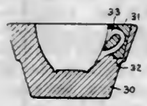
1,677,608. DRAFT EQUALIZER. JOSEPH WURZER, Carroll, Iowa. Filed Oct. 19, 1926. Serial No. 142,673. 1 Claim. (Cl. 278—8.)

A draft equalizer including a support, oppositely extending draft beams carried by the support, an angle member on the support, links connecting the angle portion of the angle member with one end of the support, a link connected with one end of the angle member and to one of said beams, links pivotally carried by the support and pivotally connected with one end of the angle member, one



of said links being slidably connected with said angle member, and links carried by the other beam and pivotally connected with the other end of the angle member.

1,677,609. ATTACHMENT FOR CARBURETORS. JOHN F. ABEL, Burlington, Iowa. Filed Mar. 19, 1924. Serial No. 700,301. 4 Claims. (Cl. 123—25.)

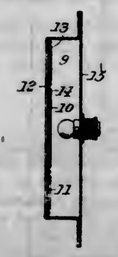


1. The combination with an internal combustion engine having a water cooling system containing water and glycerine, an exhaust manifold, intake manifold and a charge forming device connected thereto, of a Y coupling arranged to enter the carbureting passage of the charge forming device, each branch of the Y being provided with an air inlet, means for supplying glycerine mixed with water from the cooling system of said internal combustion engine to one branch of the Y coupling, and means for supplying exhaust gases to the other branch of said Y coupling from the exhaust manifold of said internal combustion engine.

1,677,610. COMBINATION STOOL AND STEPLADDER. JOSEPH H. ASSELIN, Waterbury, Conn. Filed Mar. 22, 1927. Serial No. 177,249. 2 Claims. (Cl. 228—30.)

1. In a collapsible combination stool and stepladder, a stool member, a step member adapted to be folded within said stool member and having a rod journaled in said stool member, said stool member having a resilient clip for detachably engaging said rod to hold said step member in collapsed position.

1,677,611. METHOD AND MEANS FOR SHAPING TEA-CUPS OR THE LIKE WITH INTEGRAL HANDLES. JOHN BAILEY, Cobridge, Stoke-on-Trent, England, assignor to Furnivals 1913 Limited, Cobridge, England, a British Company. Filed Sept. 9, 1927. Serial No. 218,373, and in Great Britain Jan. 14, 1927. 6 Claims. (Cl. 25—156.)



1. The process of forming a handle integral with a cup by molding comprising roughly forming by hand a clay handle and placing it in a separable handle molding member so that the ends of the handle slightly project, placing said separable member in the main molding member, and forming a cup therein in the usual well known manner, using the tool of the jolley to work the ends of said handle into the clay body of the cup while forming the same and after sufficiently drying the same inverting the mold to permit the clay cup and separable handle molding member to leave the main mold member.

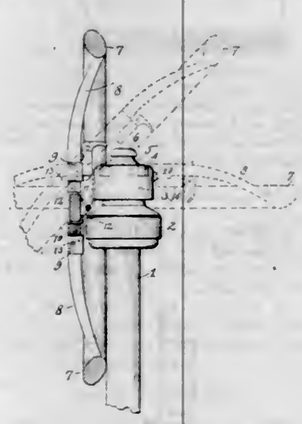
1,677,612. SHOE. CHARLES C. BLAKE, Brookline, Mass., assignor to C. C. Blake, Incorporated, Boston, Mass., a Corporation of New York. Filed Feb. 9, 1921. Serial No. 443,581. 10 Claims. (Cl. 36—17.)

1. As an article of manufacture an insole for a welt shoe comprising a sole-shaped body portion having its extreme edge upturned to form a vertical peripheral wall and a solid sole-shaped blank filling the cavity within the wall.

1,677,613. LICENSE PLATE AND METHOD OF DISPLAYING THE SAME. LOUIS L. BARR, Pittsburgh, Pa. Filed Aug. 18, 1927. Serial No. 213,811. 1 Claim. (Cl. 40—133.)

Apparatus for displaying license tags comprising a base plate having holes for the reception of attaching members, a casing of box-like form open at one side, means for securing said open side to the base plate, that wall of the casing opposite to said opening having

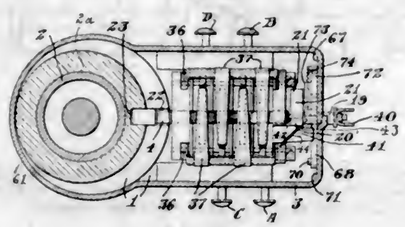
three vertically-spaced cut-out portions, a frame having two openings opposite to two of said cut-out portions, a frame having an opening opposite to the other of said cut-out portions, an upper and a lower marginal flange on the last-named frame, for engaging the edges of a license plate, upper, lower and intermediate flanges on the first-named frame for engaging the edges of two license plates and supporting them in vertically-spaced relation, and means for separately connecting said frames to the casing.



1,677,614. PROCESS OF MAKING A SIZE OR DRESSING. AUGUSTE BOIDIN, Seclin, France, and JEAN EFFRONT, Brussels, Belgium. Filed Feb. 24, 1925. Serial No. 11,329. 8 Claims. (Cl. 127—35.)

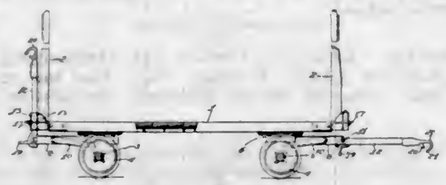
1. The process of producing sizing material, which comprises directly subjecting starch material to the action of a suitable starch-liquefying bacterial enzyme until at least a part of the starch has been liquefied, and then stopping the enzyme action.

1,677,615. PREPARED STARCH MATERIAL AND PROCESS OF MAKING IT. AUGUSTE BOIDIN, Seclin, France, and JEAN EFFRONT, Brussels, Belgium. Filed Feb. 24, 1925. Serial No. 11,330. 8 Claims. (Cl. 127—35.)



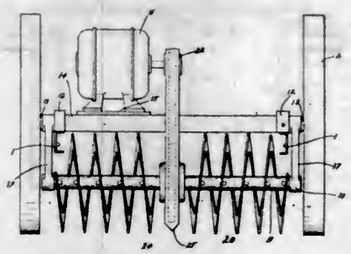
1. The process of making a dry starch product suitable for the preparation of sizings, which consists in combining a preparation of enzymes, made by micro-organisms capable of liquefying starch, and a neutral starch, and controlling the relative moisture content of the enzyme preparation and the starch so that the resultant product will not contain more moisture than an air-dried product.

1,677,616. STEERING WHEEL. ADELBERT E. BRONSON, Cleveland, Ohio, assignor to The Dill Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 14, 1925. Serial No. 2,248. 5 Claims. (Cl. 74—33.)



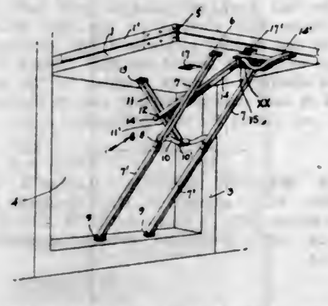
1. A steering wheel construction comprising a member which is adapted to be secured to a steering post, a steering wheel having a rim and spokes, a member to which the inner ends of the spokes are connected, said member being adapted to fit over a portion of the first mentioned member, a hinge member having a portion thereof secured to the first mentioned member, and another portion thereof pivotally connected with the steering wheel, said hinge members folding into engagement with each other when the steering wheel is in operative steering position.

1,677,617. SAFETY LOCK. HENRY N. CARRAGHER, Fall River, Mass. Filed Nov. 23, 1927. Serial No. 235,258. 6 Claims. (Cl. 70—54.)



1. In a keyless combination lock, a spring-operated disc with teeth along its circumference; a spring-operated dog to engage said teeth, said dog being pivoted, and having in its free end-portion a holding slot; a spring-operated distance-holder, pivoted at end and having a pin in its free end-portion, said portion normally to engage said groove in said dog and hold said dog out of engagement with said teeth, a slidable plate, normally operated in one direction, and a spring to move it in an opposite direction, said plate having a pawl to engage and disengage said teeth and actuate said disc, and a cam-surface in engagement with said pin in said distance-holder to cause said holder to disengage said slot and permit said dog to pass by said member to engage said teeth on said disc; and means to cause said dog, against the action of its spring, to disengage said teeth, the free end-portion of said dog engaging the free end-portion of said distance-holder, forcing it down, and passing by it, so that the free end-portion of the holder may, by the action of its spring engage said groove in said dog and hold said dog free from said teeth, and allow the spring of said disc to move said disc.

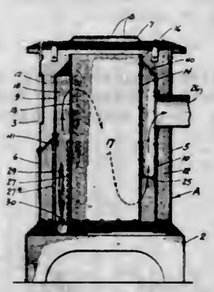
1,677,618. INDUSTRIAL TRAILER. CHARLES G. CLEMENT, Edgerton, Wis., assignor to Highway Trailer Company, Edgerton, Wis., a Corporation of Wisconsin. Filed Aug. 24 1925. Serial No. 51,901. 5 Claims. (Cl. 280—33.5.)



1. In a dirigible truck, a body, a tongue or drawbar connected for steering the wheels at one end and jointed at a point closely adjacent the vertical plane of the end of the body and at a suitable distance from the steering pivot for folding of its end portion upwardly against said end of the body, vertically extended rigid guard flanges on the end of the body between which said tongue is received for holding the wheels against steering motion and a spring catch associated with said guard flanges for retaining the tongue in upright position between said flanges.

1,677,619. SAND-MIXING MACHINE. RUSSELL H. CLEMINSHAW, Shaker Heights, Ohio, assignor to The Cleveland Electric Motor Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 17, 1927. Serial No. 176,011. 2 Claims. (Cl. 259—144.)

2. An apparatus of the character described having in combination a wheeled support, a sand mixing cylinder mounted on said support, and non-rotatable means engaged centrally with said mixing cylinder and projecting downwardly to provide a sand distributing means centrally of said cylinder.

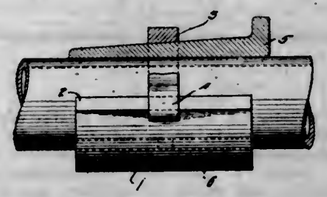


1,677,620. FOLDING BRACE. EARLE W. CUMMINGS, Santa Barbara, Calif., assignor of one-half to Santa Barbara Lumber Company, Santa Barbara, Calif., a Corporation of California. Filed Aug. 23, 1926. Serial No. 130,894. 3 Claims. (Cl. 45—47.)

2. In a folding article of the character described, a folding strut brace comprising two channel sections arranged in endwise mortised relation and laterally offset whereby the legs of one channel section lie to the same sides of the respective legs of the other channel section, the legs of the two sections transversely pivoted together, and the end of the web of one section being offset to lie upon the web of the other section when the sections are unfolded to bracing position.

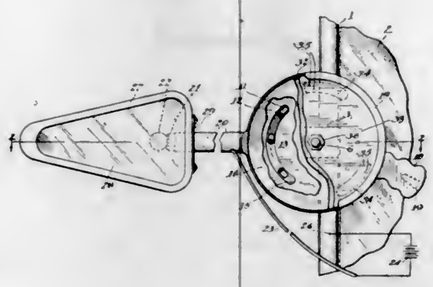
1,677,621. COMBINATION CONVECTION AND RADIANT HEATER. SAMUEL J. DELANEY, Oakland, Calif. Filed Mar. 23, 1925. Serial No. 17,511. 2 Claims. (Cl. 126—92.)

1. A heater of the character described comprising a main exterior casing vertically disposed and elongated, and rectangular in shape in cross section, a base member forming a support therefor, a perforated plate forming a cover, an intermediate casing supported by the base and interspaced with relation to the exterior casing to form an air heating passage in communication with air inlet openings formed in the base and with the perforated cover, an inner casing disposed within the intermediate casing and interspaced therefrom to form a front passage, a rear passage and a pair of side passages, a gas burner, means for directing the products of combustion liberated by the burner upwardly into the front passage, baffle members directing the products of combustion downwardly through the side passages and then upwardly through the rear passage, and a vent pipe connected with the upper part of the rear passage.



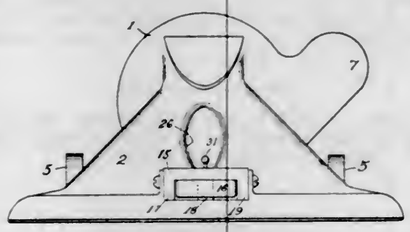
1,677,622. TOOL. EMILE JOSEPH DREUIL, New Orleans, La. Filed Oct. 19, 1926. Serial No. 142,772. 2 Claims. (Cl. 173—359.)

1. A tool, for manipulating a two-part electric screw plug, one part of the plug having prongs, comprising a stem having a disk extending angularly from one end thereof and adapted to be disposed between the parts of the plug and having an angular opening snugly receiving the said prongs therethrough to permit rotation of the plug upon rotation of the tool, and an apertured handle on the other end of the stem receiving an electric cord therein.



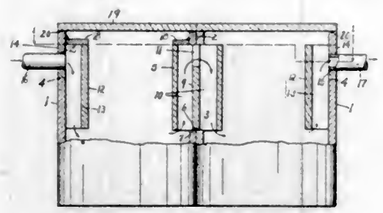
1,677,623. PATCH CLAMP FOR PIPES. OLIVER P. EILAR, Lawrenceville, Ill. Filed Apr. 16, 1927. Serial No. 184,264. 1 Claim. (Cl. 24—25.)

A patch clamp for a pipe comprising a flanged semi-cylindrical saddle, a patch interposed between said saddle and said pipe adapted to stop a leak in said pipe,



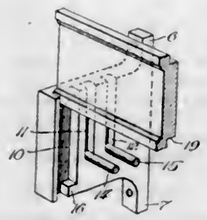
a clamping member having grooves, said grooves adapted for interlocking engagement with the flanges of the saddle and a wedge positioned between the pipe and clamping member to frictionally hold the assembled members tightly in position.

1,677,624. TRAFFIC SIGNAL FOR MOTOR VEHICLES. CLAUDE B. FERRO, San Bernardino, Calif. Filed Nov. 6, 1924. Serial No. 748,108. 6 Claims. (Cl. 117—327.)



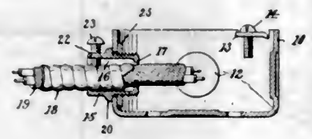
1. A traffic signal comprising in combination a fixed conducting disc, an oscillating conducting disc, means to secure the fixed disc to a vehicle and pivotally mount the oscillating disc in relation to the fixed disc, a stationary insulating disc between the fixed and oscillating discs and having a slot therein, a handle and semaphore connected to the oscillating disc, a lamp to illuminate the semaphore, an electrical circuit to and from the lamp, electrical make and break contacts on the fixed and oscillating disc located in the slot in the insulating disc and actuated to make and break the electric circuit by movement of the handle.

1,677,625. SUCTION CLEANING DEVICE. WALTER A. FRANTZ, Cleveland, Ohio, assignor to The Apex Electrical Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 10, 1924. Serial No. 742,757. 7 Claims. (Cl. 15—13.)



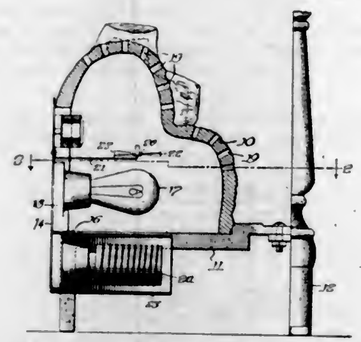
1. The combination with a suction cleaner casing having a collecting nozzle, of an agitating device therein, an electromagnetic member rigidly connected to said agitating device, a companion electromagnetic member carried by said casing in operative magnetic relation with said first member, and means independent of said electromagnetic members for producing suction in said nozzle.

1,677,626. SEPTIC TANK. JOSEPH FRAPPY, Stirling, Ontario, Canada. Filed Oct. 26, 1927. Serial No. 228,867. 12 Claims. (Cl. 210—6.)



1. A septic tank comprising cylindrical containers having flattened side faces with openings therein disposed in opposed abutting relation with their openings registering, said containers also having side openings in their walls opposite said flattened faces, a combined locking and passage member disposed vertically in said registering openings and fitting therein to constitute a locking member for said containers, said passage member having a vertical partition aligned with the abutting walls of said containers and having an opening at the top thereof providing a pair of vertical passages connected at the top and coacting to provide a return passage connection for said containers, inlet and discharge conduit baffle members of channel cross section disposed on the inner sides of said containers to coact with the walls thereof providing vertical inlet and discharge passages, said baffle members having outer wall portions at the tops thereof conformed to and secured within said side openings in said container walls and having openings therein to receive inlet and discharge conduits, closures for the top of the passages of said passage member and of the inlet baffle member, and covers for said containers.

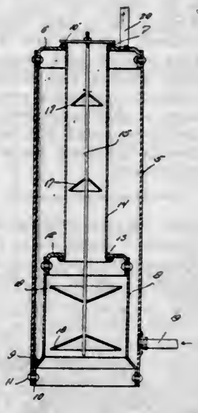
1,677,627. WINDOW CORNICE. HARVEY L. GOODROW, Hinsdale, Ill., assignor to Wm. Goodrow Moulding Co., Chicago, Ill., a Corporation of Illinois. Filed Aug. 24, 1927. Serial No. 214,993. 2 Claims. (Cl. 156—13.)



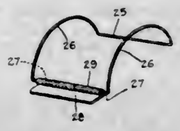
1. In a window cornice in which is comprised a face moulding board, a support therefor comprising an end bracket adapted for rigid attachment to a wall, said bracket vertically slotted from its upper edge with two of the slots terminating short of the lower edge and the third slot which is forwardly of the others being extended clear through to the lower edge thereof, a ledge extending part way across the third slot adjacent the lower edge of the bracket to provide a rest, and the face moulding board being rabbeted whereby to provide a shoulder which may rest upon the ledge when the moulding is slid vertically into said forward slot, the upper and lower edges of the moulding board disposed flush with the face of the end bracket, substantially as described.

1,677,628. CABLE CONNECTER FOR OUTLET BOXES. HARRY V. GOULD, Bridgeport, Conn. Filed Jan. 12, 1927. Serial No. 160,595. 1 Claim. (Cl. 247—25.)

A cable connecter comprising a cylindrical sleeve, an external annular flange intermediate its ends and including a series of pointed projections formed upon one side of said flange, threads upon the outer periphery of one end portion of said sleeve adjacent said points, a nut fitted upon the threads, and means upon the other end of said sleeve for clamping a cable.



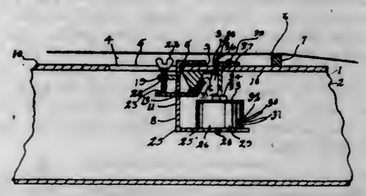
1,677,629. ATTACHMENT FOR LOGS AND GRATES. FRED GEORGE GROSS, Chicago, Ill., assignor to Mrs. Clara Schneider, Chicago, Ill. Filed Aug. 24, 1925. Serial No. 51,921. 1 Claim. (Cl. 219—45.)



In an electric log the combination of end walls and apertured top and front walls, with a removable back having an electric bulb and socket and a heating socket secured to and projecting forwardly from the back, said back having a downwardly extending portion to provide an exterior mounting for the heating socket, said bulb being mounted within the log in a position that no light rays pass directly through said apertured top and front walls, and conductors connecting said bulb and heating coil, whereby the entire lighting and heating elements can be easily and quickly assembled and dismantled.

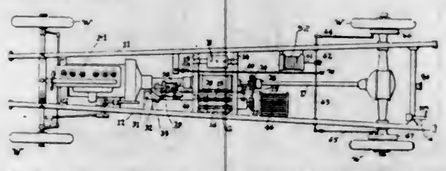
1,677,630. STEAM BOILER. CLARENCE HENRY HAAS and LEWIS JOHN MITCHELL, Warren, Ohio. Filed Feb. 19, 1926. Serial No. 89,452. 2 Claims. (Cl. 122—155.)

1. A vertical single flue boiler having an annular steam and water chamber surrounding said flue and coextensive therewith, the base portion of said chamber being of restricted width from inner to outer wall, and a baffle disposed in said flue, said baffle including a deflecting member in the form of an imperforate cone-shaped plate with its apex uppermost, said member located adjacent the flue inlet and being of a diameter approximating that of the flue.



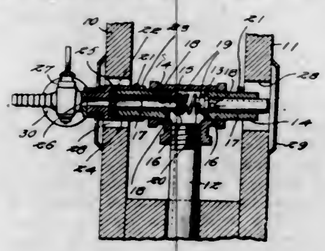
1,677,631. ANTIBACKLASH ATTACHMENT FOR REELS. LOUIS A. HAAS, St. Paul, Minn. Filed Aug. 1, 1927. Serial No. 209,859. 5 Claims. (Cl. 242—84.5.)

2. An article of the class described, including a length of wire bent into four-sided shape to form a head member over which a line from the spool of a reel may pass, arched arms bent back from said head member and adapted to ride the flanges of the reel spool, and aligned butt-pieces bent inward from said arms in parallelism with said head member, said article further including a fulcrum member fitted on said butt-pieces, said fulcrum member being adapted to engage a tie-member of the reel frame and limit the forward movement of the article within a reel.



1,677,632. SOUND-WAVE TRANSMITTING AND AMPLIFYING DEVICE. WALTER HARDEN, Cincinnati, Ohio. Filed Mar. 21, 1927. Serial No. 176,863. 5 Claims. (Cl. 179—1.)

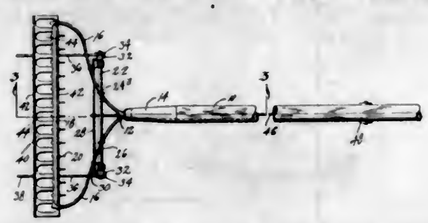
1. The combination with a stringed musical instrument having a rib and having a sounding-board, of a U-shape support comprising a link having an upper and a lower



leg, an arm pivotally connected with said link, a stud fixed to the upper end of said link and having a hole therein, a thumb-screw threaded in said hole and adapted to engage an end of said arm, thereby forcing the other end of said arm in engagement with said rib, thereby maintaining said upper leg in fixed relation adjacent the top of said instrument, whereby said U-shape support is maintained in fixed position with respect to said instrument, a transmitter fixed to said lower leg and having a diaphragm, a vibration conductor operatively connected with the diaphragm of said transmitter and said sounding-board, and means connected with said transmitter to reproduce and amplify the sound waves produced by the strings of said instrument.

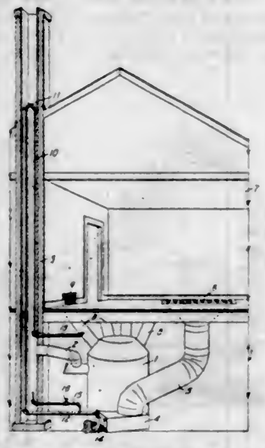
1,677,633. POWER BRAKE FOR MOTOR VEHICLES. ARTHUR W. HARRISON, Eagle Rock, Calif., assignor of one-half to Thomas D. Sexton, Los Angeles, Calif. Filed Nov. 20, 1924. Serial No. 751,078. 9 Claims. (Cl. 188—159.)

5. An automobile brake comprising an electric generating device associated with the drive mechanism of an automobile, a load for said generating device, and means including a lever located in the driver's compartment of the automobile for varying the field resistance of said generating device.



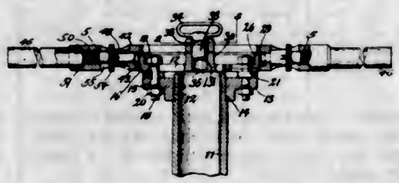
1,677,634. GAS OUTLET. EDGAR W. HORTON and HORACE G. RICHARDSON, San Antonio, Tex. Filed July 2, 1926. Serial No. 120,094. 1 Claim. (Cl. 284—18.)

A gas outlet including a gas conduit, a T on an end of the conduit, a sleeve screwed into each of the lateral branches of the T and having the inner end of the bore thereof formed with a beveled seat, said sleeve having a radial pin outwardly of the branch of the T, a hollow stem slidable in the bore of each of the sleeves and having its outer end open and its inner end closed, said stem having lateral openings in its closed end and a peripheral beveled valve forming flange, seated on said seat, a coil spring disposed between the inner ends of the stems and having its ends encircling the said stems and bearing against said valve flanges whereby to yieldably maintain the flanges on the seats, the outer end of each of said sleeves being arranged to receive thereon a bayonet-slotted cap provided with a threaded portion for reception of a valved nipple.



1,677,635. CLEANER ATTACHMENT FOR RAKES. FLETCHER A. HOWE and NIELS C. BANG, Spencer, Iowa. Filed May 31, 1927. Serial No. 195,206. 3 Claims. (Cl. 55—146.)

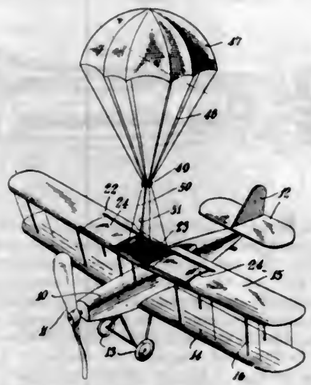
1. An attachment for rakes comprising a cross rod, means for mounting said rod on a rake, said means comprising a half round rod extending around portions of the rake and said cross rod, the ends of said half round rod being threaded for forming a bolt when brought adjacent each other and a nut on said ends, a cross member having right-angled extensions at its ends terminating in loops rotatably mounted on said rod, said loops having



parallel arms projecting away therefrom, a tooth cleaning grid secured to said last-named arms spaced from the extreme free ends thereof formed with a plurality of elongated openings, a link member pivoted to said second-described rod, a yoke adapted to be pivoted to a rake handle and to said link having a projecting handle.

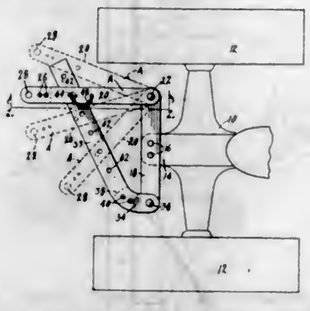
1,677,636. FLUE HEATER. WILLIAM D. JOHNSTON, Independence, Mo. Filed Oct. 28, 1927. Serial No. 229,350. 8 Claims. (Cl. 126—110.)

1. In combination with a smoke flue and a hot air pipe of a heating system, a heating device comprising a tube connected with the hot air pipe and having a portion provided with a bend extending in the flue, and a fan adapted for impelling air through the tube to the hot air pipe.



1,677,637. PIPE-FLANGE WRENCH. WILLIS H. JONES, Buffalo, N. Y. Filed June 18, 1925. Serial No. 37,938. 10 Claims. (Cl. 81—63.)

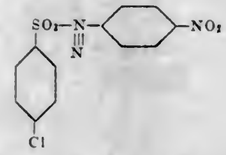
1. A pipe flange wrench comprising a circular body provided with a plurality of radial slots which are arranged at differently spaced distances from each other



in a direction circumferentially of the body, bolts adapted to pass through some of the said slots and the pipe flange to be turned, and a ratchet mechanism for turning said body.

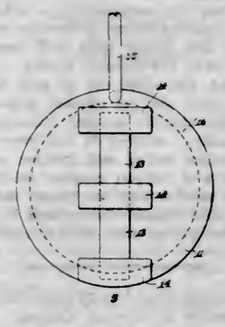
1,677,638. SAFETY DEVICE FOR AIRPLANES. ALBERT JOST, Yonkers, N. Y. Filed Mar. 17, 1927. Serial No. 175,984. 4 Claims. (Cl. 244—21.)

1. An airplane comprising a fuselage having upper and ower wings, a chamber in the upper wing having an opening in its upper wall, a parachute anchored in said chamber and normally folded therewithin, covers for the opening slidable outwardly in the upper wing to permit egress of the parachute, means to release said covers from the fuselage, and means for directing air to the parachute.



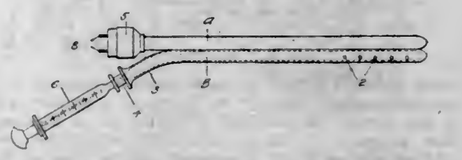
1,677,639. TRACTOR HITCH. MARTIN T. KAMERICK, Pella, Iowa. Filed Sept. 12, 1927. Serial No. 218,975. 1 Claim. (Cl. 280—33.44.)

A tractor hitch comprising a bar adapted to be secured to a fixed portion of a tractor at right angles to the line of draft of the tractor, a draw bar pivotally mounted upon one end of said first bar, said draw bar being formed of two spaced similar members straddling said first bar at one end, a filler block between the other ends of said members, said draw bar having an opening therein for connection to an implement to be drawn, a link pivoted at one end to the other end of said first bar, said link having one portion bent at an angle and having another portion slidably mounted between the two members of said draw bar, said link having a plurality of spaced openings therein adapted to selectively register with aligned openings formed in the draw bar and a pin element for locking said link relative to said draw bar and for forming a rigid tractor hitch.



1,677,640. SOLID DIAZOSALT. FERDINAND KELLER, Offenbach-on-the-Main-Burgel, and KARL SCHNITZSPAHN, Offenbach-on-the-Main, Germany assignors to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 11, 1927, Serial No. 167,580, and in Germany Feb. 12, 1926. 4 Claims. (Cl. 260—69.)

4. As a new product the solid diazosalt of the formula:

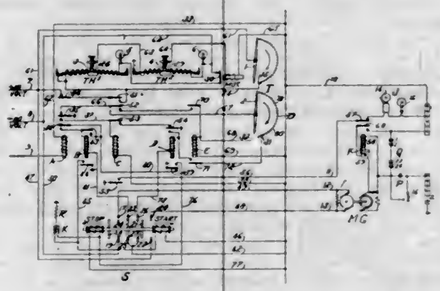


being an almost colorless and well soluble powder and being substantially identical with a compound obtainable by double decomposition reaction of mineral acid diazosalt solution of para-nitraniline either with a parachlorobenzene sulfonic metal salt or with free parachlorobenzene sulfonic acid.

1,677,641. DRAINING PAD. JUSTUS R. KINNEY, Jamaica Plain, Mass. Filed Apr. 24, 1926. Serial No. 104,318. 5 Claims. (Cl. 128—275.)

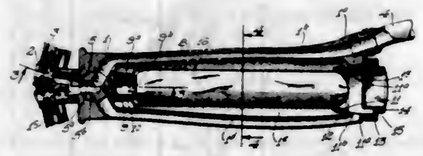
1. An imperforate disk having secured to the bottom thereof an annular inflatable member and provided with a draining passage extending through the walls of said inflatable member and adjacent the bottom surface thereof.

1,677,642. INTERNAL APPLICATOR. WILLIAM J. KIRK, Wellsburg, W. Va. Filed Dec. 9, 1926. Serial No. 153,558. 3 Claims. (Cl. 128—255.)



1. An applicator of the class described consisting of a double barrelled elongated multi-tubular body tapered at its outer end providing a common entering terminal and having a middle longitudinal partition forming a closed heater cavity and a perforated medication cavity, a heater in the heater cavity, and a syringe connected with the medication cavity.

1,677,643. COUNTERBALANCING DEVICE FOR WINDOW SASHES. NELS A. LEREN, Minneapolis, Minn. Filed Nov. 21, 1925. Serial No. 70,501. 8 Claims. (Cl. 16—197.)

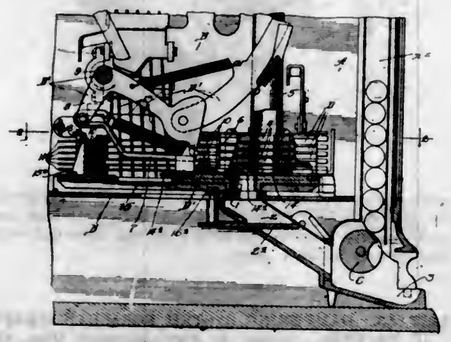


1. In combination with a window frame and upper and lower sliding sashes therefor, counter-balancing mechanism having in combination a guide member at the top of said window frame, a flexible member secured at one end to said upper sash and passed over said guide member, said lower sash having a vertical seat in a side thereof, the other end of said flexible member extending into said seat, a tubular member about the lower end of said flexible member slidable in said seat, a contacting member secured to the lower extremity of said flexible member below said tubular member, and a coiled spring on said tubular member interposed between said contacting member and the upper end of said seat, and a lock for holding said lower sash in a plurality of positions relative to the side of said window frame.

1,677,644. AUTOMATIC BATTERY-CHARGING SYSTEM. CLARENCE E. LOMAX, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Aug. 18, 1924. Serial No. 732,639. 11 Claims. (Cl. 171—314.)

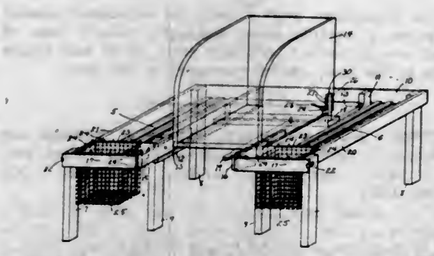
1. In combination, a storage battery provided for an equipment which intermittently draws current from said battery, there being periods of times of variable duration during which no current is required, charging means for said battery, a switching device for automatically connecting said charging means when current is required and for causing its disconnection during periods in which no current is required, and means comprising a plurality of electrically operated apparatuses including a stepping device for automatically delaying the operation of said switching device for a predetermined period of time.

1,677,645. SUDS-PRODUCING MEANS. THURE A. LUTHANDER, San Diego, Calif. Filed Dec. 3, 1924. Serial No. 753,655. 5 Claims. (Cl. 299—84.)



1. In a means of the class described, the combination with a liquid conducting means provided with a two-way valve, the one position thereof permitting unobstructed flow of the liquid in said conductor means, other conductor means adapted to be connected with said first mentioned conductor means through said valve when the same is shifted to the other position, an unobstructed flexible and contractible container adapted to fit snugly around a bar of soluble substance and communicating at one end with said other conductor means, and a third conductor means adapted to connect the other end of said container with said first mentioned conductor means beyond said valve.

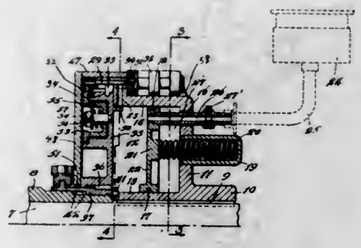
1,677,646. STORMPROOF AWNING. RAYMOND L. MEYERS, Miami, Fla. Filed Dec. 15, 1926. Serial No. 155,073. 1 Claim. (Cl. 189—35.)



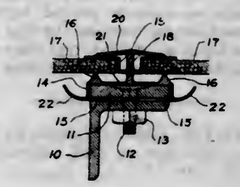
A combined awning and shutter comprising a channeled frame adapted to be secured to a window frame, an angular roller support in transverse position at one end of the frame, a metal curtain including narrow plates movably connected together and adapted to be engaged with the faces of the roller upon rotation of the latter, wider plates connected together and to the narrow plates and arranged to extend downwardly and outwardly from the channeled members of the frame to form an awning when said narrow plates are wound on said roller, and a pivotally mounted yoke carried by the channeled side members of the frame and connected with the outer end of the outermost of the wider plates, all of said plates being adapted to lie within the channels of the frame to form a protective shutter for a window when the narrow plates are wound from the roller.

1,677,647. SAFETY-CATCH DEVICE. FRED L. MILLS, Oak Park, Ill., assignor to Mills Novelty Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 11, 1926. Serial No. 80,569. 6 Claims. (Cl. 312—84.)

1. In a machine of the character set forth, the combination with a coupon magazine and pay-out mechanism associated therewith comprising a stack of pay-out slides, springs for actuating said slides, and latch-members associated with said slides, of a safety-catch device lightly held normally adjacent the path of the pay-out slides and adapted to be thrown into the path of the slides in position to catch the slides in partially retracted position when the machine is subjected to jarring action.



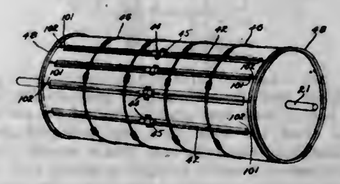
1,677,648. LAUNDRY-CLASSIFYING TABLE. ANTHONY T. MOORE, New Haven, Conn., assignor to Perrys Incorporated, Waterbury, Conn., a Corporation. Filed Nov. 18, 1927. Serial No. 234,092. 4 Claims. (Cl. 211—10.)



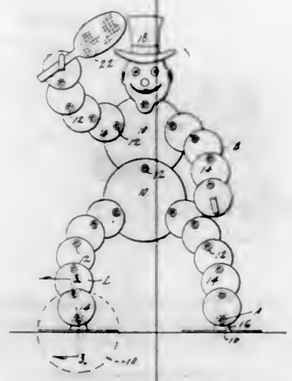
1. A laundry classifying table, comprising two table parts with supports therefor, a hopper pivotally mounted between said tables near the forward ends thereof, and a locking-bar pivoted to the underside of said hopper near its rear end and adapted to be turned into engagement with the inner sides of said tables when the hopper is in its raised position, said hopper provided with handles by which it may be raised or lowered.

1,677,649. LUBRICATING MECHANISM FOR SPROCKET CHAINS. EDMUND C. MORGAN, deceased, New York, N. Y., by Olive Eugenie Morgan, executrix, New York, N. Y. Filed Aug. 13, 1923. Serial No. 656,988. 28 Claims. (Cl. 184—15.)

1. In lubricating apparatus for chains of mining machines, the combination with a sprocket wheel, of lubricating mechanism mounted concentrically upon said sprocket wheel, and means for directing lubricant from such lubricating mechanism endwise of and in alinement with the axes of the pivotal bearings between links of the chain meshing with said sprocket wheel by feeding the lubricant axially into the interior of the pivot pins.

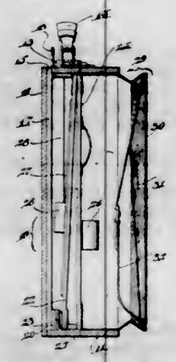


1,677,650. GLAZING BAR. ELMER L. NELSON, Chicago, Ill. Filed July 28, 1924. Serial No. 728,604. Renewed Dec. 19, 1927. 5 Claims. (Cl. 108—16.)



1. A glazing bar comprising a flat bar, a supporting member, and a glazing member partially surrounding the flat bar and having lips firmly secured between said flat bar and supporting member, said glazing member having means for supporting a pane of glass and means for sealing said glass.

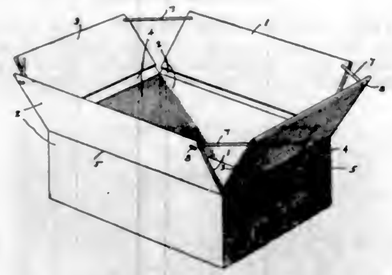
1,677,651. ELECTRIC ROASTER. WILLIAM J. NOONAN, Mansfield, Mass. Filed Feb. 12, 1927. Serial No. 167,719. 7 Claims. (Cl. 219—19.)



4. A heating drum made of heat conducting material having a plurality of electric heating elements mounted on its periphery longitudinally thereof and in electrical contact therewith, means for clamping each of the said heating elements to the drum substantially midway of the length of the heating elements to prevent longitudinal movement of the heating elements at the said midway clamping point, and hoops which encircle the drum and all the attached heating elements and bind them sufficiently to hold them in contact with the drum yet permitting longitudinal expansion and contraction on opposite sides of the midway clamp.

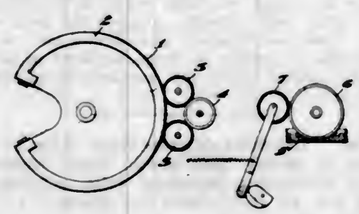
1,677,652. FIGURE TOY. CLYDE A. PECK, Newton, Iowa. Filed July 20, 1927. Serial No. 207,105. 5 Claims. (Cl. 46—40.)

5. A toy comprising a series of flat substantially disc-like members including larger members forming the body and head of a toy, the body and head members being pivoted together, and a series of pluralities of smaller disc-like members successively pivoted together to each other and to the body for forming the legs of a toy, the respective discs being so pivoted that they may be frictionally held in any position to which they are adjusted.



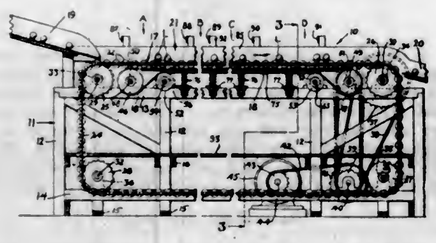
1,677,653. UTILITY CASE. FRANK PHILIPPI, Philadelphia, Pa. Filed Apr. 8, 1927. Serial No. 181,913. 5 Claims. (Cl. 190—10.)

1. A utility case including a body part, guides fixed in the body part, a desk tray slidable behind the guides and extendible from the body part, an accessory carrying member hinged to the body part, and a second accessory carrying member hinged to said member and to the desk tray, whereby extending the desk tray will cause the accessory carrying members to stand at an angle to the body part and retracting the desk tray will cause said members to fold together.



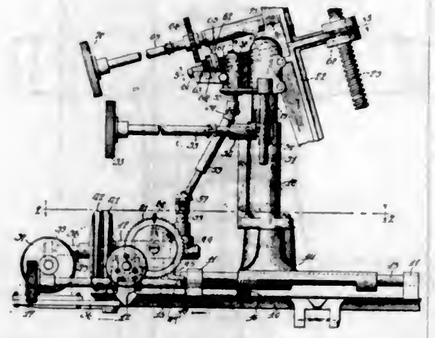
1,677,654. DISPLAY CONTAINER. EDMUND M. PITTS, Fresno, Calif., assignor to Sunland Sales Cooperative Association, Fresno, Calif., a Corporation of California. Filed Jan. 19, 1927. Serial No. 162,038. 4 Claims. (Cl. 206—44.)

4. A rectangular cardboard box provided with flaps extending from its four sides adapted for covering the top of the box, said flaps being bendable at the upper edges of the box to lie within the box to form a coverless open box, and the four vertical walls of said box being horizontally scored entirely around the box and



weakened at the corners down to the score line whereby the four sides of the box may be bent outwardly from said score line to form an outwardly flaring open box with doubled-over exposed edges.

1,677,655. DAMPENING SYSTEM FOR PLANOGRAPHIC PRESSES. ROBERT F. REED, Norwood, Ohio, and WALTER SCHOLL, Washington, D. C., assignors to The Lithographic Technical Foundation, Inc., New York, N. Y., a Corporation of Delaware. Filed Feb. 15, 1927. Serial No. 168,457. 2 Claims. (Cl. 101—148.)



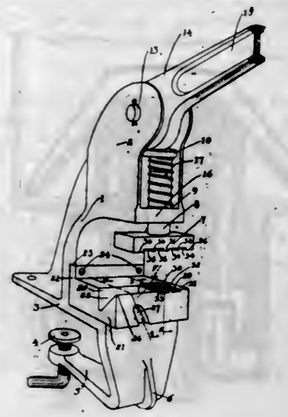
1. A lithographic press wherein the impression member comprises a metallic plate, dampening rollers, some of which are, in contact with said plate, all of said rollers being at the same electric potential as the plate.

1,677,656. SORTING TABLE. FRANK B. ROBERTS and WILLIS G. HUNTINGTON, Anaheim, Calif. Filed Feb. 12, 1927. Serial No. 167,624. 7 Claims. (Cl. 209—125.)

1. In a fruit grading device an endless conveyor including spaced rollers mounted for rotation, means for driving said conveyor and means for turning said rollers, means for driving said roller turning means and adjustable resilient means for positively causing said roller turning means to engage said rollers.

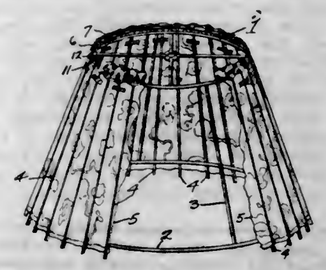
1,677,657. ARC-LAMP MOTOR FEED. ALVAH C. ROEBUCK, Chicago, Ill., assignor to The Enterprise Optical Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 17, 1922. Serial No. 545,281. 7 Claims. (Cl. 176—73.)

1. Arc lamp feeding means comprising a carbon feeding screw; a shaft operatively connected with said screw; a motor driven connection having a portion rotatably mounted on said shaft; a clutch collar rotatably mounted on said shaft and in engagement with the motor driven connection; a gear having clutch teeth fixed on said shaft; means for moving said collar into and out of operative relation with said clutch teeth and hand-operated means for driving said gear.



1,677,658. CHAIN TOOL. JAMES WEBB SAFFOLD, Cleveland, Ohio. Filed June 1, 1925. Serial No. 34,060. 3 Claims. (Cl. 81—15.)

2. In a chain tool for opening and closing the eyes of tire chain chain cross-links, a pair of relatively movable jaws having opposed jaw faces, the face of one of the jaws comprising a pair of parallel grooves and a third groove disposed at the ends of, communicating with, and disposed transversely of the said parallel grooves, and a wedge-shaped horn disposed parallel with the transversely disposed groove extending from the jaw toward the opposed face of the other jaw, said other jaw having a recessed portion adapted to receive a part of a chain cross-link, disposed between the jaws and having other portions projected into the said parallel grooves thereof.

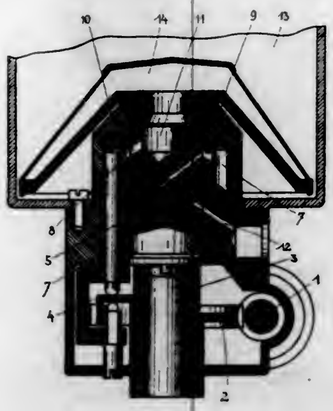


1,677,659. CHAIN TOOL. JAMES WEBB SAFFOLD, Cleveland, Ohio. Filed Feb. 26, 1926. Serial No. 90,782. 10 Claims. (Cl. 81—15.)

10. In a chain tool for opening and closing the eyes of a cross-chain link of anti-skid chains, a pair of jaws, one of said jaws a stationary jaw and the other said jaw movable relative to the stationary jaw, means for moving the movable jaw, said stationary jaw having a recess extending transversely on the upper face, a wedge shaped horn extending upwardly from the recess

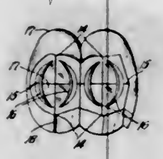
and a groove in the horn, said groove adapted to receive and retain a link while an adjoining link is mounted on the horn in direct alignment with the thrust of the movable jaw.

1,677,660. LAMP SHADE. SADASUKE SATO, San Francisco, Calif. Filed Mar. 14, 1927. Serial No. 175,153. 4 Claims. (Cl. 240—108.)



1. A lamp shade shaped as a truncated cone and consisting of a covering of pleated formation; strips secured to the covering in line with the pleats, each of said strips having a shoulder adjacent the inner upper end thereof; means passed through the upper ends of said strips to regulate the diameter of the smaller end of the truncated cone; and a frame shaped to conform to the interior of the shade having means on the upper end thereof to support the shoulders on the strips of the shade covering.

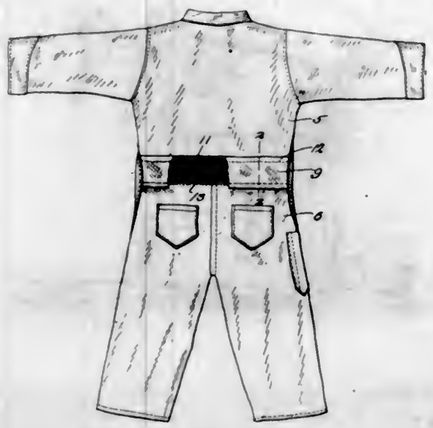
1,677,661. CENTRAL LUBRICATING APPARATUS FOR STIFF LUBRICANTS. ALFRED SCHLOSSHAUER, Berlin, Germany. Filed Mar. 9, 1927, Serial No. 173,939, and in Germany Dec. 16, 1925. 1 Claim. (Cl. 184—33.)



In a central lubricating apparatus for stiff lubricant in combination with a reservoir for stiff lubricant, a number of piston pumps, a driving mechanism, a cock

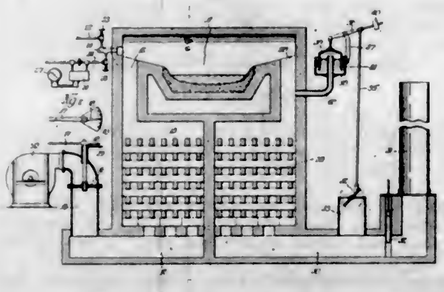
plug made in one piece with said driving mechanism and having a suction channel common to all piston cylinders, a suction head in said cock plug rotating with the same and connected with said suction channel, all the

perforations of said suction head being arranged on the sides of said suction head which projects into said reservoir so that the stiff lubricant is permanently sucked off from other points of the mass in said reservoir.



1,677,662. ARTIFICIAL TEETH. LAKE H. SPRINKLE, Brooklyn, N. Y. Filed Feb. 4, 1926. Serial No. 86,087. 3 Claims. (Cl. 32—9.)

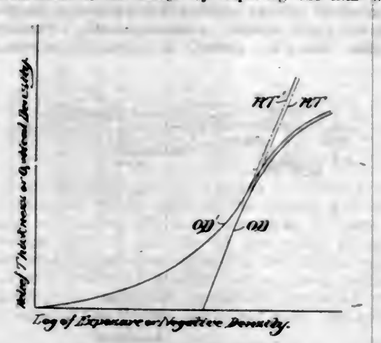
1. In artificial teeth or facings, having therein elevations and depressions, sloping surfaces diverging from said elevations and extending to said depressions, the inclinations of said surfaces being in opposite directions to each other, and other sloping surfaces diverging from said elevations and extending to said depressions, the inclinations of said last mentioned surfaces being in directions substantially transversely to the inclinations of said first mentioned surfaces, and the inclinations of all of said surfaces being so disposed as to cause said teeth or facings, when the latter are moved in any direction to have their successive positions substantially parallel to each other.



1,677,663. OVERALLS. MOSES E. ST. AMOUR, Faust, N. Y. Filed Mar. 10, 1926. Serial No. 93,679. 1 Claim. (Cl. 2—79.)

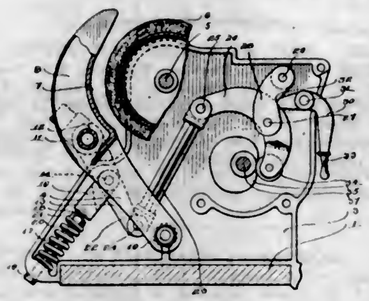
In a union garment, a body section and a nether section separated at the back thereof, a guard flap for covering the space between the body section and nether section, said guard flap embodying a length of cloth material folded upon itself defining outer and inner layers, a strip of elastic material having one edge folded outwardly and secured between the layers, said strip of flexible material and guard flap being secured to the body section, said strip of flexible material being secured along its lower edge to the nether section,

and said guard flap having its lower edge disposed an appreciable distance below the upper edge of the nether garment to which the lower edge of the elastic strip is secured to cover the strip of flexible material.



1,677,664. METHOD OF OPERATING OPEN-HEARTH FURNACES. ARTHUR L. STEVENS, Chicago, Ill., assignor to Arthur L. Stevens Corporation, Chicago, Ill., a Corporation of Illinois. Filed May 16, 1927. Serial No. 191,563. 6 Claims. (Cl. 266—33.)

1. The method of operating an open hearth furnace consisting in creating a neutral atmosphere in the furnace chamber, and automatically maintaining it at substantially atmospheric pressure.



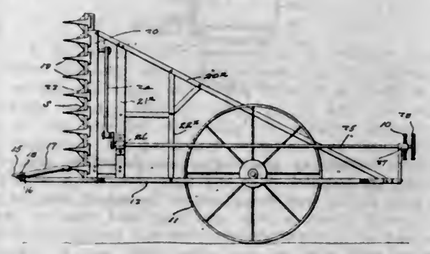
1,677,665. PHOTOGRAPHY. EASTMAN A. WEAVER, Brookline, Mass., assignor, by mesne assignments, to Technicolor Motion Picture Corporation, Boston Mass., a Corporation of Maine. Filed Nov. 2, 1921. Serial No. 512,390. 56 Claims. (Cl. 95—5.)

1. The method of producing a photographic printing matrix comprising printing a film with light distributed to produce a latent image therein, altering the contrast gradations of the image by exposing the film with

correspondingly distributed light, and converting the altered latent image into a photographic printing matrix.

1,677,666. IRONING MACHINE. RANDOLPH V. WELLER, Rochester, N. Y. Filed Sept. 24, 1925. Serial No. 58,434. 17 Claims. (Cl. 68—9.)

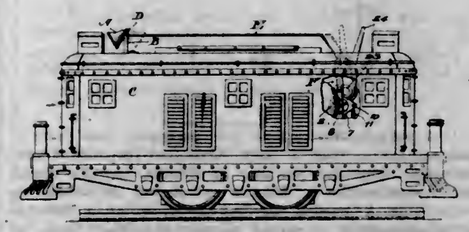
2. An ironing machine comprising a rotary bed, an iron, a motor, a connection between the motor and the bed for turning the latter, means operated by the motor for effecting relative movement between the iron and the bed to bring the two into and out of cooperative engagement, and means operated by the motor for breaking the driving connection between the motor and the bed upon the separation of the iron and the bed, said means effecting the establishment of such driving connection after the iron engages the material on the bed but before the final compression between the iron and the bed.



10. An ironing machine comprising a rotary bed, an iron pivotally mounted to move toward and from the bed, a member supported by the iron to turn about an axis to one side of the pivotal axis of the latter, two arms extending from said member one at each end of the iron, longitudinally movable spring pressed plungers to which said arms are pivoted, said plungers being guided in fixed parts of the machine, and means having connection with said turning member to move the iron toward and from the bed and swing said arms against the action of the spring pressed plungers.

16. An ironing machine comprising a frame, a rotary bed on the frame, an iron on the frame, two parallel shafts on the frame, a removable driving unit having a single shaft, a clutch for connecting one of said frame shafts with the single shaft when the two shafts are aligned, a gear on the single shaft, and means providing driving connection between the gear and the other shaft on the frame.

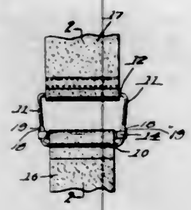
1,677,667. TREATMENT OF MAGNESIUM AND MAGNESIUM ALLOYS TO INHIBIT CORROSION. ARTHUR C. ZIMMERMAN, Dayton, Ohio. Filed Oct. 31, 1924. Serial No. 747,128. 5 Claims (Cl. 148—6.)



5. The method of treating magnesium and magnesium base alloys to inhibit corrosion which consists of treating the metal with a solution of phosphoric acid until a protective coating of magnesium phosphate is formed on the surface of the metal.

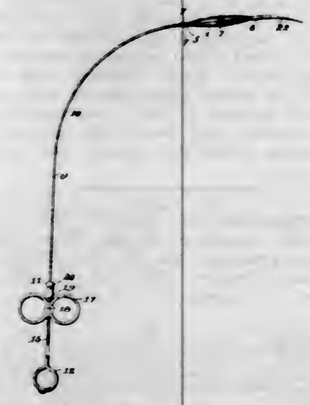
1,677,668. VERTICAL SICKLE DIVIDER FOR GRAIN-HARVESTING MACHINERY. WILLIAM A. BARBER, Washington Township, Carroll County, Ill. Filed Nov. 11, 1926. Serial No. 147,760. 1 Claim. (Cl. 46—316.)

In a grain harvester and in combination, a frame, a supporting wheel at one side of the frame, a horizontal cutting mechanism in front of the frame, a vertical cutting mechanism at one end of the first mentioned cutting mechanism and forwardly thereof and carried by an upright bar fixed with respect to the first named frame, means for operating the second named cutting mechanism, said second named cutting mechanism having forwardly directed fingers, a divider sill having its rear end fixed to the frame and terminating in front of and to one side of the first named cutting mechanism, a bracket fixed on the forward end of said sill and having a rearwardly directed arm spaced above the sill, a rigid tube connectd at one end to said arm of said bracket and extending upwardly and rearwardly from said arm and receiving in its rear end the lowermost finger of the second named cutting mechanism, and an upright supplemental frame connected with the upright bar of the second named cutting mechanism and the frame and arranged in rear of said upright bar and having a rearwardly and downwardly inclined top bar and also having intermediate upright bars and braces for the latter.



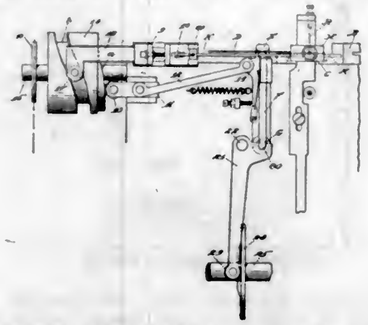
1,677,669. BELL-RINGING MEANS FOR TOY LOCOMOTIVES. HARRY S. BECKER, River Forest, Ill., assignor to American Flyer Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 17, 1928. Serial No. 247,447. 7 Claims. (Cl. 46—47.)

6. In a toy electric locomotive, the combination of a swinging mute bell mounted in a visible position on the locomotive and a ringing bell mounted in a con-



cealed position within the locomotive, and a lever having means connected therewith for simultaneously sounding the concealed bell and swinging the mute bell, and means for actuating said lever.

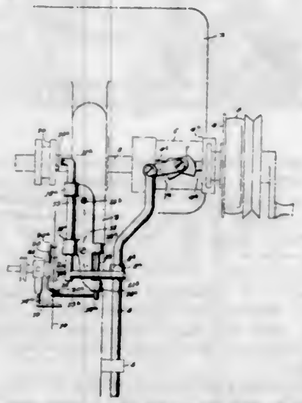
1,677,670. FASTENING LOOP. HERBERT A. AUSTIN, Worcester, Mass. Filed Mar. 25, 1926. Serial No. 97,411. 1 Claim. (Cl. 24—196.)



As an article of manufacture, a fastening loop of wire having parallel sides and ends that are diverging, the ends of the wire being located in one of said sides and spaced apart, a tube enclosing said ends of the wire and of a length shorter than the normal distance between said ends at the wider side, and a sliding clamping bar parallel with said sides and having passages at its ends for the ends of the wire frame, said passages engaging the ends of the frame frictionally in all positions of the clamping bar, for the purpose described, said wire being flattened to provide opposite projections to hold the clamping bar in clamping position.

1,677,671. URETERAL STONE EXTRACTOR AND DILATOR. WILFORD A. COUNCILL, Baltimore, Md. Filed July 2, 1926. Serial No. 120,177. 6 Claims. (Cl. 128—328.)

1. A surgical instrument for entrapping and extracting substances from a body, having an expansible portion consisting of a plurality of strands, operable means for expanding the portion for entrapping the substance, comprising a tension device consisting of a suitable gripping member, a pulling element extending from the gripping member through the expansible portion, one end of the pulling element being attached to the gripping member and the other end to the expansible portion.

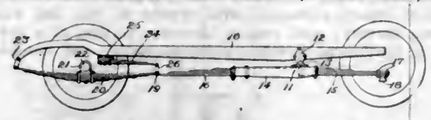


1,677,672. BRUSH-MAKING MACHINE. WILLIAM S. ELLIOT and WILLIAM NOBLE, Northampton, Mass., assignors to Pro-phy-lac-tic Brush Company, Northampton, Mass., a Corporation of Massachusetts. Filed Feb. 24, 1925. Serial No. 11,090. 2 Claims. (Cl. 300—5.)

1. A brush making machine comprising a reciprocating slide, a pick carried by said slide for separating a tuft of bristles, and a rotary cam coacting directly with said slide for operating the same.

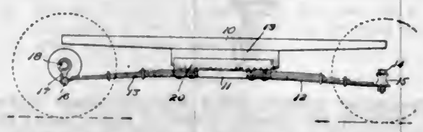
2. A brush making machine comprising a rotary cam, a gripper for feeding an anchor forming metal strip, and a slide connected to said gripper and operated by said cam.

1,677,673. STOP MECHANISM FOR SEWING MACHINES. ROY A. GRAMSE, Paducah, Ky., assignor to Southern Textile Machinery Co., Paducah, Ky., a Corporation of Kentucky. Continuation of application Serial No. 731,295, filed Aug. 11, 1924. This application filed June 20, 1927. Serial No. 199,967. 18 Claims. (Cl. 112—219.)



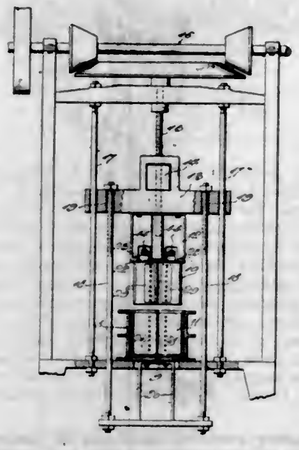
1. In combination with the drive and drive control mechanism of a sewing machine, of stop motion mechanism including a thread control knot catcher and trip device, said trip device being operable by said knot catcher and upon depletion of the thread, said trip device being normally supported by the thread and movable to operative position by gravity.

1,677,674. ART OF PRODUCING PERMANENT MAGNETS. LESLIE E. HOWARD and ALLEN D. POTTS, Lockport, N. Y., assignors to Simonds Saw and Steel Company, Fitchburg, Mass., a Corporation of Massachusetts. Filed Oct. 9, 1926. Serial No. 140,671. 3 Claims. (Cl. 175—21.)



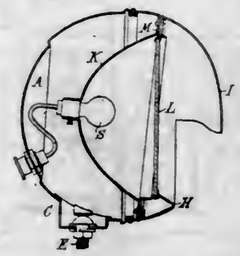
3. A permanent magnet comprising a tungsten steel having a vanadium content of .05 to 1.00%, and characterized by a substantially permanent magnetization.

1,677,675. SPRING SUSPENSION FOR VEHICLES. HENRY WEBB HYDE, North Cohasset, Mass., assignor to Hyde Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed May 28, 1923. Serial No. 641,933. 12 Claims. (Cl. 280—104.)



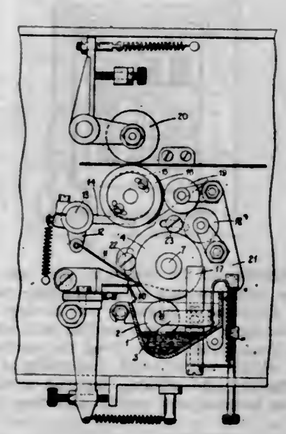
1. A spring suspension for vehicles including a spring reach connected to an axle of the vehicle and having a freely rocking connection intermediate its ends with the vehicle body at one side of the center of gravity thereof, said spring reach extending beyond the opposite side of said center of gravity, and a spring fulcrumed intermediate its ends and operatively connected at opposite sides of its fulcrum with said body and reach.

1,677,676. SPRING SUSPENSION FOR VEHICLES. HENRY WEBB HYDE, North Cohasset, Mass., assignor to Hyde Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 17, 1923. Serial No. 657,990. 3 Claims. (Cl. 280—104.)



1. A spring suspension for motor vehicles including a pair of spring reaches each of which comprises a substantially rigid beam having spring extensions rigidly connected thereto and connected respectively with the front and rear axles of the vehicle, and rockers secured to the body and having rolling engagement upon said beams.

1,677,677. SAGGAR-MAKING MACHINE. DEWITT DILWORTH IRWIN, East Liverpool, Ohio, assignor of one-half to Edwin M. Knowles, Newell, W. Va. Filed July 25, 1927. Serial No. 208,257. 10 Claims. (Cl. 25—27.)

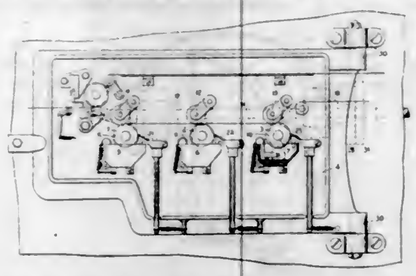


1. A saggar-forming plunger of hollow form provided with openings from its inner to its outer periphery, saggar punches slidably received in said openings, and operating means for said punches embodying punch-projection cams connected for rotation in unison.

1,677,678. HEADLIGHT. ASHER MAURER, Newark, N. J. Filed May 29, 1928. Serial No. 281,521. 17 Claims. (Cl. 240—41.)

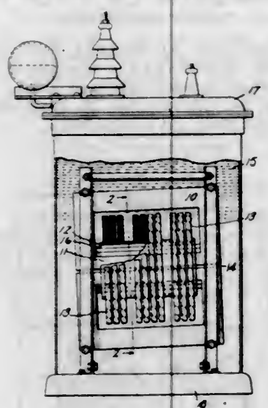
1. A vehicle lamp, comprising a reflector oval in front elevation and developed in shape by pressing inwardly the upper and lower parts of a modified parabolic circular reflector from points near its base to its rim, thereby shortening its vertical diameter and elongating its horizontal diameter and removing the parts of the upper and lower sections of the edge which project beyond the vertical plane of the axial horizontal section.

1,677,679. PRINTING APPARATUS FOR USE WITH CIGARETTE MACHINERY. WALTER EVERETT MOLINS, Deptford, London, England. Filed Apr. 18, 1927, Serial No. 184,810, and in Great Britain May 19, 1926. 6 Claims. (Cl. 101—350.)



1. In a printing device, the combination with a furnishing roller adapted to receive ink, of a doctor blade arranged to control the quantity of ink retained on said roller, and means for scraping the surface of said doctor blade to remove surplus ink.

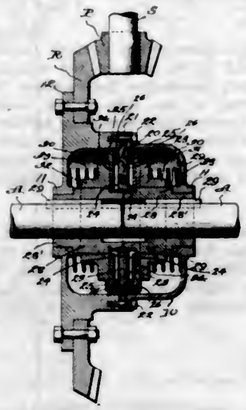
1,677,680. CIGARETTE MACHINERY. WALTER EVERETT MOLINS, Deptford, London, England. Filed Apr. 18, 1927, Serial No. 184,811, and in Great Britain May 17, 1926. 4 Claims. (Cl. 101—57.)



1. A printing mechanism for use on a cigarette making machine of the continuous rod type which comprises a frame (arranged to accommodate the printing units) adapted to be swingingly mounted to permit the movement of the same relatively to the frame of the machine,

and means operable solely by the movement of the frame to effect both the operative connection and disconnection of the printing units with and from the drive

of the machine and ensure that the printing units are always connected in correct phase relationship with the rod cutting mechanism.

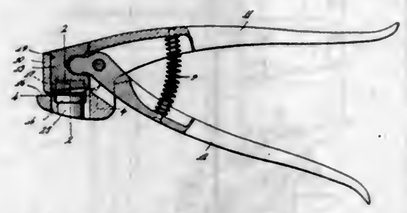


1,677,681. TRANSFORMER. VINCENT M. MONTSINGER, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Oct. 25, 1927. Serial No. 228,644. 3 Claims. (Cl. 175—361.)

1. A transformer of the horizontal core type immersed in a cooling liquid within a surrounding casing, said transformer including a magnetic core having a winding leg, an insulating cylinder surrounding said winding leg, there being longitudinal space along the surface of said winding leg within said cylinder, and windings surrounding said cylinder, said winding leg and cylinder being longitudinally inclined at a small angle from horizontal.

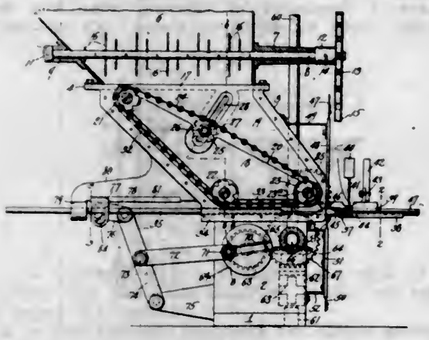
1,677,682. DIFFERENTIAL MECHANISM. ROWLEY K. ORTT and ELWOOD K. ORTT, Dixon, Ill., assignors to The Clipper Manufacturing Company, Dixon, Ill., a Corporation of Illinois. Filed Oct. 28, 1924. Serial No. 746,309. 3 Claims. (Cl. 74—7.)

1. A differential comprising a rotary driven housing, alined shaft sections rotatably mounted in the ends of and extending axially into said housing, a driving disk carried and rotated by the housing and formed at both vertical side faces with similar annular series of spaced radial clutch teeth, two independent driven clutch sleeves at opposite sides of said disk and having clutch plates formed with clutch teeth normally operatively engaging and driven by said teeth of the disk, each shaft section provided with and normally driven by one of said sleeves rotating therewith and slidable longitudinally thereof; expansion springs to independently hold said sleeves in normal operative driven relation with said disk; two cam rings, one for each driven clutch sleeve, said rings arranged at the opposite vertical faces of said disk surrounding the annular series of teeth and bearing on the outer ends of the teeth and secured together and having limited rotary movement with respect to the disk and driven thereby; each ring at its outer vertical face having a continuous annular series of radial cam notches



approximately radially alined with the spaces between the teeth of the annular series of clutch teeth; each clutch plate having radially projecting cam portions to ride on said cam rings and cooperate with the cam notches thereof to automatically slide one or the other clutch sleeve outwardly against the pressure of its spring to disengage said sleeve from the clutch teeth of the driving disk, when the shaft section of said sleeve rotates faster than the shaft section of the other sleeve.

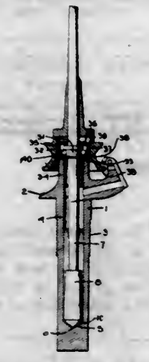
1,677,683. HOSIERY PROTECTOR. GEORGE W. PARRY, Philadelphia, Pa.; Rose Parry administratrix of said George W. Parry, deceased. Filed Mar. 4, 1927. Serial No. 172,892. 5 Claims. (Cl. 36—2.)



1. A hosiery protector comprising in combination with a sandal, a relatively thin rubber body with its lower portion permanently attached to the rear of the sandal and adapted to conform to the leg of the wearer, provided with forward opposed edges and arch edges to fit over the instep of the foot, and fastening means connecting the opposed edges of the protector.

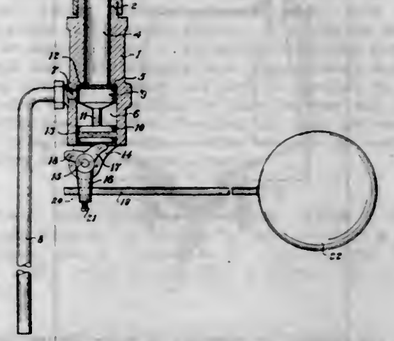
1,677,684. TOOL FOR CUTTING BOX STRAPPING AND THE LIKE. STUART W. PARSONS, New Britain, Conn., assignor to The Stanley Works, New Britain, Conn., a Corporation of Connecticut. Filed Nov. 17, 1927. Serial No. 233,862. 3 Claims. (Cl. 164—81.)

1. A tool for cutting box strapping and the like comprising a head having a strap receiving slot, a handel on which said head is carried, a punch mounted for reciprocation in said head and having a semi-circular cutting or punching edge in its lower end, a handle for operating said punch, a die on said head below said slot and comprising a cylindrical disk having flat parallel end surfaces each provided with a continuous circular cutting edge, and means for adjustably and removably securing said die in place whereby said disk may be angularly adjustable or reversible end for end to bring new cutting edges thereon into play.



1,677,685. POULTICE-MAKING MACHINE. ROBERT H. PLASS, Upper Montclair, N. J., assignor to Poloris Company, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 5, 1927. Serial No. 181,128. 12 Claims. (Cl. 112—2.)

5. In a machine of the character described, the combination with a sewing machine for sewing together the edges of wrapper-forming material supplied thereto, of means for supplying the wrapper-forming material to said sewing machine, a tubular housing arranged to discharge filler material to the continuous tubular wrapper formed by said sewing machine, a plunger reciprocable in said tubular housing for compressing the filler material within said wrapper, said tubular housing being provided with an inlet for filler material, and means for supplying filler material to said inlet, said means being provided with a contracted conveyor channel discharging into said inlet and including a conveyor operating in said channel.

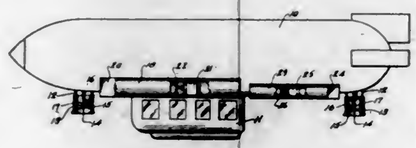


1,677,686. BALL-BEARING-SPINDLE CONSTRUCTION. THEODORE M. PRUDDEN, Grafton, Mass. Filed Jan. 19, 1923. Serial No. 613,731. 8 Claims. (Cl. 308—228.)

6. A ball bearing spindle construction comprising a bolster case, a spindle blade provided with an inner ball race member, an outer ball race member removably mounted in the upper end of the bolster case and cooperating with the inner race member to resist lateral and downward forces acting upon the spindle and a cover permanently attached to said outer race member and

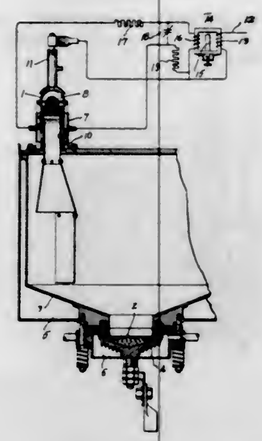
overlying the inner race member retaining the parts of the bearing in their relative positions and operable to permit removal of the spindle and race members as a unitary construction.

1,677,687. FLOAT VALVE. DUDLEY REED, Canton, Ohio. Filed Mar. 29, 1927. Serial No. 179,262. 2 Claims. (Cl. 137—104.)



1. A valve of the character described including a vertically disposed casing having a valve seat intermediate its ends, an inlet pipe communicating with the upper end of the casing, an outlet pipe communicating with the casing just below the valve seat, a vertically movable valve within the casing, a pivot below the valve and offset from the axis of the valve, a lever below the valve on the pivot for normally holding the valve in raised position against the valve seat, a stop arm upon the lever for limiting the downward movement of the valve, said lever having a depending arm radially disposed from the pivot, and a rod carrying a float ball mounted on the depending arm at right angles thereto.

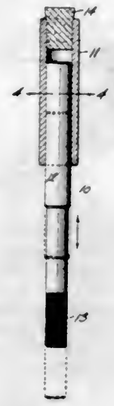
1,677,688. AIRCRAFT. ALPHY REES, Coalinga, Calif., assignor of one-third to Edward A. Webb, Coalinga, Calif. Filed Mar. 22, 1927. Serial No. 177,304. 1 Claim. (Cl. 244—7.)



In an aircraft of the character described, the combination with a lighter than air body, a pair of longitudinal

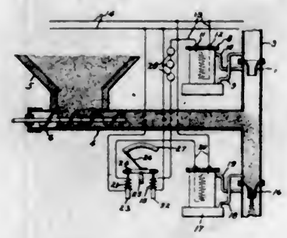
tubular housings secured adjacent the forward portion of the body in opposed positions on the sides thereof, a second pair of housings secured adjacent the rear end of the body relatively decreased diameter, propelling motors secured in the intermediate portions of the housings, ver-

tical propellers driven by the said motors, vertical tubular housings secured to the forward and rear ends of the body, motors mounted in the said vertical housings, and horizontal propellers driven by the said motors to control the ascension and descension of the said aircraft.



1,677,689. VAPOR ELECTRIC DEVICE. LEWIS T. ROBINSON and CAMILLE A. SABBAH, Schenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Filed Nov. 19, 1925. Serial No. 70,201. 9 Claims. (Cl. 175—354.)

1. The method of operating a vapor electric device comprising a control electrode interposed between an anode and an anode shield, which comprises changing the polarity of said shield and anode, and thereafter changing the polarity of said control electrode.

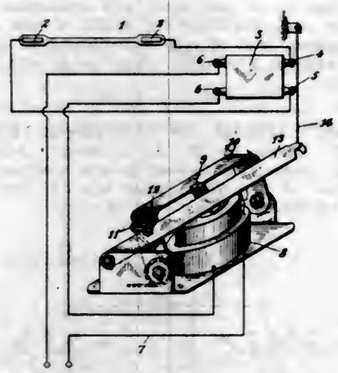


1,677,690. DEVICE FOR TESTING LUBRICATING OILS. ADOLPH A. SCHAEFER, Buffalo, N. Y., assignor to Frontier Manufacturing Company, North Tonawanda, N. Y. Filed Dec. 12, 1921. Serial No. 521,688. 2 Claims. (Cl. 265—11.)

1. A portable, hand operated device for testing and comparing the properties of oils and various lubricants, comprising a cylindrical tube having a smooth bore, a piston having a smooth surface closely fitting the bore of the tube and freely slidable endwise into and out of the bore to various extents from one end thereof, whereby when a coating of the sample of the lubricant to be tested is interposed between the contacting, movable surfaces of the piston and tube bore, the opposition offered to the relative movement of the piston and tube will serve as a relative indication of the quality of the lubricant, and means by which the other end of the tube may be closed or opened to atmosphere, as de-

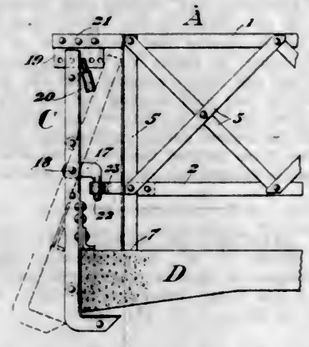
sired, whereby the relative sealing quality of the lubricant will be indicated by the resistance offered to the piston by the air trapped in the closed end of the tube.

1,677,691. MEANS FOR MEASURING A SUBSTANCE CARRIED IN SUSPENSION BY A SECOND SUBSTANCE. ARTHUR R. SMITH, Schenectady, N. Y., assignor, by mesne assignments, to Bailey Meter Company, a Corporation of Delaware. Filed Feb. 20, 1925. Serial No. 10,706. 7 Claims. (Cl. 73—167.)



1. The combination with a conduit through which a fluid flows and to which at a point in the conduit a substance is fed into the fluid, of means for measuring the amount of the substance per unit of time fed into the conduit, said means comprising a pressure difference creating device which creates a pressure difference which bears a definite relation to the rate of flow of the fluid, a pressure difference creating device which creates a pressure difference which bears a definite relation to the rate of flow of the mixture, and measuring means responsive to the difference between the two pressure differences created.

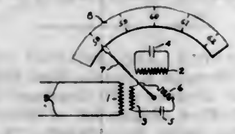
1,677,692. ELECTRICAL CUT-OUT. JOHN FRASER STOKES, New York, N. Y., assignor to Rainbow Light, Inc., a Corporation of New York. Filed July 9, 1927. Serial No. 204,481. 7 Claims. (Cl. 175—294.)



1. An electric cut-out designed for use in connection with transformers and to prevent the continuation of open circuit secondary voltage conditions, comprising in

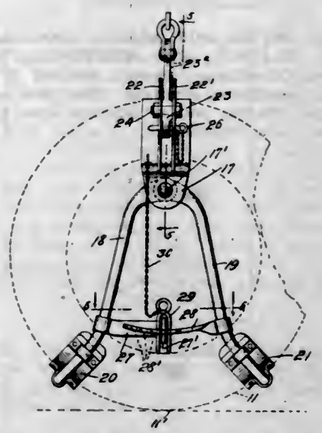
combination, a transformer, a primary circuit, a cut-out switch in the primary circuit normally closed, and means whereby said switch will operate to break the

primary circuit under the effect of continued open circuit voltage conditions in the secondary, substantially as set forth.



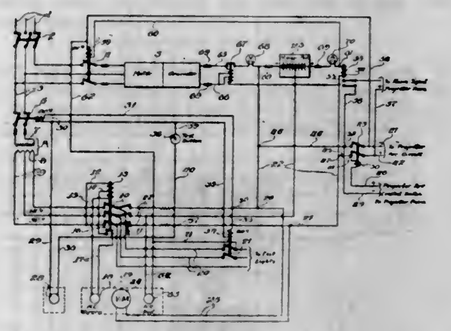
1,677,693. BARRICADE. RUSSELL A. TRUFANT, Middleboro, Mass. Filed June 3, 1925. Serial No. 34,529. 7 Claims. (Cl. 256—1.)

1. A barricade adapted to engage the edges of a concrete road slab, and means for locking the same to prevent its removal.



3. A road barricade comprising two upright portions which engage opposite sides of the roadway slab, a central portion connecting said uprights to close the road, and means for locking the parts when in place.

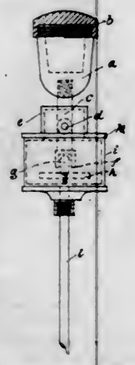
1,677,694. FREQUENCY-RESPONSIVE INSTRUMENT. FRANCIS B. VOGDES, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 29, 1922, Serial No. 557,485. Renewed Mar. 16, 1928. 4 Claims. (Cl. 172—245.)



1. An electrical instrument comprising a stator element and a rotor element, a pair of angularly disposed windings on one of said elements inductively related to a winding on said other element, one winding of said pair comprising a primary coil and the other windings of the instrument comprising a tuned secondary system, the tuning frequency of which changes with different positions of the rotor elements.

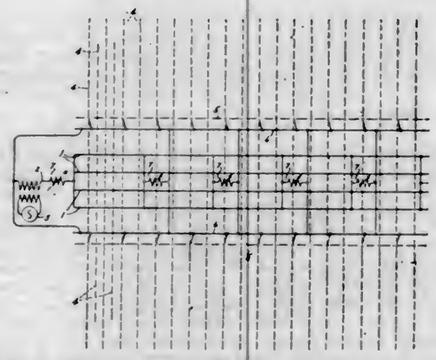
1,677,695. AUTOMOBILE HANDLING APPARATUS. THEODORE VOGT, Fairview, N. J. Filed Aug. 4, 1926. Serial No. 126,991. 9 Claims. (Cl. 294—74.)

1. An automobile handling apparatus embodying, in combination, a series of automobile clamps for engaging the wheels of automobiles, each comprising a base member having pivotally mounted thereon rigid legs having free ends movable pivotally to engage the wheel tire at opposite sides of the ground-contacting portion thereof, and a top-engaging lever also pivotally mounted on said base member and movable pivotally to engage and clamp an automobile wheel between said top-engaging lever and said diverging side legs, and means for locking said pivotally movable legs and top-engaging members in wheel-clamping position.



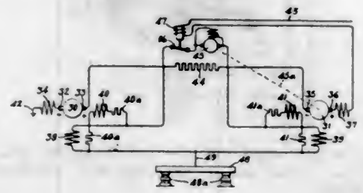
1,677,696. EXIT-LIGHTING SYSTEM. RALPH T. WILLIAMS, Chicago, Ill., assignor to Roth Brothers & Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 14, 1927. Serial No. 161,227. 2 Claims. (Cl. 171—97.)

1. In an electric light and power system, a lamp circuit, a normally open switch in said circuit, a main circuit, a normally open switch in said main circuit, means controlled by current from said main circuit for connecting said main circuit with said lamp circuit, an



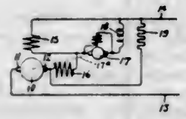
auxiliary circuit, automatic means for connecting said auxiliary circuit with said lamp circuit upon failure of said main circuit to supply current, means controlled by current from said auxiliary circuit for closing said main circuit switch and said lamp circuit switch, a storage battery for supplying current to said auxiliary circuit, a motor-generator set for charging said battery, an arc circuit connected to said battery, and means operated by current passing through said arc circuit for connecting said motor-generator set to said main circuit.

1,677,697. DEVICE FOR MIXING AMALGAM FOR TOOTH FILLINGS AND STOPPINGS. VALDEMAR WILMING, Copenhagen, Denmark, assignor to Günnar Koefoed, Copenhagen, Denmark. Filed Mar. 16, 1927, Serial No. 175,881, and in Germany Mar. 17, 1926. 2 Claims. (Cl. 259—75.)



1. In a device for mixing amalgam for tooth fillings and stoppings, a pot for receiving the amalgam components, a rod integral with the said pot and carrying a transverse shaft swingingly journaled in a support, a body integral with the end of the said rod and provided with a longitudinal groove, and a pin adapted to rotate in the said groove with some freedom of movement and thereby rocking the pot in jerks.

1,677,698. ANTENNA. ERNST F. W. ALEXANDERSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 10, 1922. Serial No. 550,946. 3 Claims. (Cl. 250—33.)

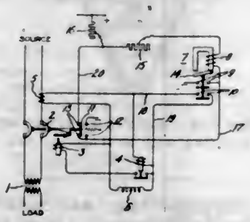


1. A radiating antenna system comprising a long horizontal aerial, a network beneath said aerial comprising a plurality of buried wires extending in directions at right angles to the direction of the aerial for a distance on each side of the area covered by said aerial substantially equal to at least one and one-half times the effective height of the aerial, bus conductors connecting all of said wires, and connections from a plurality of points along the length of said aerial to said network, each of said connections from the aerial being made to a plurality of points in said bus conductors.

1,677,699. SYSTEM OF ELECTRICAL DISTRIBUTION. ERNST F. W. ALEXANDERSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 13, 1927. Serial No. 191,252. 8 Claims. (Cl. 171—228.)

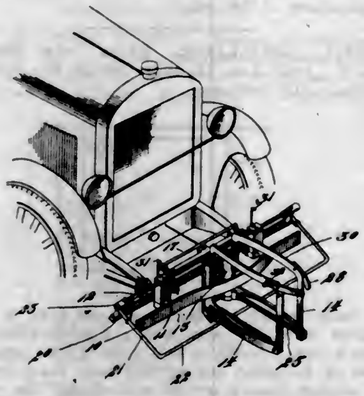
1. In a direct current system of electrical distribution a dynamo-electric machine having an armature and an exciting field winding, said dynamo-electric machine being provided with a commutator and brushes, means for energizing said exciting field winding, means responsive to an increase in the current flow from said armature for decreasing the energization of said field winding in order to reduce the voltage generated by said armature, and means responsive to the decrease in energization of said field winding for inducing an electromotive force in that portion of said armature short circuited at the brushes during commutation opposing the electromotive force induced therein at the same time by the decrease in energization of said field winding.

1,677,700. SYSTEM OF ELECTRICAL DISTRIBUTION. ERNST F. W. ALEXANDERSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 13, 1927. Serial No. 191,256. 8 Claims. (Cl. 171—228.)



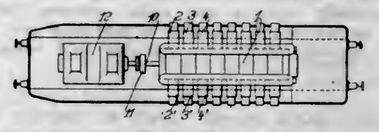
1. In a direct current system of electrical distribution, a dynamo-electric machine having an armature with brushes bearing thereon and a field excitation system, means for energizing said excitation system, and means responsive to a sudden increase in load on said system for deenergizing said excitation system and for causing an increased flow of current in said armature during the transient in which said excitation system is deenergized in order to reduce sparking at said brushes.

1,677,701. GRANULE AND METHOD OF PRODUCING SAME. WILLIAM H. ALTON, New York, N. Y., assignor to R. T. Vanderbilt Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 9, 1927. Serial No. 239,001. 12 Claims (Cl. 25—156.)



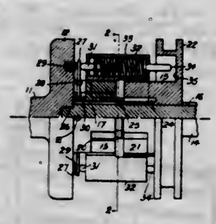
1. The method of producing granules which comprises crushing soft non-vitreous rocks having a fibrous or laminated structure, separating particles of proper granule size from the crushed material and subjecting such granules to a vitrifying treatment to reduce the absorptive properties of the granules.

1,677,702. CONTROL OF ELECTRIC CIRCUITS. HERMAN BANY, Scotia, and DANIEL C. HOFFMANN, Schenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Filed Aug. 12, 1927. Serial No. 212,586. 6 Claims. (Cl. 175—294.)



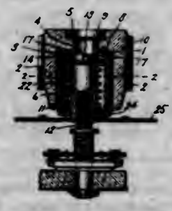
1. In combination with an electric circuit, a circuit breaker therefor, and means including a relay for effecting the opening of the circuit breaker on the occurrence of abnormal circuit conditions, means for rendering said relay temporarily inoperative on the closing of the circuit breaker comprising an electromagnet having a winding arranged to be energized on the opening of the circuit breaker and normally open contacts in the circuit of the winding and in a circuit across the winding of the relay arranged to be closed on the energization of the electromagnet winding, and means arranged on the closing of the circuit breaker to short circuit the electromagnet winding whereby to effect a time delay in the opening of said contacts.

1,677,703. SAFETY DEVICE FOR MOTOR VEHICLES. CHARLES L. BEAUREGARD, Providence, R. I. Filed Feb. 16, 1927. Serial No. 168,580. 7 Claims (Cl. 293—16.)



4. A safety device for a motor vehicle comprising a pair of arc-shaped grappling members, means for mounting said members to swing into position to grab a person, coiled springs extending as a cord across the arc of said members to conform to the shape of the person grabbed and cushion the force of engagement with the members.

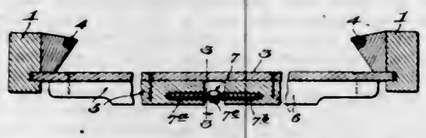
1,677,704. OIL-MOTOR-DRIVEN LOCOMOTIVE. JACOB BUCHLI, Winterthur, Switzerland. Filed Aug. 27, 1926. Serial No. 131,952, and in Germany Oct. 26, 1925. 2 Claims. (Cl. 105—35.)



1. An internal combustion engine for Diesel-locomotives of large output having a plurality of cylinders arranged on both sides of the longitudinal centre plane of the locomotive, each pair of cylinders arranged opposite each other having their axes in the same plane extending at right angles to the longitudinal axis of the locomotive, a crank-shaft extending in the longitudinal direction of the locomotive and having a plurality of crank pins, and connecting rods for transmitting the power from every cylinder to said crank pins, said connecting rods having at their outer ends segment shaped bearing bushes, and coupling members embracing the bearing segments of the connecting rods of every two opposed cylinders which cooperate with the same crank pin.

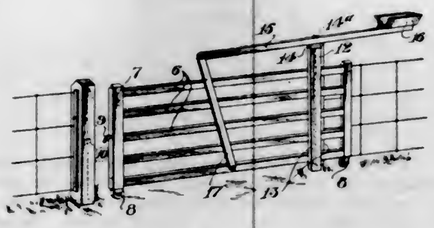
1,677,705. POSITIVE CLUTCH. WILLIAM THOMAS CARLING, Guildford, England. Filed June 20, 1927, Serial No. 200,241, and in Great Britain June 18, 1926. 12 Claims. (Cl. 192—67.)

1. In a positive clutch, comprising driving and driven members, and means for sliding one of said members into engagement with the other of said members, a clutch controlling element capable of limited angular displacement relative to the slidable member, said controlling element adapted in one position of displacement to permit engagement of said members together, and frictional means for producing said angular displacement, said sliding means determining the operation of said frictional means.



1,677,706. ROTARY SWITCH HANDLE. ARTHUR W. CLAUDER, Bridgeport, Conn., assignor to General Electric Company, a Corporation of New York. Filed Nov. 1, 1924. Serial No. 747,396. 3 Claims. (Cl. 200—172.)

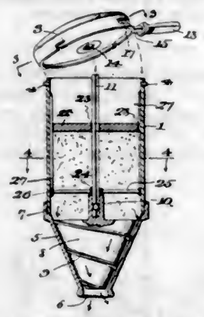
1. A handle for rotary switches comprising a main part chambered at one end, a cylindrical metal thimble secured in the chamber of said main part and provided



with internal ribs or shoulders, a combined stop and guide disk freely engaging said ribs or shoulders, a switch engaging nut assembled within said thimble and axially guided therein by said guide and stop disk and in which it is journaled, a ratchet secured to said nut and normally engaging said guide and stop disk, a spring forcing said nut inwardly of said main part, and means in said thimble for retaining said spring in place.

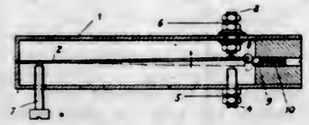
1,677,707. GAME BOARD. PERCY R. COMPTON, Portland, Me., assignor to The E. T. Burrowes Company, Portland, Me., a Corporation of Maine. Filed Dec. 3, 1927. Serial No. 237,490. 6 Claims. (Cl. 273—6.)

1. In a game board, a bed, a cleat comprising sections secured to the bed at the under side thereof in end to end spaced relation, and means extending between the inner ends of said cleat sections and connecting the same together, said means being adjustable to adjust the cleat sections to true up the bed.



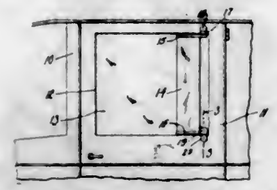
1,677,708. GATE. BENJAMIN W. COOK, Midland, Mich. Filed Apr. 26, 1927. Serial No. 186,679. 1 Claim. (Cl. 39—76.)

A gate structure including a vertically slotted post with an upstanding pin in the top thereof; a second post having a lock receiving recess; a gate member mounted for longitudinal sliding movement through the first mentioned post and horizontal swinging movement therein in an arc up to ninety degrees; a gate elevating lever loosely mounted on said pin; a depending lever pivoted at its upper end to one end of the first mentioned lever and at its lower end to the lowermost edge of the gate member at the center thereof whereby said gate member will be raised as it slides back in the first mentioned post to disengage the gate member from the second post and disengage the latch member carried thereby from the said lock receiving recess in the said second post; casters carried by said gate member at the lower corners thereof to support the weight of said gate member when resting on the ground; and a weight on the outer portion of said gate elevating lever.



1,677,709. SOAP DISPENSER. WALLACE J. COUSINS, Chicago, Ill. Filed Mar. 25, 1924. Serial No. 701,783. 4 Claims. (Cl. 221—61.)

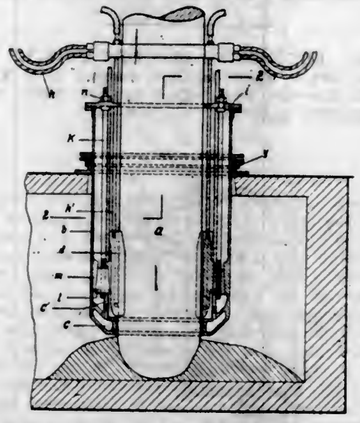
1. A dispensing container comprising a body portion, a delivery portion connected thereto, a rotatably feeding device in the delivery portion, means for giving said device a step-by-step rotation, means for limiting the extent of said rotation, and a weight upon the material



in the container and connected to rotate with the screw, and scrapers rotating with said device and engaging said weight.

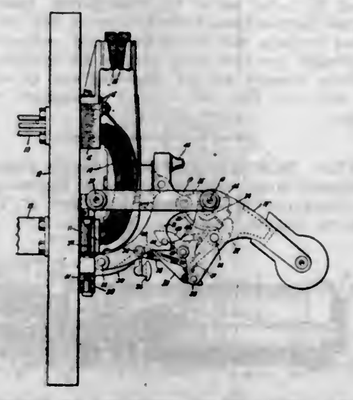
1,677,710. TEMPERATURE REGULATOR. ALFRED DÄNIKER, Zurich, Switzerland. Filed Feb. 18, 1927, Serial No. 169,333, and in Germany Feb. 26, 1926. 2 Claims. (Cl. 200—138.)

1. In a temperature regulator for electrically heated devices the combination with a casing, two electric contacts mounted in the casing substantially opposite one another and one of which is insulated from the casing, a thermostatic strip in the casing and means for adjusting the tension of said strip, said strip arranged between the contacts; of an anti-friction member mounted on one end of the strip and an anti-friction member mounted in the casing and cooperating with the former member to produce rolling engagement during a snap action of the strip from one contact to the other when the strip is heated, and means to provide relative yielding of one member with respect to the other during the movement of the strip.



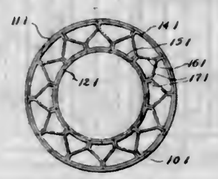
1,677,711. VENTILATOR. FRANK DELY, New York, N. Y. Filed Aug. 11, 1927. Serial No. 212,257. 1 Claim. (Cl. 296—44.)

A motor vehicle comprising a closed body, a door associated with said body having a window opening, a window pane slidable in said opening, two brackets secured to the outer face of said door above and below the window opening therein and adjacent the rear edge of said opening, the lower one of said brackets having a cylindrical extension within said window opening, a horizontal channel member having a vertical pivot pin in alignment with said cylindrical extension and rotatable on said upper bracket, a second horizontal channel member provided with a bearing member rotatable on the cylindrical extension of said lower bracket, a vertical bolt connecting said bearing member and said lower



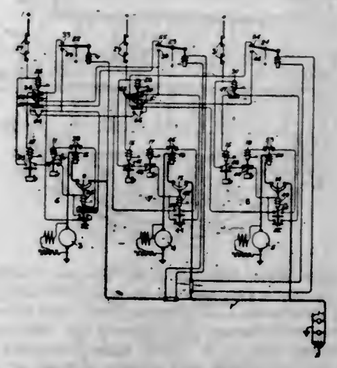
bracket, said bolt being in alignment with the pivot pin on said first-mentioned channel member, a panel engaging said two channel members, the upper face of said cylindrical extension being provided with a plurality of recesses arranged on a circle, a ball in each recess, a ball retaining member in said bearing member fixed thereto so as to rotate with the same but permitted to move in the direction of the longitudinal axis of said bolt, said ball retaining member being provided with recesses also arranged on a circle and in which said balls are adapted to be seated, and a spring in said bearing member for forcing said ball retaining member into engagement with said balls, the number of recesses in said ball retaining member exceeding those in said cylindrical extension.

1,677,712. ELECTRODE HOLDER. JACOB DION, Bitterfeld, Germany, assignor to the Firm; I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed Nov. 6, 1926, Serial No. 146,726, and in Germany Dec. 28, 1925. 6 Claims. (Cl. 266—1.5.)



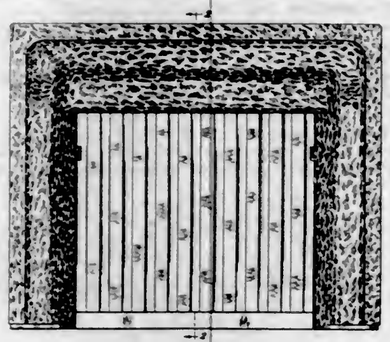
1. An electrode holder for closed electric furnaces comprising a plurality of clamps adapted to be fastened and released from without while the clamps are placed inside the furnace, and a jacket enclosing the constructional parts of the holder.

1,677,713. ELECTRIC SWITCH. HARRIS D. DUNTON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 28, 1926. Serial No. 112,401. 18 Claims. (Cl. 200—89.)



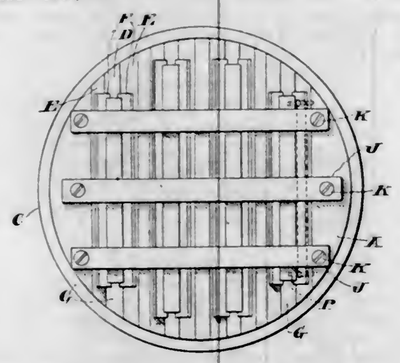
1. A movable switch member, an operating member, and a link connecting the members, said link being slotted and pivoted through the slot to one of the members, the slot being so shaped that the path of movement of the link pivot relatively to the link has a variable radius of curvature whereby to permit a change in the distance between the connections of the link to the respective members.

1,677,714. TUBULAR STRUCTURE. HURXTHAL F. FREASE, Canton, Ohio. Filed Dec. 29, 1924. Serial No. 758,662. 8 Claims. (Cl. 189—34.)



1. A main structural member adapted for resisting all types of loading, and including a central tube and a plurality of longitudinally extending and circumferentially connected tubular members abutting each other and the central tube.

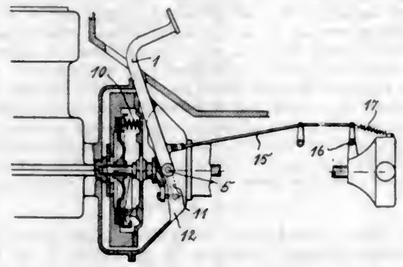
1,677,715. AUTOMATIC SWITCHING SYSTEM. WILLIAM N. GITTINGS, Springfield, Pa., assignor to General Electric Company, a Corporation of New York. Filed Dec. 23, 1927. Serial No. 242,233. 7 Claims. (Cl. 171—118.)



1. In combination, an electric circuit, a plurality of sources of current for supplying current to said electric circuit, switching means associated with each source for connecting it to said electric circuit, a main control circuit associated with each switching means, a time relay associated with each control circuit for effecting the energization thereof, a control device normally adapted to control the energization of one of said time relays so as to effect the energization of its associated control circuit, and means associated with the source with which said one of said time relays is associated and responsive to predetermined conditions of the associated source for removing said one of said time relays from the control of said control device and placing another of said time relays under the control of said control device.

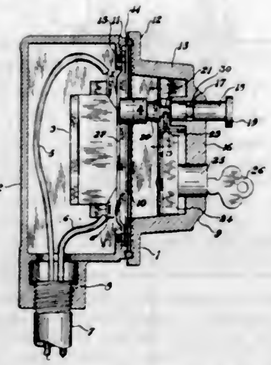
1,677,716. METHOD OF MAKING ANTIQUE SURFACES. RAYMOND J. GREENE, Sebring, Ohio, assignor to The Gem Clay Forming Company, Sebring, Ohio, a Corporation of Ohio. Filed Mar. 21, 1927. Serial No. 176,972. 3 Claims. (Cl. 25—156.)

1. The ornamenting process which consists in forming an article of clay mixed with magnesium silicate and the like, applying a slip containing an oxide to the surface of the article, and firing the article whereby the oxide combines with the magnesium silicate to eat into the surface of the clay article.



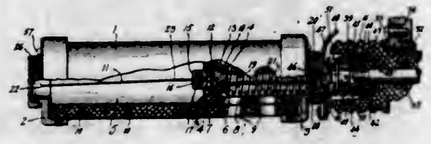
1,677,717. PLATE VALVE. LESLIE R. HUFF, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Dec. 11, 1926. Serial No. 154,224. 4 Claims. (Cl. 251—119.)

1. A plate valve comprising a valve seat having ribs forming passage-ways, grooves in said valve seat having diverging sides forming seating surfaces, rigid valve plates cooperating with the seating surfaces for controlling the passage-ways, said valve plates being supported by the bottoms of the grooves, and springs secured at one end to the ribs adjacent the inlet openings of the passage-way and at their other ends to the valve plates for holding the valve plates on the seating surfaces.



1,677,718. DEVICE FOR ACTUATING THE COUPLING AND THE BRAKE IN AUTOMOBILES. VICTOR JESSEN, Copenhagen, Denmark. Filed Nov. 26, 1926. Serial No. 150,972. 3 Claims. (Cl. 192—13.)

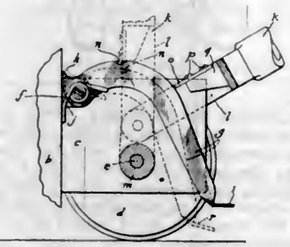
2. In devices for actuating the coupling and the brake in automobiles, the combination by means for connecting the pedalarm of the motor-coupling with the brake-bar, and of a coupling shaft, with a claw-coupling, one part of which being connected with the said pedalarm and lodged on a fixed muff, having a threaded part and surrounding the said coupling-shaft, while the other part of the said claw-coupling having a threaded inner portion



surrounds the said muff, and is adapted to be displaced in longitudinal direction, when the said coupling shaft is turned substantially as set forth for the purpose specified.

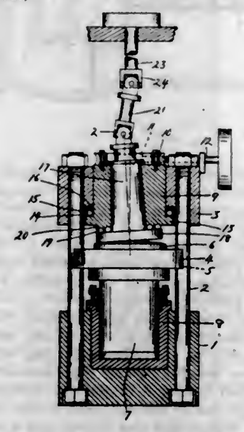
1,677,719. KEY-LOCKING ELECTRIC SWITCH. MORGAN J. LEWIS, Massillon, Ohio, assignor to E. F. Duquette, Hartville, Ohio. Filed Jan. 26, 1927. Serial No. 163,670. 3 Claims. (Cl. 200—44.)

1. A key locking electric switch including a base housing, a push button operated electric switch mounted in the base housing, a cover housing for the base housing, a reciprocating plunger mounted in the cover housing and having its outer end extending exteriorly thereof and its inner end extending in the housing for abutment against the outer end of the push button, means urging the push button toward the plunger, a key lock in the housing having a bolt for selective stop engagement with the plunger, the lock being adapted for operation by an exteriorly inserted key for extending and retracting the lock bolt into and out of stop engagement with the plunger.



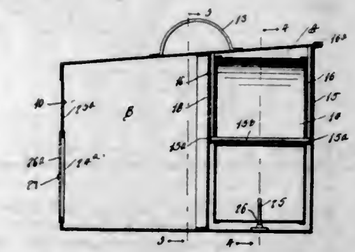
1,677,720. ELECTRIC CUT-OUT. GEORGE FRED LINCKS, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Dec. 17, 1924. Serial No. 756,613. 8 Claims. (Cl. 200—117.)

1. An electric cut-out comprising an insulating shell having a transverse partition provided with a contracted



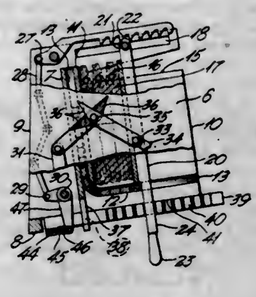
opening and dividing the interior thereof into an explosion proof chamber and a spring chamber, arc suppressing fluid within and surrounding said explosion proof chamber, metal contacts secured to the ends of said shell, a fusible element extending through said explosion proof chamber from one of said contacts, a displaceable terminal connected to the opposite end of said fusible element and disposed adjacent said contracted opening, and spring means disposed in said spring chamber and exerting tension on said displaceable terminal.

1,677,721. HANDLE FOR VACUUM CLEANERS, ETC. WALDEMAR L. LINDGREN, Chicago, Ill., assignor, by direct and mesne assignments, to Alfred A. Norton, Chicago, Ill. Filed July 17, 1924. Serial No. 726,569. 2 Claims. (Cl. 306—12.)



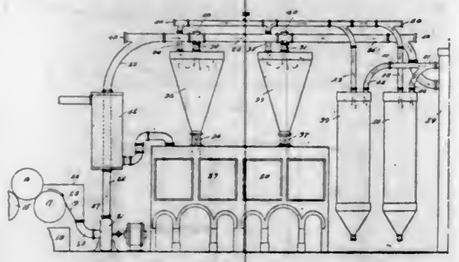
1. In a device of the class described, the combination with a casing, of a handle pivoted thereto and adapted to swing from an inclined to a substantially vertical position, a spring-pressed latch lever having a recess with vertical edges pivoted to the casing, and a latch member on the handle co-operating with the vertical edges of the recess to lock the handle from swinging movement relative to the casing in either direction while the latch remains in its operative position, said latch lever having the portion adjacent the recess shaped so that as the latch member swings up toward the recess it finally engages the surface of the latch lever before it reaches the recess so as to put the spring under increased tension.

1,677,722. METHOD OF FORMING TAPERED CROSS-SECTION DISKS. EDWARD D. LOWRIE, Detroit, Mich., assignor, by mesne assignments, to Steel Wheel Corporation, Lansing, Mich., a Corporation of Michigan. Filed July 9, 1923. Serial No. 650,564. 6 Claims. (Cl. 80—16.)



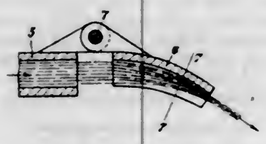
6. A method of forming a tapered disk which includes the steps of applying pressure to a blank by means of a plate, positively rotating the plate, and revolving the plate about an axis angularly arranged with respect to the axis on which the plate is rotated.

1,677,723. BIRD TRAP. JOEL M. MAXWELL, Sedalia, Mo. Filed Nov. 18, 1926. Serial No. 149,168. 2 Claims. (Cl. 43—68.)



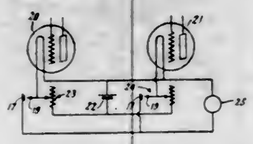
1. A trap of the class described having a catching chamber and a captive chamber, a partition between said chambers having an opening therethrough, a drum in the catching chamber, means pivotally mounting said drum and forming a perch therein, means maintaining said drum normally in capturing position and in closing relation to said opening, said drum being over-balanced by a captive so that the same may pass therefrom through said opening into the captive chamber, and subsequently return to catching position, means to limit the movement of said drum comprising a pin extending from the box and the drum having an elongated slot coacting with the pin, and bearings carried one by the partition and one by an adjacent wall of the box, said bearings being open at the top and closed at the bottom, and trunnions on the drum removably engaging said bearings.

1,677,724. TOBACCO PRESS. THOMAS MILLER, Brooksville, Ky. Filed Apr. 11, 1927. Serial No. 182,591. 7 Claims. (Cl. 100—57.)



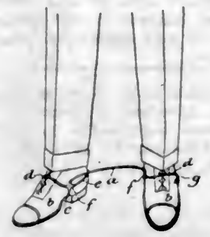
1. A press of the character described, comprising a fixed back board, side boards mounted on the back board, said side boards having transversely extending corresponding slots at one end thereof, a transverse bar slidably engaging said slots, a presser board mounted on said bar, said presser board being adapted to co-operatively engage said side boards and said back board, and means for adjustably positioning said presser board with relation to said back board, for the purposes described.

1,677,725. BAGASSE HANDLING. WALLACE MONTGOMERY, Central Miranda, Cuba, assignor to Edge Moor Iron Company, Edge Moor, Del., a Corporation of Delaware. Filed Nov. 23, 1926. Serial No. 150,323. 4 Claims. (Cl. 209—2.)



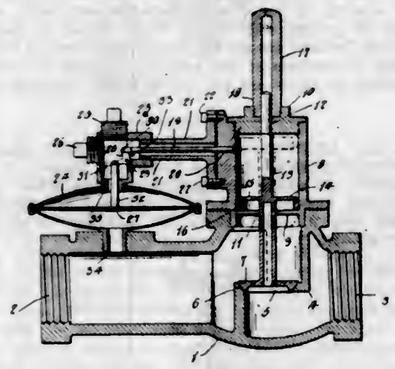
1. The method of handling bagasse and associated bagacillo which comprises propelling the same by a current of air, causing the bagasse to settle out of the current at a desired point and thereafter separating the bagacillo from the propelled air current.

1,677,726. METHOD OF AND APPARATUS FOR DELIVERING SAND INTO MOLDS. OTTO NAGEL and WILHELM KAEMPFER, Durlach, Baden, Germany, assignors to Badische Maschinenfabrik & Eisengiesserei vormals G. Sebold und Sebold & Neff, Durlach, Baden, Germany. Filed Apr. 18, 1927, Serial No. 184,823, and in Germany Mar. 23, 1927. 7 Claims. (Cl. 302—63.)



4. A nozzle for delivering sand into molds by compressed air, comprising a cylindrical portion for delivering the sand and compressed air, and a terminal discharge portion of angular cross-section, adapted to bring the same to more compact form, said terminal discharge portion having a wall extending in a direction at an angle to the axis of the cylindrical portion and in the path of movement of the sand.

1,677,727. VACUUM-TUBE-CONTROL DEVICE. JACKSON H. PRESSLEY, Long Branch, N. J. Filed July 27, 1926. Serial No. 125,222. 4 Claims. (Cl. 201—55.)



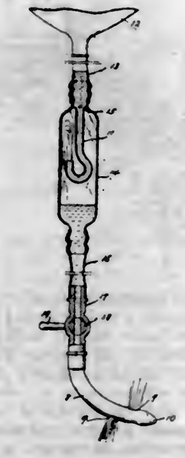
1. A variable resistance device for controlling the filament current of a thermionic relay comprising a resistance, an arm movable thereon to vary the resistance in circuit, an operating shaft mounted for rotation to drive said arm and for axial movement to close a pair of contacts, and means comprising a cam surface for effecting axial movement of said shaft to close said contacts before causing movement of said arm, when said shaft is rotated.

1,677,728. MEANS FOR FACILITATING LOCOMOTION ON FOOT. JOHN DENIS MANSFIELD ROBINSON, Roydon, England. Filed May 7, 1926, Serial No. 107,444, and in Great Britain May 18, 1925. 4 Claims. (Cl. 272—70.)

1. An appliance for facilitating human locomotion in running or walking comprising ankle engaging members, means to prevent said ankle engaging members from rising upon the leg of the wearer and a single elastic element joining and connected only to said ankle members and adapted to be placed under tension with each stride of the wearer so as to extend in a straight line between said members.

1,677,729. AUTOMATIC CUT-OFF VALVE FOR GAS LINES. CHARLES L. SAMS, Bridgeport, Ohio. Filed Jan. 8, 1927, Serial No. 159,955. Renewed June 11, 1928. 1 Claim. (Cl. 67—115.)

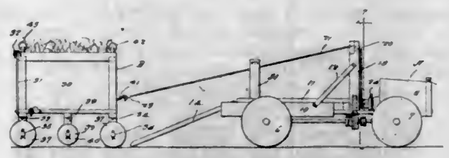
An automatic cut-off comprising a casing having a valve seat, a valve arranged within the casing and adapted when in closed position to occupy the seat, a cylinder extending from the casing in axial alinement with the valve seat, said cylinder being closed at its ends and provided in a side thereof with a radial opening, a piston slidably arranged within the cylinder and provided with an axial opening, a stem secured to the valve and piston, a sleeve extending at right angles from the cylinder and communicating with the opening therein, a second casing secured to and communicating with said first casing, an elbow secured to and communicating with the sleeve and second casing, a diaphragm within the second casing, an angle lever pivoted within the elbow, a rod secured to the diaphragm and elbow, and a pin arranged within the sleeve and the opening in the cylinder and connected to the lever.



1,677,730. MANUFACTURE OF PARAFORMALDEHYDE. KARL SATOR and WILHELM PFANNMÜLLER, Ludwigshafen-on-the-Rhine, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed June 26, 1926, Serial No. 118,845, and in Germany July 2, 1925. 4 Claims. (Cl. 260—140.)

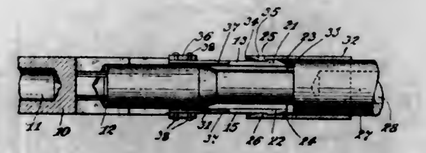
1. The process of producing solid polymers of formaldehyde which consists in removing water from gas mixtures comprising formaldehyde and water vapor and separating the solid product from the remaining gases.

1,677,731. PROCESS OF WORKING UP ACID RESINS OBTAINED FROM THE REFINING OF MINERAL-OIL DERIVATIVES INTO NEUTRAL BITUMENS. CARL SAUTERMEISTER, Wiesbaden, Germany, and FRIEDRICH WILHELM, Ploesti, Rumania. Filed Dec. 19, 1925, Serial No. 76,552, and in Rumania June 30, 1925. 2 Claims. (Cl. 196—148.)



1. A process of working up acid resins, obtained from the refining of mineral oil derivatives, into neutral bitumens, consisting in heating the acid-tar, agitating the same to separate the sulphuric acid from the tar, removing the sulphuric acid, heating the tar in order to concentrate the sulphuric acid remaining, continuing the heating up to about 130° C., and thereafter introducing sulphur into the tar so as to form sulphuretted hydrogen which reduces the sulphuric acid.

1,677,732. LIQUID-FLOW REGULATOR. OSCAR BOTO SCHELLBERG, New York, N. Y. Filed Apr. 14, 1927. Serial No. 183,672. 2 Claims. (Cl. 128—229.)

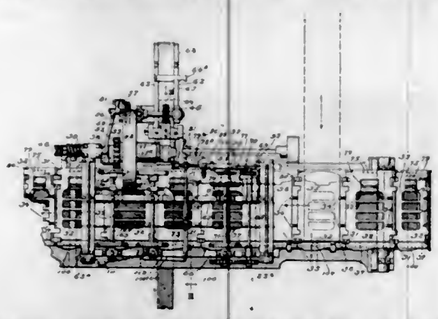


1. In combination with a liquid reservoir and delivery tube therefor, a visible indicator disposed between said reservoir and tube for disclosing the condition of the flow through said tube, said indicator embodying a transparent receiver operatively connected with said reservoir and said tube in open communication therewith, and an inlet member extending part-way into said receiver for delivery thereinto, said receiver being closed at the upper end of said inlet member to form an air pressure chamber, the pressure wherein is increased or diminished in accordance with the accumulation in the end of said receiver opposite said inlet member, said pressure being employed to restrict and atop the flow from said inlet member.

1,677,733. SUGAR-HAULING APPARATUS. JOSEPH SCHIFTNER, La Gloria, Cuba. Filed Mar. 23, 1927. Serial No. 177,784. 4 Claims. (Cl. 214—85.)

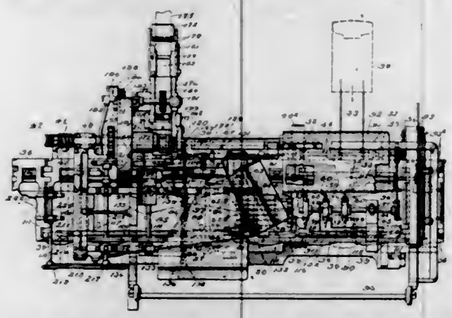
3. In combination, a truck body, slideway means in the truck body, a gang plank, a block, a strip of flexible material connecting one end of the gang plank with the block, said plank, said strip of flexible material and said block being slidable in the slideway, and means for preventing the block from being moved completely out of the slideway.

1,677,734. CONNECTER. LEO O. SMITH, Brooklyn, N. Y., assignor to Columbia Machine Works and Malleable Iron Co., Brooklyn, N. Y., a Corporation of New York. Filed May 11, 1927. Serial No. 190,392. 3 Claims. (Cl. 173—328.)



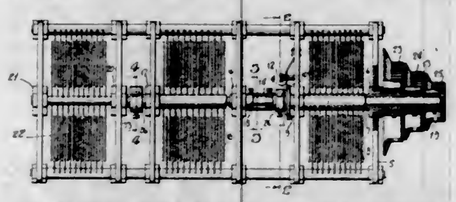
3. In a connecter for electric cables and the like, a socket member having a plurality of spaced longitudinal slots in a cylindrical wall thereof to provide therein a series of spaced tongues, a plug member adapted to fit within the tongues of the socket member, means associated with the plug member for engaging the ends of the tongues to maintain the parts in an associated relationship, a member fitting over and movable on the said tongues, and a series of spacer devices connected to and carried by the said member and adapted to fit within the slots between the said tongues, the said member and spacer devices carried thereby being shiftable from one position in which the tongues are yieldable to pass into the means for engaging the same with the plug to another position in which the said member and spacer devices carried thereby prevent any yielding movement of the tongues and thereby prevent the tongues from becoming accidentally disengaged from the said means.

1,677,735. METHOD OF AND MACHINE FOR CONDITIONING SHEET ARTICLES AND OF AND FOR APPLYING MINOR MEMBERS TO SHEET ARTICLES, SUCH AS ENVELOPES, FOR EXAMPLE. GEORGE C. SNYDER, New York, N. Y., assignor to Kaelma Manufacturing Company, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 2, 1924. Serial No. 741,180. 80 Claims. (Cl. 93—61.)



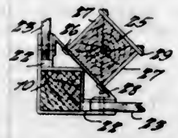
1. The method herein described, including moving sheet articles, in substantially flat form continuously in

succession past a location where minor members are to be applied, and delivering the minor members to and im-



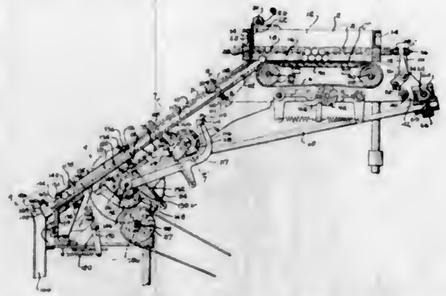
mediately connecting them interlockingly with the actual material of the articles at such location while the articles are moving.

1,677,736. METHOD OF AND MACHINE FOR APPLYING MINOR MEMBERS TO SHEET ARTICLES. GEORGE C. SNYDER, New York, N. Y., assignor to Kaelma Manufacturing Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 28, 1925. Serial No. 53,056. 60 Claims. (Cl. 93—61.)



1. The method herein described, including moving individual sheet articles, flattening and positioning those articles which are qualified for use in a subsequent operation, and positively engaging and removing those articles which are not flattened and are disqualified for use whether positioned or not.

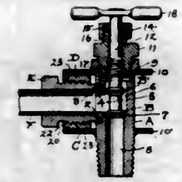
1,677,737. RADIO TUNING DEVICE. OSHEL C. STAATS, Ripley, W. Va. Filed Feb. 6, 1926. Serial No. 86,564. 2 Claims. (Cl. 175—41.5.)



1. In a radio tuning device, a frame, sets of condenser elements carried thereon, a hollow shaft rotatable through a zone of the frame having one set of condenser elements, condenser elements carried on the said shaft and adapted to coact with the condenser elements in the said zone, a hollow shaft within the first mentioned shaft extending beyond each end of said shaft, means yieldingly connecting the shafts for rotation in unison, the second mentioned shaft carrying condenser elements for a succeeding zone, a shaft within the second mentioned shaft extending beyond its ends, condenser elements carried by the inner shaft to coact with the condenser elements of another zone, means for yieldingly coupling the first mentioned and second mentioned shafts together, means for yieldingly coupling the inner shaft to the intermediate shaft, and separate hand grasps for the shafts whereby they may be manipulated simultaneously or selectively.

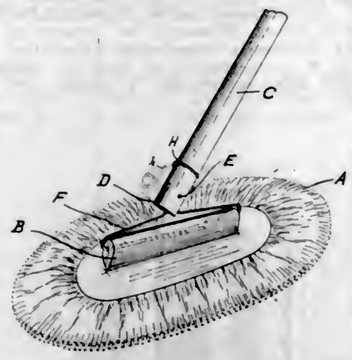
1,677,738. OIL-WELL DERRICK. BENJIMAN F. SUMPTER, Wichita Falls, Tex.; DOUGLAS E. WINFREE, Chickasha, Okla.; and ROLAND B. ROBIRDS, Wichita Falls, Tex. Filed Apr. 1, 1927. Serial No. 180,260. 2 Claims. (Cl. 20—0.5.)

2. In an oil well derrick, a plurality of brackets adapted to receive sectional corner posts, girth shoes carried by each bracket, a web connecting the shoes of each bracket, and a reinforcement clamp anchored to said web.



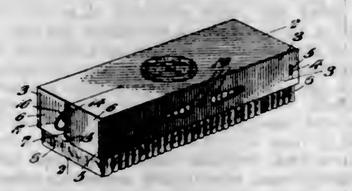
1,677,739. ASSEMBLING MACHINE. HARRY E. TOWNSEND, Brooklyn, N. Y. Filed Dec. 9, 1925. Serial No. 74,295. 17 Claims. (Cl. 226—2.)

1. A machine for handling articles of the kind described having, in combination, a hopper having a discharge opening adjacent to its lower end, an endless conveyor adjacent to the bottom of the hopper for conveying the articles toward said discharge opening, means for arranging the articles on said conveyor in rows extending longitudinally thereof, with the articles in each row arranged edge to edge in upright position, and means for imparting advancing and retracting movements to said conveyor to tend to move the articles toward and from said discharge opening, said advancing movements being of greater extent than the retracting movements.



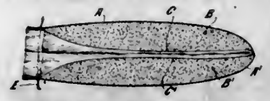
2. A machine for handling articles of the kind described having, in combination, a hopper, an endless conveyor adjacent to the bottom of the hopper having one end thereof spaced a distance away from the lower end of a wall of said hopper to provide an opening through which the articles may be discharged, means for arranging the articles on said conveyor in rows extending longitudinally thereof with the articles in each row arranged edge to edge in upright position, and means for imparting advancing and retracting movements to said conveyor to tend to move the articles toward and from said discharge opening, said advancing movements being of greater extent than the retracting movements.

1,677,740. COMBINED VALVE AND PIPE COUPLING. ALBERT J. WEATHERHEAD, Jr., Cleveland, Ohio. Filed Apr. 13, 1927. Serial No. 183,371. 8 Claims. (Cl. 137—69.)



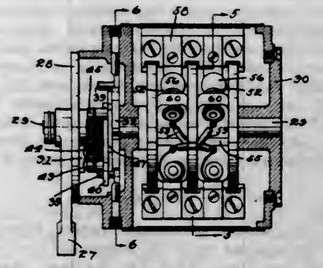
1. A combined valve and pipe coupling, comprising a body having longitudinal and lateral passages, a valve member extending into said body adapted to control the flow of a fluid through said passages, and a separate member sleeved over said body in axial alignment with said valve member, said separate member having a tubular nut adapted to clamp a pipe against said body in open communication with said lateral passage.

1,677,741. HOLDER FOR MOPS. WILLIAM T. WHITAKER, Elkins Park, Pa. Filed Sept. 22, 1926. Serial No. 137,148. 1 Claim. (Cl. 15—147.)



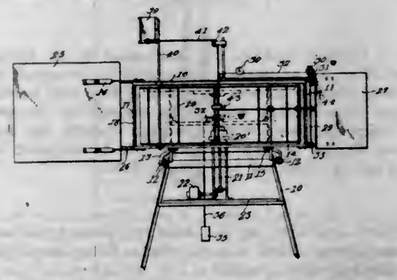
A holder for a mop comprising a handle provided with a slot extending inwardly from one end thereof, a mop holding member extending within the slot, and a pin extending through the handle and across the slot and forming a pivotal mounting for the member, said pin being provided with a clip at one end of the pin and embracing the handle, said clip extending about the handle from its junction with the pin beyond the free end of the pin.

1,677,742. POLISHING DEVICE. STEPHEN G. WILSON, Philadelphia, Pa. Filed Mar. 5, 1927. Serial No. 172,990. 4 Claims. (Cl. 15—223.)



1. A polishing device comprising a casing open at its bottom and having slots and notches at its ends, a filler, a back to receive said filler, and a flat strip of spring material passing through said filler and back and having laterally extending inclined flanges co-operating with said slots and notches to retain said filler and back within said casing.

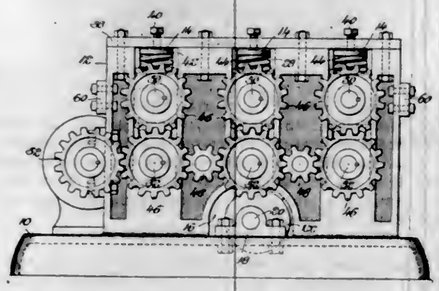
1,677,743. COMBINED BAG AND CUSHION. HERBERT BERTON, London, England, assignor of one-half to Arthur Berton Limited, London, England. Filed Apr. 26, 1927, Serial No. 186,655, and in Great Britain Jan. 10, 1927. 4 Claims. (Cl. 5—337.)



1. A combined reversible bag and cushion, consisting of an open-ended bag made of covered waterproof material and a padding covered with textile fabric secured to the interior surface of the bag to form a cushion said bag having sufficient capacity to receive said padding, whereby when said padding is exteriorly of the bag a waterproof pocket is presented within said padding, and when said bag is reversed a waterproof covering upon both sides of the padding is afforded.

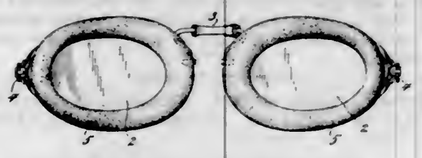
1,677,744. ELECTRIC REVERSING DEVICE FOR TAPPING MACHINES. BENJAMIN S. T. BISHOP, Shrewsbury, and HENRY A. JACOBSON, Worcester, Mass., assignors to Leland-Gifford Company, a Corporation of Massachusetts. Filed Feb. 3, 1926. Serial No. 85,693. 12 Claims. (Cl. 200—70.)

1. The combination of a rod, a lever connected with said rod, a reversing switch comprising an oscillatable plate connected to be operated by said rod, a shaft on which the plate is movable, means for alternately connecting said plate with the shaft and disconnecting it therefrom, and means for conducting a current through the switch alternately in opposite directions as the plate is oscillated.



1,677,745. FLUID MOTOR. DOMENICO BONETTO, St. Louis, Mo. Filed Oct. 19, 1925. Serial No. 63,450. 1 Claim. (Cl. 170—12.)

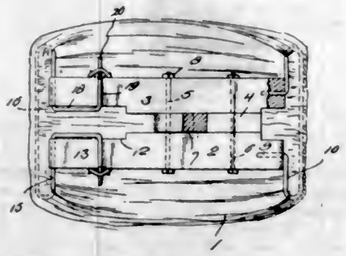
In an apparatus of the class described, a support having a horizontally disposed angle iron ring, its horizontal flange forming a circular track and its vertical flange



forming a means of attachment, a supporting member, brackets depending from said member, each bracket having a pair of arms of unequal length and having rollers mounted adjacent their free ends and engageable with the top and bottom surfaces of said horizontal flange, and a windmill frame mounted on said supporting member.

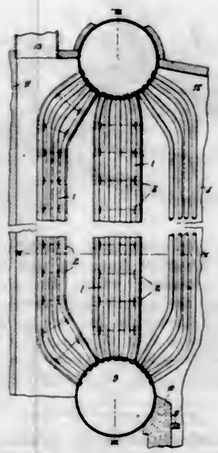
1,677,746. BENDING MACHINE. JOHN Y. BROWN and JOHN R. BROWNING, Everettville, W. Va. Filed June 19, 1926. Serial No. 117,093. 1 Claim. (Cl. 153—56.)

In a bar or rail bending machine, a pair of spaced frame members, three pairs of bearing blocks carried by each frame member, shafts connecting corresponding blocks of the respective frame members, a roller carried by each shaft, the intermediate pairs of blocks being slidably mounted in said frame members, a rotatable shaft mounted below said intermediate blocks, eccentric disks on said shaft supporting said intermediate blocks, a lever on said shaft for rotating same, a fixed toothed segment, and means carried by said lever cooperating with said segment to retain said lever in different angularly adjusted positions.



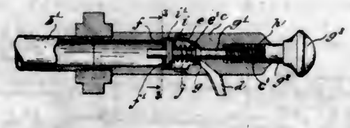
1,677,747. GOGGLES. WILLIAM NEVINS COOK, New York, N. Y., assignor to E. B. Meyrowitz, Inc., a Corporation of New York. Filed Nov. 1, 1924. Serial No. 747,168. 13 Claims. (Cl. 2—14.)

1. A resilient cushion for attachment to an eye-piece frame of a pair of goggles, comprising an elongated integral ring member formed of sponge rubber and having a varying cross section, and means cooperating therewith, and comprising removable stitching, whereby the larger section of said cushion is adapted to be adjusted in a facial hollow, attached to a goggle frame.



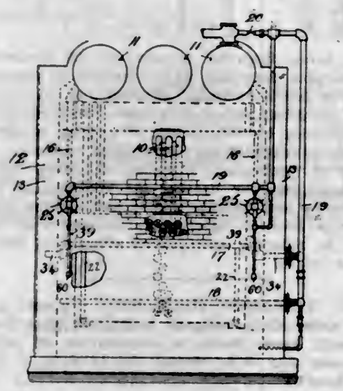
1,677,748. FLOOR MOP. SAMUEL NORMAN CRAGIN, Akron, Ohio. Filed Aug. 11, 1927. Serial No. 212,304. 4 Claims. (Cl. 15—231.)

1. A mop comprising a body having longitudinally disposed sockets in one of its ends and also having its opposite end bifurcated and provided with kerfs in the ends of the furcations, a loop shaped mop cloth holder having longitudinally disposed terminal portions removably arranged in said sockets at one end of the body, a loop shaped mop cloth holder having portions removably arranged in the kerfs at the opposite ends of the body



and also having longitudinally disposed portions and lateral arms at the inner ends of said portions and terminating in enlargements, and keeper loops pivotally connected to the side edges of the body and swingable into and out of engagement with said enlargements.

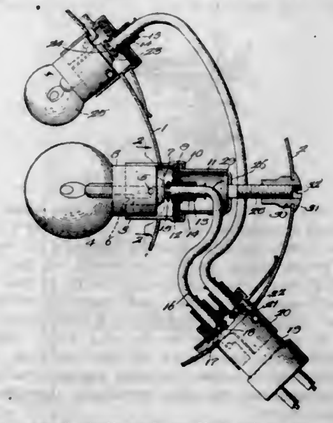
1,677,749. CONTROL OF GASES THROUGH BOILERS. JOSEPH B. CRANE, Pittsburgh, Pa., assignor to International Combustion Engineering Corporation, New York, N. Y., a Corporation of Delaware. Filed Oct. 24, 1923. Serial No. 670,490. 5 Claims. (Cl. 110—98.)



1. A water tube boiler consisting of a bank of tubes arranged in parallel rows, a combustion chamber and an outlet for products of combustion, said elements being so arranged that the gases will flow in a direction at an angle to the tubes in combination with a plurality of substantially continuous walls or partitions extending between and substantially parallel with adjacent parallel rows of tubes in a direction of the flow of the gases and spaced from the tubes forming the rows, said walls or partitions being substantially continuous through the bank and adapted to divide the gases flowing from the combustion chamber into a plurality of streams laterally confined to operate on a plurality of tubes forming the rows or lines between adjacent walls.

1,677,750. LIQUID-SOAP DISPENSER. JOSEPH M. DABNOWSKI, Brooklyn, N. Y., assignor to Moore Brothers Company, New York, N. Y., a Corporation of New York. Filed Sept. 9, 1919. Serial No. 322,637. 5 Claims. (Cl. 221—94.)

1. A liquid soap dispenser embodying therein a tank having an opening therein to the atmosphere, distributing piping including a plurality of branch pipes and a valve controlled delivery mechanism connected with each of said branch pipes consisting of a substantially horizontal casing, a substantially vertical partition having an intake port therethrough, and forming a horizontally extending supply chamber, one end of said chamber having a recessed portion forming a sub-chamber communicating with said supply chamber, a nozzle leading from said sub-chamber, a valve movable in said sub-chamber and controlling said nozzle, an actuating stem therefor, a spring acting thereon, a second valve seated within said supply chamber and controlling said intake port, and operative connections between said valve, whereby with the opening of said first named valve, said other valve will be closed, and with the closing of said first named valve, said other valve will be opened.



1,677,751. SOOT-BLOWER APPARATUS FOR STEAM BOILERS. CHARLES L. DAVIDSON, New York, N. Y. Filed June 25, 1921. Serial No. 480,309. 1 Claim. (Cl. 122—392.)

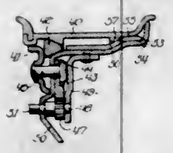
The combination with a steam boiler having a casing, of an oscillatable perforated blower element permanently mounted within the casing, a protecting wall within said casing behind which said element normally rests to protect it from direct heat, means on the outside of the casing for moving said blower element out of normal position for use and means for maintaining said blower element in protected position against which the first mentioned means acts in moving said blower element into position for use.

1,677,752. ELECTRIC REFLECTING LAMP. HARRY A. DOUGLAS, Bronson, Mich. Filed Jan. 27, 1921. Serial No. 440,488. 1 Claim. (Cl. 73—328.)

An electrical connector including a shell having an annular internal groove which is U-shaped in cross section and which is located at one end of the shell; a second shell having a flange extending into said groove; a disk of insulation also received in said groove; and a spring contact carried by said disk adapted to be compressed by a circuit continuing element engaged in

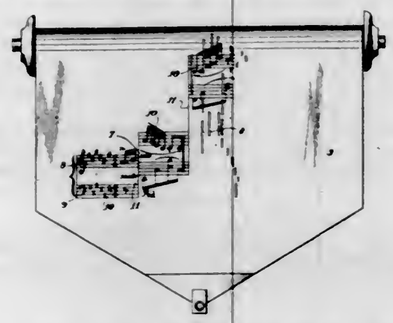
the first named shell and tending when so compressed to force the disk against the flange of the second shell whereby the possibility of disturbance of the assembly of said shells by vibration is eliminated.

1,677,753. CELLULOSE COMPOSITION. OTTO DROSSBACH, Ludwigshafen-on-the-Rhine, and OTTO JORDAN, Mannheim, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed July 2, 1926, Serial No. 120,254, and in Germany July 24, 1925. 4 Claims. (Cl. 106—37.)



4. The process of preparing plastic which consists in treating a cellulose derivative with an ester of an ethylene di-carboxylic acid with a non-aromatic alcohol.

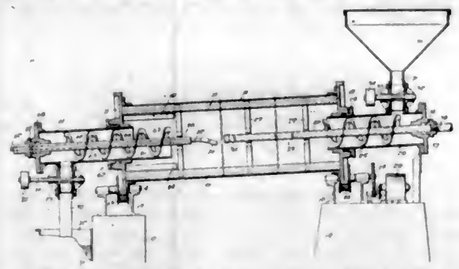
1,677,754. BEATER. LEE EDGAR EARLE, Albany, N. Y., assignor to United Royalties Corporation, New York, N. Y. Filed May 20, 1925. Serial No. 31,651. 5 Claims. (Cl. 259—131.)



1. A beater comprising a vertical frame having at its lower end a laterally extending portion formed with a pinion opening, a pinion located in the said opening and carrying beater blades, and a bridge extending across the said opening connected to opposite portions of the supporting frame by being bent around the latter for preventing the disengagement of the pinion from the driving gear.

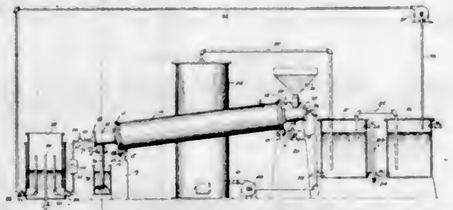
1,677,755. DISK WHEEL. GEORGE H. FORSYTH, Harvey, Ill., assignor, by mesne assignments, to Steel Wheel Corporation, Lansing, Mich., a Corporation of Michigan. Filed July 11, 1921. Serial No. 484,008. 3 Claims. (Cl. 301—22.)

1. In a wheel, the combination with the wheel body, the felly, and a demountable rim, of adjustable rim-positioning and retaining clips bearing laterally on the rim at divers points about the circumference of the wheel, an adjusting ring rotatable concentrically of the wheel and circumferentially slotted and provided with cam surfaces at intervals corresponding to the clips, bolts connected to the clips and to the ring within the slots with the bolt heads bearing on the cam surfaces, whereby simultaneously to press the clips against the rim to position the same on the felly uniformly throughout as the ring is rotated.



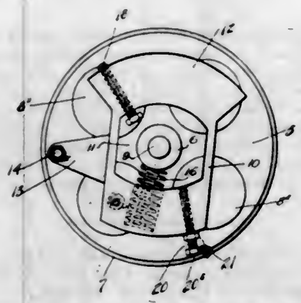
1,677,756. MUSIC ROLL FOR PLAYER PIANOS. OSCAR FOSS, Aneroid, Saskatchewan, Canada. Filed June 10, 1926, Serial No. 115,036, and in Canada Apr. 20, 1926. 2 Claims. (Cl. 84—165.)

2. A music roll for player pianos having a musical exercise printed thereon and perforations, adapted when used in connection with a player piano to mechanically reproduce the said musical exercise printed thereon; said printed exercise extending continuously transversely of the sheet from margin to margin and stepped longitudinally of the roll in measure-length fragments, having the bars on aligned ends of adjoining measures extended to connect the same, the lines returning from the right hand end to recommence in alignment at the left hand margin, said measures being disposed longitudinally of the roll so that the bottom line of the staff is in horizontal alignment with the bottom of the perforation representing the first note in each respective measure.



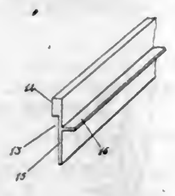
1,677,757. TREATMENT OF CARBONACEOUS AND OTHER MATERIALS. FELIX FRANK, San Francisco, Calif., assignor, by mesne assignments, to William Wallace Kemp, Baltimore, Md. Filed Dec. 1, 1920. Serial No. 427,566. 8 Claims. (Cl. 202—8.)

1. The herein described process for the treatment of heat dissociable carbonaceous material, which consists in introducing the material into an air-tight chamber, and subjecting the same to the direct action of a flame produced by burning a previously formed mixture of uniform composition containing as constituents combustible materials, and a supporter of combustion, and including an excess of one constituent, thereby heating the material to dissociate the same into volatile matter and



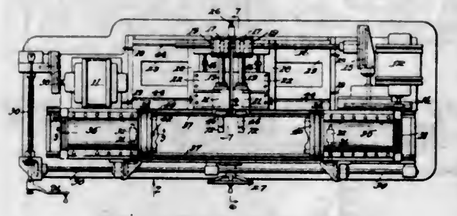
residue and carrying out a chemical reaction by the action of an element of the excess constituent on an element of the material being treated.

1,677,758. TREATMENT OF CARBONACEOUS AND OTHER MATERIALS. FELIX FRANK, San Francisco, Calif., assignor, by mesne assignments, to William Wallace Kemp, Baltimore, Md. Original application filed Dec. 1, 1920, Serial No. 427,566. Divided and this application filed Jan. 2, 1923. Serial No. 610,290. 2 Claims. (Cl. 202—8.)



1. The herein described process for the treatment of heat dissociable materials which consists in introducing the material into an air-tight chamber and subjecting the same to the direct action of a flame produced by burning a previously formed mixture of uniform composition, containing as constituents combustible material and a supporter of combustion, including an excess of a reducing agent, thereby heating the material to dissociate the same into volatile matter and residue and carrying out a chemical reaction by the action of an element of the reducing agent on an element of the material being treated.

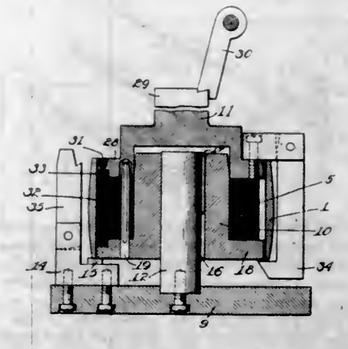
1,677,759. VIBRATING MECHANISM. ALBERT A. FREVERT, Alma, Mich., assignor to Crippen Manufacturing Company, Alma, Mich., a Corporation of Michigan. Filed Aug. 23, 1926. Serial No. 131,029. 7 Claims. (Cl. 74—14.)



1. A vibrating mechanism comprising a cylindrical member having a hub, a counter-balanced counterweight pivotally secured thereto and having a centrally disposed opening embracing said hub, resilient means interposed between the counterweight and hub and adjustable means for adjusting the offcenter movement of the counterweight.

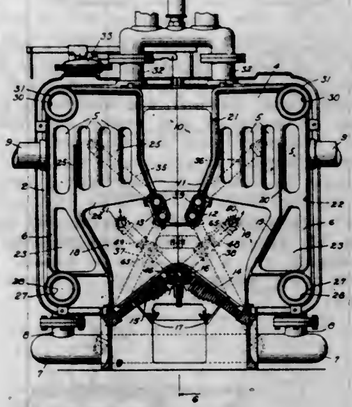
1,677,760. DIVIDING STRIP FOR TERRAZZO FLOORING. PASQUALE GALASSI, New York, N. Y. Filed Jan. 18, 1928. Serial No. 247,619. 5 Claims. (Cl. 94—18.)

1. A floor strip of the character described, comprising a relatively narrow rib portion and a wider head portion integral therewith, said head portion having an upper uninterrupted straight edge.



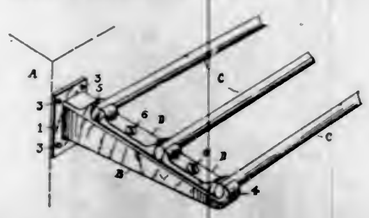
1,677,761. MACHINE FOR MILLING CRANK-SHAFT PINS. ALBERT J. GIFFORD, Shrewsbury, and BENJAMIN S. T. BISHOP, Worcester, Mass., assignors to Leland-Gifford Company, Worcester, Mass., a Corporation of Massachusetts. Filed June 25, 1924. Serial No. 722,403. 2 Claims. (Cl. 90—20.)

1. In a milling machine, the combination with a milling cutter spindle, of a bed for supporting it, said bed having a pair of longitudinal ways, a head mounted to slide on said ways, means for clamping the head to the ways, said head having a cylindrical passage therethrough, a spindle rotatably mounted in said passage, a gear on the spindle, means for rotating said gear to rotate the spindle, and means on the end of the spindle for locating an eccentric part of the work to be operated upon in a certain position around the circumference of the spindle, said spindle being provided with an eccentric fixed stop on the end thereof for engaging the end of the work for the purpose described.



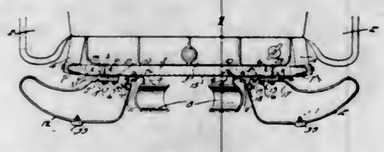
1,677,762. MOTOR-ASSEMBLING FIXTURE. ROY O. GILBURG, Wausau, Wis., assignor to Marathon Electric Mfg. Co., Wausau, Wis., a Corporation of Wisconsin. Filed July 5, 1927. Serial No. 203,428. 5 Claims. (Cl. 22—116.)

1. In a fixture for securing a laminated stator ring core in place in a motor frame, an arbor for receiving the core, a base for holding the arbor, the base having locating pads for positioning the frame in relation with the core, and rods mounted in pairs in the arbor for projecting into the annular space between the core and the frame



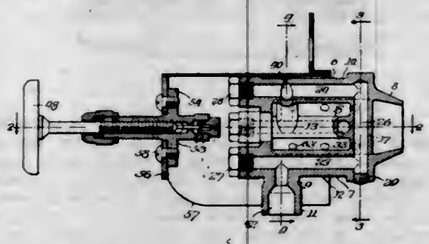
so that the holds for casting strips of metal in said space may be formed by pouring sand into the spaces between the pairs of rods.

1,677,763. STEAM GENERATOR. MERRIMAN C. GILLETT, Philadelphia, Pa., assignor to Standard Heater Company, Williamsport, Pa., a Corporation of Pennsylvania. Filed Jan. 18, 1924. Serial No. 687,149. Renewed May 18, 1928. 11 Claims. (Cl 122—228.)



1. In a steam generator, the combination of a plurality of water circulating sections including a front and a back section, said sections being so shaped as to form a choke magazine; a pair of hollow choke members each provided with a pair of water channels disposed along the lower edges of said magazine and forming a continuation of the choke sides thereof; a water inlet to the back section above said choke members; a water header joining the side edges of said back section; upper water connections between one of the channels in each of said choke members and said back section; lower water connections between said header and the other of said channels in each of said choke members; a combustion chamber into which said choke members extend; a grate hollow supporting member provided with means for admitting air thereto associated with said combustion chamber; and valved means for cooling and supporting member.

1,677,764. SUPPORTING BRACKET FOR PARALLEL RAILS, RODS, AND THE LIKE. JOHN EDWARD GLOEKLER, Pittsburgh, Pa. Filed Oct. 9, 1925. Serial No. 61,522. 3 Claims. (Cl. 186—34.)

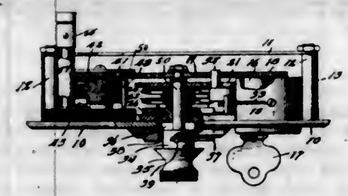


1. In a support for cafeteria rails, the combination of a bracket having lugs thereon and said lugs being provided with an arcuate face against which one side of the rails fit, and a clamp-plate detachably secured to the bracket and having its ends provided with an arcuate surface which fits against the other side of the rails opposite the lugs whereby the rails are held fixedly in position.

1,677,765. AUTOMOBILE FENDER GUARD. OSCAR H. GOETZ, Springfield, Mass., assignor to American Chain Company, Inc., a Corporation of New York. Filed Oct. 5, 1925. Serial No. 60,404. 7 Claims. (Cl. 293—55.)

1. An automobile fender-guard comprising a set of impact-bars in the form of extended loops combined with a bracket having means to connect and support said loops in vertically spaced alignment, and with means to permit ready attachment of said bracket and connected loops, as a unitary structure, to a transverse member of an automobile frame.

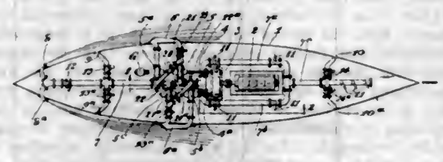
1,677,766. VAPORIZING NOZZLE. EUGENE E. GOLLER, Chicago, Ill., assignor to Unique Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed June 23, 1926. Serial No. 118,123. 5 Claims. (Cl. 158—33.)



1. A vaporizing nozzle for blow torches and the like, which comprises a hollow casting, longitudinal tubular passages for liquid fuel in the walls thereof; transverse tubes connecting said passages, said tubes crossing at right-angles to each other and also being at right-angles with said tubular passages; an ejector nozzle for vaporized fuel in communication with said passages and located rearwardly of said transverse tubes and in line with the point at which said tubes cross so as to direct a stream of flame against said transverse tubes to heat them and vaporize the liquid fuel passing therethrough; a flame orifice in the end of said casting opposite to said ejector nozzle; and means, comprising a threaded opening communicating with said passages, for connecting said nozzle to a fuel supply.

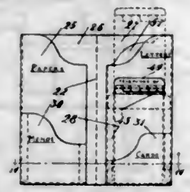
1,677,767. PENCIL CARRIER. GILBERT W. GOODRIDGE, Fairfield, Conn., assignor to The Bead Chain Manufacturing Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Dec. 17, 1926. Serial No. 155,494. 3 Claims. (Cl. 124—116.)

1. A pencil-holding clip, comprising means for attaching thereto the end of a chain of the ball-and-link type, and a catch adapted to establish readily disengageable connection with the chain intermediate the ends of the latter, said catch comprising a lug apertured to accommodate a link of the chain, said aperture having a constricted guideway opening thereto.



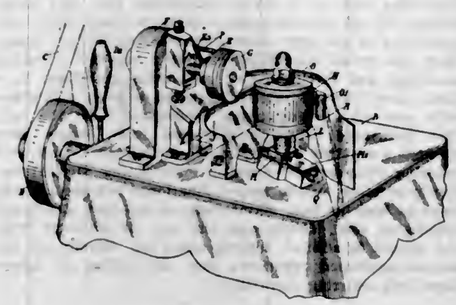
1,677,768. LOCKING DEVICE. CHARLES M. GRAVES, New York, N. Y. Filed July 23, 1927. Serial No. 207,957. 16 Claims. (Cl. 70—53.)

1. A locking device comprising a manually operated actuating member, a combination controlled element, a member to be actuated, means controlled by the combination lock to prevent the actuation of one member by the other until the combination has been set, and means preventing disconnection of said members until the actuated member has been returned to normal position.



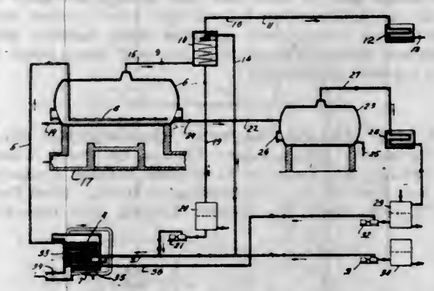
1,677,769. FIRE-FIGHTING BOAT. HARRY Y. HADEN, New York, N. Y. Filed Apr. 7, 1927. Serial No. 181,707. 6 Claims. (Cl. 114—0.5.)

1. A fire boat, including fire extinguishing nozzles and jet propulsion nozzles in combination with an engine, centrifugal pumps and a distributing system for supplying both kinds of nozzles, said engine being of the heavy duty slow speed type, operating through a multiplying gear to drive two or more centrifugal pumps at normal full speed for supplying both kinds of nozzles, said pumps being each designed for maximum output at pressures



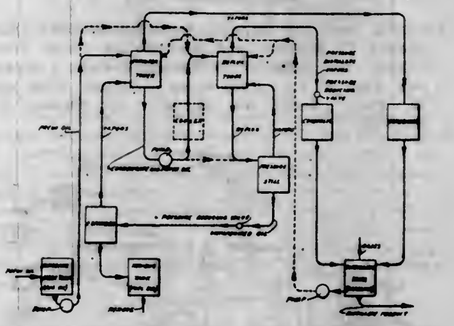
suitable for the jet propulsion and equipped for connection of two or more pumps in series to furnish higher pressures for fire fighting.

1,677,770. POCKET WALLET. HARRY H. HARNSBERGER, Brooklyn, N. Y., assignor to Modern Management Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 10, 1927. Serial No. 211,987. 14 Claims. (Cl. 129—1.)



1. As a new article of manufacture, a pocket wallet comprising two body flaps connected by a folding edge, two inner flaps forming two open pockets therewith, and two additional flaps forming two smaller additional open pockets with said inner flaps.

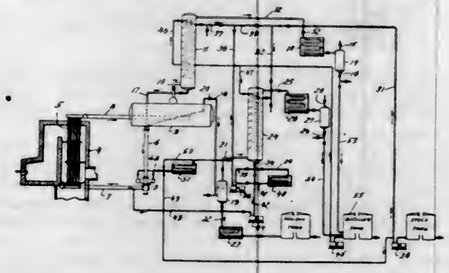
1,677,771. COLLAR-SHAPING MACHINE. JOHN HARRIS, Nuneaton, England. Filed Feb. 14, 1927, Serial No. 168,083, and in Great Britain July 16, 1926. 1 Claim. (Cl. 68—9.)



In a collar shaping machine, a rail for supporting a collar, a grooved wheel cooperating with one edge of said rail to move a collar therealong and to shape the fold of the same, a portion of said rail being curved, a guard, a portion of which extends contiguous with and in spaced relation to the curved portion of said rail, and rollers carried by said guard with which one side of a collar moving along said rail is adapted to engage to facilitate movement of the collar along said rail.

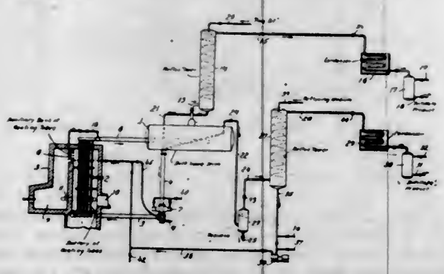
1,677,772. ART OF CRACKING HYDROCARBONS. EUGENE C. HERTHEL and THOMAS DE COLON TIFFT, Chicago, Ill., assignors to Sinclair Refining Company, New York, N. Y., a Corporation of Maine. Filed June 22, 1926. Serial No. 117,696. 1 Claim. (Cl. 196—49.)

An improved method of producing lower boiling hydrocarbon oils from higher boiling hydrocarbon oils, which comprises forcing such higher boiling hydrocarbon oils in a single pass through a heating zone into a primary vaporizing zone and maintaining the oil under superatmospheric pressure in both the said heating zone and the primary vaporizing zone, passing unvaporized oil from the primary vaporizing zone to an externally unheated secondary vaporizing zone and maintaining the oil therein under a pressure lower than that prevailing in the primary vaporizing zone, taking off and condensing vapors from the secondary vaporizing zone and forcing oil condensed from these vapors again through the heating zone, first in advance of fresh oil and then in admixture with fresh oil, without returning to the heating zone unvaporized components of oil which have once passed therethrough, passing heating gases in the heating zone first in heat exchange with the oil condensed from vapors from the secondary vaporizing zone and then in heat exchange with the mixture of this oil with fresh oil, and taking off vapors from the primary vaporizing zone including vapors of the desired lower boiling hydrocarbon oils.



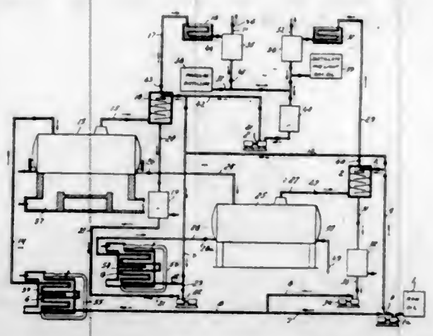
1,677,773. ART OF CRACKING HYDROCARBON OILS. EUGENE C. HERTHEL and THOMAS DE COLON TIFFT, Chicago, Ill., assignors to Sinclair Refining Company, New York, N. Y., a Corporation of Maine. Filed June 22, 1926. Serial No. 117,697. 3 Claims. (Cl. 196—49.)

1. In processes of cracking higher boiling hydrocarbon oils to produce lower boiling hydrocarbon oils by distillation under pressure at cracking temperatures in which unvaporized oil is withdrawn during the pressure distillation and subjected to further vaporization by its self-contained heat under a reduced pressure, the improvement which comprises passing the vapors separated from the oil withdrawn from the pressure distillation



into a tower, introducing fresh oil directly into the vapor space in this tower, so as to bring the fresh oil and vapors into direct and intimate contact therein, thereby subjecting the vapors to condensation, passing the vapors from the pressure still into a reflux tower and introducing admixed condensate and unvaporized fresh oil from the first mentioned tower into direct contact with the vapors therein, and returning reflux together with admixed unvaporized oil from the said reflux tower to the pressure distillation.

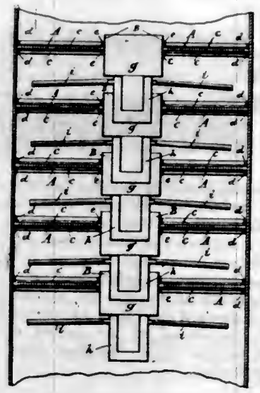
1,677,774. ART OF CRACKING HYDROCARBON OILS. EUGENE C. HERTHEL and THOMAS DE COLON TIFFT, Chicago, Ill., assignors to Sinclair Refining Company, New York, N. Y., a Corporation of Maine. Filed June 22, 1926. Serial No. 117,698. 1 Claim. (Cl. 196—49.)



In processes of cracking higher boiling hydrocarbon oils to produce lower boiling hydrocarbon oils by distillation under pressure at cracking temperatures in which unvaporized oil is withdrawn from the pressure distillation during operation and subjected to further vaporization by its self-contained heat through reduction in pressure, the improvement which comprises taking off vapors from the pressure distillation and condensing them to form a pressure distillate, subjecting the vapors separated from the unvaporized oil withdrawn from the pressure distillation to a fractionating operation, and controlling the fractionating operation by supplying thereto a fraction the constituents of which correspond to components of the desired distillate product to take off as vapors from the fractionating operation a fraction the constituents of which correspond to the components of the pressure distillate, and condensing this fraction.

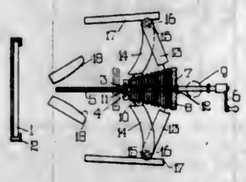
1,677,775. ART OF CRACKING HYDROCARBON OILS. EUGENE C. HARTHEL and THOMAS DE COLON TIFFT, Chicago, Ill., assignors to Sinclair Refining Company, New York, N. Y., a Corporation of Maine. Filed Aug. 12, 1927. Serial No. 212,482. 10 Claims. (Cl. 196—49.)

1. An improved method of cracking hydrocarbon oils, which comprises maintaining a body of oil in a vaporizing zone under a superatmospheric pressure and heating it to a cracking temperature by circulating oil therefrom through heating tubes and back thereto, taking off vapors including vapors of the cracked product therefrom under pressure, discharging oil from the said body into a separate vaporizing zone maintained under a pressure lower than that prevailing in the first and taking off vapors from the second vaporizing zone, subjecting the vapors from the second vaporizing zone to a condensing operation and forcing condensate from this condensing operation through separate heating tubes into the first vaporizing zone, and passing heating gases from a firebox in which fuel is burned for supplying heat to the cracking operation first over the heating tubes through which condensate from the said condensing operation is forced and then over the heating tubes through which oil from the said body is circulated.



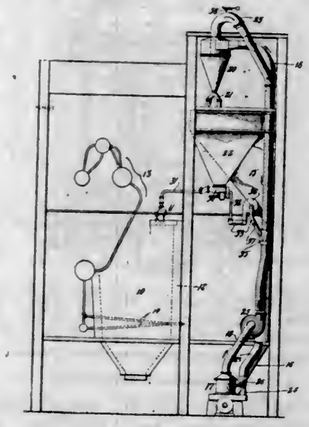
1,677,776. ART OF CRACKING HYDROCARBON OILS. EUGENE C. HERTHEL and THOMAS DE COLON TIFFT, Chicago, Ill., assignors to Sinclair Refining Company, New York, N. Y., a Corporation of Maine. Filed Oct. 27, 1927. Serial No. 229,122. 8 Claims. (Cl. 196—49.)

1. An improved method of cracking hydrocarbon oils which comprises forcing raw oil in a single pass through a heating zone into a vaporizing zone and maintaining the oil under superatmospheric pressure in both the heating zone and the vaporizing zone, heating the oil to the cracking temperature in the said heating zone, subjecting the vapors from the said vaporizing zone to a refluxing operation, passing unvaporized oil from the said vaporizing zone to a second vaporizing zone and maintaining the oil therein under a pressure lower than that prevailing in the first vaporizing zone, subjecting vapors from the second vaporizing zone to a separate refluxing operation and forcing reflux condensate therefrom in a single pass through the said heating zone in admixture with raw oil, passing reflux condensate from the said first mentioned refluxing operation in a single pass through a separate heating zone and heating the oil to a cracking temperature therein, maintaining superatmospheric pressure on the second mentioned heating zone at least as high as that maintained on the first mentioned vaporizing zone, discharging the hot oil products from the second mentioned heating operation directly to the second mentioned vaporizing zone and taking off vapors from both refluxing operations.



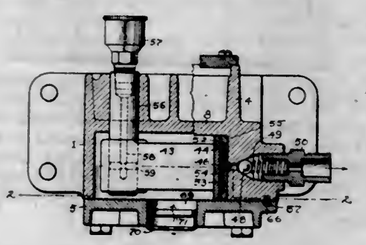
1,677,777. HEAT-INTERCHANGE DEVICE. CECIL ROBERT HOUSEMAN, Wembley, England, assignor, by mesne assignments, to Air Reduction Company, Incorporated, a Corporation of New York. Filed Jan. 23, 1926, Serial No. 83,232, and in Great Britain Jan. 28, 1925. 1 Claim. (Cl. 261—113.)

An apparatus for use where intimate contact between a gas and a liquid is desired, comprising a receptacle, means mounted in said receptacle to support a body of liquid and to permit the passage of gas therethrough, said means comprising a series of alternately plain and corrugated ribbons, the corrugations in said last mentioned ribbons being angularly disposed, said corrugated



ribbons filling a substantial portion of the space between the plain ribbons, whereby the plain ribbons are maintained in spaced relation and a sufficient surface is provided to maintain a liquid between said strips.

1,677,778. AUTOMATIC FOCUSING OPTICAL-PROJECTION APPARATUS. EDGAR KENNETH HUNTER, London, England, assignor to Johannes Robert Carl August, London, England. Original application filed Sept. 20, 1922, Serial No. 589,365, and in Great Britain Sept. 21, 1921. Divided and this application filed Dec. 18, 1925. Serial No. 76,288. 3 Claims. (Cl. 88—24.)

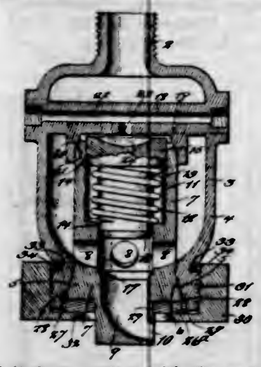


1. An optical projection system comprising an object holder, an image holder, a lens holder, movable mounts for two of said holders, a cam controlling the displacement of one holder in a forwardly progressive direction, a second cam controlling the movement of the other holder, first in a forwardly progressive direction and then in a reverse direction, and means to provide relative displacement between said holders and said cams whilst maintaining the relationship of the three holders according to the Newtonian law of conjugate foci.

1,677,779. MEANS FOR HANDLING AND FEEDING PULVERIZED FUEL. GEORGE P. JACKSON, Flushing, and ARTHUR V. ADAMSON, Hempstead, N. Y., assignors to Combustion Engineering Corporation, a Corporation of New York. Filed June 8, 1923. Serial No. 644,119. 4 Claims. (Cl. 110—104.)

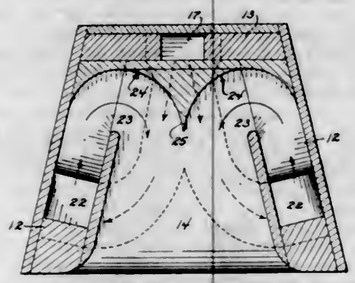
2. The combination with a furnace, of a return-air pulverizing and conveying system, a feeder for the furnace, means for supplying the feeder with pulverized fuel from the system, and a combined means for exhausting air from the return side of the system and for supplying air under pressure to the feeder.

1,677,780. AIR PUMP. JOSEPH F. JAWOROWSKI, Cleveland, Ohio. Filed Dec. 4, 1922. Serial No. 604,708. 1 Claim. (Cl. 230—149.)



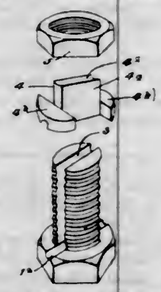
A rotary air compressor, comprising a body having a circular air-compressing chamber open at one side thereof and provided with air intake and discharge ports, a movable cover plate enclosing the open side of said chamber, said body and cover plate having circular registering grooves in their meeting faces, a split spring ring mounted within said grooves, a rolling air-compressing member within said chamber, and a movable abutment extending into said chamber intermediate said intake and discharge ports.

1,677,781. CYLINDER COCK. LAURIE JOYNER, Philadelphia, Pa. Filed June 1, 1927. Serial No. 195,760. 14 Claims. (Cl. 121—134.)



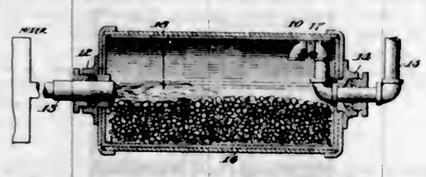
1. A cylinder cock, comprising a casing having a chamber into which the condensation of steam drains, a valve cage with an open ended chamber therein and upstanding within the casing and having a drain passage to carry off the condensation of steam to the atmosphere, said cage having a valve seat, a valve operable in and mounted to

close both ends of said cage chamber, a spring housed in the cage chamber and being free from contact with the steam or foreign matter therein, and associated with the



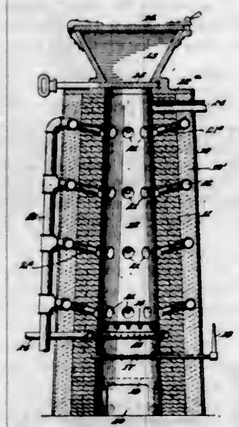
valve to hold it from contact with the seat, and means for permitting the entrance of steam to act upon the top of the valve for closing it against the seat to prevent the escape of steam from the drain passage.

1,677,782. SOUND-AMPLIFYING HORN. JESSE CODY HENDRICKS, Greensburg, Ind. Filed July 20, 1927. Serial No. 207,228. 4 Claims. (Cl. 181—27.)



1. A sound amplifier comprising a casing including top, bottom, side and end walls defining a sound outlet chamber open at the front of the casing, said casing having a sound inlet opening, sound passages arranged in the top, bottom, side and end walls of the casing and communicating with one another to provide a continuous sound passage from the sound inlet opening to the sound outlet chamber.

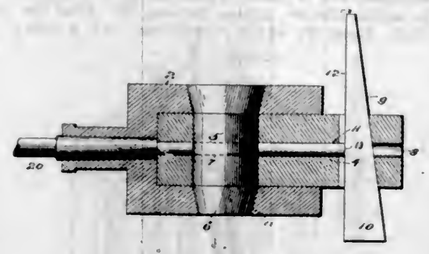
1,677,783. ELECTRICAL CONNECTION. JAMES R. KEARNEY, Kansas City, Mo. Filed Apr. 24, 1922. Serial No. 556,277. 2 Claims. (Cl. 173—259.)



1. In an electrical connection, a member slotted longitudinally, a washer having a diametrical portion fitting in the slot in said member and a portion adapted to extend across said slot, and a securing element fitting over the exterior of said member and removably engaging said washer.

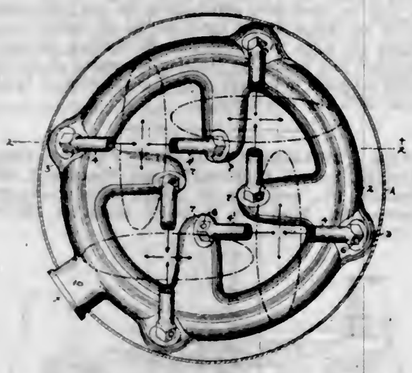
1,677,784. METHOD AND APPARATUS FOR REDUCING MATERIALS BY HEAT. WILLIAM WALLACE KEMP, Baltimore, Md. Filed Nov. 7, 1921. Serial No. 513,442. 18 Claims. (Cl. 202—8.)

15. The herein described process for the treatment of carbonaceous material which consists in forming a mixture, of uniform composition, consisting of combustible material and a supporter of combustion, the proportion of the latter not exceeding that required to effect combustion of the combustible material, burning this mixture in a retort, from which air is excluded, and passing carbonaceous material through the retort and subjecting it during its travel to the action of the heated retort and the direct action of the flame resulting from burning the combustible mixture.



1,677,785. METHOD FOR PRODUCING COMBUSTIBLE GAS. WILLIAM WALLACE KEMP, Baltimore, Md. Filed Nov. 7, 1921. Serial No. 513,444. 7 Claims. (Cl. 48—202.)

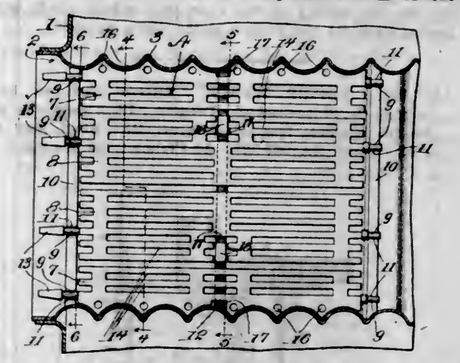
1. The method of producing combustible gas from material capable of evolving gas under the action of heat, which consists in charging the gas producing material into a gas generator, preventing the ingress of air into said generator, and heating the material to form gas therefrom by projecting into the generator the flame produced by the combustion of a thoroughly premixed gas and air mixture, the amount of oxygen in which is not in excess of that required to effect combustion of the mixture and is insufficient to produce combustion of the material.



1,677,786. PISTON-REMOVING DEVICE. PATRICK H. KENNEY, Cumberland, Md. Filed Nov. 27, 1925. Serial No. 71,692. 2 Claims. (Cl. 29—86.1.)

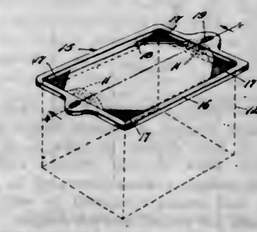
1. A piston removing device adapted to be used with a cross-head having a piston secured therein and having wrist pin openings, said removing device including a block member corresponding to the interior dimensions of the cross-head and adapted to seat therein, an anchoring pin adapted to extend transversely through said block and said wrist pin openings to lock the block against longitudinal movement, a plunger movable in said block in longitudinal alignment with said piston, a transverse aperture through said block in spaced parallelism

with said anchoring pin, a wedge member movable in the aperture at right angles to the plunger for coaction therewith, a hammer means carried by the block adapted to contact with said wedge to impart thereto a sudden heavy blow for transmission to said piston through the instrumentality of said plunger to effect removal of the piston from the crosshead.



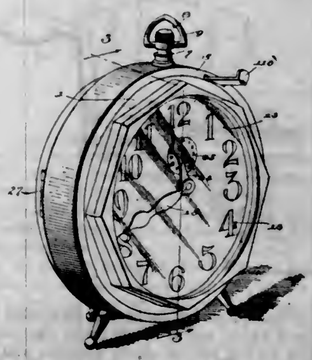
1,677,787. GAS BURNER. HARRY E. KERR, Cleveland, Ohio, assignor to The Cleveland Gas Burner and Appliance Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 30, 1925. Serial No. 59,497. 1 Claim. (Cl. 158—104.)

A gas burner, comprising a circular gas distributing manifold having gas and air commingling tubes extending inwardly from its circumference and companion gas and air commingling tubes extending outwardly from its center portion, said tubes forming pairs of cooperating gas and air commingling tubes, the axes of each pair of said tubes lying in a single plane tangential to a small circle centrally of the manifold.



1,677,788. GRATE. WILLIAM A. KNOWLTON, Dorchester, Mass. Filed Mar. 9, 1927. Serial No. 174,077. 2 Claims. (Cl. 126—162.)

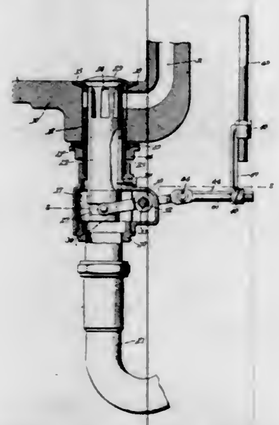
1. In combination with a furnace, front and rear cross bars in the furnace, a central cross bar therein, a plurality of grate sections, pintles at the ends of the sections rotatably supported by the front and rear cross bars, each section having flat upper and lower faces and each section being of considerable width, each section having a central opening extending through the top and bottom of the



section and from one edge to the axis of the pintles to permit the section to be rocked without interference on the part of the central supporting bar.

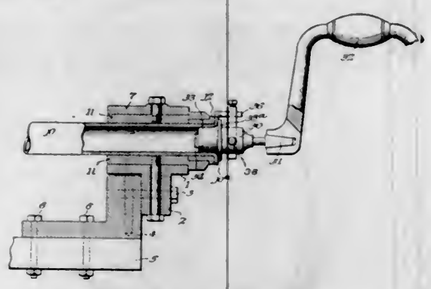
1,677,789. BATTERY-BOX CLAMP. CLINTON L. MABEY, Providence, R. I. Filed Aug. 6, 1927. Serial No. 211,105. 3 Claims. (Cl. 180—68.5.)

1. A battery box clamp comprising a rectangular open frame shaped to conform to the contour of the battery box and provided with diagonal corner plates adapted to bear against the upper edges of the battery box at spaced points thereon and having downwardly extending lugs engaging the outer side of the battery box adjacent to the upper edges thereof.



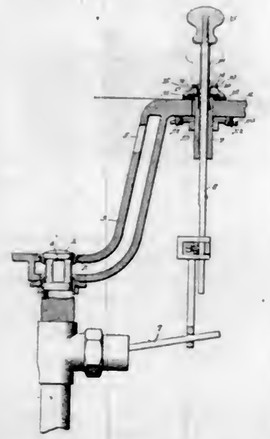
1,677,790. ALARM CLOCK. WILLIAM FRANK MCKINLEY, Little Rock, Ark. Filed Sept. 22, 1923. Serial No. 664,267. 3 Claims. (58—71.)

1. A clock having hour and minute hands, an alarm setting pointer, and setting mechanism comprising gearing adapted to turn the hour and minute hands, gearing



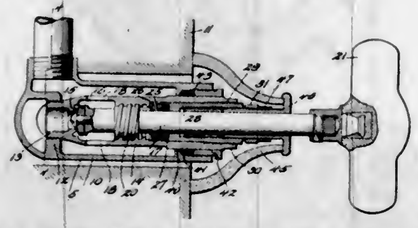
adapted to turn the pointer, an arrangement of movable gears adapted to be shifted to operate either one or the other of the gearings, and a stem adapted to be pulled out for the setting of the hour and minute hands and pushed back for the setting of the alarm pointer.

1,677,791. POP-UP WASTE. PHILIP MUELLER and ANTON C. SCHUERMANN, Decatur, Ill., assignors to Adolph Mueller, trustee, Decatur, Ill. Filed May 8, 1923. Serial No. 637,525. 14 Claims. (Cl. 4—203.)



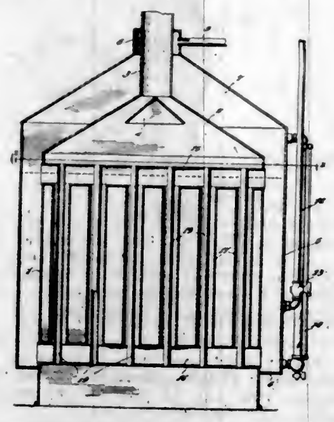
1. The combination in a fitting of the class described, of a tubular waste stopper, a stopper casing into which the lower end of said stopper projects, a stopper fork engaging opposite sides of said stopper and pivotally mounted in said casing, a yoke journaled to both sides of said casing, and means connected to said yoke and engaging said fork for actuating said stopper; said yoke, fork, and their operating means being arranged symmetrically with respect to one another so as to give a uniformly distributed lifting action.

1,677,792. MEANS FOR TRIMMING SOFT-METAL PIPE FLANGES. PHILIP MUELLER and ANTON C. SCHUERMANN, Decatur, Ill., assignors to Adolph Mueller, trustee, Decatur, Ill. Original application filed Nov. 12, 1919, Serial No. 337,499. Divided and this application filed Sept. 26, 1923. Serial No. 664,939. 7 Claims. (Cl. 82—4.)



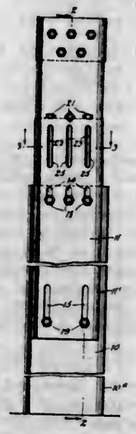
1. An implement for trimming the peripheral edge of a flange formed at the end of a soft metal pipe comprising a stem having an end portion of the diameter and adapted to be positioned within the bore of the flanged end of a pipe and provided with an abutment adapted to contact with the said end of the pipe, and a cutting blade bodily adjustable both radially and longitudinally of the stem and extending across the edge of the pipe flange when the stem is positioned within the pipe with the abutment thereon in contact with the end of the pipe.

1,677,793. ATTACHMENT FOR LAVATORY-OUTLET-VALVE DEVICES. PHILIP MUELLER, LUCIEN W. MUELLER, and WILLIAM J. MIX, Decatur, Ill., assignors to Adolph Mueller, trustee, Decatur, Ill. Filed Oct. 24, 1925. Serial No. 64,571. 10 Claims. (Cl. 4—203.)



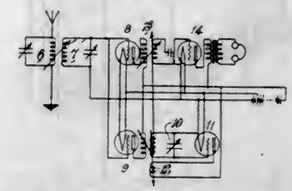
1. The combination with the operating push rod of a lavatory outlet valve having a knob or handle at its outer end, of a guide for said rod adapted to be attached to a suitable support, and having an annular flange about its outer end, an escutcheon surrounding the rod and extending over the flange at the outer end of the guide, means engaging the guide and escutcheon for holding the latter in position, and means for limiting movement of the rod through the guide to prevent contact of the knob or handle thereon with the escutcheon.

1,677,794. BUILT-IN REMOVABLE VALVE. PHILIP MUELLER, ROBERT H. MUELLER, and WILLIAM J. MIX, Decatur, Ill., assignors to Adolph Mueller, trustee, Decatur, Ill. Filed Nov. 20, 1926. Serial No. 149,741. 2 Claims. (Cl. 251—156.)



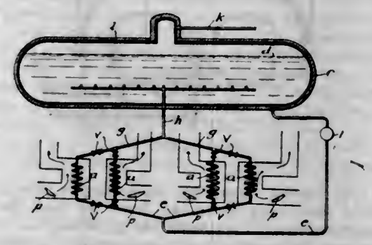
1. A plumbing fixture comprising a valve body provided with inlet and outlet ports and an interior partition between said ports and having a threaded aperture formed therein, a valve casing provided with a valve seat and a threaded section engaging the thread of said aperture in the partition in the valve body, said casing being provided between its outer end and the section engaging the partition with a lateral port and between said port and its outer end with an internal thread, means providing a fluid tight joint between the valve body and said casing, and a valve adapted to cooperate with the valve seat and having its stem extending through the outer end of the casing and provided with a compression thread engaging said interior thread in the casing, whereby the valve casing and valve may be removed from the body as a unit, for the purpose described.

1,677,795. BOILER FOR STILLS. ERNON V. OLIVER, Portland, Oreg. Filed June 4, 1927. Serial No. 196,558. 4 Claims. (Cl. 122—174.)



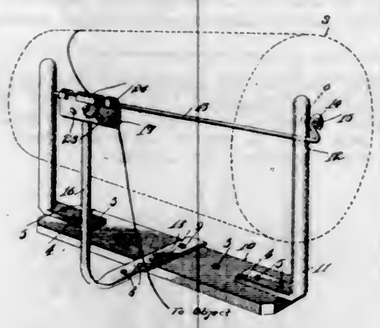
1. A still comprising a hollow body defining a heating chamber and having its upper end provided with an outlet, a water jacket disposed about said body and having its upper portion provided with a steam outlet, upper and lower water tubes extending transversely through said body and having open ends secured in openings formed in the walls of the body and communicating with said water jacket, water tubes extending vertically between and communicating with said upper and lower tubes, and open-ended conduits for a heating medium extending longitudinally through the vertical water tubes with their end portions extending transversely through the upper and lower water tubes and communicating with the upper and lower portions of said chamber.

1,677,796. YIELDABLE SUPPORT. ROLAND DANE PARKS, Lake Linden, Mich. Field Feb. 18, 1926. Serial No. 89,124. 4 Claims. (Cl. 248—2.)



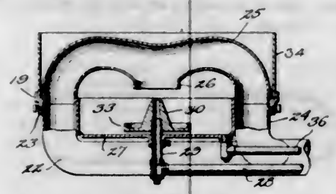
1. A support of the class described including an I-beam, spaced oppositely facing channel members straddling the I-beam and mounted for limited sliding movement relative thereto, a metallic element adapted to be strained, normally blocking sliding movement of the channel members relative to the I-beam, and means carried by the channel elements acting on the member to be strained to distort the same and render the same inoperative when excessive loads are imposed on the channel members.

1,677,797. SYSTEM OF RECEPTION FOR MODULATED-WAVE TELEGRAPHY AND TELEPHONY. ERNEST YEOMAN ROBINSON, Withington, England. Filed Mar. 19, 1923, Serial No. 626,140, and in Great Britain Mar. 28, 1922. 6 Claims. (Cl. 250—20.)



1. In a communication system in which a carrier wave of constant frequency is partially modulated by audio frequency currents and the original full carrier wave and at least one of the side band components of the resulting complex oscillations transmitted, the method of reducing distortion in and increasing the efficiency of the demodulation at the receiver, which comprises receiving the original wave components as transmitted, increasing the amplitude of the transmitted carrier wave component relative to that of a side band component while maintaining substantially constant the amplitude relationship of the various frequencies of said side band component, and finally effecting de-modulation of the oscillations thus modified.

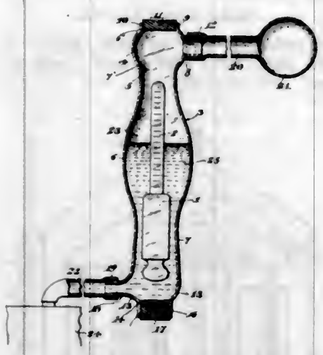
1,677,798. STEAM PLANT. JOHANNES RUTHS, DJURSHOLM, Sweden, assignor to Aktiebolaget Vapor-Ackumulator, Stockholm, Sweden, a Corporation. Filed Apr. 27, 1923, Serial No. 635,143, and in Sweden June 16, 1922. 2 Claims. (Cl. 122—35.)



1. A steam generator comprising a plurality of water tube boilers, conduits connecting said boilers for parallel operation, a common supply pipe and a common discharge pipe for said boilers connected to said conduits, independent fires for each of said boilers for separately generating steam therein, a well-insulated storer comprising a large receptacle having a water content of sufficinet capacity to permit firing of the boilers independently of variations of steam demand and to permit storing of surplus steam by rise of pressure, said storer being in open unrestricted communication with said common supply and discharge pipes, a discharge device in the water space of said storer connected to said common discharge pipe, means to conduct water from said storer to said common supply pipe, and means for taking out dry steam from said storer.

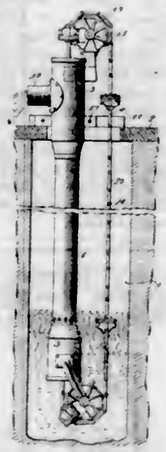
1,677,799. TWINE HOLDER. ROSARIO SALVAGGIO, New Orleans, La. Filed July 28, 1927. Serial No. 209,084. 1 Claim. (Cl. 242—142.)

In a device of the character described a flat elongated base, vertical arms rising from the ends thereof and having right angular extensions at their lower ends which extend longitudinally of the upper face of the base and are detachably secured thereto, a roll supporting mandril removably supported by the arms and disposed below the upper ends thereof, a vertically disposed cutter carrying arm arranged in advance of the base and roll supported on the mandril and having a right angular extension at its lower end detachably secured to the base, and a cord cutting element attached to the upper end of the last mentioned arm and lying below the highest point of such roll whereby to obviate danger of sharp edges contacting with the person of one using the device.



1,677,800. OIL BURNER. OSCAR JAMES SEE, Peoria, Ill. Filed Jan. 17, 1927. Serial No. 161,646. 1 Claim. (Cl. 158—91.)

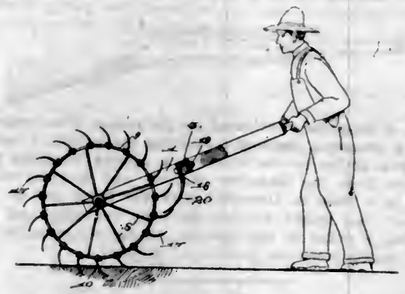
An oil burner apparatus comprising a platform, a manifold comprising upper and lower sections, the lower section being supported upon the platform, one end of the section being offset, an elbow carried by the lower section being projected in parallelism with the end thereof, the upper section being adapted for connection with the end of the lowermost section and the elbow, the upper section being provided with an opening therein, a burner disposed in juxtaposition to said opening, and a burner ring carried by the platform and surdounding the manifold adapted to reflect heat from the burner upon the manifold to cause the heating of the air.



1,677,801. HYDROMETER. FRANK E. SODE, Chicago, Ill. Filed Nov. 1, 1926. Serial No. 145,498. 10 Claims. (Cl. 265—45.)

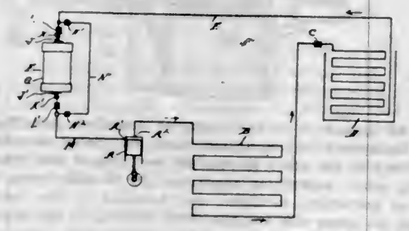
1. A hydrometer for the purpose set forth comprising a transparent tube having each end thereof closed by an imperforate resilient plug, a meter element arranged within the tube, said tube provided in proximity to one end with means disposed at right angles thereto for connecting a suction feeding device therewith and in

proximity to its other end with means disposed at right angles thereto for establishing communication between the interior of the tube and a liquid supply.



1,677,802. WELL PUMP. JAMES F. STRUBLE, Hutchinson, Kans. Filed Aug. 16, 1927. Serial No. 213,379. 11 Claims. (Cl. 103—73.)

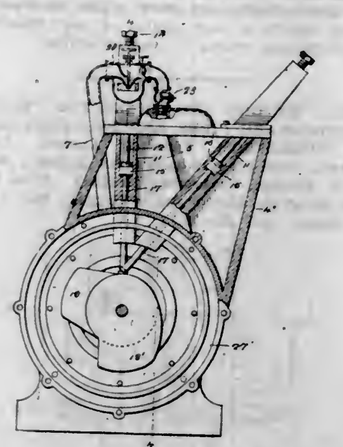
1. In a pump, a cylinder having an upper suction section of one diameter and a lower section of greater diameter converging into a junction with said upper section, a piston having suction-creating packing arranged to engage the walls of the suction section, means for moving said piston upwardly from the lower section into the suction section, and means located adjacent to the junction of the two cylinder sections for relieving the compression between the piston and the converging walls of the lower section adjacent to said junction point.



1,677,803. CULTIVATOR, WEEDER, AND DIGGER. ALBERT R. TENGER, Marshfield, Oreg. Filed May 10, 1926. Serial No. 108,089. 1 Claim. (Cl. 97—59.)

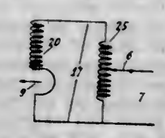
A machine of the character described comprising a frame, a wheel rotatably mounted on the frame and having a rim, a plurality of earth-working elements mounted on the rim, each earth-working element including a transversely extending plate having spaced lugs engaging the

opposite sides of the rim, a bolt and nut for fastening the plate to the rim, and a plurality of curved earth-working prongs mounted on each plate.



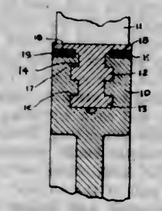
1,677,804. GAS SCRUBBER FOR REFRIGERATING APPARATUS. ALLAN C. THAYER, Detroit, Mich., assignor to Ubald R. Loranger, Detroit, Mich. Filed Jan. 29, 1923. Serial No. 615,672. 8 Claims. (Cl. 62—115.)

1. The combination with a system for circulating a refrigerating medium, of means for removing corrosive impurities produced by the chemical action of said medium during the circulation thereof, said means being so arranged in said system that all of the medium in normal circulation comes into contact therewith.



1,677,805. ROTARY MOTOR. HARLEY D. WEED, Garvin, Minn., assignor of twelve and one-half per cent to H. K. Kvanbeck and twelve and one-half per cent to Jacob Kvanbeck, Minnesota, Minn., and seven and one-half per cent to Alfred Mattson and seven and one-half per cent to David Mattson, Taunton, Minn. Filed Aug. 24, 1923. Serial No. 659,180. Renewed Feb. 21, 1928. 1 Claim. (Cl. 60—44.)

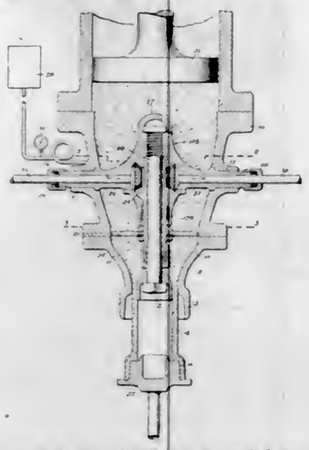
A rotary motor comprising a casing having an extension, a cylinder in the casing and a combustion chamber in the extension, a carbureter, means for connecting its outlet to the combustion chamber, the cylinder having a pair of ports in its upper part, one of which connects the combustion chamber with the cylinder, means for connecting the other port with the inlet end of the carbureter, the lower part of the cylinder having a combined inlet and exhaust port therein, a rotor in the cylinder, a piston therein arranged to close the ports as it passes over the same, a sliding abutment in the casing and arranged between the upper ports which are connected respectively with the carbureter and the combustion chamber, said abutment engaging the rotor, a sliding valve for controlling the port leading to the combustion chamber, cams connected with the rotor, means associated with the abutment and valve and operated by the cams for raising the abutment to permit the piston to pass the same and for lifting the valve as soon as the port leading to the combustion chamber



is partly uncovered by the piston and means for firing the charge in the combustion chamber just before the valve is opened.

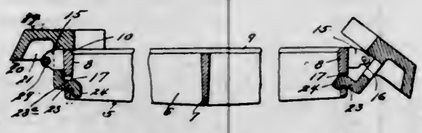
1,677,806. ELECTRIC PHONOGRAPH CIRCUIT. JULIUS WEINBERGER, New York, N. Y., assignor to Radio Corporation of America, a Corporation of Delaware. Filed July 21, 1925. Serial No. 44,986. 5 Claims. (Cl. 179—100.1.)

4. In combination, a variable groove device, means for following variations, a movable armautre connected therewith, a coil surrounding the armature, transmission means from the coil, and inductive current controlling means connected to the transmission means having a definite known inductance relative to the coil for producing maximum output efficiency therefrom and for varying the intensity of electrical oscillations produced by the coil, whereby a constant voltage ratio exists between the coil and the controlling means irrespective of frequency.



1,677,807. BLADE FASTENING. WALTER WESSEL, Lester, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 4, 1925. Serial No. 66,829. 3 Claims. (Cl. 253—77.)

1. In an axial flow turbine, the combination of a blade holding disc, a blade mounted thereon, one of said elements having a slot formed therein and the other

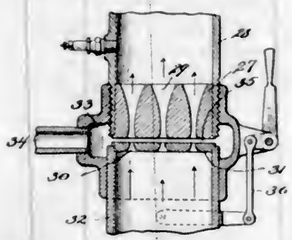


element having a portion disposed within said slot and interlocking with said slotted element, and a screw threaded between meeting faces of the free end of the slotted section and of the other section, said screw terminating outside of that portion of said other section which is disposed within the slotted section.

1,677,808. METHOD AND MEANS FOR PRODUCING EARTHENWARE PIPES AND PRODUCTS RESULTING THEREFROM. FEDERICO ALASSIO, JUAN B. ALASSIO, TOMÁS ALASSIO, SERAFIN ALASSIO, and FLORENCIO ALASSIO, Paysandu, Uuruguay. Filed Oct. 29, 1925, Serial No. 65,550, and in Uruguay Mar. 12, 1925. 27 Claims. (Cl. 25—15.)

1. In a method of making an extruded article from plastic material, the steps of advancing said material under pressure, subdividing the material while under pressure, bringing the portions resulting from the subdivision together while maintaining the material under pressure and in addition to giving said material the said advancing movement, subjecting said material to a displacing movement in a circular direction in a plane transverse to the advancing movement prior to the extruding of the article.

1,677,809. GRATE. LEO J. BINDER, Spokane, Wash. Filed Mar. 10, 1926. Serial No. 93,690. 3 Claims. (Cl. 126—180.)

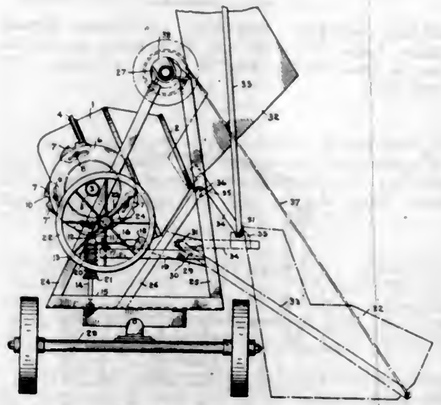


1. A grate unit comprising a support with end walls integrally formed therewith and having slots extending through the lower portions thereof above the lower terminals of the said walls, grate sections mounted on the support, and end cap sections fitting over and enclosing the ends of the support, the ends of the support having upper outwardly projecting arms at opposite sides above the slot of each wall and each enclosing end cap section having an intermediate depending flange terminating at its lower end in a right angle projecting lip with a depending terminal of hook form to pass through the slot of the adjacent wall of the support and bear against the lower portion of said wall below the slot therein, the upper portion of the flange of the cap section being provided with slots on opposite sides of the center to receive the projections of the support.

1,677,810. MAGAZINE FOR AIR GUNS. RICHARD T. BOND, Stringtown, Okla. Filed July 15, 1927. Serial No. 206,054. 6 Claims. (Cl. 124—11.)

1. A magazine attachment for pneumatic rifles comprising a magazine chamber containing the pellets, a pellet feeding device in the form of a shuttle receiving the pellets from the magazine chamber and carrying them one at a time to alinement with the inner end of the barrel, and means for automatically engaging and releasing a pellet in the chamber on the reciprocation of the shuttle from one position to another.

1,677,811. GAS BURNER. WILLIAM SPENCER BOWEN, Westfield, N. J. Original application filed Apr. 11, 1924, Serial No. 705,919. Divided and this application filed Sept. 21, 1927. Serial No. 221,034. 10 Claims. (Cl. 158—99.)



9. An apparatus of the character described, including two superposed and separated tubes, one being movable relatively to the other to regulate the area of the intervening space, means for supplying gas at said space, a pair of perforated members, one mounted in the lower end of the upper tube and the other mounted in the upper end of the lower tube, means for moving said tubes to vary the space between said perforated members, and an ignition means mounted in the upper tube.

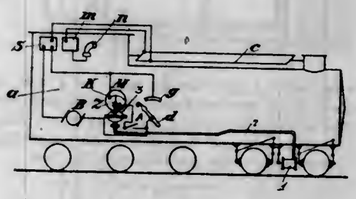
1,677,812. UNDERREAMER. CHARLES H. BROWN, Breckenridge, Tex. Filed Oct. 7, 1925. Serial No. 61,119. 9 Claims. (Cl. 255—78.)

6. In combination with a body, a collapsible cutter structure carried thereby, means controlling the movement of the cutters comprising a plunger having expansible engagement with said cutters, a stationary block carried by the body, and a movable block having a plurality of inclined walls for operative engagement with the well casing and having a yieldable connection with said plunger for giving movements thereto.

1,677,813. CONCRETE MIXER. JAMES E. BUSHNELL, North Plainfield, N. J., assignor to Ransome Concrete Machinery Company, Plainfield, N. J., a Corporation of New Jersey. Filed Oct. 20, 1926. Serial No. 142,825. 18 Claims. (Cl. 83—73.)

1. In a mixing apparatus, the combination with a mixing vessel having a charging opening and mounted to rotate and to have tilting movement to charging and discharging positions, of a charging device, a plurality of pivots on which said charging device is mounted to swing from lower to upper position, one of said pivots being independent of the remaining pivot.

1,677,814. SAFETY SNAP HOOK. OTIS R. CLOSE and ROY N. CLOSE, Carterville, Mo. Filed Jan. 23, 1928. Serial No. 248,753. 4 Claims. (Cl. 24—233.)

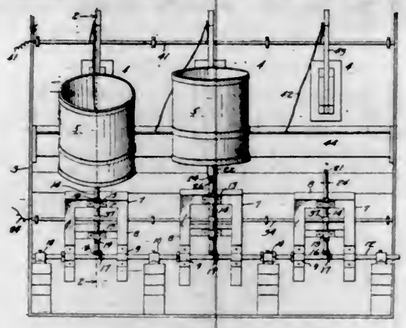


1. A hook having a nose and a shank, a tongue engageable with the nose, a heel being part of the tongue and having a recess, a housing on the shank receiving the heel, a pivotal mounting for the heel within the housing, and a spring seated between the recess and a portion of the housing.

1,677,815. BROACH. HIRAM D. CROFT, Springfield, Mass., assignor to Perkins Machine and Gear Company, Springfield, Mass., a Corporation of Massachusetts. Filed Sept. 20, 1927. Serial No. 220,656. 3 Claims. (Cl. 90—33.)

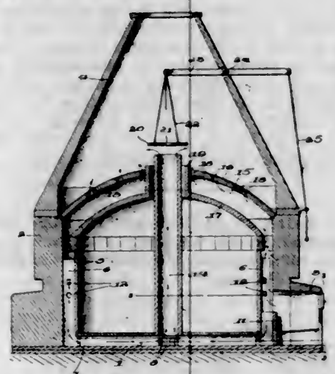
1. A broach having a plurality of series of finishing and roughing cutters arranged in offset stepped relationship, at least one of said series having a finishing and a roughing cutter in longitudinal alignment, and at least one other of said series comprising a single roughing cutter laterally placed relative to said finishing cutter, each successive series decreasing in length, and spaces between cutters of the same series to allow for indexing the work, whereby it is possible to reduce in length the strokes of the broach, after the first stroke thereof, for the performance of a given amount of work.

1,677,816. RAILWAY SIGNAL APPARATUS. WERNER DAYA, Berlin-Halensee, Germany. Filed Nov. 18, 1926, Serial No. 149,216, and in Germany Nov. 24, 1925. 23 Claims. (Cl. 246—30.)



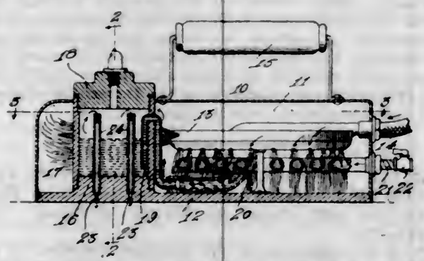
1. In a railroad vehicle, the combination with the vehicle brakes, of a manually operable brake control lever, pressure operated means for automatically applying the brakes in emergency, a radio receiver of signals, a radio transmitter of signals, a circuit for energizing the transmitter, a contact switch included in the circuit arranged to be closed by the brake control lever, and means for energizing and de-energizing the transmitter dependent upon the pressure operated means.

1,677,817. APPARATUS FOR ELECTROPLATING AND THE LIKE. JOSEPH DE VERRE, Oakland, Calif. Filed Jan. 26, 1923. Serial No. 614,975. 6 Claims. (Cl. 204—11.)



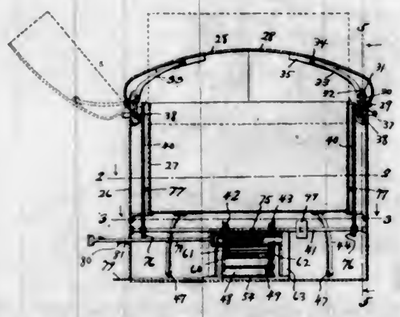
5. In an apparatus of the character described, a rotatable plurality of supports, containers adapted to be mounted on said supports for rotation therewith and arranged to have anode and cathode members associated

therewith, means operable entirely by and upon a relative displacement of said containers and supports to connect them for or release them from rotative engagement,



and means arranged to hold one of said members connected to a source of current during the rotation of its support.

1,677,818. UP-DRAFT PROCESS OF AND MUFFLE KILN FOR FIRING. THOMAS DOWNS, Somerset, N. J. Filed Jan. 25, 1927. Serial No. 163,479. 9 Claims. (Cl. 25—144.)



1. The method of kiln drying ware in a kiln including circulating air upward about the sides and over the crown of the kiln, circulating air beneath the kiln and upward therethrough, and regulating and controlling the relative circulations about and through the kiln.

1,677,819. STEAM PRESSING IRON. JACOB FAUST, Passaic, N. J. Filed Sept. 24, 1926. Serial No. 137,546. 2 Claims. (Cl. 68—26.)

1. A pressing iron comprising a hollow body having a heating element arranged therein, a cylindrical steam generating chamber arranged in juxtaposition to said heating element, the walls of said steam generating chamber being subjected to the heat from said heating element, steam outlet ducts leading from the pressing face of the iron to the interior of said steam generating chamber and opening into the same adjacent the top thereof, a water pipe extending downward into said steam generating chamber and terminating short of the bottom thereof, a pipe coil connected with said water pipe and disposed adjacent said heating element, a hose leading from said pipe coil to a suitable water supply, and means for controlling the flow of water from said water pipe, substantially as and for the purpose specified.

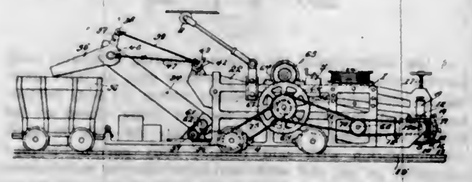
1,677,820. NOVELTY HOLDER. INEZ MERCY FOSTER, Simla, India. Filed Feb. 20, 1926, Serial No. 89,803, and in Great Britain Feb. 26, 1925. 4 Claims. (Cl. 220—36.)

1. In a device for the purpose set forth, a compartment, hinged doors normally closing the compartment, pivotally mounted arms in the compartment contacting with the doors, and said arms having segmental teeth at their pivoted ends, worm wheels journaled in the compartment and in mesh with said teeth, a receptacle in the compartment, and motor operated means for imparting a vertical movement to the receptacle and for turning the worms to swing the arms to cause the doors to open and close when the receptacle is being raised or lowered.

1,677,821. BRICK-MASON'S GAUGE. ANDREW O. GRAHAM, Fort Worth, Tex. Filed June 4, 1924. Serial No. 717,787. 3 Claims. (Cl. 33—111.)

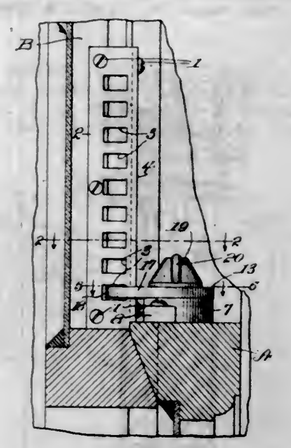
1. A bricklaying gauge having a series of groups of scale marks thereon, the marks of each group being consecutively indicated, corresponding marks of the several groups being successively equi-distantly spaced throughout the length of the gauge, one end of the gauge constituting an abutment end for disposal against a surface from which measurements are to be taken, the first scale mark of the group adjacent the abutment end of the first group being spaced from said end a distance equal to the distance between the first marks of the several groups.

1,677,822. HEEL BLOCK AND METHOD OF FORMING THE SAME. NICHOLAS L. GULLIFORD, Peabody, Mass. Filed Feb. 2, 1927. Serial No. 165,386. 17 Claims. (Cl. 144—309.)



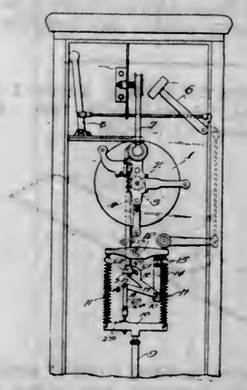
1. As a new article of manufacture, a heel block having a concave front face constituting the breast of a heel and a rear convex surface describing a curve substantially coinciding with that of said front concave face.

1,677,823. POLYHYDROXY-MERCURY COMPOUND. HEINRICH GÜNZLER and OSKAR NEUBERT, Elberfeld, Germany, assignors to Winthrop Chemical Company, Inc., New York, N. Y. Filed May 5, 1927, Serial No. 189,173, and in Germany Jan. 20, 1926. 3 Claims. (Cl. 167—6.)



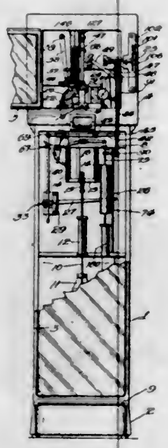
2. As an insecticide and fungicide, the reaction product of a polyhydroxy compound of the benzene series with a water-soluble mercury salt which reaction product is a stable material readily soluble in water and has a strong disinfecting action.

1,677,824. COAL-LOADING AND TRACK-CLEANING MACHINE. HENRY H. HARRISON, HOWARD W. ALLENDER, and RICHARD L. FOUT, Thomas, W. Va. Filed Oct. 27, 1926. Serial No. 144,517. 4 Claims. (Cl. 37—190.)



1. In a device for the purpose set forth, an electrically operated wheeled truck designed to travel on a mine track and to have a mine car coupled thereto, a digger wheel at the forward end of the truck and between the sides thereof, said wheel having a longitudinal series of spaced hook-shaped blades, a substantially U-shaped mount for the shaft of the digger wheel, guided in a bearing opening in the sides of truck frame, spring means influencing the mount in one direction, hand operated means between the truck and mount for influencing the latter in a second direction, a hingedly supported scoop at the rear of the mount having an outer widened portion and projecting ends which are received on the ends of the shaft for the digger wheel, said scoop having openings in the outer portion thereof disposed opposite the rails of the track, cross sectionally U-shaped guards covering said openings, an upwardly inclined endless conveyor at the rear of the scoop, an outwardly inclined endless elevator at the delivery end of the conveyor, a chute at the delivery end of the elevator arranged over the mine car, and means actuated by the motor for simultaneously imparting motion to the digger wheel, the conveyor and the elevator.

1,677,825. SASH FASTENER. ALPHEUS M. HUNT, McKeesport, Pa. Filed Nov. 30, 1927. Serial No. 236,802. 4 Claims. (Cl. 292—240.)

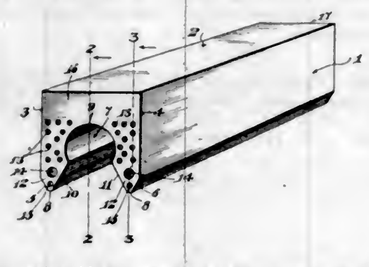


1. A sash fastener of the character described comprising a keeper member, a base plate formed with slots, a latch member mounted for rotary and slidable movement on said base plate, an operating handle, means secured to said operating handle and arranged in said latch member for moving the same, and means depending from said latch member and movable in said slots for locking the latch member in open and closed positions.

1,677,826. ATTACHMENT FOR WEIGHT-RECORDING SCALES. GUSTAV F. HOCHRIEM, Chicago, Ill., assignor to Rhodes-Hochriem Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 15, 1926. Serial No. 81,385. 4 Claims. (Cl. 265—9.)

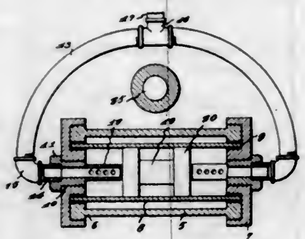
1. In a scale, a rack bar and a weight indicating mechanism actuated thereby, a load-receiving mechanism, a link and a pivot therefor connected to the load-receiving mechanism, an arm and a fixed pivot therefor, and pins on said arm, one of said pins connected to said link and the other pin being caused to contact the lower end of the rack bar, said lower end of the rack bar being sufficiently wide to contact with said contacting pin throughout its movements.

1,677,827. COIN-CONTROLLED TICKET PRINTING AND DELIVERING SCALE. GUSTAV F. HOCHRIEM, Chicago, Ill., assignor to Rhodes-Hochriem Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Mar. 11, 1926. Serial No. 93,981. 4 Claims. (Cl. 194—47.)



1. In a ticket-printing and delivering weighing scale, the combination with a frame, movable platform and associated weighing mechanism parts, of a vertically disposed printing wheel actuated by the weight of a person on the platform, a vertically disposed ticket magazine above the plane of the printing wheel, means for feeding the bottom ticket from the stack in the magazine to the top of the printing wheel, a printing hammer arranged to fall upon a ticket at the top of the printing wheel and associated inking mechanism, means including coin operated tripping mechanism for actuating the printing hammer and ticket-feeding mechanism, and means for preventing complete ejection of the printed ticket co-operatively associated with a manually operated handle adapted to be manipulated to restore the weighing mechanisms to normal position and completely eject the ticket.

1,677,828. COTTON-TIE SPLICE. PEYTON L. HOWLETT, Brownwood, Tex. Filed Jan. 21, 1928. Serial No. 248,430. 1 Claim. (Cl. 24—20.)

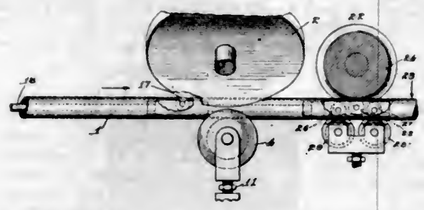


A cotton tie splice, including a pair of sections exactly alike but reversely positioned, each section having its end of general compound curvature whereby one edge of the section is longer than the other, a tongue bent at right angles to each section and located at the shorter edge thereof, said sections having longitudinal slots therein adjacent their longer edges, said slots having their ends in approximate alinement with the ends of the tongues and said tongues having their edges curved or rounded, the tongue of each section being projected through the slot of the other section and bent flat against the section to lock the sections together.

1,677,829. PAVEMENT. CLARENCE H. JACK, Versailles, Pa., assignor to Layton Fire Clay Company, McKeesport, Pa. Filed Mar. 3, 1927. Serial No. 172,368. 6 Claims. (Cl. 94—13.)

1. A paving block comprising a body portion formed with a lengthwise extending groove in its bottom, said groove being of key-hole shape in cross section, the lower part of the wall of said groove being oppositely flared to provide the lower portion of the blocks with tapered parts, said body portion at each side of said groove formed with lengthwise extending openings.

1,677,830. LOW-WATER ALARM. GEORGE WILLIAM KELLER, Portsmouth, Ohio. Filed July 16, 1924. Serial No. 726,381. 1 Claim. (Cl. 122—504.2.)

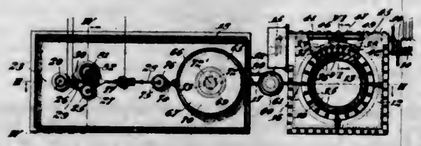


A low water signal for boilers including a tubular body portion closed at its end and provided with an inlet opening, an expansible tubular member within the body portion and spaced therefrom, said member being closed at its ends and having a port intermediate its ends in open communication with said tubular body portion, a pipe connected at one end with said inlet opening and having its other end open and adapted to extend into the water space of a boiler below the normal water level thereof, said pipe acting to conduct steam to said body portion upon a drop in water level below said open end, a spool-shaped valve disposed in said tubular member having its heads positioned on opposite sides of said lateral port and normally in sealing engagement with the walls of the expansible tubular member to close communication between said port and the ends of said tubular member, and pipe connections leading from the ends of said tubular member to direct steam to a signal when the expansible tube expands upon being subjected to steam.

1,677,831. PROCESS FOR THE CHLORINATION OF METHANE. ERICH KRAUSE, Constance, Germany, assignor to the Firm of Holzverkohlungs-Industrie Atkiengesellschaft, Constance, Baden, Germany, a Corporation of Germany. Filed Jan. 6, 1923, Serial No. 611,181, and in Germany Mar. 27, 1922. 4 Claims. (Cl. 260—162.)

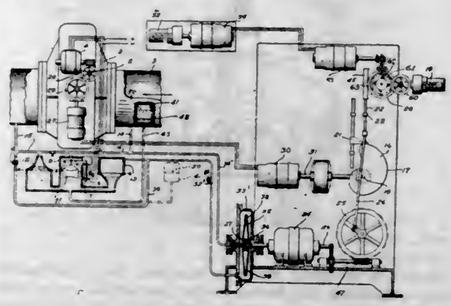
1. In the process of chlorinating methane, the step which comprises reacting methane with antimony pentachloride.

1,677,832. ELECTRIC WELDING OF LONG SEAMS. JOHN F. LAWSON, Brooklyn, N. Y. Filed June 7, 1924. Serial No. 718,434. 6 Claims. (Cl. 219—6.)



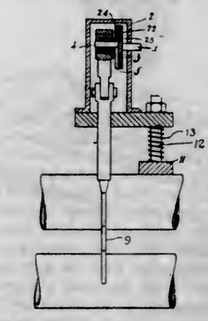
1. The method of electrically welding a long seam by causing an alternating electric current to enter and leave the work through a relatively short length of the work and to flow across the seam while the seam is passed lengthwise through the current path and pressure is exerted on the heated seam edges to cause them to weld, characterized by causing the seam edges to be brought together into current carrying contact so far in advance of the point where the weld is completed and by causing the heating current to flow through such a wide path in advance of the point where the weld is completed, that the seam edges are heated to incandescence for a distance in advance of the point where the weld is completed at least equal to the distance the seam travels during the passage of three current impulses across the seam, and the welding is begun at least about the same distance in advance of the point of its completion and is carried on progressively up to the point of completion.

1,677,833. LAMINATED CAGE FOR ANTIFRICTION BEARINGS AND ART OF MANUFACTURING SUCH CAGES. ANDREW H. LINDE, Philadelphia, Pa., assignor to The Hess-Bright Manufacturing Company, Philadelphia, Pa., a Corporation of Delaware. Filed Feb. 18, 1927. Serial No. 169,160. 5 Claims. (Cl. 308—201.)



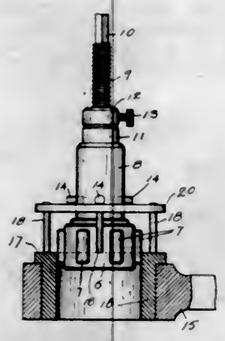
1. A spacing cage for anti-friction bearings consisting of a body portion formed of super-imposed permanently united layers and folded, presenting two plates disposed face to face and provided at intervals in their edges with open notches, and having flanges extending outwardly from the layers at the notches laterally beyond the faces of the plates and constituting conjointly ball holding sockets.

1,677,834. METER. GARRETT B. LINDERMAN, Jr., Bethlehem, Pa., assignor, by mesne assignments, to American Meter Company, Incorporated, New York, N. Y., a Corporation of Delaware. Filed Aug. 14, 1923. Serial No. 657,344. 50 Claims. (Cl. 73—167.)



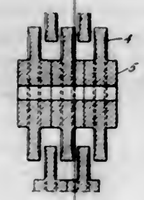
1. In a gas meter, the combination of a valve having an adjustable orifice, means responsive to a change in differential pressure across the orifice for adjusting the size of the latter, and means responsive to a change in specific gravity of gas flowing through the main for controlling said size adjusting means to neutralize the effect of a change in differential pressure due to variation in specific gravity of the gas.

1,677,835. METER. GARRETT B. LINDERMAN, Jr., Erie, Pa., assignor to American Meter Company, Incorporated, New York, N. Y., a Corporation of Delaware. Filed Mar. 4, 1926. Serial No. 92,138. 12 Claims. (Cl. 73—167.)



1. In a flow meter, the combination of a main for fluid, a valve therein having a variable orifice, valve actuating means, means responsive to variation in differential pressure across said orifice for effecting operation of said valve actuating means, means communicating with the main and with said operation effecting means for continuously transmitting to the latter a fluid pressure different from that in the main and variable in response to variations in density of the fluid in the main and means responsive to variations in said continuously transmitted pressure for neutralizing the effect upon said operation effecting means of variations in differential pressure across the orifice due to variations in density of the fluid.

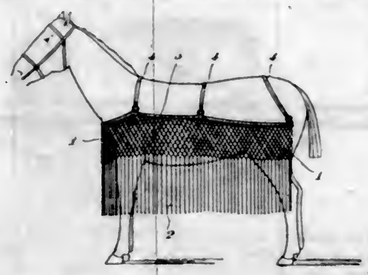
1,677,836. APPARATUS FOR CLEANING BOILER TUBES. JOHANNES PETER MARTINUSSEN, Copenhagen, Denmark. Filed Apr. 21, 1925, Serial No. 24,886, and in Denmark Apr. 25, 1924. 3 Claims. (Cl. 15—104.04.)



2. A tool for cleaning boiler tubes arranged so that each group of four are spaced at the corners of a rectangle, comprising a hammer head of substantially cross shape having four surfaces of quadrant curvature adapted to engage the surfaces of four tubes to simultaneously clean one quarter of each, a drive shaft, a disc thereon, a pin adjustably positioned on one face of said disc and a connecting rod joining said pin and head so that the movement of said head may be adjusted in accordance with the pitch of said tubes.

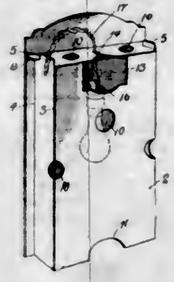
1,677,837. ALIGNING DEVICE. GRAVES R. MAUPIN, Moberly, Mo., assignor to The J. Faessler Manufacturing Company, Moberly, Mo., a Copartnership composed of John W. Faessler, Christinia Faessler, Louis E. Faessler, and Graves R. Maupin. Filed Jan. 24, 1927. Serial No. 163,211. 5 Claims. (Cl. 29—90.)

2. In an aligning device comprising the combination with a finishing tool having radial projections, of a table provided with means for supporting the same at right angles to the axis of a cylindrical bearing, said table adapted to support said radial projections and having a central bore and cutaway portions, through which said projections may pass whereby said table can be removed from the finishing tool after the same has been inserted in said bearing.



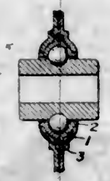
1,677,838. SIZING APPARATUS FOR COKE OR THE LIKE. ADOLF GUSTAF MOLIN, Stockholm, Sweden. Filed Dec. 9, 1926. Serial No. 153,654, and in Sweden Feb. 3, 1926. 1 Claim. (Cl. 209—104.)

Sizing apparatus for coke and the like comprising a number of parallel shafts rotating in the same direction, said shafts having discs attached thereto in such a manner that the discs of adjacent shafts overlap one another, characterized by the fact that the edges of the discs are slightly and in a continuous manner sinuously shaped at the same time as the discs are tapering from the edge toward the hub, in order that the openings at the hubs of the sizing apparatus may in axial as well as radial direction be slightly larger than the axial distance between the edges of adjacent discs, so as to facilitate the passage of that part of the material which passes between the edges of adjacent discs and which material otherwise would tend to clog up the sizing openings of the apparatus.



1,677,839. FLY NET FOR HORSES. ADRIEN MONTELS, Buenos Aires, Argentina. Filed Aug. 15, 1927. Serial No. 213,032. 1 Claim. (Cl. 54—81.)

A fly net for horses, comprising a net formed of a comparatively narrow net-work portion, and a plurality of threads depending from the lower edge of the net-work portion, the said threads being of a length greater than the width of the net-work portion, the net being provided at its upper edge with a reinforcing band, and with a

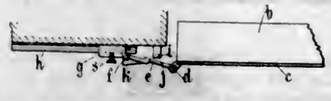


plurality of adjustable bands secured to the reinforcing band and adapted to pass over the back of the horse and hold the net at the sides of the horse.

1,677,840. DISPLAY DEVICE. LOUIS MOSES, Brooklyn, N. Y. Filed Oct. 27, 1927. Serial No. 229,098. 3 Claims. (Cl. 40—132.)

1. A device of the character described, including a front member, a supporting back member secured thereto, and a top member movable on the back member and functioning to lock the back member in holding position, said back member having an opening therein through which an electric lamp may be projected and said top member having a recess therein in which the wires to the lamp may be wedged to support the lamp.

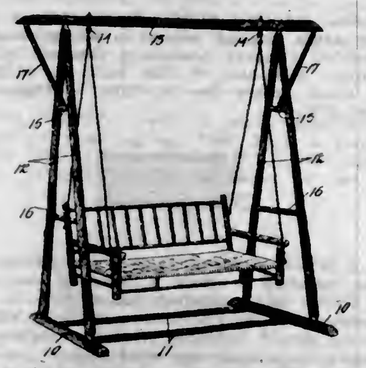
1,677,841. METHOD OF MAKING BALL-RACE ELEMENTS. BUDD G. NICE, Ogontz, Pa., assignor, by mesne assignments, to John L. McMichael, trustee, Philadelphia, Pa. Filed Jan. 18, 1923. Serial No. 613,488. 1 Claim. (Cl. 29—148.4.)



The method of making ball race elements in two stages and at one operation from metal blanks of flat ring form which consists in displacing the inner rim part of the blank laterally out of the plane of the outer rim part and into flaring form and in flanging and stretching the inner rim part of the flaring portion into neck form by pressure

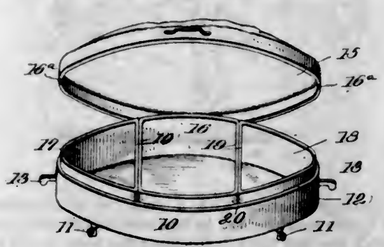
applied to the portion of the face of the blank which lies between the rim of the hole and the margin of the blank while the outer part of the blank is confined and while the inner part of the blank is unconfined, and pressing the flaring portion of the blank into dished form by continued application of pressure in the same direction while both the outer part and the neck part are confined.

1,677,842. BRAKE LINING AND METHOD OF MAKING SAME. IZADOR J. NOVAK, Bridgeport, Conn., assignor to Raybestos Company, Bridgeport, Conn., a Corporation of Connecticut. Filed May 10, 1923. Serial No. 638,126. Renewed Jan. 14, 1928. 8 Claims. (Cl. 91—70.)



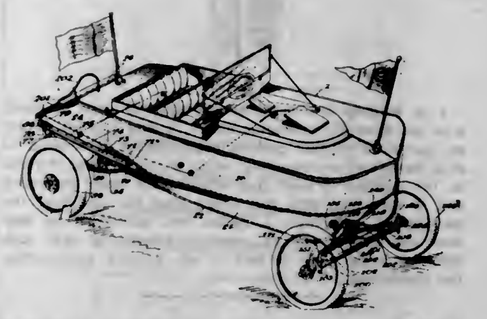
1. Frictional elements consisting of asbestos fibre having incorporated therewith a solid residue obtained from the heat treatment of a mixture of water gas tar and petroleum oil.

1,677,843. DOOR HINGE AND SUPPORT. ALBERT SAMUEL PARKIN, Plaistow, England. Filed Jan. 22, 1926. Serial No. 83,116, and in Great Britain Feb. 4, 1925. 6 Claims. (Cl 16—179.)



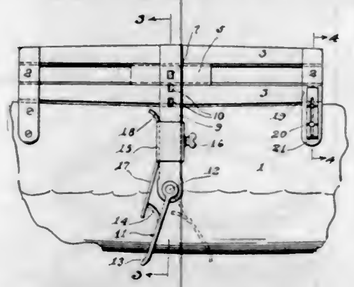
1. A hinge for supporting a door upon a wall, comprising a hinge leaf, a guideway, a carriage slidable along said guideway, a link having a pivotal connection at one end to the hinge leaf and a pivotal connection at the other end to the carriage, means for securing the carriage in adjusted position on the guideway, a lug on the link and a catch plate adjacent to the said guideway to engage the said lug.

1,677,844. STAND OR SUPPORT FOR SWINGS. WILLIAM H. PATTON, Martinsville, Ind., assignor to Old Hickory Furniture Company, Martinsville, Ind., a Corporation of Indiana. Filed Dec. 21, 1925. Serial No. 76,852. 1 Claim. (Cl. 155—58.)



As an article of manufacture, a swing supporting frame fabricated of unsplit tree portions comprising a pair of bases, spaced parallel compression members connecting said bases, uprights mounted in spaced relation on each of said bases and converging and meeting at their upper ends, spaced horizontal braces supporting said converging uprights, a top bar connecting the converging upper ends of the uprights on one base with the converging uprights on the other base, said top bar projecting outwardly beyond said converging ends, and diagonal compression braces between the horizontal supports on each of the uprights and the projecting overhanging end of the top bar, the connections between all said members consisting of tongue and socket joints, whereby a supporting frame is provided having a minimum width for maximum width of swing seat, substantially as set forth.

1,677,845. SERVING DISH. MARY MILLICENT PINNEY, Hagerstown, Md. Filed Nov. 4, 1927. Serial No. 231,013. 1 Claim. (Cl. 65—53.)



A serving dish of the character described comprising a carrier-receptacle of substantially elliptical form in plan view, provided with a dish receiving chamber, bosses depending from the bottom of said receptacle, casters swivelled in said bosses, whereby said carrier-receptacle is mounted so that it may be conveniently moved about to various positions upon a table, a plurality of dishes removably located within said chamber, said dishes being complementally shaped with respect to said chamber and to each other, said dishes being deeper than the chamber so that their upper edges extend above the plane of the upper edge of said chamber, so as to provide a flange contiguous to said edge and a dome-like cover conforming to the shape of said carrier receptacle and hingedly connected to one side edge of said receptacle, the bottom edge of said cover being so shaped as to engage and enclose the projecting edges of said dishes while the cover is in closed position, said cover having slots in its edge to permit the handles of serving implements to project therethrough.

1,677,846. LAND AND WATER VEHICLE. GEORGE E. POWELL, Chicago, Ill., assignor of one-half to Elmer E. Shugart, Council Bluffs, Iowa. Filed July 28, 1926. Serial No. 125,507. Renewed May 25, 1928. 16 Claims. (Cl. 115—1.)

1. A land and water vehicle including a hull having means for propelling it in water, and running gear for mounting and driving the hull on land including a pair of driving wheels connected to the stern of the hull, a pair of steering wheels at the bow, manually controlled means for operating the steering wheels, a suitably supported spring, a universal connection between the spring and the bow of the hull, an axle for said steering wheels, elastic connections between the hull and said axle, and radius rods connecting the axle with the hull.

1,677,847. MEANS FOR PROPELLING BOATS. JACOB Y. PROPST, Ohatchee, Ala. Filed Nov. 12, 1927. Serial No. 232,815. 6 Claims. (Cl. 115—21.)

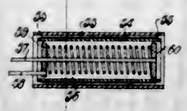
1. The combination with a boat, of a reciprocating block, guide bars secured to the side of the boat loosely engaging the said block for guiding the same in its movements; a lever bar one end of which is fashioned to form a handle or arm and the other end passed through the reciprocating block to which it is rigidly secured and extended beyond the side of the boat; a vertical bar rigidly secured to the extended end of the lever bar; an oar blade pivoted to the lower end of the said vertical bar; and means for limiting the movement of the oar blade through an arc of approximately 90° in the water.

1,677,848. STUFFING BOX. CHARLES L. PRUIETT, Oil Center, Calif. Filed Sept. 12, 1927. Serial No. 219,038. 3 Claims. (Cl. 286—31.)

1. A stuffing box comprising a tubular base provided with an upwardly extending sleeve, a ring on said sleeve, an apertured tubular packing cage detachably secured to said base and surrounding said sleeve, a ring formed on the interior of said cage adjacent its upper extremity and co-operating with the sleeve ring for retaining the packing in said cage, a polish rod positioned in said base and sleeve and an aperture formed in said cage whereby access may be had to the packing surrounding the polish rod.

1,677,849. CLASP. GEORGE H. ROBERTS, Providence, R. I., assignor to B. A. Ballou & Co., Inc., Providence, R. I., a Corporation of Rhode Island. Filed May 24, 1927. Serial No. 193,799. 5 Claims. (Cl. 24—265.)

1. A strap connector comprising a body having a front plate with side walls, a diaphragm spring in said body, a back plate having its edge engaging the side walls and held in position by the folded-in edge of said side walls, one of said plates having an eye for attachment to the strap, bearings in said back plate, a lever jaw having pintles in said bearings and swingable towards and from said back plate to clamp between it and the back plate an article to which it is desired to

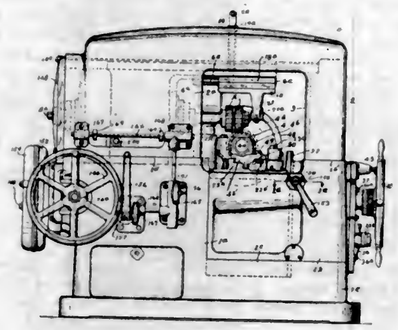


attach said strap, and a tongue portion on said lever engaging said spring to be forced thereby into clamping position or when said lever is swung thru substantially 90° to then force or hold said lever in open position.

1,677,850. VACUUM TUBE. ERNEST YEOMAN ROBINSON, Manchester, England, assignor to Metropolitan-Vickers Electrical Company Limited, London, England, a British Joint Stock Company. Filed Nov. 27, 1922. Serial No. 603,715, and in Great Britain Dec. 6, 1921. 4 Claims. (Cl. 250—27.5.)

1. In a vacuum electric discharge tube having an envelope containing an ionizable rarified atmosphere, an anode, a thermionic cathode mounted within the anode, said anode and cathode being so closely spaced that the inter-electrode electron paths are of less length than the mean free path in said atmosphere and are sufficiently short to give the tube "hard" characteristics which atmosphere in a longer gap would be ionized and would give the tube "soft" characteristics, and means at the boundaries of said cathode exposed to the space outside of the inter-electrode space to substantially confine the electrons to said inter-electrode space.

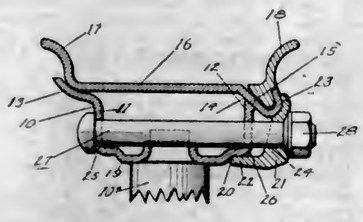
1,677,851. VACUUM TUBE. ERNEST YEOMAN ROBINSON, Lymm, England, assignor to Metropolitan-Vickers Electrical Company Limited, a Company of Great Britain. Filed Mar. 19, 1926, Serial No. 96,050, and in Great Britain Dec. 6, 1921. 4 Claims. (Cl. 250—27.5.)



2. A vacuum electric discharge tube comprising an envelope contaning an anode, a thermionic electron-emitting cathode spaced therefrom, and an ionizable rarified atmosphere, the inter-electrode space being sufficiently short to prevent ionization of said atmosphere which atmosphere in a longer gap would produce gaseous ionization, the cathode having means for producing a sufficiently reduced electron emission from the boundaries thereof exposed to the space outside of the inter-electrode space to substantially completely confine the electron emission to said inter-electrode space.

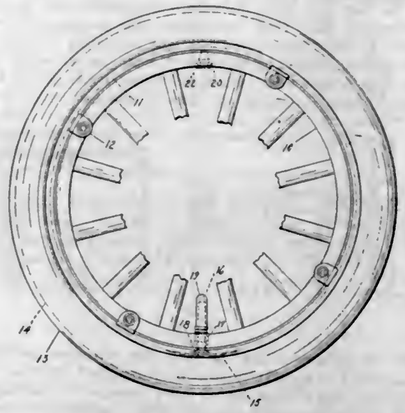
1,677,852. TEXTILE LUBRICANT AND PROCESS. JOSEPH J. SCHAEFER, Jr., Dayton, Ohio. Filed Jan. 5, 1928. Serial No. 244,774. 10 Claims. (Cl. 19—66.)

1. A textile lubricant containing an alkali metal lactate.



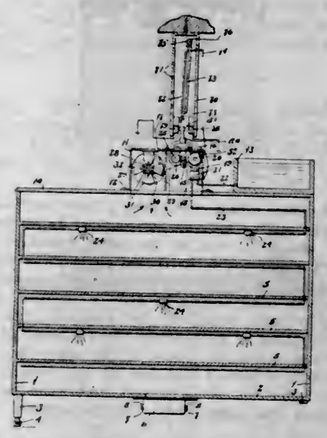
1,677,853. MACHINE FOR HOBBING OR CUTTING GEARS. CHARLES H. SCHURR, Cleveland, Ohio, assignor to The Lees-Bradner Company, Cleveland, Ohio, a Corporation of Ohio. Continuation of application Serial No. 679,127, filed Dec. 7, 1923. This application filed July 22, 1924. Serial No. 727,421. 25 Claims. (Cl. 90—4.)

1. In apparatus of the character described, the combination of a frame, a driven shaft, a knee mounted in said frame to move vertically, a head supported by said knee, and swingable about the axis of said shaft, a tool spindle supported by said head and carrying a worm gear, a sleeve splined on said driven shaft and provided with a worm meshing with said worm gear, a work spindle, connections between said work spindle and said driven shaft, means for adjustably securing said head to said knee, and means for adjusting said knee.



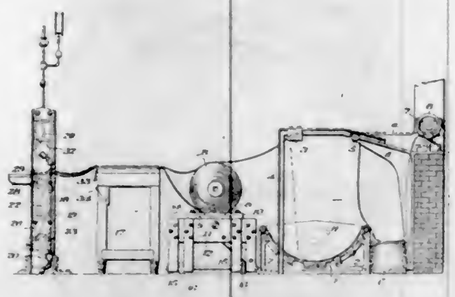
20. In apparatus of the class described in combination, a frame, a work spindle adapted to support a work piece, a tool spindle and a tool thereon, means for rotating the spindles, spindle adjusting means for bringing the tool into working position relative to a work piece, said adjusting means including a knee by which one of the spindles is supported, guides on the frame within and on which the knee is slidably mounted, an inclined surface on the knee, a movable member on the frame having a corresponding inclined surface engaging the inclined surface on the knee, and means for moving the movable member.

1,677,854. WHEEL. JOSEPH G. SWAIN, Akron, Ohio, assignor to The Firestone Steel Products Company, Akron, Ohio, a Corporation of Ohio. Filed July 29, 1924. Serial No. 728,875. 2 Claims. (Cl. 301—24.)



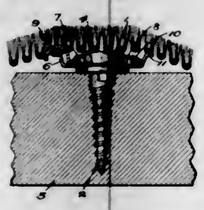
2. A vehicle wheel having, in combination, a metal felly formed with a generally transversely flat base having a crown extending inwardly therefrom and with rim-seating flanges having transversely aligned apertures, bolts in the apertures, and rim clamps on the bolts, said clamps having fulcrums adapted to seat on one edge of said crown.

1,677,855. COUNTERWEIGHT. JOSEPH G. SWAIN, Akron, Ohio, assignor to The Firestone Steel Products Company, Akron, Ohio, a Corporation of Ohio. Filed Dec. 31, 1926. Serial No. 158,229. 1 Claim. (Cl. 301—6.)



In an automobile wheel assembly comprising on one side of the wheel, a rim driver and a tire valve, counterweight attached to the felloe diametrically opposite said driver and valve, said counterweight including a plug attached to the felloe of the wheel and having a shouldered recess therein, and a slug of weighting material cast in the recess.

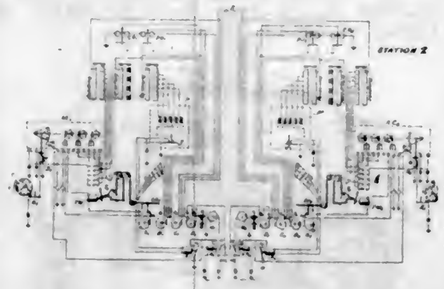
1,677,856. AUTOMATIC MOISTURE CONTROL. WALLACE C. WRIGHT, Brookfield, N. H., assignor to American Shoe Machinery Company, East Boston, Mass., a Corporation of Massachusetts. Filed Nov. 17, 1922. Serial No. 601,599. 2 Claims. (Cl. 236—44.)



1. In a machine of the kind described, the combination of a storage chamber having therein perforated shelves to receive stock to be retained in tempered condition, a liquid supply tank, means for distributing the liquid from said tank simultaneously at a plurality of points throughout said chamber, a suction fan for withdrawing heat or moisture from the chamber to maintain the same at an even humidity, and moisture responsive means to regulate the injection and expulsion of moisture to and from said chamber.

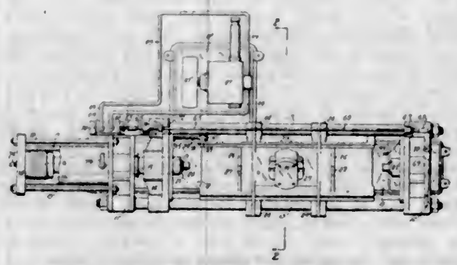
1,677,857. APPARATUS FOR SPLICING FABRIC. WINTHROP W. BENNER, Cuyahoga Falls, and EDMUND A. HOENER, Akron, Ohio, assignors to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Dec. 5, 1922. Serial No. 605,058. 6 Claims. (Cl. 154—42.)

6. An apparatus for the uses and purposes set forth, comprising a support for an exhausted roll of fabric and a support for a fresh roll of fabric, means for uniting the ends of the fabric by vulcanization comprising a heated element and a complementary member and means for moving said element and member together to cure the union between the ends of the fabric, and means for moving the fresh fabric roll to the position for the exhausted roll after the fabric ends have been vulcanized together.



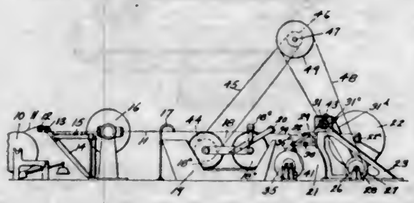
1,677,858. FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Feb. 26, 1925. Serial No. 11,692. 6 Claims. (Cl. 16—4.)

1. A fastener socket comprising a body portion providing a stud-receiving aperture surrounded by resilient stud-engaging means, a wall at the outer periphery of said body portion adapted to be seated against the under side of a support and a plurality of attaching prongs extending upwardly from said body portion between the inner periphery of said wall and the resilient stud-engaging means, the bases of said prongs being located in a plane substantially below the plane of the upper face of said wall, thereby to permit the bend of said prongs to begin at points below the plane of said wall when said prongs are clinched into engagement with the support.



1,677,859. AUTOMATIC REVERSING SYSTEM FOR MULTIPLEX CIRCUITS. WILLIAM A. DUDLEY, Brooklyn, N. Y., assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Mar. 24, 1925. Serial No. 17,986. 20 Claims. (Cl. 178—2.)

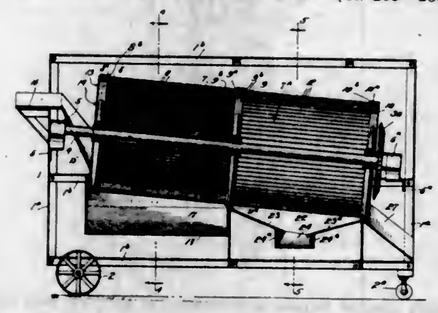
1. A printing telegraph system adapted for alternate operation in both directions, comprising a plurality of stations, an automatic transmitter and a receiving printer at each station, means at each station to automatically and periodically reverse the connection of the line from the transmitter to the receiver, and additional



means at each station operative through the printer at the distant station to reverse the connection of the line at the distant station from receiver to transmitter.

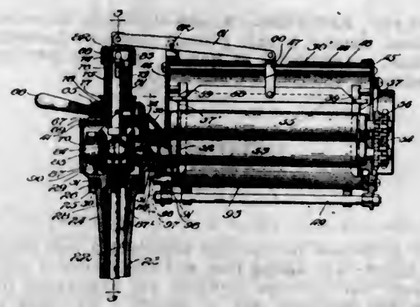
1,677,860. ASSEMBLY PRESS. JOHN P. FERRIS, Milwaukee, Wis., assignor to The Oilgear Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 1, 1926. Serial No. 85,233. 23 Claims. (Cl. 29—84.)

11. In a hydraulic press the combination of a pressure applying head, a pressure sustaining head, a work support, means for securing the work to said support, and hydraulically actuated means for operating said securing means and for effecting relative movement between said heads in predetermined sequence.



1,677,861. METHOD AND APPARATUS FOR HANDLING TACKY STRIP MATERIAL. FRED GOODALL, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 3, 1926. Serial No. 99,492. 7 Claims. (Cl. 242—158.)

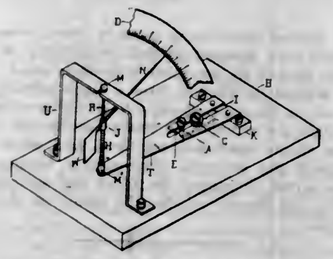
1. The combination with apparatus for making or treating tacky strip material and a reel for receiving the material therefrom, of a level winding mechanism



adapted to guide said strip material and a strip of liner into superposed relation onto said reel, said mechanism comprising a unit movable to and fro transversely of the reel and including a series of strip guiding rollers, a series of liner guiding rollers, and means urging a liner guiding roller against the strip as it passes to the reel.

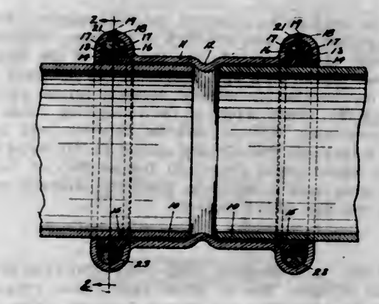
1,677,862. CERAMIC SORTING MACHINE. RUSSELL P. HERROLD, Zanesville, Ohio, assignor to The Mosaic Tile Company, a Corporation of Ohio. Filed Sept. 26, 1924. Serial No. 740,047. 2 Claims. (Cl. 209—288.)

1. A sorting machine for ceramic units embodying a tumbling-drum having a charging opening at one end, a discharge opening at the opposite end, and being divided into communicating sand-sieving and unit-gauging compartments, said sand-sieving compartment having a screen wall provided with apertures of less width than the thickness of the unit to be sorted and said unit-gauging compartment having a screen wall unobstructed on its interior surface and provided with elongated gauging apertures of slightly greater width than the thickness of the units to be sorted, means for supporting said drum with its axis in inclined position, means for rotating said drum about said inclined axis, a sand-receiving bin arranged below the sand-seiving compartment, and another independent bin having means arranged closely adjacent to the bottom of the unit-gauging compartment for receiving without breakage units passing through the gauging apertures of said unit-gauging compartments.



1,677,863. POWER-OPERATED CLOTHES WRINGER. JOHN T. HUME, Chicago, Ill., assignor, by mesne assignments, to Electric Household Utilities Corporation, Chicago, Ill., a Corporation of Illinois. Filed Nov. 2, 1922. Serial No. 598,516. 14 Claims. (Cl. 68—32.)

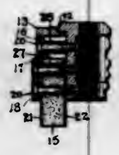
1. The combination of a standard, a frame mounted thereon to swing around a vertical axis, a drive shaft extending through the standard, a relatively fixed roll in the frame, and means for operatively connecting said drive shaft and roll to drive the latter in rotation about its fixed axis in the frame, said means including a clutch having a shiftable element; a relatively movable roll parallel to the first roll and vertically shiftable in the frame, a lever pivoted in said frame and having operative connections with said shiftable roll for moving the same toward said relatively stationary roll, one end of said lever extending into alignment with said standard, a spring for acting on said portion of said lever to tension the movable roll, and a controlling handle coaxial with the power shaft having operative connections both with said clutch member to shift the same to engaging and to neutral positions, and with the spring to release the roll-tension when said clutch member is shiftd to neutral position,



---

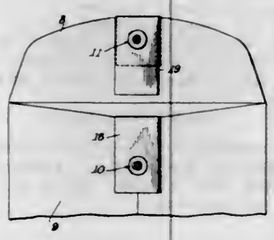
1,677,864. MEASURING INSTRUMENT. WILLIAM JANDUS, East Cleveland, Ohio, assignor of one-half to Herbert S. Jandus, Detroit, Mich. Filed Oct. 7, 1921. Serial No. 506,221. 6 Claims. (Cl. 73—151.)

1. A device of the class described comprising a base member, a support rising from said base member, a single coil helicoid spring having a ribbon extension rigidly connected with said support, indicating mechanism including a needle rigidly connected adjacent the juncture of said extension and spring and means operatively connected with said spring at a point removed from said juncture and with said base member for causing a rectilinear distortion of said spring and an angular deflection of said needle in a single plane.



1,677,865. COUPLING. EDWIN JOHN KROEGER, Akron, Ohio, assignor of three-fourths to Selden Lord, Akron, Ohio. Filed Mar. 6, 1926. Serial No. 92,683. 3 Claims. (Cl. 285—118.)

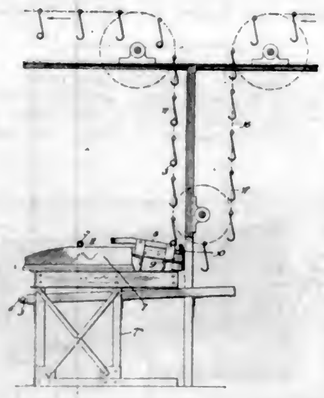
1. A pipe joint comprising an element on one pipe end embracing another pipe end, said element having a gutter on the inside thereof, a rubber gasket fitted in the gut-



ter defining a space about the gasket within the gutter, said gutter being adapted to be supplied with a fluid pressure medium for said space, and a packing ring within the gutter of soft deformable material adapted to protect the rubber gasket from the action of any fluid in the system tending to deteriorate rubber.

1,677,866. SEGMENTAL RING WHEEL. THURE LARSSON, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 22, 1924. Serial No. 733,661. 4 Claims. (Cl. 51—209.)

1. A driving head for a grinding wheel comprising a supporting ring adapted to hold a plurality of abrasive segments around its periphery with their outer ends projecting beyond the ring to form a plane grinding surface and a set of clamping blocks adjustably mounted on the head which are arranged to clamp against the peripheral surfaces of the assembled segments, said parts being so constructed and arranged that certain clamping blocks may be moved to engage the inner end surfaces of the segments and thereby receive the thrust of the grinding operation.



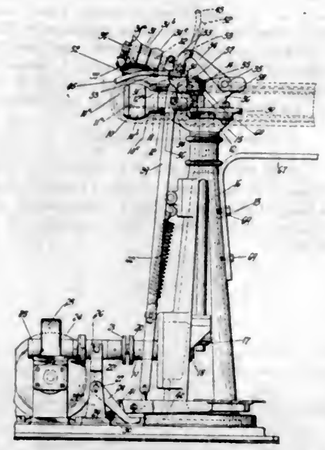
1,677,867. ENVELOPE FASTENING. JOHN LLOYD, Paterson, N. J., assignor of forty per cent to Philip S. McLean, Bloomfield, N. J. Filed Sept. 4, 1926. Serial No. 133,551. 2 Claims. (Cl. 229—78.)

1. An envelope for repeated use, said envelope having a closure flap overlying the back of the same, folded reinforcement strips engaged over the edge of the flap and the edge of the back and complementary members of a snap fastener having integral securing prongs extended through the double layers of the reinforcing strips with the intervening envelope material between, said prongs being turned over and clinched against the far layers of the folded reinforcement strips and the members of the fastener being faced to engage as relatively releasable cooperating stud and socket elements.

1,677,868. APPARATUS FOR MANUFACTURING INNER TUBES. MAX H. PADE, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Dec. 5, 1919. Serial No. 342,712. 2 Claims. (Cl. 154—5.)

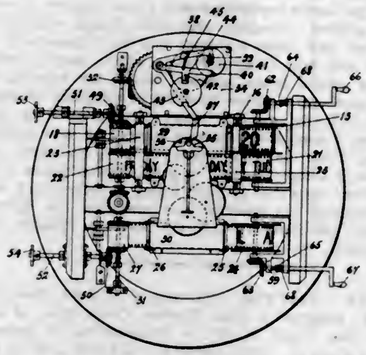
1. An apparatus for the manufacture of tubes comprising a device whereon the tube is rolled about a mandrel, a guideway from said device along which the mandrels pass, a stop in said guideway, a conveyor intersecting said guideway, and swinging hooks on said conveyor adapted to pick up a mandrel at the stop, said stop being arranged to contact a mandrel on said conveyor and swing said hook backward.

1,677,869. FASTENER. WALTER H. PIERCE, Watertown, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Nov. 18, 1924. Serial No. 750,596. 2 Claims. (Cl. 24—219.)



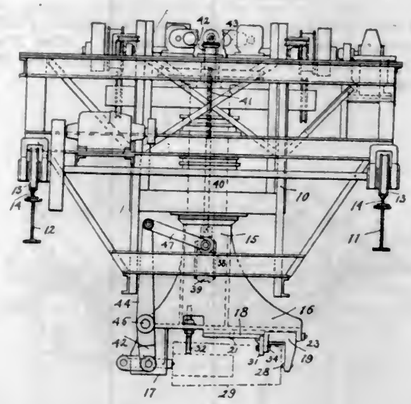
1. A fastener stud having a base portion, an attaching part extending from said base portion, and an upstanding annular wall projecting upwardly from said base portion to provide a stud head and neck for cooperative engagement with a suitable socket, said wall extending upwardly outwardly and then inwardly and having its free edge terminating about an aperture in the head of said stud through which a suitable tool may be inserted to back support the attaching part when said stud is being secured to a carrying medium.

1,677,870. FASTENER. WALTER H. PIERCE, Watertown, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Nov. 18, 1924. Serial No. 750,598. 4 Claims. (Cl. 16—4.)



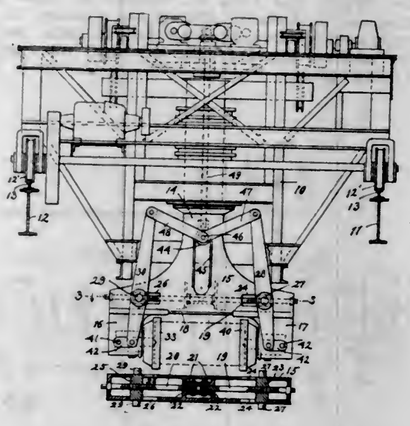
1. A one-piece fastener stud comprising a base portion, an annular wall arising from said base portion, a second annular wall extending outwardly and downwardly from said first mentioned wall to provide a stud head and neck, and a plurality of slots extending through both walls to permit contraction and expansion thereof independently of each other.

1,677,871. TIRE-FINISHING MACHINE. EDWARD D. PUTT, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Feb. 13, 1925. Serial No. 9,062. 6 Claims. (Cl. 154—10.)



1. In a tire finishing machine, means for circumferentially driving a tire casing, means for stitching a side wall onto the casing having a tread thereon, and means for stitching over the joint between the side wall and the tread, the two last-named means being arranged to act in succession.

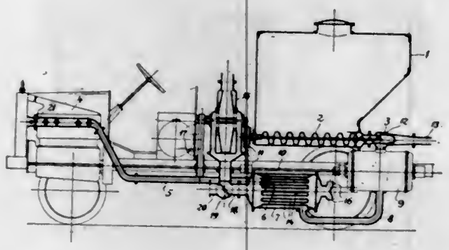
1,677,872. CALENDAR CLOCK. REGINALD NORMAN REID, Edinburgh, Scotland. Filed Oct. 17, 1927, Serial No. 226,794, and in Great Britain Sept. 1, 1926. 3 Claims. (Cl. 58—6.)



1. In combination, a clock having three apertures in the dial thereof, a movable strip positioned behind each aperture, a let-off spool, a driving spool, and a take-up spool for two of said strips, rollers around which the other strip forms an endless band, the driving spool for one of said strips operatively engaging one of said rollers, and mechanism controlled by said clock for simultaneously rotating said spools, whereby said strips and band move at predetermined intervals of time.

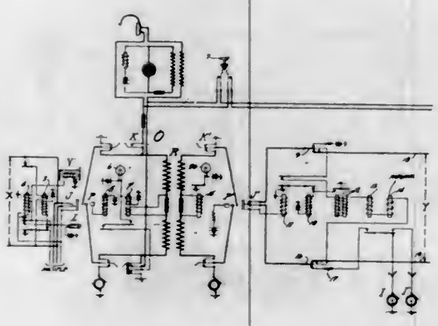
1,677,873. PICK-UP AND CENTERING DEVICE FOR BILLET-HANDLING MACHINES. SYDNEY SMITH, London, England, assignor to The Wellman-Seaver-Morgan Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 26, 1926. Serial No. 97,536. 7 Claims. (Cl. 78—96.)

1. In apparatus of the class described, the combination of a lifting member, means carried by said member for positioning an ingot relative thereto, a plunger carried by said member and reciprocable in alignment with the axis of the ingot when so positioned, said plunger having a punch adapted to engage one end of the ingot and form a central depression therein, and means on said member for actuating said plunger.



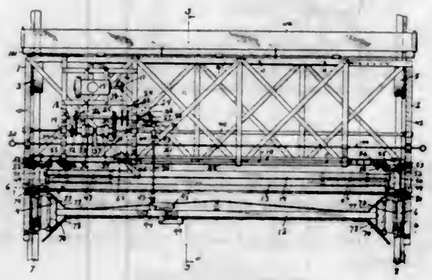
1,677,874. PICK-UP AND CENTERING DEVICE FOR BILLET-HANDLING MACHINES. SYDNEY SMITH, London, England, assignor to The Wellman-Seaver-Morgan Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 26, 1926. Serial No. 97,537. 8 Claims. (Cl. 78—96.)

1. In apparatus of the class described, the combination of a lifting member, an arm thereon having means adapted to engage one end of a billet, a bracket slidable



on said member axially of the billet, a centering member carried by said bracket and engageable with one end of the billet to position the latter, a punch carried by said bracket and movable therewith to form a central depression in said end of the billet, and means for moving said bracket.

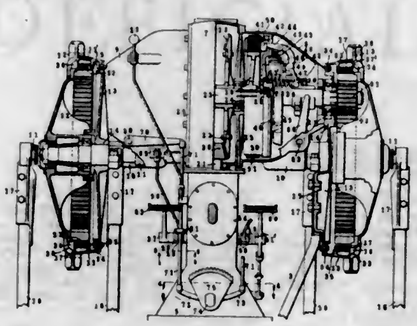
1,677,875. APPARATUS FOR EXTINGUISHING FIRE. CORNELIUS SZILVAY, Budapest, Hungary. Filed Dec. 24, 1924, Serial No. 757,834, and in Hungary Dec. 29, 1923. 3 Claims. (Cl. 169—15.)



1. A fire extinguishing apparatus comprising a combustion engine, a pipe leading away from the exhaust gases of said combustion engine, an air cooler connected to said pipe and having a tubing, an exhauster actuated by said combustion engine sucking air through said tubing, a nozzle, a compressor driven by the said combustion engine connected to said cooler, sucking the exhaust gases from the said cooler and conveying them to the nozzle, a receptacle for extinguishing powder, means for conveying the extinguishing powder from said receptacle to the said nozzle, means in connection with the said nozzle and with the compressor for mixing the extinguishing powder with the exhaust gases and means for conducting the mixture to the fire.

1,677,876. TOLL-SERVICE TRUNKING SYSTEM. JOHN WICKS, Oak Park, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed June 16, 1923. Serial No. 645,714. Renewed June 18, 1927. 26 Claims. (Cl. 179—27.)

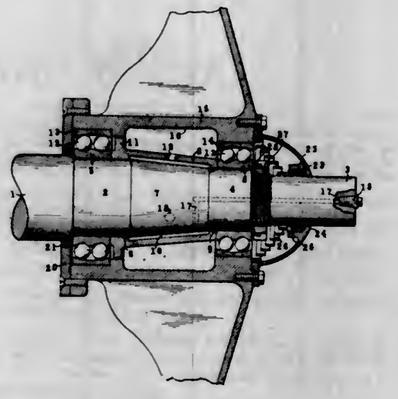
1. In a telephone system, a manual office and an automatic office interconnected by trunk lines, an operator's cord circuit at the manual office for completing calls to subscribers of either office, means for providing order wire service between said offices to permit an operator at the manual office to repeat numbers of subscribers in the automatic office to an operator thereat and to permit such operator to assign one of said idle trunks to the manual operator, automatic switches in the automatic office for setting up connections to called lines, means at the automatic office for transmitting impulses to effect the operation of said automatic switches, and supervisory means at the manual office operative in a characteristic manner depending upon the number of automatic switches operated or the condition of the called line when seized.



1,677,877. CONCRETE-ROAD MACHINE. EDWARD G. CARR, Chicago, Ill., assignor to The Lakewood Engineering Company, Lakewood, Ohio, a Corporation of Ohio. Filed Dec. 29, 1921. Serial No. 525,571. 10 Claims. (Cl. 94—44.)

1. The combination in a concrete road machine, of a frame member, a motor secured to said frame member, wheels for partly supporting said frame member, a second frame member engaging said first frame member for movement with respect thereto and for additionally supporting said first frame member, wheels partly supporting said second frame member, means for securing said frame members together in different positions of adjustment, vertically movable links secured to said frame members, a spreading template secured to said vertically movable links, rocking-frames secured to said frame members, a tamper secured to said rocking-frames, a float or finisher supported by said frame members, and means for propelling the machine and operating the spreading template, the tamper, and the float or finisher, from said motor.

1,677,878. TRACTOR. THOMAS C. LEAKE, New York, N. Y., assignor to Bear Tractor Corporation of America, New York, N. Y., a Corporation of Delaware. Filed June 27, 1922. Serial No. 571,308, and in Great Britain Feb. 2, 1923. 18 Claims. (Cl. 180—9.2.)



1. In a tractor, in combination, traction elements, brake mechanism for each of said traction elements, clutch mechanism for each of said traction elements, an operating link connected with each of said brake and clutch mechanisms, a rotary brake shaft having crank arms thereon operatively connected respectively to said brake operating links, a foot pedal connected to operate said brake shaft to simultaneously apply said brake mechanisms, a lost motion connection between each of said clutch operating links and the corresponding brake operating link, a steering shaft having an operating hand wheel thereon and connections between said steering shaft and said clutch operating links for alternate operation thereof to control said clutch mechanisms and

to said brake operating links for operation of said brake mechanisms through said lost motion connections in sequence to said clutch operation.

1,677,879. SELF-OILING BEARING. THOMAS C. LEAKE, New York, N. Y., assignor to Bear Tractor Corporation of America, New York, N. Y., a Corporation of Delaware. Filed June 27, 1922. Serial No. 571,309. 5 Claims. (Cl. 308—190.)

1. In a self-lubricating bearing for vehicle wheels or the like, the combination with an axle and a hub associated for relative rotation and having spaced bearings therebetween, of a storage reservoir for lubricant disposed between said hub and axle and between said spaced bearings, an axle extension for said axle at the outer end thereof, a lubricant conduit leading to said reservoir and extending through said axle and axle extension for insertion of lubricant to the reservoir from an external point, a recessed cap secured to said hub through which the axle extension projects to an external point, packing between the cap and axle extension,

a retaining nut housed within the recess of said cap and threaded on said axle and adapted to retain the bearing parts in assembled relation and a conical spring housed within the recess of said cap stressed between said hub and packing to automatically adjust the latter, said nut and spring being housed within said cap and protected thereby.

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual indexes, $11.50; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Vol. 372—No. 4. TUESDAY, JULY 24, 1928. Price—$10 per year.

International Convention—Ratification.

This Office has been notified by the Secretary of State of the receipt of a notice from the Government of the Netherlands that the following countries have ratified the Convention of the Union for the Protection of Industrial Property as revised at The Hague on November 6, 1925: Italy, Germany, Great Britain and North Ireland, Austria, Canada, Spain, and the Netherlands.

THOMAS E. ROBERTSON,
Commissioner of Patents.

Adverse Decisions in Interference.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,428,787, H. Landsiedel, Adding machine, decided April 19, 1928, claims 31 to 36, inclusive.

Pat. 1,508,151, E. F. W. Alexanderson, Wireless signaling system, decided June 12, 1928, claim 21.

Pat. 1,565,411, C. A. Boddie, Load-regulator system, decided June 14, 1928, claims 14, 15, and 17.

Pat. 1,620,245, A. W. Turner, Device for closing the air bladders of sport balls of any kind, decided June 4, 1928, claims 1 to 7, inclusive.

Final decisions in interference have been rendered against the following trade-marks:

T. M. 172,592, Liver, kidney, and stomach medicine, Spinks & McIlwain, also doing business as Nu-life Medicine Company, Selma, Ala. Registered September 11, 1923. Decided May 15, 1928.

T. M. 173,148, Fresh cherries, San Joaquin County Cherry Growers Assn., Stockton, Calif. Registered September 18, 1923. Decided June 28, 1928.

T. M. 227,821, Radio apparatus and accessories, consisting of receiving sets, vacuum and electron tubes, batteries, battery eliminators, loud speakers, switches, and battery charges, The Glenn L. Martin Company, Cleveland, Ohio. Registered May 17, 1927. Decided June 30, 1928.

Notices of Cancellation.

U. S. Patent Office, *Washington, June 23, 1928.*

The Apex Coal Company, its assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of The Masteller Coal Company, of Keyser, W. Va., to effect the cancellation of the trade-mark registration of The Apex Coal Company, of Fort Smith, Ark., No. 160,128, dated October 17, 1922, and the notice of such proceeding sent by registered mail to the said The Apex Coal Company at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said The Apex Coal Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

U. S. Patent Office, *Washington, June 23, 1928.*

Alma Wooster, H. W. Patrick, and A. G. Palmer, their assigns or legal representatives, take notice:

An application was filed in this Office by Lysol, Incorporated, of Bloomfield, N. J., for cancellation of trade-mark registration No. 35,104, issued September 18, 1900, to Caroline W. Patrick, of 22 East Main Street, Norwalk, Ohio. The assignment records of this Office show a transfer of title of this registration to Alma Wooster, H. W. Patrick, and A. G. Palmer. Since the Office has been unable to obtain the post-office address of Alma Wooster, H. W. Patrick, and A. G. Palmer, the proceeding can not be instituted. Therefore notice is hereby given that unless said Alma Wooster, H. W. Patrick, and A. G. Palmer, their assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

Condition of Applications Under Examination at Close of Business July 13, 1928.

Room No.	(Total number of applications awaiting action, excluding Trade-Mark Division, 108,524; Trade-Mark Division, 1,934. Oldest new case, Sept. 8, 1927; oldest amended, Sept. 29, 1927. The dates given are 1927 except where † indicates 1928.) DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTIONS.	Oldest new application awaiting office action. New.	Amended.	No. of applications awaiting action.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Court of Appeals of the District of Columbia.

VANORE *v.* IMPROTA.

No. 2,001. Decided April 2, 1928.

INTERFERENCE—PRIORITY.

Evidence reviewed and *Held* to establish that V., the junior party, was the first to conceive the invention but insufficient to establish that he reduced the invention to practice prior to the date on which I., the senior party, filed his application.

APPEAL from the Patent Office. Affirmed.

Mr. John W. Steward for Vanore.

Mr. J. W. Milburn for Improta.

Before MARTIN, Chief Justice, VAN ORSDEL, Justice, and SMITH, Judge U. S. Court of Customs Appeals.

SMITH, *J.*:

This is an appeal by Guiseppe Vanore from the decision of the Commissioner of Patents affirming the decision of the Examiners in Chief and the Examiner of Interferences awarding priority of invention to Ralph Improta.

The invention involved is a method of winding lame or other smooth, flat filaments on elongated quills and the unwinding of the lame or filament therefrom. The issue is defined in eight counts of which the following are typical:

1. The method of winding lame or other smooth, flat filament upon a core having an abutment at one end, consisting in winding the filament, flat side contacting, back and forth upon the core to form a plurality of superposed layers, while advancing the successive layers along the core from the smaller end toward the abutment thereof and carrying the inner ends of the layers into engagement with the abutment.

6. A wound package usable in a loom shuttle without disintegration and snarling under the starting and stopping of the shuttle, comprising a shuttle quill having a tapered peripheral surface at an extremely acute angle to the quill axis, and a relatively heavy non-yieldable metal mass solidly and anti-slippingly surrounding said quill and incapable of being disintegrated by the starting and stopping of the shuttle, said mass consisting of a filament of flat metal traverse-wound on said quill into layers gradually receding from the smaller end of the quill at one end of the mass and substantially all terminating on said tapered peripheral surface at the other end of said mass.

7. A method of unwinding a smooth flat filament from a quill or other core on which it is wound in a plurality of superposed layers which are advanced along the core from one end thereof, consisting in pulling the filament toward the end of the core from which the layers of windings are advanced.

Prior to the invention which is here the subject of controversy great difficulty was experienced in weaving lame from quills which were wound from the larger towards the smaller end thereof with successive layers of lame. Lame so wound after being placed in the shuttle and submitted to the shocks resulting from throwing the shuttle backward and forward slipped off the quill and became entangled and snarled. The snarling and tangling caused the breaking of the lame and consequently a suspension of the weaving.

The invention for which both parties claim priority prevents the snarling and slipping on the quill by reversing the operation of winding the lame on the quill. That is done by boring a hole in the small end of the quill, reversing the quill on the winding machine and winding the lame from the small end to the large end of the quill.

Improta filed his application to patent the invention just described on June 23, 1923, and on that application a patent was issued to him on June 3, 1924.

According to Vanore's preliminary statement he conceived the invention about the second week of September, 1922, and on that date first embodied his conception in a full size wound package and successfully put the package in operation in the city of Paterson, N. J. His application for a patent was not filed until October 20, 1924. Vanore is, therefore, the junior party and upon him was imposed the burden of proving in the interference proceeding that he was the prior inventor.

Testimony for the appellant material to the issue.

Guiseppe Vanore testified in his own behalf that he was a loom fixer and weaver and that he was employed in that capacity by Bramson & Sachs in September, 1921; that in the second week of September, 1922, a satin warp came from outside with a box of lame and some quills or bobbins ready for use; that he put a warp in the loom and started the quill in the loom; that he could not get any "pick in the cloth" because the material came off the quills; that he worked 25 or 30 quills and did not get even 4 inches of cloth; that he came to the conclusion that it was no use to go on that way spoiling material and costing money; that he then took four empty quills and after boring a hole in the small end, put the point of quill Exhibit 2 on the butt of the spindle and the butt of the quill on the point of the spindle; that by means of the spindle, he wound lame 2 inches in length from the point of the quill; that he put the quill so wound in the shuttle and after placing the shuttle on the loom actually wove cloth with it; that he next wound on another quill about 2½ inches of lame and tried it in the same way as the first quill and it went first class; that his sister, Antonetta Grico, saw these quills work; that he nearly filled other quills with lame wound in the same way as the first quill and that they worked fine on the loom; that his brother, Nicola Vanore, started the loom to working the quills last referred to and that he saw those quills work; that he filled other quills and called Billy White to see them work; that White said:

Joe, you got a good idea * * * don't tell anybody, because some day you make money out of it;

that the fully wound quills represented by Exhibit 8 wove about 15 inches of cloth; that he told Frank Mingione of the Dante Silk Company about his invention and asked him to get work for the

witness on lame material; that the witness explained everything to Mingione; that the witness thought that the quills represented by Exhibit 2 were too thick on the butt and a little thin on the point and he made quill Exhibit 9 which would carry more material. On cross examination Guiseppe Vanore said that at the time he made his experiment with the quills Bramson & Sachs did not make cloth out of lame but "a warper weaving lames comes from outside;" that he *guessed* the warper came from the Meadow Silk Company and that he came and wove the warp with lame; that the boss told the witness:

That's a warp, any time you got time to put it up on the loom;

and he put it on the loom and started to work on it right away; that the warper came from outside to Bramson & Sachs and brought with him the quills with which he first tried to weave the warp; that the witness had seen lame before but not the quills on which the lame was wound; that he had worked in the Dante Silk Mills with lame on different quills than those which were brought by the warper; that the lame slipped from the quills with which he worked when employed by the Dante Silk Mills Company; that the lame slipped from the quills which the warper brought but did not slip after the witness changed them; that the witness was a laborer with Bramson & Sachs and did not use his invention after he proved that it would work; that it was his idea to get into business as soon as he could and then put his invention in operation; that in August or September, 1923, he bought 20 plain looms and worked on his invention in the Miesch mills of the Jeffroy Silk Company; that the quills that he used in 1923 and 1924 are the same kind of quills that Improta had a patent for; that as he was working on commission the Jeffroy Silk Company supplied him with the quills with which he did the work; that in *August, September, or October, 1923*, he knew that Improta had a patent on the quills with which he worked at the Jeffroy Silk Company's mill; that he did not know where those quills came from; that they represented his idea exactly; that when he saw the quills furnished by Jeffroy he did not know who had the patent on them until 1924 but that as soon as he saw them he said those are the quills that I have to make; that he did not file an application for a patent because he did not have an opportunity to do so and was a laborer in Jeffroy's place.

Q. Did Mr. Improta ever tell you that he had filed an application for patent upon this invention? Ans. I guess he says to me: "I got to go to Washington." In 1923 about March or April, something like that—maybe May, he don't told me what he got to do, only he told me he got to go to Washington.

The witness then stated that he could not remember whether Improta told him about the invention after the latter came back from Washington; that in March, 1923, the witness saw Improta experimenting with lame on looms but that the experiment was not a success; that the witness said nothing about his invention to Improta.

Frank Mingione testified for Vanore, that he was a silk manufacturer and understood silk, lame, tinsel and yarn weaving; that Vanore told him in 1922 that he had a way of winding the lame which would "run good on the loom" and requested witness to get work on lame; that the witness did not know what Vanore meant but that he went to New York and tried to secure a contract for making lame cloth and was informed by concerns there that they could not use the kind of cloth the witness wanted to make for them because they could import it cheaper than the witness could make it; that he told Vanore that it was no use to make the cloth because it could not be sold; that Vanore stated to the witness in the last week of September or the first week of October, 1922, that he could make lame cloth on the loom by putting the quill into the spindle backwards; that a couple of days afterwards Vanore showed the witness the quill and described to him how it operated; that the quill shown to him had a hole in both ends; that he received a letter from Rosenstein Brothers not to manufacture lame with quills like that shown to him by Vanore.

William J. White testified for Vanore that he was a silk warper by occupation; that he was working for Bramson & Sachs in 1922; that he knew G. Vanore whom the witness called "Joe" and that Vanore called the witness "Bill"; that when Bramson & Sachs first tried to weave lame or tinsel there was a great deal of trouble for the reason that the lame did not come off the quill properly thereby causing a lot of waste and imperfect cloth; that Vanore had trouble with weaving lame but overcame the difficulty; that Vanore as loom fixer tried to make the lame run properly and finally succeeded by drilling a hole in the small end of the quill and reversing the winding of the lame on the quill; that about the first week of September, 1922, Vanore wound in reverse a small quantity on one of the quills; that the quill so wound ran perfectly in the loom; that the witness saw Vanore use seven or eight quills wound in reverse and that all of the quills so wound were satisfactory; that Vanore wove in the presence of the witness 12 or 13 inches of cloth with the reversed quills; that the quills theretofore used had a hole in the butt and that the witness saw Vanore drill a hole in the small end of the quill; that after the hole was drilled he put the quill on the quilling machine by inserting the spindle in the hole in the small end of the quill; that so inserted, the quill was in a position the reverse of that for which the quill was originally designed; that when the quill was partially filled with lame Vanore put it in the shuttle and, until the quill ran out of lame, operated it in the loom without breaking the lame; that Vanore filled several more quills by winding them in the same way as the first and that the filled quills so wound operated perfectly; that the testing of the quills wound in reverse was completed in less than a day; that

the witness told Vanore that the only fault of the quill was that it would not hold enough material; that Vanore replied he would make the quill smaller but on the pattern of a normal or ordinary quill. On cross-examination the witness testified positively that Bramson & Sachs were engaged in weaving cloth out of lame but that they used only one loom for that purpose; that that loom did not work continuously and he could not say that the cloth made on it was made to sell; that the loom was used in Bramson & Sachs' mill for a few days off and on but that the lame did not run; that Vanore tried every means to make the lame run smooth before he finally conceived the idea of putting a hole in the small end of the quill and back winding the quill; that the witness told Vanore in May or June, 1923, when he quit the firm that bought Bramson & Sachs out, that he hoped to see Vanore "put over" his patent successfully; that he had never testified in a court proceeding before.

Josephine Logan, a witness for Vanore, testified that she was a quill winder by occupation and was employed in that capacity by Bramson & Sachs; that to wind the quill the big end of the quill was placed on the spindle but that in the first part of September, 1922, she saw Vanore in the Bramson & Sachs mill place the quill on the spindle in another way and wind lame on it; that she knew that Vanore had so placed the spindle and wound it with lame in the first week of September, 1922, because she went on her vacation in the last week of August and came home the Sunday before Labor Day and went to work on the following morning; that Vanore did the winding of the quill so placed on her quilling machine.

Antonetta Grico, a witness for Vanore, testified that she was a sister of Vanore and was a weaver for Bramson & Sachs in the year 1922; that in that year Bramson & Sachs attempted to weave lame but failed in the attempt; that her brother wove lame in the month of September, 1922, from a quill wound in the ordinary way; that he wove about 8 inches of lame cloth but that the woven material was bad; that her brother finally put a hole in a quill and wound it from the tip to the butt; that the cloth woven with it was very nice; that she saw him put holes in four quills; that her brother put the quill with which the weaving was done on the spindle with the point of the quill inward or toward the machine; that the first quill so placed by her brother on the spindle was not wound full but that he put a little more material on the next quill; that she saw him put the first quill so wound in the shuttle; that warper Bill White and Nick Vanore saw her brother do the things to which she testified. On cross examination the witness said that when the first quill was wound she was taking care of the spool and that her brother was taking care of the bottom quill; that she was holding the spool on a piece of straight wire and was holding it up high with her left hand.

Q. Was there any tension on the spool?
A. What's that?
Q. Did you have anything to keep the spool from turning too fast?
A. What do you mean, a weight?
Q. Yes.
A. No, there wasn't any.

The witness then stated that the winding of the quills to which she testified took place right after Labor Day in 1922 and that she remembered that it was in 1922 because she was very sick that year; that her brother drilled the holes in the tip end of the quills.

Walter Eardley testified in rebuttal on behalf of Vanore that he put bobbins on a wire and holding the tension with his fingers, after putting them over a glass bar, ran about 12 on quills; that the lame on three of the quills broke in the loom and one ran all right; that after giving a different set to the guider, the rest ran without breaking. On cross-examination Eardley said that he held with both hands the wire on which the spools of lame were placed and that it was necessary to use both hands to get tension.

Testimony for appellee material to the issue.

Ralph Improta testified on his own behalf that he had been connected with the firm of Rosenstein Brothers from 1921 and that prior to that time he was employed by A. Meadow & Son as a loom fixer; that he began to work with lame quills for Rosenstein Brothers in the early part of 1923 and used a quill, the butt end of which was put on the spindle; that a quill of that kind did pretty good but did not produce enough of cloth; that early in 1923 Rosenstein Brothers were notified to quit using that quill and that then the witness started to work on a new quill; that he made several kinds of quills and finally in the latter part of May, 1923, produced quill, Exhibit No. 10, the thin point of which was put up against the spindle; that the first layers of lame were wound on the thin end of Exhibit 10 and were wound towards the large end of the quill; that Exhibit 10 proved to be a success when used for weaving lame and is the quill which has been used since the latter part of May, 1923, by Rosenstein Brothers for weaving lame; that he heard about somebody winding a quill by having someone hold a spool of lame on a wire without tension; that he tried to wind a spool without tension but found that the lame came right off after four throws of the shuttle in which the quill was placed; that G. Vanore saw the witness in May, 1923, working on quills in Rosenstein Brothers' mill; that Vanore helped the witness to try to run the ordinary quill better; that Vanore never showed the witness anything, simply watched and put the fur in the shuttle; that after the witness filed his application for a patent in June, 1923, he told Vanore that he had been to Washington to patent the quill made by the witness; that at that time he described the quill to Vanore and said that the idea was to backwind the quill by putting the small end of the quill on the spindle; that when the witness showed his quill to Vanore at that

time Vanore stated to the witness that he had the same idea but that as long as the witness had it, it was all right; that that was the only time that Vanore ever spoke to the witness about Vanore's idea of the quill and that after the witness got his Letters Patent in September or October, 1924, Vanore met the witness on the street and asked him what was the idea of sending him a letter forbidding the use of the quill; that witness said that the letter had been sent to Jeffroy; that Vanore then said:

What's the difference; if Jeffroy has to stop, I will be compelled to stop too, because I am working for Jeffroy on commission;

that when Vanore asked his advice the witness told him to see Rosenstein Brothers. On cross-examination Improta said that he began to work on his own quill in the beginning of May, 1923, and that he never backwound any quill until May, 1923.

Charles Rosenstein testified for Improta that the firm of Rosenstein Brothers used lame in their mill ever since the summer of 1922 and that they used the ordinary quill for weaving lame; that the ordinary quill ran along all right but that it produced cloth very slowly because you had to stop the loom too many times in order to refill the shuttle; that his firm began to use a quill which was wound from the point of the quill towards the butt after his firm had been informed of that method of winding by Improta in May, 1923; that Improta in May, 1923, told the witness about his method of winding lame and showed the witness how it was done; that a quill can not be wound by holding a spool of lame in a person's hand on a wire; that the witness wound the quill in that way and that after running four throws of the shuttle it broke.

Arthur Morris testified for Improta that he saw Improta in May, 1923, working on quills wound from the small end towards the butt.

Max Lessman testified that after he went to work for Rosenstein Brothers in 1923 he saw Improta working on quills which were put into the winding machine with the point towards the spindle.

Philip Saracco testified that he first saw lame used for weaving at the end of the season of 1922 and that the lame was put on the ordinary quill; that in the second or third week of May, 1923, Rosenstein Brothers began to use a quill made by Improta; that the winding of the quill made by Improta was the reverse of that of the first quill used by Rosenstein Brothers.

Lucile Le Conte testified for Improta that she worked for A. Meadows & Sons two years prior to October, 1922, and that she never saw any tinsel lame in the mill of Meadows & Son while she worked there; that since October, 1922, she has worked for Rosenstein Brothers and that the quills of lame used by that firm are wound from the point to the butt; that she did not use quills at Meadows & Sons and that she wound the thread on paper cops.

Abraham Bramson testified on behalf of Improta that he was a member of the firm of Bramson & Sachs from February, 1921, until June, 1923, and that that firm was engaged in the business of manufacturing silks; that his firm never did any work with lame and that he never got any lame from A. Meadow & Sons; that he did not see anybody bring lame into the mill of Bramson & Sachs and that if a warper had come into the mill of Bramson & Sachs and brought lame, he would have known of it. On cross-examination Bramson said that at the time he was a member of the firm of Bramson & Sachs he was interested in the Paterson Iron & Metal Company and gave some attention to its affairs; that he spent more time, however, at the Bramson & Sachs mill; that he was away from Bramson & Sachs once a week or something like that; that he could not swear that he had not been away from Bramson & Sachs oftener than once a week as he kept no record of the matter; *that Sachs, his partner, was in the mill nearly every day and that Vanore used to take orders from Sachs;* that he got no bill from anyone for lame.

The opinion.

The testimony of G. Vanore, Antonetta Grico, Wm. J. White, and Josephine Logan is convincing that G. Vanore conceived his invention in the second week of September, 1922, and that on the date of his conception he bored holes in the small end of quills, inserted them by means of the hole so bored on the spindle of the winding machine, wound them with lame the reverse of the way in which such quills had been previously wound, placed the quills so partially wound in a shuttle and wove with such quills about 15 inches of cloth. That testimony is not at odds with that of any other witness in the case and as it has not been impeached in any way, but is corroborated, it is entitled to full faith and credit. The testimony on behalf of Vanore as to his conception is corroborated by Frank Mingione to whom he disclosed it in the last week of September or the first week of October, 1922. At that time, according to Mingione, Vanore showed to Mingione a quill with a hole in both ends and explained to Mingione how the quill operated. As a result of that disclosure and at the request of Vanore, Mingione went to New York and sought to obtain a contract for the making of lame cloth. The New York concerns declined to make a contract on the ground that such cloth could be imported for less money than it would cost to make it in the United States. If the opinion of the New York concerns was based on the manufacture of lame cloth with the ordinary quill they were probably right.

The contention that the testimony of Antonetta Grico was false is not supported by the record. Antonetta Grico did testify that she held a spool of lame on a wire with her left hand while the lame was wound from the spool onto the quill and that no weight was used to prevent the spool from turning too fast. She did not testify that the spool could be wound without tension and was, therefore, not contradicted by the witnesses who testified that quills could not be wound with lame without tension. Tension may be applied without the use of a weight. Moreover it must be remembered that the first quill was only partially wound with lame and for a distance of only 2 inches from the small end and that for such a winding tension might not be required.

The testimony of Bramson that his firm never used lame, that no lame was ever billed to his firm and that if lame had come to the mill of Bramson & Sachs, he would have known of it, does not outweigh or impeach that of Vanore's witnesses. Bramson was, at times, absent from the mill of Bramson & Sachs and he admitted that at least once a week, if not oftener, his presence was required at the works of the Paterson Iron and Metal Co. Vanore stated that he received his orders to test the lame quills from his boss and his boss might have been either Bramson, Sachs or the superintendent or foreman of the mill. It is worthy of note that Vanore was not questioned on cross-examination as to the name of his boss and that Sachs, the partner of Bramson, was not called as a witness by Improta, notwithstanding the admission by Bramson that Vanore used to take orders from Sachs. We are satisfied that Vanore conceived the invention and disclosed it to his sister, William White, and Josephine Logan, early in September of 1922 and later in September or in the first week of October, 1922, to Mingione.

Whether Vanore reduced his invention to practice is quite another matter. After weaving with his quill 15 inches of cloth he put his invention to no further use whatever. He filed no application for a patent until more than a year after he had learned of the success of Improta and was spurred to that activity by a letter notifying the Jeffroy Silk Company, for whom Vanore worked on commission, that the company was infringing Improta's patent. Vanore's device was so simple that by boring a hole in the small end of the quill, that quill could be easily attached to the winding machine then in use and the record discloses nothing which would excuse Vanore from putting his quill into operation as a manufacturing device. He wove with his quill a little more than a foot of cloth and when he failed to secure a contract to put his conception to commercial use, he made no further effort to prove its industrial practicability and allowed more than two years to elapse before he filed his application for a patent.

The primary purpose of conferring on Congress the power to pass patent laws and to grant for a limited time patent rights to inventors was not to help or reward the inventor but to promote the progress of science and the useful arts for the benefit of the public and organized society. Such being the purpose of patent laws, inventors have no right without just cause or reason to conceal their inventions or to withhold them from the public. Inventors who do so not only defeat in some measure the chief end to be accomplished by patent laws but work a most serious injustice to those who later enter the field and expend their time, money and energies in developing a conception, reducing it to practice, making it useful to the public and in diligently prosecuting their claims to a patent. As against the inventor who is guilty of inexcusable delay in asserting his priority according to law, all the equities and presumptions are in favor of the inventor who, though later in conception, first files his application for a patent. An inventor may have a reasonable excuse for not promptly applying for a patent but if he has none and unreasonably delays in taking the necessary steps to secure a patent, the courts are warranted in presuming that his claim of reduction to practice was nothing better than an abandoned experiment. *Mason* v. *Hepburn*, 13 Appls. D. C. 86, 94, 95; 84 O. G. 147; *Warner* v. *Smith*, 13 Appls. D. C. 111, 114, 115, 116; 84 O. G. 311; *Howard* v. *Hey*, 18 Appls. D. C. 142, 144, 145; 95 O. G. 1647; *Quist* v. *Ostrom*, 23 Appls. D. C. 69, 74; 108 O. G. 2147.

While we are satisfied that Vanore was the first to conceive the invention, we are forced to the conclusion that his conception was not reduced to practice prior to the date on which Improta filed his application for a patent.

The decision of the Commissioner of Patents is affirmed.

Affirmed.

ADREPHINE

For Astringent to the Accessible Respiratory Mucous Membranes.
Claims use since Jan. 19, 1928.

Ser. No. 266,682. PARKE, DAVIS & COMPANY, Detroit, Mich. Filed May 19, 1928.

JELISSA

For Surgical Lubricant.
Claims use since Mar. 26, 1928.

Ser. No. 266,684. CURTIS S. PHILLIPS, San Antonio, Tex. Filed May 19, 1928.

The trade-mark consists of the portrait and signature of the applicant.
For Preparation for the Treatment of Pyorrhea.
Claims use since Dec. 9, 1925.

Ser. No. 266,737. LIVEROGEN COMPANY, Cincinnati, Ohio. Filed May 21, 1928.

LIVEROGEN

For Tablets for the Correction of Weakness, Loss of Appetite, and Resulting Malnutrition, Certain Forms of Anemia, and General Run-Down Condition.
Claims use since Apr. 30, 1928.

Ser. No. 266,777. EDWIN HILL ANDERSON, New York, N. Y. Filed May 22, 1928.

ZOL
SULFUR BATH

No claim is made to the exclusive use of the words "Sulfur Bath" apart from the mark shown in the drawing.
For Sulphur Used for Bathing Purposes.
Claims use since Apr. 18, 1928.

Ser. No. 266,779. EDWIN HILL ANDERSON, New York, N. Y. Filed May 22, 1928.

ZYT
SULPHUR
BATH

No claim is made to the exclusive use of the words "Sulphur Bath" apart from the mark shown in the drawings.
For Sulphur Used for Bathing Purposes.
Claims use since Apr. 18, 1928.

Ser. No. 266,853. DAVIES, ROSE & CO., LTD., Boston, Mass. Filed May 28, 1928.

SHADOCOL

For Radiopaque Diagnostic Preparation.
Claims use since Aug. 6, 1927.

Ser. No. 266,898. WILLARD L. THOMPSON, doing business as Alkura Dispensary, (Unincorporated), Madison, Wis. Filed May 23, 1928.

ALKURA

For Alkalizing Medical Preparations for the Treatment of Abnormal Conditions Due to or Accompanied by Hypoalkalinity of the Blood or an Excessive Acidity of the Secretions.
Claims use since May 15, 1928.

Ser. No. 266,971. THE BRITISH DRUG HOUSES, LIMITED, London, England. Filed May 25, 1928.

RADIOMALT

For Medicated Malt Product for Human Use.
Claims use since Mar. 31, 1926.

Ser. No. 267,066. LES ETABLISSEMENTS POULENC FRERES, Paris, France. Filed May 26, 1928.

GITAÏNE

For Chlorhydrate of Metaamino-Stovaine.
Claims use since Feb. 16, 1928.

Ser. No. 267,079. RAINIZED PROCESS LTD., New York, N. Y. Filed May 26, 1928.

RAINIZED

For Waterproofing Compound in Liquid Form for Protecting Surfaces of Straw, Textiles, Leather, and the Like.
Claims use since Jan. 30, 1928.

Ser. No. 267,231. ANTHONY J. BOOKHOLD, doing business as M. O. Chemical Co., Oregon City, Oreg. Filed May 31, 1928.

M-O

For Cough Drops.
Claims use since Jan. 9, 1928.

Ser. No. 267,355. THE FARASTAN COMPANY, Ardmore, Pa. Filed June 2, 1928.

FARASTAN

For Preparation Used in the Treatment of Rheumatism, Arthritis, Neuritis, Neuralgia, Lumbago, Sciatica, Gout, Influenza, Kidney and Bladder Disorders, and Colds.
Claims use since May 31, 1928.

Ser. No. 267,358. GAMADIN LABORATORIES, INC., Philadelphia, Pa. Filed June 2, 1928.

GAMADIN

For Preparation used in the Treatment of Rheumatism, Arthritis, Neuritis, Neuralgia, Lumbago, Sciatica, and Gout.
Claims use since May 31, 1928.

Ser. No. 267,429. THE LACTONA COMPANY, Chicago, Ill. Filed June 4, 1928.

LACTONA

For Tooth Paste.
Claims use since May 16, 1928.

Ser. No. 267,438. EDWARD MORRISH, St. Louis, Mo. Filed June 4, 1928.

METRO-OIL

No claim is made to the word "Oil" apart from the mark shown in the drawing.
For Antiseptic, Analgesic, Antiphlogistic Preparation for the Treatment of Infections of the Nasal and Accessory Sinuses of the Nose and Throat.
Claims use since about April 21, 1928.

Ser. No. 267,464. PETER SANTURELLO, doing business as Santurello Beauty Parlor, Columbus, Ohio. Filed June 4, 1928.

Perma-SET

For Hair-Dressing Preparation.
Claims use since Jan. 1, 1928.

Ser. No. 267,522. LEWIS C. TROHN, New York, N. Y. Filed June 5, 1928.

noRun

For Preparation for Treating Fabrics, Particularly Hosiery to Increase the Wearing Properties Thereof.
Claims use since about May 26, 1928.

Ser. No. 267,574. ISRAEL O. GOLDSTEIN, doing business as Goldstein Laboratories, Philadelphia, Pa. Filed June 6, 1928.

FRIS

For Hair Tonic.
Claims use since Feb. 1, 1928.

Ser. No. 267,575. GEORGES LOUIS GUILLEVIC, Paris, France. Filed June 6, 1928.

PYRÉTHANE

For Preparation Used in the Treatment of Neuralgia and as a Febrifuge.
Claims use since Feb. 28, 1913.

Ser. No. 267,591. HENRY M. LANDAU, Boston, Mass. Filed June 6, 1928.

LAXAFRU

For Laxative.
Claims use since May 18, 1928.

Ser. No. 267,592. LA SALLE MEDICINE COMPANY, Los Angeles, Calif. Filed June 6, 1928.

DIUTONE

For Diuretic and Stimulant for the Kidneys.
Claims use since Sept. 1, 1927.

Ser. No. 267,612. SOCIETE ANONYME LES DENTIFRICES DU DOCTEUR PIERRE, Nanterre, France. Filed June 6, 1928.

LES 5 FLEURS

For Perfume, Toilet Water, Face Powder, Talcum Powder, Face Creams, Rouge Lipsticks, Lotion for the Skin and Hair, Sachet, Brilliantine, Bath Salts, and Dentifrices.
Claims use since Jan 1, 1926.

Ser. No. 267,670. ANGELINA SACCO, New Orleans, La. Filed June 7, 1928.

The trade-mark consists of a portrait of applicant.
For Preparation for the Treatment of Skin Diseases.
Claims use since May 26, 1928.

Ser. No. 267,757. THE COOPER LABORATORIES, INC., Dayton, Ohio. Filed June 9, 1928.

SARGON

For Medicinal Tonic Used as a Treatment Designed to Build Up Deficient Metabolism, Restore the Hæmoglobin of the Blood to Normal, Stimulate the Action of the Liver and Gall Bladder, and Thereby Improve Nutrition.
Claims use since Nov. 17, 1927.

Ser. No. 267,785. THE NORWICH PHARMACAL COMPANY, Norwich, N. Y. Filed June 9, 1928. Under 10 year proviso.

Norwich

For Alteratives, Analgesics, Anaphrodisiacs, Anæsthetics, Anodynes, Antacids, Anthelmintics, Antichlorotics, Antimetics, Antiepileptics, Antigalactagogues, Antigonorrheics,

Antihydrotics, Antilithics, Antineuralgics, Antiparasitics, Antiperiodics, Antiphlogistics, Antipyretics, Antirheumatics, Antiseptics, Antisialagogues, Antispasmodics, Antitubercular, Antizymotics, Aperients, Aphrodisiacs, Astringents, Cardiac Sedatives, Cardiac Stimulants, Carminatives, Cathartics, Caustics, Cerebral Depressants and Stimulants, Cholagogues, Cicatrizants, Constructives, Counterirritants, Demulcents, Deodorants, Deoxidizers, Depilatories, Depressants, Diaphoretics, Digestives, Discutients, Disinfectants, Diuretics, Ecbolics, Emetics, Emmenagogues, Errhines, Escharotics, Expectorants, Galactagogues, Gastric Tonics, Germicides, Hæmostatics, Hæmatinics, Hypnotics, Irritants, Laxatives, Motor-Depressants, Motor-excitants, Mydriatics, Myotics, Narcotics, Nervines, Nutrients, Oxytocics, Parasiticides, Ptyalagogues, Purgatives, Pustulants, Refrigerants (Medicinal), Resolvents, Respiratory Depressants, Respiratory Stimulants, Restoratives, Rubefacients, Sedatives, Sialagogues, Soporifics, Sternutatories, Stimulants (Cardiac, Cerebral, Hepatic), Stomachics, Styptics Sudorifics, Teniafuges, General Tonics, Vasoconstrictors, Vasodilators, Vascular Sedatives, Vermicides, Vesicants; Chemicals and Drugs—Namely, the Following: Acacia, Acetanilid, Acetone, Acetphenetidin; Acids—Namely, Acetic, Acetylsalicylic, Arsenous, Benzoic, Boric, Carbolic, Citric, Gallic, Hydriodic, Hydrochloric, Hypophosphorous, Sactic, Nitric, Nucleinic, Oleic, Oxalic, Phosphoric, Glacial Phosphoric, Picric, Salicylic, Stearic, Sulphuric, Tannic, Tartaric, Aconite (Leaves and Root), Aconitine, Adepslanæ, Agaric, Agaricin, Alcohol, Aletris, Alfalfa, Aloes, Aloin, Althæa; Aluminum Compounds—Namely, the Following: Alum, Ammonium; Alum, Exsiccated; Aluminum, Acetate, Sulphate; Amidopyrine; Ammonia and Ammonium Compounds—Namely, Ammonia Water; Ammonium Bromide, Carbonate, Chloride, Citrate, Hypophosphite, Iodide, Salicylate, Sulphoichthyolate, Valerate; Angelica Seed, Anise, Antimony Sulphide, Antimony Sulphureted; Antimony and Potassium Tartrate; Antipyrine, Apocynum, Apomorphine Hydrochloride, Aqua Ammonia, Arecoline Hydrobromide, Areca Nut, Arnica Flowers, Arnica Root, Aromatized Castor Oil; Arsenic Sulphide, Arsenic Tribromide, Arsenic Trioxide, Arsenous Iodide; Arsenous and Mercuric Iodides; Asafetida, Asclepias, Asparagus Seed, Aspidium, Atropine Sulphate; Balm Gilead Buds, Balsam Copaiba, Balsam Fir, Balsam Peru, Balsam Tolu; Bamboo Briar, Baptisia; Barium Compounds—Namely, Barium Chloride, Iodide, Sulphide; Bearberry, Belladonna, Benzyl-Benzoate, Berberis Aquifolium, Berberine Hydrochloride, Benzoin, Betanaphthol, Betel Nut; Bismuth Compounds—Namely, Bismuth Milk; Bismuth Betanaphthol, Subcarbonate, Subgallate, Subnitrate, Subsalicylate; Bismuth and Ammonium Citrate; Bitter Apple, Black Cohosh, Black Haw, Black Hellebore, Black Indian Hemp, Bladderwrack; Blaud Mass; Bloodroot, Blue Cohosh, Blue Flag, Blue Mass; Bole, Armenian; Boneset, Borax, Broom-Corn Seed, Broom Tops, Brucine, Buchu, Buckthorn, Bugle Weed, Burdock; Cacao Butter, for Medicinal Purposes; Cactus, Caffeine; Caffeine, Citrated; Caffeine and Sodium Benzoate; Calabar Bean, Calamus; Calcium Compounds—Namely, Calcium Bromide, Carbonate, Chloride, Glycerophosphate, Hypophosphite, Iodide, Lactate, Lactophosphate, Oxide, Phenolsulphonate, Prosphate, Sulphate, Sulphide; Calendula, Calisaya Bark, Calomel, Calumba; Camphor; Camphor, Monobromated; Canella, Cannabis, Cantharides, Capsicum, Caraway Seed; Carbon Disulphide; Carbon Tetrachloride; Cardamom; Cardamom Compound; Cascara Sagrada, Cascarilla; Cascin for Medicinal Purposes; Cassia Bark, Caulophyllum; Caustic Potash; Caustic Soda; Cerium Oxalate; Chalk, Precipitated; Chalk, Prepared; Chamomile, Charcoal, Chelidonium, Chestnut Leaves, Chimaphila, Chionanthus; Choral, Camphorated; Chloral, Hydrated; Chloramine T, Chloroform, Chromium Sulphate, Chrysarobin, Cimicifuga; Cinchona, Red; Cinchona Compound; Cinchonidia, Cinchonidine Sulphate; Cinchonine, Cinchonine Sulphate; Cinnamon, Cloves, Cocaine Hydrochloride, Cochineal, Cocillana; Codeine, Codeine Phosphate, Codeine Sulphate; Colchicine, Colchicine Salicylate; Colchicum (Corm and Seed), Cold Cream; Collinsonia, Collodion, Colocynth, Columbo, Condurango, Conium, Convallaria; Copper Arsenite, Copper Citrate, Copper Sulphate; Coriander, Corn Silk, Corpus Luteum, Corrosive Sublimate, Cotton Root, Coumarin, Cramp Bark, Cranesbill, Cream Tartar; Creosote (Wood); Creosote Carbonate; Cresol, Cubeb, Cudbear, Culvers Root, Cypripedium, Damiana, Dandelion Root, Diacetylmorphine; Diastase from Malt; Dichloramine T, Diethylphthalate, Digitalin, Digitalis, Dioscorea, Dog Grass, Echinacea, Elaterium, Elecampane, Elder Flower; Emetine Hydrochloride; Epinephrim Chloride; Epsom Salt, Ergot, Eriodyctyon, Erythroxylon, Eserine salicylate, Eserine Sulphate, Ether; Ether, Acetic; Ethyl Chloride, Ethylene Dichloride, Eucalyptol, Eucalyptus, Euphorbia Pilulifera, Euphorbium, Fennel, Fenugreek, Flaxseed, Formaldehyde, Foxglove, Frangula, Fringe Tree, Gaduol, Gamboge, Garden Celandine, Gelsemium, Gentian; Gentian Compound; Geranium; Ginger for Medicinal Purposes; Glycerin, Glycerites; Glycyrrhiza (Licorice); Goldenseal, Gold Tribromide, Gold Oidide; Gold and Sodium Chloride; Gossypium, Grindelia, Guaiac, Guaiacol Carbonate, Gum Arabic, Guniguaiac, Hawthorn Berries; Hellebore (Black and Green); Helonias, Hemoglobin, Henbane, Hepatica, Hexmethylenamine, Hops, Horehound, Horse Nettle, Hydrangea, Hydrastine, Hydrastine Hydrochloride, Hydrastis, Hydrogen Peroxide, Hyoscine Hydrobromide; Hyoscyamine, Hyoscyamine Hydrobromide, Hyoscyamine Sulphate; Hyoscyamus; Hypodermic Tablets; Ichthyol, Inula, Iodine, Iodoform, Ipecac, Irish Moss; Iron and Iron Compounds—Namely, Iron Reduced; Iron Albuminated, Arsenate, Arsenite, Bromide, Cacodylate, Carbonate, Chloride, Citrate, Glycerophosphate, Hypophosphite, Iodide, Oxide, Peptonate, Pyrophosphate, Subcarbonate, Sulphate, Valerate; Iron and Ammonium Citrate; Iron and Manganese Peptonate; Iron and Quinine Citrate; Jaborandi, Jalap, Jamaica Dogwood, Juniper Berries; Kaolin, Medicinal; Kaolin Cataplasm; Kavakava, Kermes Mineral, Kino, Kola, Ladies' Slipper, Lanolin, Lappa; Lard Benzoinated Larkspur, Laudanum; Lavender Compound; Lead Acetate, Lead Carbonate, Lead Iodide; Lead Oxide, Yellow; Lecithin; Lemon Peel for Medicinal Purposes; Licorice, Liferoot; Lily of the Valley; Lime for Medicinal Purposes; Lime, Chlorinated; Liquid Petroleum, Litharge; Lithium Salts—Namely, Lithium Benzoate, Bromide, Carbonate, Citrate, Salicylate; Liverwort, Lobelia; Magma Bismuth; Magma Magnesia; Magnesium Compounds—Namely, Magnesia, Calcined; Magnesium Carbonate, Oxide, Peroxide, Salicylate, Sulphate; Magnesium Creosote Sulphonate; Magnesium Guaiacol Sulphonate; Male Fern; Malt for Medicinal Purposes; Mandrake; Manganese Compounds—Namely, Manganese Citrate, Dioxide, Glycerophosphate, Hypophosphite, Iodide; Marigold, Marrubium, Mastic, Matico; Matricaria, Menthol; Mercury and Mercury Compounds—Namely, Mercury; Mercurous Chloride; Mercury Ammoniated; Mercury Iodide, Oxide, Oxycyanide, Salicylate, Tannate; Methylene Blue, Methyl Salicylate; Milk of Bismuth; Milk of Magnesia; Morphine, Morphine Diacetyl, Morphine Hydrochloride, Morphine Sulphate, Mullein, Musk Root; Mustard for Medicinal Purposes; Myrrh, Nickel Bromide, Nickel Sulphate; Nitroglycerin for Medicinal Purposes; Nuclein, Nutgall; Nutmeg for Medicinal Purposes; Nux Vomica; Oils for Medicinal Purposes—Namely, Oil Anise, Bitter Almond, Bay, Bergamot, Birch, Cade, Cajuput, Camphor, Camphorated, Caraway, Cardamon, Cassia, Castor; Castor, Aromatized; Cedarwood, Citronella, Cloves, Coconut, Cod-Liver, Coriander, Corn, Cottonseed, Croton, Erigeron, Eucalyptus, Fennel, Geranium, Hemlock, Juniper, Lavender Flower, Lemon, Linseed, Locust Buds, Mineral, Mustard, Neroli, Nutmeg, Olive, Orange, Pennyroyal, Peppermint, Petroleum, Pimiento, Pine-Needles, Pinus Sylvestris, Rose, Rosemary, Sandalwood, Sassafras, Savin, Tansy, Tar, Theobroma, Thuja, Thyme, Turpentine, Wintergreen Oleoresins—Namely, Oleoresin Apiol, Capsicum, Cubeb, Ginger; Opium; Orange Peel for Medicinal Purposes; Orchic Substance, Orris Root, Ovarian Substance, Oxygall, Oxydendron, Pancreatin, Papain, Paraformaldehyde, Paraldehyde, Paregoric, Pareira, Parsley Seed; Pepper for Medicinal Purposes; Pepper-

mint, Pepsin; Pepsin, Saccharated; Petrolatum, Phenolphthalein; Phenyl Salicylate (Salol); Phosphorus, Physostigma, Physostigmine Salicylate, Physostigmine Sulphate, Phytolacca, Pilocarpine Hydrochloride, Pilocarpine Salicylate, Pilocarpus, Pine Tar, Pink Root, Piperine, Pipsissewa, Pituitary Gland, Pleurisy Root, Podophyllin, Podophyllum, Poke Root; Potassium Compounds—Namely, Potassium Acetate, Arsenite, Bicarbonate, Bichromate, Bitartrate, Bromide, Carbonate, Chlorate, Citrate, Glycerophosphate, Hydroxide, Hypophosphite, Iodide, Nitrate, Permanganate; Potassium Creosote Sulphonate; Potassium Guaiacol Sulphonate; Potassium and Sodium Tartrate; Prickly Ash, Pulsatilla, Pumpkin Seed, Quassia, Quebracho, Quercus, Quillaja, Quinidine, Quinidine Sulphate; Quinine and Salts—Namely, Quinine; Quinine Arsenate, Arsenite, Bisulphate, Dihydrochloride, Glycerophosphate, Hydrobromide, Hydrochloride, Hypophosphite, Salicylate, Sulphate, Tannate, Valerate; Quinine and Urea Hydrochloride; Red Clover, Red Saunders, Rennin, Resin Gualac, Resin Jalap, Resin Podophyllum, Resin Scammony, Resorcinol, Rhatany, Rhubarb, Rochelle Salt, Rue, Rumex, Saccharin, Saffron, Salicin, Salol, Sambucus, Sandalwood, Sandarac, Sanguinaria, Sanguinarine Nitrate, Santonin, Sarsaparilla, Sassafras, Saw Palmetto, Scammony, Scoparius, Scopola, Scopolamine Hydrobromide, Scutellaria; Seidlitz Powder; Senecio, Senega, Senna, Serpentaria, Sevenbarks, Silver Nitrate, Silver Nucleinate, Skullcap, Skunk Cabbage, Snakeroot, Soapbark; Sodium Compounds—Namely, Sodium Arsenate, Benzoate, Bicarbonate, Bromide, Cacodylate, Carbonate, Chloride, Citrate, Formate, Glycerophosphate, Glycocholate, Hydroxide, Hypophosphite, Hyposulphite, Iodide, Nitrate, Nitrite; Oleate, Acid; Phenolsulphonate, Phosphate, Salicylate, Silicate, Succinate, Sulphate, Solanum, Sourwood, Sparteine Sulphate, Spearmint, Spigelia, Squaw Vine, Squill, Star grass, Stillingia, Stone Root, Stramonium, Strontium Bromide, Strontium Salicylate, Strophanthin, Strophanthus; Strychnine and Salts—Namely, Strychnine; Strychnine Arsenate, Arsenite, Glycerophosphate, Hypophosphite, Nitrate, Phosphate, Sulphate, Valerate; Styrax; Sugar of Milk; Sulphonethylmethane, Sulphonmethane, Sulphur, Sumbul, Suprarenal Gland, Taraxacum, Tartar Emetic, Terebene, Terpin Hydrate, Thiosinamin, Thyme, Thymol, Thyroid Gland, Tonga, Tragacanth, Triticum, Turpentine, Uva-Ursi, Valerian; Vanilla Beans for Medicinal Purposes; Vanillin, Veratrum, Viburnum Opulus, Viburnum Prunifolium, Wahoo, White Oak, White Pine, White Precipitate, Wild-Cherry Bark, Wild Indigo, Wild Lettuce, Wild Yam, Witch-Hazel, Xanthorrhiza, Xanthoxylum; Yeast for Medicinal Purposes; Yellow Dock, Yellow Jasmine, Yellowroot, Yerba Santa, Yohimbine Hydrochloride, Zedoary; Zinc Compounds—Namely, Zinc Acetate, Bromide, Chloride, Oxide, Peroxide, Phenolsulphonate, Phosphate, Phosphide, Stearate, Sulphate, Valerate; Zangiber; Proprietary Medicines, Pharmaceutical Preparations, and Home Remedies—Namely, Preparations in Liquid and Tablet Form for the Treatment of Coughs and Colds, Whooping Cough, Croup, Asthma, Bronchitis, Rhinitis; Bronchial Lozenges, Brown Mixture, Cough Sirup, Expectorants; Ointments for External Use—Namely, Sulphur Ointment, Blue Ointment, Boric-Acid Ointment, Zinc Ointment; Preparations in Tablet Form for Internal Use—Namely, Yeast Vitamin Tablets, Worm Lozenges, Soda-Mint and Pepsin Tablets, Soda-Mint Tablets, Chlorate-of-Potash Tablets, Throat Pastils, Saccharin Tablets; Laxative Preparations in Liquid, Tablet, or Powder Form—Namely, Aromatized Castor Oil, Cascara Sagrada, Laxative Pills, Cascarin Tablets, Laxative Cold and Grippe Tablets, Saline Laxatives, Mineral Oils for Medicinal Use; Tonics and Tonic Preparations—Namely, Blaud Iron Pills, Nux and Iron Compound, Emulsion of Cod-Liver Oil with Hypophosphites, Cod-Liver Oil, Tar Compounds with Hypophosphite, and Cod-Liver Oil Extracts for Internal Use; Glycerine Suppositories for Adults and Infants, Suppositories, for the Treatment of Piles, Antiseptic Vaginal Suppositories; Antiseptics, Deodorants, and Disinfectants for Hospital, Surgical, and Household Use; Larkspur Lotion for the Destruction of Vermin; Liquid Preparations for the Treatment of Corns, Calli, and Warts; Alcohol for External Use, Preparations in Liquid Form for the Treatment of Intestinal Disorders; Preparations for the Treatment of Toothache—Namely, Toothache Gum, Toothache Drops; Prophylactics, Zinc Stearate; Worm Sirups, Vermifuge, and Worm Confections; Antiseptic Salves or Ointments Used Externally in the Treatment or Relief of Cuts, Burns, Bruises, Boils, Pimples, Chilblains, Piles, Ecsema, Sunburn, Poison Ivy, Blisters, Insect Bites, and Ulcers; Preparations in Liquid Form for the Treatment of Eczema and Other Inflammatory Conditions of the Skin, Antiseptic Preparations in Liquid Form for Use in the Treatment of Catarrhal Conditions of the Nose and Throat, and as a Mouth Wash, Preparations in Liquid Form for Cleansing and Treating the Hair; Veterinary Medicines and Preparations—Namely, Blister Preparations, Bovine Laxative, Elixirs, Counterirritants, Colic Mixtures, Mange Lotions, Eye Ointment, Pituitary Extracts, Liniments, Salves; the Above Mentioned Porducts May Be in Any One or Another of the Following Forms: Ampoules, Crude Drugs, Crystals, Elixirs, Emulsions, Extracts (Solid and Fluid), Liniments, Liquids, Lozenges, Mixtures, Ointments, Pills, Powders, Solids, Solutions, Spirits, Suppositories, Syrups, Tablets, Tinctures, and Troches.

Claims use since 1888.

Ser. No. 267,855. P. H. POTTER & SONS, INC., New York, N. Y. Filed June 11, 1928.

Iridinol

For Solution of Salts of Iridium for the Treatment of Rheumatism and Other Blood Diseases.
Claims use since Sept. 4, 1909.

CLASS 9.

Explosives, Firearms, Equipments, and Projectiles.

Ser. No. 267,857. PYRO IMPORTING COMPANY, Seattle, Wash. Filed June 11, 1928.

SHOGUN

For Firecrackers.
Claims use since Jan. 15, 1928.

Ser. No. 268,335. AMERICAN HAIR FELT COMPANY, Chicago, Ill. Filed June 20, 1928.

OZITE

For Gun Wadding.
Claims use since June 12, 1928.

CLASS 12.

Construction Materials.

Ser. No. 263,275. THE LOGAN-LONG COMPANY, Chicago, Ill. Filed Mar. 16, 1928.

DUXBAC

For Prepared Roll Roofing.
Claims use since Nov. 1, 1922.

Ser. No. 264,079. CAPLANO TIMBER CO., LTD., North Vancouver, British Columbia, Canada. Filed Mar. 31, 1928.

For Sawmill Products—Namely, Shingles, Lumber, Siding, Moulding, Flooring, Band Sticks, and Lathes.
Claims use since Oct. 15, 1927.

Ser. No. 264,308. WM. H. JACKSON COMPANY, New York, N. Y. Filed Apr. 4, 1928.

The words "Stone" and "New York & Chicago" shown in the accompanying drawing are disclaimed.
For Mantel Pieces.
Claims use since Mar. 8, 1928.

Ser. No. 265,070. SCHUMACHER WALL BOARD CORPORATION, Los Angeles, Calif. Filed Apr. 18, 1928.

SCHUMITE

For Construction Material—Namely, Wall Board, Plaster Board, Lath Board, Building Paper, and Roofing Paper.
Claims use since Mar. 22, 1928.

Ser. No. 265,432. GOOD ROADS COMPANY, INC., Upper Darby, Pa. Filed Apr. 26, 1928.

GOROCO

For Cold Patch and Bituminous Material, Said Materials Being a Combination of Hydrate Carbons Derived from the Distillation of Crude Asphalt Base Oil or from the Destructive Distillation of Bituminous Coal and Used for Bituminous Macadam Resurfacing, Bituminous Macadam Construction, Bituminous Hot-Surface Treatment, Bituminous Cold-Surface Treatment, Bituminous Cold-Mix Construction and Bituminous Cold Patching.
Claims use since Jan. 1, 1923.

Ser. No. 265,443. MISSOURI PORTLAND CEMENT COMPANY, St. Louis, Mo. Filed Apr. 26, 1928.

The lining indicating the color red.
For Portland Cement.
Claims use since 1902.

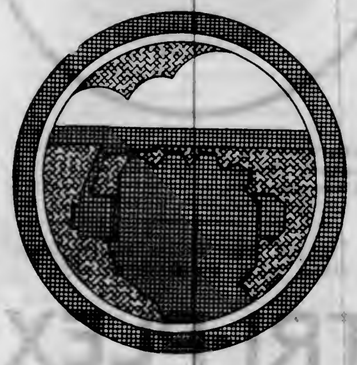
Ser. No. 265,612. THE BERGER MANUFACTURING COMPANY, Canton, Ohio. Filed Apr. 30, 1928.

TRI-PLEX

For Expanded-Metal Lath.
Claims use since Feb. 28, 1928.

Ser. No. 266,330. MICHAEL C. PIERCE, New York, N. Y. Filed May 12, 1928.

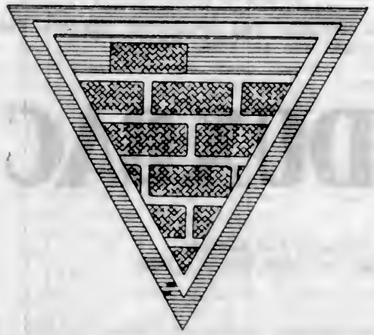
The lining on the drawing represents orange color. No claim is made to the words "A Liquid for making Cement Waterproof, Adds Strength, Will Not Discolor," and "Makes Dustless."



For Liquid for Making Cement Waterproof.
Claims use since 1925.

Ser. No. 266,387. MISSOURI PORTLAND CEMENT COMPANY, St. Louis, Mo. Filed May 14, 1928.

Prestolith



For Building Cement.
Claims use since Mar. 7, 1928.

Ser. No. 266,526. THE GIBSONBURG LIME PRODUCTS COMPANY, Gibsonburg, Ohio. Filed May 17, 1928.

The drawing is lined for the colors orange and black.
For Finishing Lime.
Claims use since Sept. 12, 1927.

Ser. No. 266,527. THE GIBSONBURG LIME PRODUCTS COMPANY, Gibsonburg, Ohio. Filed May 17, 1928.

The drawing is lined for the colors orange and blue.
For Mason's Lime.
Claims use since Sept. 6, 1927.

Ser. No. 266,900. UNITED STATES LIME PRODUCTS CORPORATION, San Francisco, Calif. Filed May 23, 1928.

For Hydrated Lime.
Claims use since Apr. 5, 1928.

Ser. No. 267,563. THE FLINTKOTE COMPANY, Boston, Mass. Filed June 6, 1928.

WARMGLO

For Asphaltic Composition Roofing Shingles.
Claims use since on or about July 1, 1927.

Ser. No. 267,564. THE FLINTKOTE COMPANY, Boston, Mass. Filed June 6, 1928.

WARMTONE

For Asphaltic Composition Roofing Shingles.
Claims use since on or about July 1, 1927.

Ser. No. 267,569. THE FLINTKOTE COMPANY, Boston, Mass. Filed June 6, 1928.

KOOLTONE

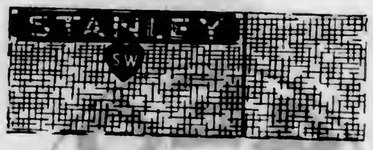
For Asphaltic Composition Roofing Shingles.
Claims use since on or about July 1, 1927.

Ser. No. 267,572. FREYDBERG BROTHERS, INCORPORATED, New York, N. Y. Filed June 6, 1928.

"DOT"

For Weather Strips of Flexible Material.
Claims use since June, 1927.

Ser. No. 267,703. THE FLINTKOTE COMPANY, Boston, Mass. Filed June 8, 1928.



KOOL-BLEND

For Asphaltic Composition Roofing Shingles.
Claims use since on or about July 1, 1927.

CLASS 13.

Hardware and Plumbing and Steam-Fitting Supplies.

Ser. No. 264,483. THE STANLEY WORKS, New Britain, Conn. Filed Apr. 6, 1928.

The trade-mark consists of a yellow background forming the body of applicant's label and divided by a vertical line into two panels or fields. On the left of the vertical line appears the name "Stanley" in a notched oblong of a blue-black color and the letters "S. W." in a heart of the same color. The drawing is lined to indicate such colors. No claim is made to the label per se.

For Hinges, Screen Hangers, Storm-Sash Hangers, Hasps, Box Handles, Chest and Drawer Handles, Door Handles; Pulls and Lifts for Doors, Sashes, and Screens; Brackets, Door Holders, Back Catches for Shutters and Doors, Padlock Eyes for Use with Padlocks, Desk Slides; Lid Supports for Boxes, Chests, Desks, Cabinets, Pianos, Talking Machines, and Similar Articles; Window Springs, Metal-Mending Plates for Reinforcing Purposes and Mending Purposes, Staples, Sliding-Door Rails, Flat Corner Irons, Metal Washers, Rolling-Door Hangers and Track-Box Strapping and Fasteners, Blind Hardware, Sash and Screen Hardware, Sash Pulleys, Corrugated Fasteners.
Claims use since Mar. 29, 1928.

Ser. No. 265,856. THE OSCAR C. RIXSON COMPANY, Chicago, Ill. Filed May 3, 1928.

RIXSON

For Door and Casement Hinges, Door and Casement Pivots, Casement Holders and Operators, Transom Operators, Door Checks (Overhead and Floor), and Door Holders and Stays.
Claims use since 1917.

Ser. No. 267,309. MCKINNEY MANUFACTURING COMPANY, Pittsburgh, Pa. Filed June 1, 1928.

2714

For Hinges.
Claims use since Jan. 1, 1906.

CLASS 14.

Metals and Metal Castings and Forgings.

Ser. No. 266,294. AMERICAN MANGANESE BRONZE COMPANY, Holmesburg, Philadelphia, Pa. Filed May 12, 1928.

Ambroco

For Cast, Solid, and Cored Bars of Bearing Metals.
Claims use since November, 1927.

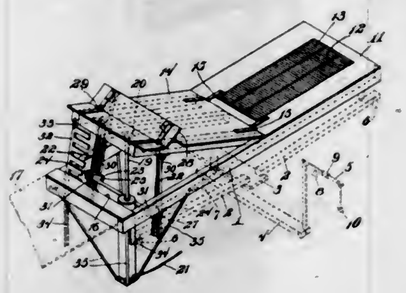
REISSUES



JULY 24, 1928.

17,045. REFRIGERATING PLANT. IVAR AMUNDSEN, Oslo, Norway, assignor to A/S Amundsen Refrigerator Company, Oslo, Norway. Filed May 18, 1928. Serial No. 278,816. Original No. 1,647,208, dated Nov. 1, 1927, Serial No. 145,037, filed Oct. 29, 1926. 4 Claims. (Cl. 62—178.)

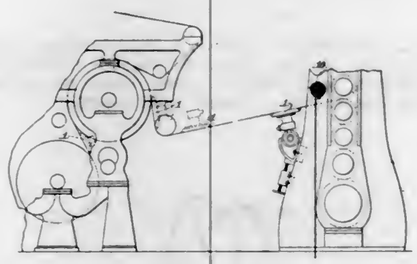
1. A refrigeration process which comprises, adsorbing in activated coal the vapors of a mass of monohydric acohol which is in heat exchanging relation with a medium to be cooled, then heating said activated coal to drive off the adsorbed alcohol, condensing said alcohol and after the evaporation of said condensed alcohol in the refrigerating act, repeating the above steps in cyclic operation.

17,046. WAGON AND TRUCK DUMP. WILLIAM GEORGE HANCOCK and LEONARD T. STROMSWOLD, Minot, N. Dak., assignors to Magic Grain Dump Company, Minot, N. Dak., a Corporation. Filed May 5, 1925. Serial No. 28,221. Original No. 1,505,777, dated Aug. 19, 1924, Serial No. 537,019, filed Feb. 16, 1922. 12 Claims. (Cl. 214—49.)

1. A device of the type described comprising a frame having an elevating platform and a guard connected to the free end of said platform, guide members carried by said frame and being adapted to receive and to guide the free end of said guard, said guard being adapted to extend between said elevating platform and said frame when said platform is in raised position.

17,047. OVERALLS. FREDERIC O. MAHAN, Eugene, Oreg. Filed Nov. 23, 1927. Serial No. 235,386. Original No. 1,590,843, dated June 29, 1926, Serial No. 35,550, filed June 8, 1925. 3 Claims. (Cl. 2—230.)

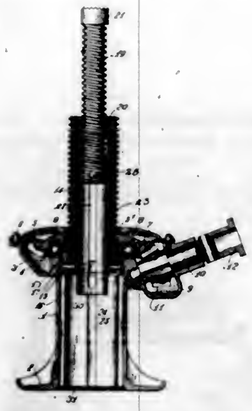
1. In a sleeveless overall, the combination with a leg covering member having a waist line opening adjacent to each hip, of supporting members adapted to extend over the shoulders of the wearer and having substantially triangular front and rear portions severally free at their side edges, the bases of said portions overlapping and extending substantially from one of said openings to the other.



17,048. METHOD OF MAKING VENTILATING STRIPS FOR TRANSFORMERS. FRANK H. TUPPER, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 7, 1927. Serial No. 238,446. Original No. 1,565,532, dated Dec. 15, 1925, Serial No. 555,181, filed Apr. 18, 1922. 16 Claims. (Cl. 18—59.)

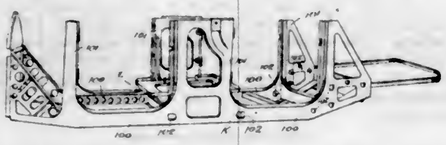
1. A method of joining molded articles which comprises roughening the surfaces to be joined, placing on said roughened surfaces a binder which is adapted to harden

under the influence of heat and pressure, inserting said articles in a press with their treated surfaces in engagement and applying heat and pressure thereto to form an integral structure.



17,049. MOISTURE INDICATING AND RECORDING. GEORGE STANFORD WITHAM, Jr., Hudson Falls, N. Y. Filed Apr. 2, 1928. Serial No. 266,738. Original No. 1,626,060, dated Apr. 26, 1927, Serial No. 531,863, filed Jan. 26, 1922. 21 Claims. (Cl. 73—24.)

18. In a machine of the character described, wherein a web of paper or the like is caused to travel over drying rolls, means for determining the moisture content of the web at a predetermined point along the path of motion thereof, comprising mechanism responsive to variations in humidity conditions of air, conducting and circulating means for maintaining a flow of gas past said point and thence to the responsive means and including confining means disposed at said point for bringing the gas throughout a constant area into contact with the surface of the traveling web.

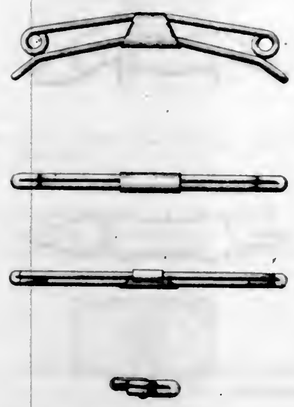


17,050. LIFTING JACK. IRWIN E. DEARSLEY, Racine, Wis., assignor to Walker Manufacturing Company, Racine, Wis., a Corporation of Wisconsin. Filed Feb. 12, 1926. Serial No. 87,981. Original No. 1,533,168, dated Apr. 14, 1925, Serial No. 732,041, filed Aug. 14, 1924. 19 Claims. (Cl. 254—102.)

1. A lifting jack comprising a hollow standard, a rotatable driving member mounted in the upper portion of the standard, a pair of nested screws mounted in the standard and driving member, and separate connections between the standard and each screw, whereby when the driving member is continuously rotated the outer screw will first

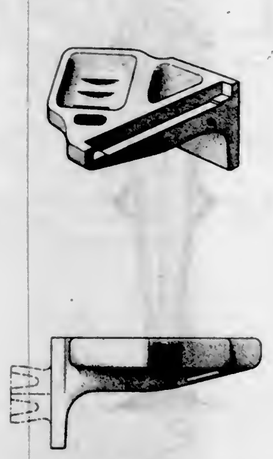
be positively elevated to its full height, carrying the inner screw bodily with it, and then the inner screw will be elevated with relation to the outer screw.

17,051. AUTOMOBILE BODY. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to The Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 2, 1928. Serial No. 266,739. Original No. 1,143,635, dated June 22, 1915, Serial No. 845,621, filed June 17, 1914. 46 Claims. (Cl. 296—28.)



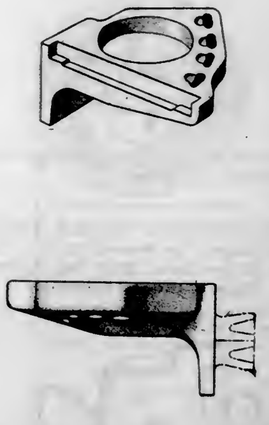
1. An automobile body frame including side members each formed in one piece and having vertical portions thereof to form door posts, a skeleton frame member connecting the upper parts of corresponding door posts at opposite sides of the body frame, and a shell applied to said frame to form body sides and a seat back, the seat being connected to the skeleton frame member.

DESIGNS



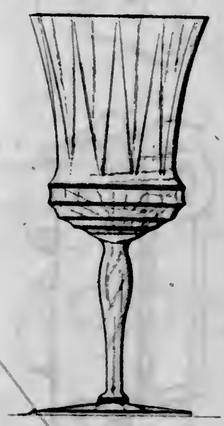
JULY 24, 1928.

75,818. COLLAR HOLDER. LAWRENCE E. BAER, Attleboro, Mass., assignor to The Baer & Wilde Company, Attleboro, Mass. Filed Dec. 8, 1927. Serial No. 24,418. Term of patent 14 years.



The ornamental design for a collar holder as shown.

75,819. COMBINATION BATH FIXTURE. JOHN H. BALMER, Maplewood, N. J. Filed Feb. 23, 1928. Serial No. 25,553. Term of patent 14 years

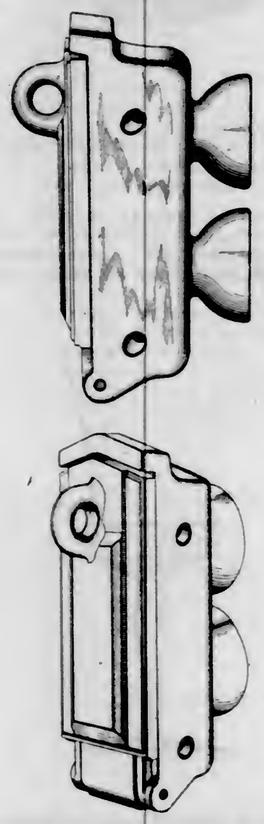


The ornamental design for a combination bath fixture as shown.

75,820. COMBINATION BATH FIXTURE. JOHN H. BALMER, Maplewood, N. J. Filed Feb. 23, 1928. Serial No. 25,554. Term of patent 14 years.

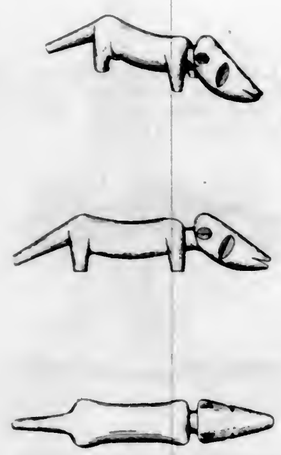
The ornamental design for a combination bath fixture as shown.

75,821. GOBLET OR SIMILAR ARTICLE. CHARLES C. BEAM, Cumberland, Md., assignor to The Potomac Glass Company, Cumberland, Md., a Corporation of Maryland. Filed Sept. 29, 1927. Serial No. 23,573. Term of patent 14 years.



The ornamental design for a goblet or similar article as shown and described.

75,822. AUTOMOBILE RADIATOR ORNAMENT. CARLOS F. BENNETT, Oceanside, Calif. Filed May 7, 1928. Serial No. 26,601. Term of patent 7 years.

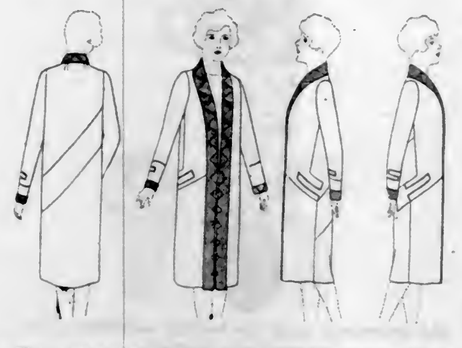


The ornamental design for an automobile radiator ornament substantially as shown.

75,823. FUSE CONTAINER. RALPH S. BENNETT, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Feb. 1, 1928. Serial No. 25,108. Term of patent 14 years.

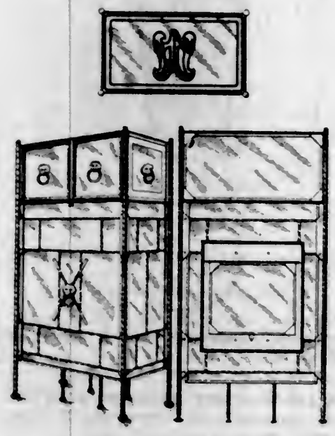
The ornamental design for a fuse container as shown.

75,824. WATCH CHARM OR SIMILAR ARTICLE. JOSEPH A. BLEWETT, Philadelphia, Pa. Filed Aug. 18, 1927. Serial No. 23,142. Term of patent 3½ years.



The ornamental design for a watch charm or similar article substantially as shown.

75,825. VASE OR SIMILAR ARTICLE. HOWARD L. BUDD, Brooklyn, N. Y. Filed Apr. 9, 1928. Serial No. 26,196. Term of patent 7 years.



The ornamental design for a vase or similar article as shown.

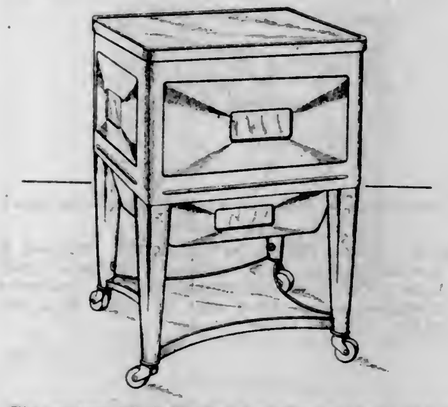
75,826. COAT. KATHERINE E. BURNS, New York, N. Y., assignor to Franklin Simon & Company, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 24, 1928. Serial No. 25,572. Term of patent 3½ years.

The ornamental design for a coat, substantially as shown and described.

75,827. RADIOCABINET OR SIMILAR ARTICLE. GAETANO CALAFATO, Westbury, N. Y. Filed Dec. 21, 1927. Serial No. 24,574. Term of patent 14 years.

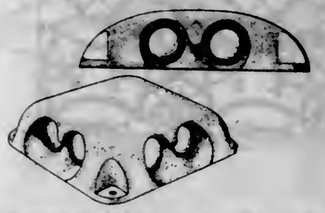
The ornamental design for a radiocabinet or similar article as shown.

75,828. RACK FOR ARTICLES. ALBERT H. CANFIELD, Bridgeport, Conn. Filed Sept. 19, 1927. Serial No. 23,468. Term of patent 3½ years.



The ornamental design for a rack for articles, as shown.

75,829. FLOWERPOT. CARL E. CARLSON and ALBERT C. GRUNWALD, Chicago, Ill., assignors to Precision Metal Workers, Chicago, Ill., a Corporation of Illinois. Filed Mar. 29, 1928. Serial No. 26,073. Term of patent 14 years.



The ornamental design for a flowerpot as shown.

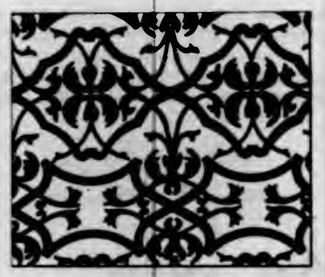
75,830. COMBINED TABLE AND CASING FOR A WASHING MACHINE OR THE LIKE. MARK A. DEFIBAUGH, Schenectady, N. Y., assignor to L. E. Case, Inc., Schenectady, N. Y., a Corporation of New York. Filed Mar. 15, 1928. Serial No. 25,855. Term of patent 14 years.

The ornamental design for a combined table and casing for a washing machine or the like, as shown.

75,831. STREET-TRAFFIC SIGNAL. KNUTH E. ERICKSON, Portland, Oreg. Filed Jan. 9, 1926. Serial No. 16,016. Term of patent 3½ years.

The ornamental design for a street traffic signal as shown.

75,832. MEMORIAL GRAVE MARKER. FRANK F. FISCHER, Oklahoma City, Okla. Filed Feb. 16, 1928. Serial No. 25,453. Term of patent 3½ years.



The ornamental design for a memorial grave marker, as shown.

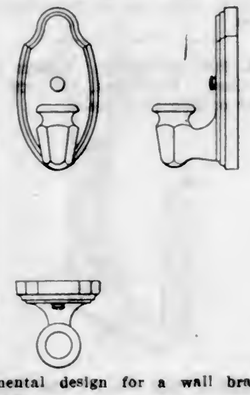
75,833. STAIR-ROD HOLDER. ERNEST E. FOUND, Hillsdale, Mich. Filed July 3, 1925. Serial No. 13,988. Term of patent 7 years.

The ornamental design for a stair rod holder, as shown.

75,834. COVER PAPER OR THE LIKE. WILLIAM S. FOWLER, Holyoke, Mass., assignor to Hampden Glazed Paper & Card Company, Holyoke, Mass., a Corporation of Massachusetts. Filed Apr. 19, 1928. Serial No. 26,388. Term of patent 7 years.

The ornamental design for cover paper or the like as shown.

75,835. HOSIERY. ROBERT FRIEDRICH, Philadelphia, Pa. Filed Feb. 6, 1928. Serial No. 25,238. Term of patent 14 years.

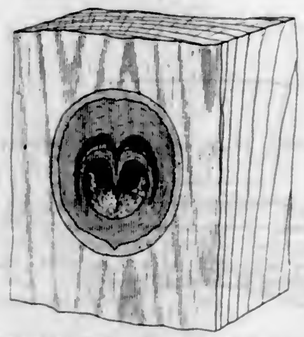


The ornamental design for hosiery, as shown.

75,836. GLASS TUMBLER. RICHARD S. GIESE, Sewickley Heights Township, Allegheny County, Pa. Filed Dec. 17, 1927. Serial No. 24,513. Term of patent 7 years.

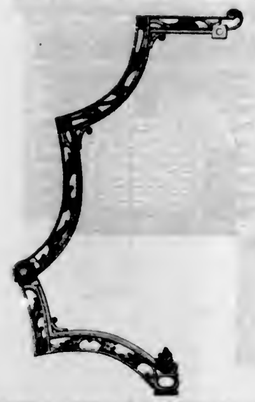
The ornamental design for a glass tumbler, as shown and described.

75,837. WALL-BRACKET LIGHTING FIXTURE. JOHN W. GILL, Glendale, Calif. Filed May 5, 1928. Serial No. 26,580. Term of patent 7 years.



The ornamental design for a wall bracket lighting fixture as shown.

75,838. FINGER RING. PHILIP GRILL, New York, N. Y., assignor to the Firm Grill & Schwartz, New York, N. Y. Filed May 18, 1928. Serial No. 26,740. Term of patent 7 years.

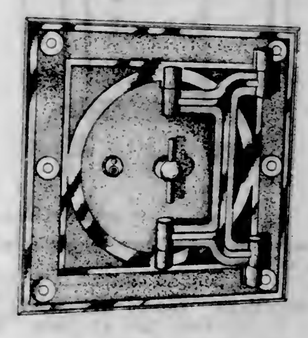


The ornamental design for a finger ring, as shown.

75,839. PANEL FOR FURNITURE. ELBERT GRIFFIN, Terre Haute, Ind. Filed Mar. 1, 1928. Serial No. 25,638. Term of patent 7 years.

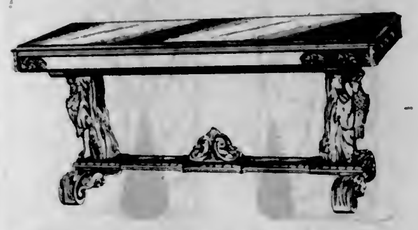
The ornamental design for a panel for furniture, as shown.

75,840. BRACKET FOR LIGHTING FIXTURES OR SIMILAR ARTICLES. FREDERICK E. HADERMANN, White Plains, N. Y., assignor to University Manufacturing & Sales Co. Inc., New York, N. Y., a Corporation of New York. Filed Apr. 2, 1928. Serial No. 26,097. Term of patent 3½ years.



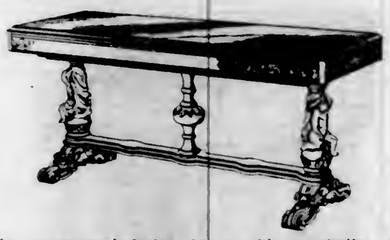
The design for a bracket for lighting fixtures or similar articles, substantially as shown.

75,841. RADIO RECEIVING SET CABINET. ALBERT E. HANSEN, Chicago, Ill. Filed Apr. 11, 1928. Serial No. 26,277. Term of patent 14 years.



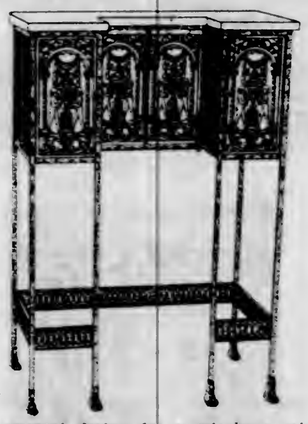
The ornamental design for a radio receiving set cabinet substantially as shown.

75,842. ENTRANCE DOOR FOR A DEPOSITORY. EDWARD C. HANSON and BURT E. HALLQUIST, Minneapolis, Minn., assignors to O. B. McClintock Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Sept. 2, 1927. Serial No. 23,279. Term of patent 14 years.



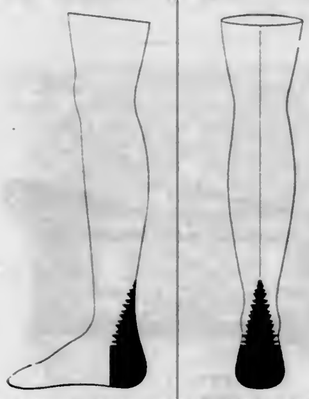
The ornamental design for an entrance door for a depository, as shown.

75,843. TABLE OR SIMILAR ARTICLE. JOSEPH JOHN HEYMAN, Chicago, Ill., assignor to Milano Furniture Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 12, 1928. Serial No. 26,301. Term of patent 3½ years.



The ornamental design for a table or similar article as shown and described.

75,844. TABLE OR SIMILAR ARTICLE. JOSEPH JOHN HEYMAN, Chicago, Ill., assignor to Milano Furniture Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 12, 1928. Serial No. 26,302. Term of patent 3½ years.

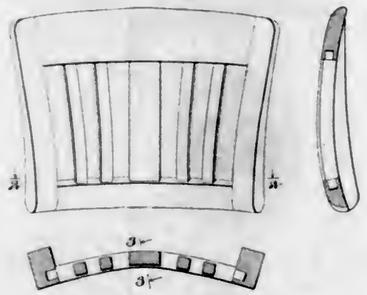


The ornamental design for a table or similar article as shown and described.

75,845. TELEPHONE CABINET. JOSEPH ZWEIG, Brooklyn, N. Y., assignor to Metropolitan Lamp Co., Inc., New York, N. Y., a Corporation of New York. Filed May 24, 1928. Serial No. 26,841. Term of patent 3½ years.

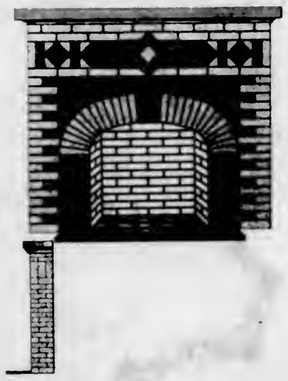
The ornamental design for a telephone cabinet substantially as shown.

75,846. STOCKING. ARTHUR MAX ALFRED HOFFMAN, Passaic, N. J. Filed Jan. 17, 1928. Serial No. 24,903. Term of patent 7 years.



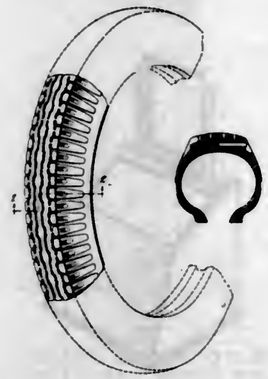
The ornamental design for a stocking, substantially as shown.

75,847. RADIATOR CAP. ROBERT H. HUMMERT, Dayton, Ohio, assignor to The S. H. Thomson Manufacturing Company, Dayton, Ohio, a Corporation of Ohio. Filed Apr. 27, 1927. Serial No. 21,738. Term of patent 3½ years.



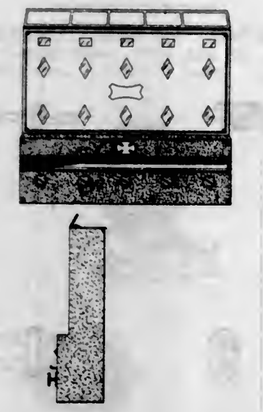
The ornamental design for a radiator cap, as shown.

75,848. CHAIR BACK. ARTHUR L. JOHNSON, Oak Park, Ill. Filed Nov. 10, 1927. Serial No. 24,065. Term of patent 14 years.



The ornamental design for a chair back, as shown.

75,849. FIREPLACE. JONAS G. JOHNSON, Baltimore, Md. Filed Jan. 20, 1928. Serial No. 24,939. Term of patent 14 years.



The ornamental design for a fireplace as shown.

75,850. TIRE. ALEY E. JONES, Cuyahoga Falls, Ohio, assignor to Lambert Tire & Rubber Co., Barberton, Ohio, a Corporation of Arizona. Filed Mar. 27, 1928. Serial No. 26,030. Term of patent 14 years.

The ornamental design for a tire substantially as shown.

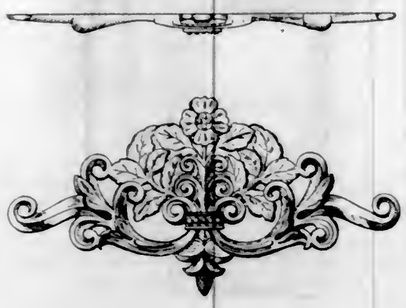
75,851. VENDING-MACHINE CASING. BERT G. LARRABEE, HARRY A. ROOT, and ERNEST S. CASSADAY, Houston, Tex., assignors to Portable Self-Serving Store Company, Houston, Tex., a Corporation of Delaware. Filed Feb. 13, 1928. Serial No. 25,436. Term of patent 3½ years.

The ornamental design for a vending machine casing, as shown.

75,852. BOTTLE. LUCIEN LELONG, Paris, France, assignor to Lucien Lelong, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 12, 1928. Serial No. 26,303. Term of patent 7 years.

The ornamental design for a bottle as shown.

75,853. GLASS TUMBLER. HARRY L. LISSFELT, New York, N. Y., assignor to Macbeth-Evans Glass Company, Charleroi, Pa., a Corporation of Pennsylvania. Filed Apr. 13, 1928. Serial No. 26,317. Term of patent 3½ years.



The ornamental design for a glass tumbler, as shown.

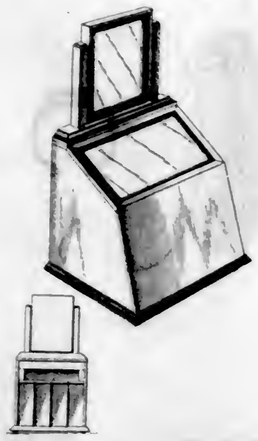
75,854. BOTTLE. GEORGE N. MAS and SOTIR K. LUBONIA, Washington, D. C. Filed Feb. 25, 1925. Serial No. 12,487. Term of patent 3½ years.

The ornamental design for a bottle as shown.

75,855. CENTER ORNAMENT FOR DRAPERY POLES AND RODS. GUNNAR MADVIG, Oakland, Calif. Filed Feb. 21, 1928. Serial No. 25,513. Term of patent 3½ years.

The ornamental design for a center ornament for drapery poles and rods substantially as shown.

75,856. CENTER ORNAMENT FOR DRAPERY POLES AND RODS. GUNNAR MADVIG, Oakland, Calif. Filed Feb. 21, 1928. Serial No. 25,515. Term of patent 3½ years.

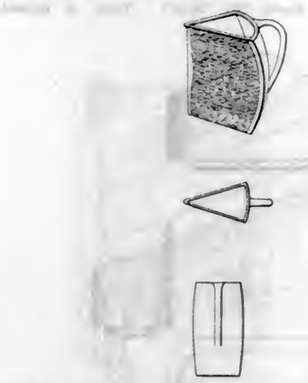


The ornamental design for a center ornament for drapery poles and rods substantially as shown.

75,857. CENTER ORNAMENT FOR DRAPERY POLES AND RODS. GUNNAR MADVIG, Oakland, Calif. Filed Feb. 21, 1928. Serial No. 25,516. Term of patent 3½ years.

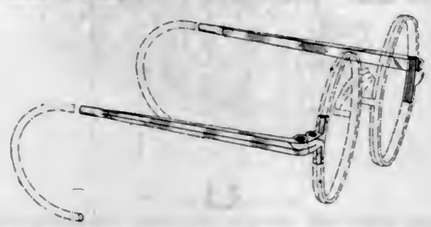
The ornamental design for a center ornament for drapery poles and rods substantially as shown.

75,858. COUNTER DISPLAY APPLIANCE. WILLIAM H. MATHER, New Brunswick, N. J., assignor to Johnson & Johnson, New Brunswick, N. J., a Corporation of New Jersey. Filed Apr. 2, 1928. Serial No. 26,103. Term of patent 14 years.



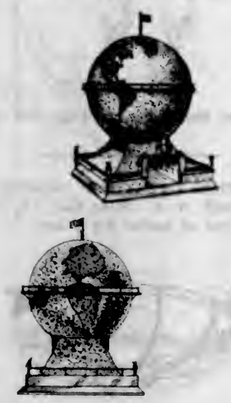
The ornamental design for a counter display appliance, as shown.

75,859. LOUD-SPEAKER EXTENSION. ARTHUR B. MCCALL, Springfield, Ill. Filed Nov. 3, 1926. Serial No. 19,600. Term of patent 3½ years.



The ornamental design for a loud speaker extension as shown.

75,860. PITCHER. HELEN G. MONROE, Santa Barbara, Calif. Filed Oct. 25, 1927. Serial No. 23,879. Term of patent 14 years.

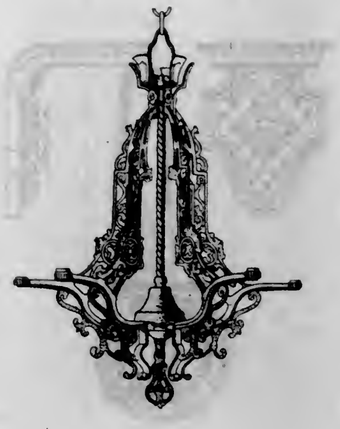


The ornamental design for a pitcher, substantially as shown.

75,861. COMBINED TEMPLE BAR AND END PIECE FOR OPHTHALMIC MOUNTINGS. GEORGE E. NERNEY, Attleboro, Mass., assignor to Bay State Optical Company, Attleboro, Mass., a Corporation of Maine. Filed Nov. 13, 1926. Serial No. 19,718. Term of patent 7 years.

The ornamental design for a combined temple bar and end piece for ophthalmic mountings, as shown and described.

75,862. MEMORIAL BUILDING. ASHTON T. NELSON, Wilton Junction, Iowa. Filed Aug. 12, 1927. Serial No. 23,072. Term of patent 7 years.

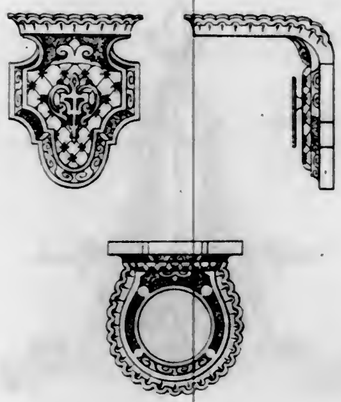


The ornamental design for a memorial building as shown.

75,863. HANDLE FOR A THERMOSTATIC VALVE. SERRIL W. NICHOLAS, Providence, R. I., assignor to Leonard-Rooke Company, Providence, R. I., a Corporation of Rhode Island. Filed Sept. 25, 1926. Serial No. 19,176. Term of patent 14 years.

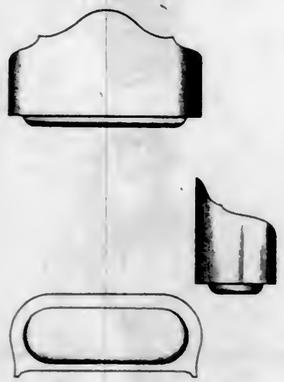
The ornamental design for a handle for a thermostatic valve, substantially as shown.

75,864. CHANDELIER. JOSEPH NOVIN, New York, N. Y., assignor to the Centre Lighting Fixture Mfg. Co., New York, N. Y., a Partnership composed of said Novin and Samuel Ribak. Filed May 21, 1928. Serial No. 26,781. Term of patent 3½ years.



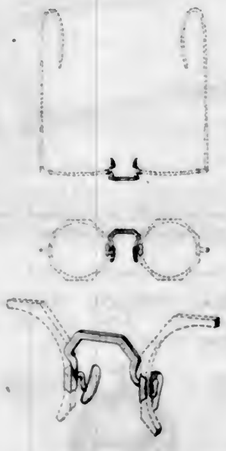
The ornamental design for a chandelier substantially as shown and described.

75,865. LIGHTING FIXTURE. ALBERT J. D. OHM, Oak Park, Ill., assignor to R. Williamson & Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 24, 1928. Serial No. 25,568. Term of patent 14 years.



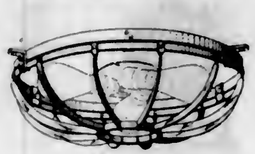
The ornamental design for a lighting fixture, as shown.

75,866. LIGHTING FIXTURE. ALBERT J. D. OHM, Oak Park, Ill., assignor to R. Williamson & Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 24, 1928. Serial No. 25,570. Term of patent 14 years.



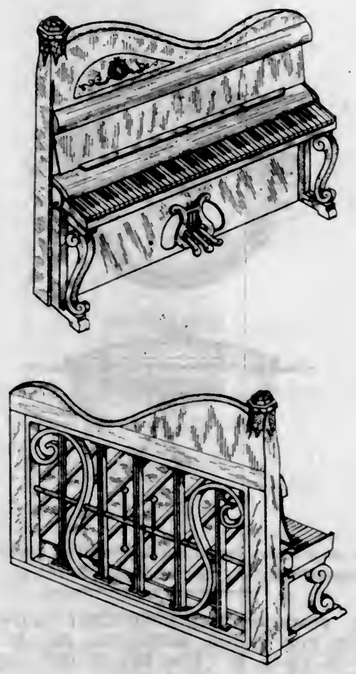
The ornamental design for a lighting fixture, as shown.

75,867. LIGHTING-FIXTURE SHADE. ALBERT J. D. OHM, Oak Park, Ill., assignor to R. Williamson & Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 24, 1928. Serial No. 25,571. Term of patent 14 years.



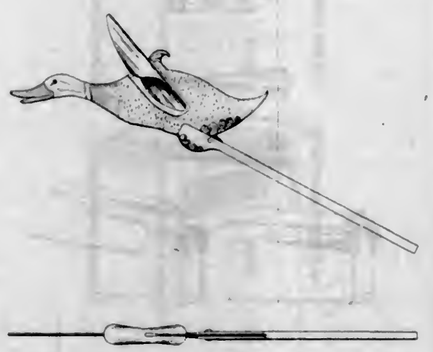
The ornamental design for a lighting fixture shade, as shown.

75,868. BRIDGE FOR SPECTACLES. EMANUEL PAPPERT, New York, N. Y. Filed Feb. 10, 1928. Serial No. 25,354. Term of patent 7 years.



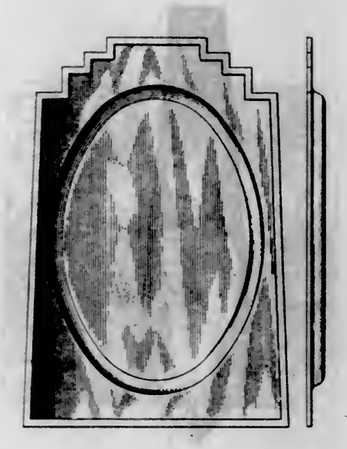
The ornamental design for a bridge for spectacles as shown.

75,869. LIGHTING - FIXTURE GUARD. RICHARD PFEIFFER, Newark, N. J. Filed Mar. 11, 1927. Serial No. 21,103. Term of patent 3½ years.



The ornamental design for a lighting fixture guard, as shown.

75,870. GOLDEN HARP PIANO. CHARLES WILLIAM PRESSLEY, Hollywood, Calif. Filed Dec. 27, 1927. Serial No. 24,670. Term of patent 14 years.



The ornamental design for a golden harp piano substantially as shown.

75,871. TOY. EARL REEK, Oakland, Calif. Filed Apr. 11, 1928. Serial No. 26,286. Term of patent 7 years.

The ornamental design for a toy substantially as shown.

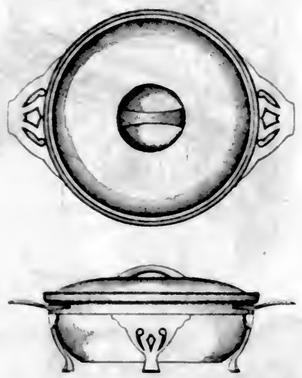
75,872. TRAY OR SIMILAR ARTICLE. LOUIS W. RICE, New York, N. Y., assignor to Bernard Rice's Sons, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 23, 1928. Serial No. 25,983. Term of patent 7 years.

The ornamental design for a tray or similar article, as shown.

75,873. BOTTLE OR SIMILAR ARTICLE. LOUIS W. RICE, New York, N. Y., assignor to Bernard Rice's Sons, Inc., New York, N. Y., a Corporation of New York. Filed May 18, 1928. Serial No. 26,751. Term of patent 7 years.

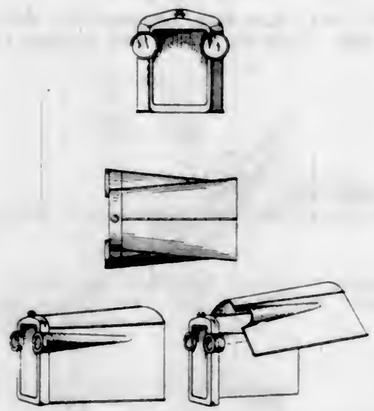
The ornamental design for a bottle or similar article, as shown.

75,874. NECKTIE. SARAH RISER, Philadelphia, Pa. Filed Feb. 4, 1928. Serial No. 25,203. Term of patent 7 years.



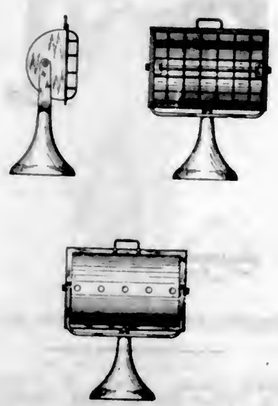
The ornamental design for a necktie, as shown.

75,875. COAL AND WOOD RANGE. JOSEPH HERMAN SANDELL, Chicago, Ill., assignor to Comstock-Castle Stove Company, Quincy, Ill., a Corporation of Illinois. Filed Feb. 11, 1927. Serial No. 20,704. Term of patent 14 years.



The ornamental design for a coal and wood range, as shown.

75,876. COMBINED CASSEROLE AND BAND. HOWARD H. SCHOTT, Rochester, N. Y., assignor to Robeson-Rochester Corporation, Rochester, N. Y., a Corporation of New York. Filed Mar. 28, 1928. Serial No. 26,040. Term of patent 7 years.



The ornamental design for a combined casserole and band, as shown.

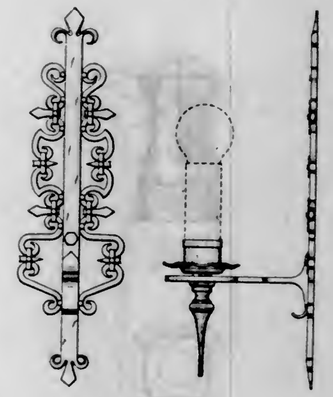
75,877. COMBINED RADIATOR, LAMP CASING, AND HOOD FOR MOTOR VEHICLES. ERIC G. SHALKHAUSER, Peoria, Ill. Filed May 19, 1927. Serial No. 22,102. Term of patent 7 years.

The ornamental design for a combined radiator, lamp-casing, and hood for motor vehicles, as shown.

75,878. ELECTRICAL HEATING APPLIANCE. BYRON G. TARKINGTON, Shorewood, and OTTO F. WINSINGER, Milwaukee, Wis., assignors to American Resistor Corporation, Philadelphia, Pa., a Corporation of New York. Filed Jan. 10, 1927. Serial No. 20,329. Term of patent 7 years.

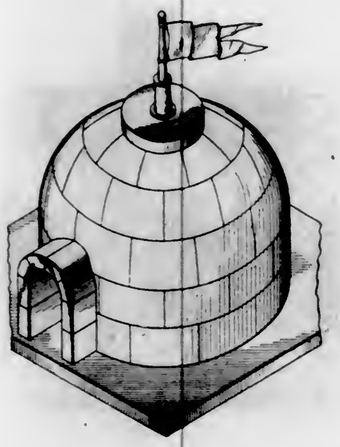
The ornamental design for an electrical heating appliance, as shown.

75,879. RADIANT GAS HEATER. AUGUSTUS F. THOMPSON, Huntington, W. Va. Filed May 12, 1928. Serial No. 26,652. Term of patent 7 years.



The ornamental design for a radiant gas-heater, as shown.

75,880. TEXTILE FABRIC. HENRY F. TIEDEMANN, New York, N. Y., assignor to Theo. Tiedemann & Sons, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 12, 1928. Serial No. 26,299. Term of patent 7 years.



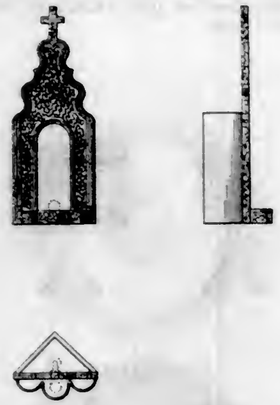
The ornamental design for a textile fabric, as shown.

75,881. WALL-BRACKET LIGHTING FIXTURE. ANDREW TUCKER, Fairfield, Conn. Filed Sept. 20, 1927. Serial No. 23,470. Term of patent 3½ years.

The ornamental design for a wall bracket lighting fixture, subsantially as shown.

75,882. REFRIGERATOR. CLEM F. WADE, Evanston, Ill. Filed Sept. 13, 1926. Serial No. 19,052. Term of patent 3½ years.

The ornamental design for a refrigerator as shown.



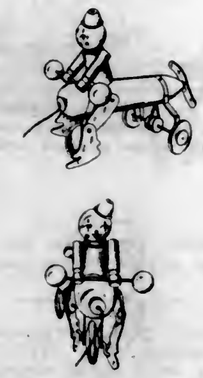
75,883. PEDESTAL. RALPH WAGGONER, Los Angeles, Calif., assignor to Marbelite Corporation of America, Los Angeles, Calif., a Corporation of Delaware. Filed Feb. 13, 1928. Serial No. 25,431. Term of patent 14 years.

An ornamental design for a pedestal, substantially as shown.

75,884. SHRINE. EDWARD JOSEPH WEES, Omaha, Nebr. Filed Apr. 25, 1928. Serial No. 26,460. Term of patent 7 years.

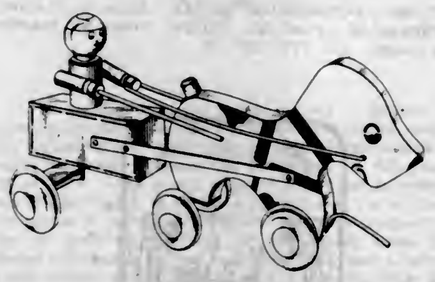
The ornamental design for a shrine, as shown.

75,885. BIRD CAGE. HYMAN D. WEISSBERG, New York, N. Y. Filed Feb. 16, 1928. Serial No. 25,454. Term of patent 3½ years.



The ornamental design for a bird cage, as shown.

75,886. WALL-PAPER BORDER. CHARLES W. WESTON, Pampa, Tex., assignor of one-fourth to Zach Wilson, Hidalgo County, Tex., and one-half to F. E. Osborn, F. B. Freeland, and Gordon Griffin, McAllen, Tex. Filed June 3, 1927. Serial No. 22,307. Term of patent 3½ years.



The ornamental design for a wall paper border, as shown.

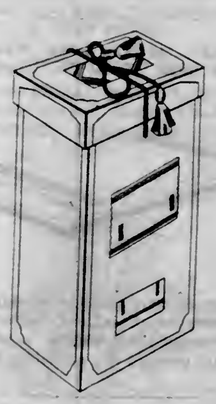
75,887. WHEEL-BEARING FIGURE TOY. CLARE A. WETZELL, Sterling, Ill. Filed Mar. 27, 1928. Serial No. 26,031. Term of patent 3½ years.

The ornamental design for a wheel bearing figure toy as shown.

75,888. WHEEL-BEARING FIGURE TOY. CLARE A. WETZELL, Sterling, Ill. Filed Mar. 27, 1928. Serial No. 26,035. Term of patent 3½ years.

The ornamental design for a wheel bearing figure toy as shown.

75,889. LAMP. WILLIAM A. WINSBORO, Los Angeles, Calif., assignor to Josephine A. Greathouse. Filed Aug. 3, 1927. Serial No. 22,987. Term of patent 3½ years.

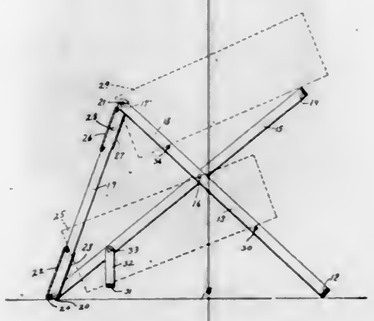


The ornamental design for a lamp, as shown.

75,890. LAMP STANDARD. HERMAN H. WOLTER, Meriden, Conn., assignor to The Miller Company, Meriden, Conn., a Corporation of Connecticut. Filed May 17, 1928. Serial No. 26,728. Term of patent 3½ years.

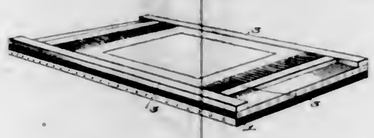
The ornamental design for a lamp standard, as shown.

75,891. SHOE BOX. MORRIS WOLOCK, Chicago, Ill. Filed May 18, 1928. Serial No. 26,742. Term of patent 7 years.



An ornamental design for a shoe box, as shown.

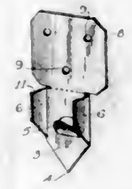
PATENTS



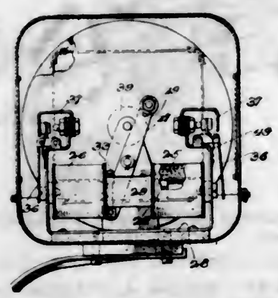
GRANTED JULY 24, 1928.

1,677,880. FOLDING DISPLAY STAND. WILLIAM H. AVERILL, Boston, Mass., assignor to Joseph Pollak Tool and Stamping Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 25, 1928. Serial No. 272,744. 4 Claims. (Cl. 211—130.)

2. A folding display stand comprising a locking bow, a companion bow, pivots connecting the crossed arms of said bows, the outer ends of the arms of the locking bow being resilient and provided with outwardly projecting locking studs, and rigidly connected struts pivoted to the outer ends of the arms of the companion bow, and provided at their swinging ends with orifices formed to receive the locking studs, the arrangement being such that when the studs are in the orifices, the stand is maintained in an erected position, the studs being yieldingly held in the orifices by the resilience of the arms, to maintain the erection of the stand, and adapted to be withdrawn from the orifices to permit the folding of the stand.



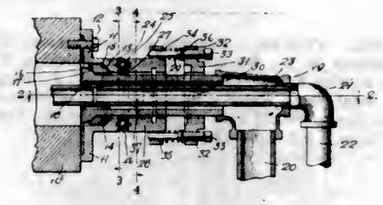
1,677,881. MOLD. ADRIAN BAISH, Wadsworth, Ohio. Filed May 13, 1925. Serial No. 30,095. 8 Claims. (Cl. 18—47.)



1. A composition mold facing consisting of rubber, sulphur, an accelerator or sulphur carrier, comprising a zinc salt of dimethyldithiocarbomic acid and a small amount of methyl mustard oil, a filler and lightener, and a drier.

1,677,882. SLEEPER ANCHOR. GEORGE B. BOSCO, Chicago, Ill. Filed Jan. 19, 1928. Serial No. 247,892. 6 Claims. (Cl. 72—101.)

4. A sheet metal sleeper anchor comprising a prong adapted to be driven into a support, a lug struck out from the plane of said prong for securing the anchor against removal from the support, and a substantially flat bearing plate on one end of said prong normally located substantially in the plane of said prong for attachment to a sleeper, said bearing plate being adapted to be bent at substantially right angles to said prong to provide a head for engaging the surface of the support to limit the inward movement of said prong.



1,677,883. AUTOMOBILE SIGNAL. EINAR F. CARLSEN, Chicago, Ill. Filed Jan. 5, 1924. Serial No. 684,620. 3 Claims. (Cl. 177—327.)

1. A signal of the character specified comprising alined magnetic coils, a core received in said coils, a bracket supporting said coils, contact levers connected intermediate their ends to the upper portions of said brackets and having free terminal portions arranged in the field of magnetic force of said coils, and U-shaped contact members carried by said upper portions of the bracket and having terminal portions extended downwardly and arranged at opposite sides of and in the path of travel of said contact levers.

1,677,884. JOINT PACKING. JAMES A. CONNELLY, Hamilton, Ohio. Filed May 4, 1925. Serial No. 27,778. 6 Claims. (Cl. 285—10.)

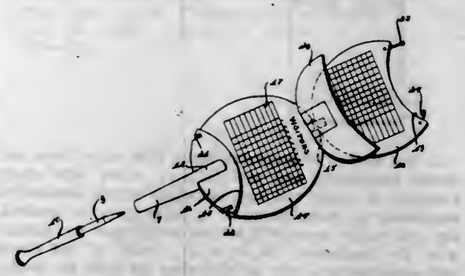
1. A packing box for a pressure chamber comprising a rotating member, and a stationary member, a metallic packing between and having curved surfaces cooperating with correspondingly shaped metallic surfaces of the rotating and stationary members, the metallic packing having an opening, one of the members having an enlarged portion greater in size than the coacting opening in the packing, the packing having a portion greater in size than a coacting opening in the other member, so that

the pressure within the pressure chamber will tend to force the coacting surfaces together to form a tight joint.

1,677,885. TELEGRAPHIC AND TELEPHONIC RECEIVING CIRCUITS. CHARLES KINGSLEY CHANDLER, of the Headquarters of the Royal Air Force, India. Filed Aug. 15, 1925, Serial No. 50,492, and in Great Britain Sept. 3, 1924. 4 Claims. (Cl. 250—20.)

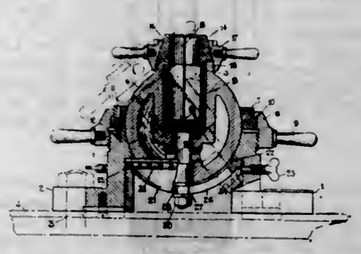
1. In a signal receiving system having a collector circuit for incoming signals and a detector circuit, means for balancing out oscillations in said circuit caused by static and other disturbances comprising an unbalanced Wheatstone bridge in said collector circuit having variable reactances in each of its arms and adjusted for minimum impedance at a frequency different from the frequency of the incoming signals, said detector circuit being connected across one pair of conjugate arms, and a pair of tuned circuits connected in parallel across the other pair of conjugate arms, one of said tuned circuits being adjusted to offer high impedance at the signal frequency, the other tuned circuit being adjusted to cause the combined circuit to be resonant to the signal frequency.

1,677,886. VARIABLE RESISTANCE. EDWIN C. BALLMAN, St. Louis, Mo., assignor to Valley Electric Company, St. Louis, Mo., a Corporation of Delaware. Filed Feb. 10, 1923. Serial No. 618,259. 4 Claims. (Cl. 201—56.)



1. An electrical resistance unit comprising a helically grooved barrel, a resistance conductor wound in said groove, a movable contact collar surrounding said barrel and punched to provide a plurality of rounded interior projections spaced one from the other and adapted to contact with adjacent turns of said conductor and be guided thereby.

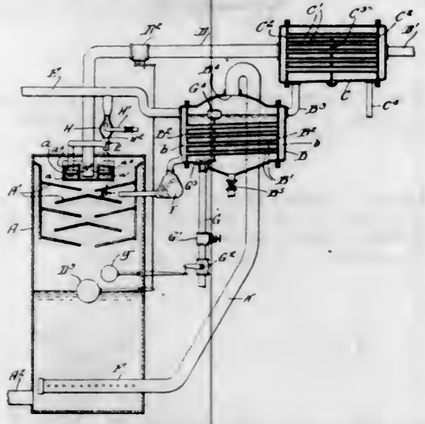
1,677,887. WATER TUBE FOR FURNACE WALLS. HENRY B. BRADFORD, Wilmington, Del., assignor to Edge Moor Iron Company, Edge Moor, Del., a Corporation of Delaware. Filed Oct. 19, 1926. Serial No. 142,757. 1 Claim. (Cl. 122—6.)



Water tubes for application to the inside of a furnace wall having a row of threaded nuts welded to them and adapted to receive clamping bolts.

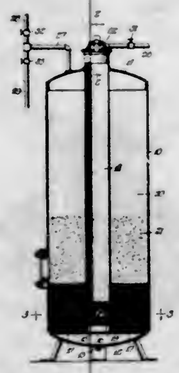
1,677,888. COMBINATION FAN. CLARENCE A. CONNORS, Detroit, Mich., assignor of one-third to Frank McKnight, Detroit, Mich. Filed June 20, 1927. Serial No. 200,049. 7 Claims. (Cl. 230—266.)

1. A fan of the class described, comprising: a handle; a fan body mounted on said handle; a cooperating fan body swingably mounted on said first mentioned fan body and adapted for folding into engagement with either face of said fan body; and means for securing said fan bodies in fixed relation in either position.



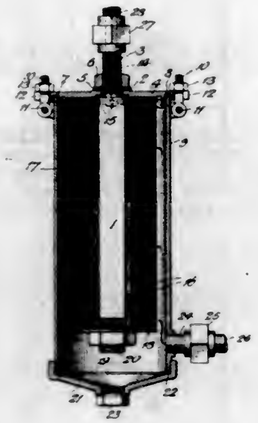
1,677,889. UNIVERSAL MACHINE-SHOP FIXTURE. EMIL GAIRING, Detroit, Mich. Filed Dec. 13, 1924. Serial No. 755,653. 4 Claims. (Cl. 96—59.)

1. In a universal machine shop fixture comprising a chuck or work holder having a ball portion, a mounting for said holder having a spherical seat for said ball por-



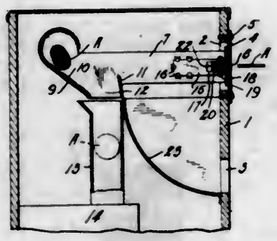
tion, means engaging the mounting for clamping the ball portion upon said seat, a plate carried by the mounting and rotative about a fixed axis, means carried by the mounting for holding the plate stationary in any position of its rotation and means engaging said plate for holding the ball portion of the holder in any position of tilting of the holder about said axis.

1,677,890. HEATING, DEAERATING, AND EVAPORATING WATER. GEORGE H. GIBSON, Montclair, N. J., assignor to Cochrane Corporation, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 21, 1922. Serial No. 555,923. 14 Claims. (Cl. 183—2.5.)



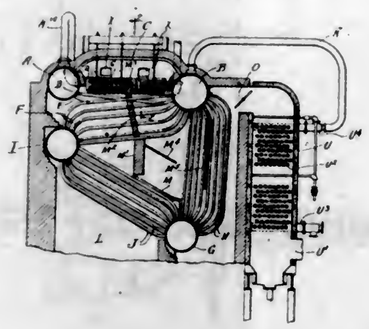
2. The method of preparing boiler feed water from condenser condensate and raw make-up water with steam available at hight and low pressures which consists in vaporizing the make-up water in an evaporator, condensing the vapor generated in the evaporator by contact with the condensate in a water heater of the steam and water contact type, withdrawing air from the heater by a steam ejector supplied with steam at high pressure, and heating the evaporator with the exhaust from the ejector and the low pressure steam.

1,677,891. WATER-SOFTENING APPARATUS. WALTER H. GREEN, Chicago, Ill., assignor to General Zeolite Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 21, 1926. Serial No. 130,755. 9 Claims. (Cl. 210—24.)



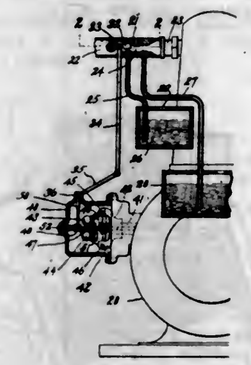
1. Zeolite water softening apparatus comprising a casing having a central cylindrical member, said member having a perforated bottom and a removable cover and being adapted to hold salt for regenerative purposes, a fresh water inlet discharging into the cylindrical member, and zeolites disposed in the annular chamber between the walls of the casing and the member.

1,677,892. FILTER. FREDERICK D. HERBERT, Upper Montclair, N. Y.; WALDO L. KRAEMER, Brooklyn, N. Y.; and JOSEPH E. GARABRANT, Bloomfield, N. J., assignors to Metal Edge Filter Corporation, a Corporation of New Jersey. Filed June 13, 1924. Serial No. 719,695. 5 Claims. (Cl. 210—183.)



5. In a filter for edge filtration, a spindle, a plurality of filter elements of sheet metal, each element having upon a face thereof an adherent spacing layer of electrodeposited non-fibrous material.

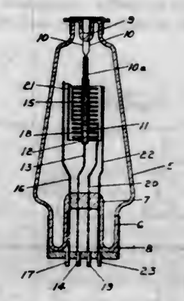
1,677,893. COIN-CONTROLLED MECHANISM. HARRY B. HILTZ, New York, N. Y., assignor, by mesne assignments, to Auto-Sales Corporation, Long Island City, N. Y., a Corporation of New York. Filed Nov. 15, 1924. Serial No. 750,076. 2 Claims. (Cl. 194—97.)



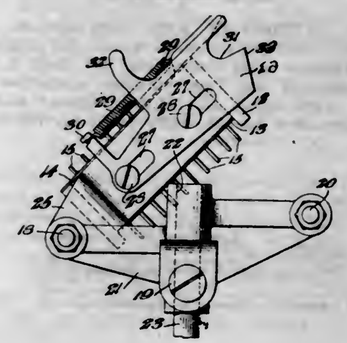
1. A coin control comprising a coin insertion element, guiding means disposed horizontally and extending from the coin insertion element, coin intercepting elements carried by the guiding means, means for propelling a coin of predetermined character between the guiding means and a partition extending downward from one of the coin intercepting means.

1,677,894. SUPERHEATER BOILER. WALTER FRANCIS KEENAN, Jr., Pelham, N. Y., assignor to Foster Wheeler Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 31, 1924. Serial No. 703,061. 3 Claims. (Cl. 122—478.)

1. In a superheater boiler, the combination with horizontally disposed U-shaped superheater elements, of a housing wall comprising a pair of metal walls through which the ends of the elements extend, each formed in sections, one for each of said elements, and insulating material between said walls.



1,677,895. FUEL-SUPPLY SYSTEM. LESTER S. KEILHOLTZ, Dayton, Ohio, assignor, by mesne assignments, to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Aug. 8, 1918. Serial No. 249,002. 4 Claims. (Cl. 123—127.)

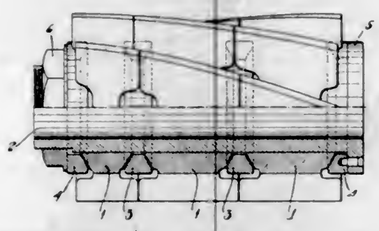


1. In a fuel supply device, the combination with an engine having a mixing chamber; of a conduit for delivering priming fuel to the engine from a fuel level below the mixing chamber; of a conduit for delivering running fuel to the engine from a fuel level below the mixing chamber; and means responsive to engine speed for arresting the delivery of priming fuel to the engine at a predetermined engine speed, said second-mentioned conduit being open continuously during the operation of the engine.

1,677,896. RADIOTUBE AND METHOD OF OPERATING SAME. EARL L. KOCH, Pittsburgh, Pa., assignor to Frederick S. McCullough, Wilkinsburg, Pa. Filed Apr. 25, 1925. Serial No. 25,903. 11 Claims. (Cl. 250—27.5.)

1. A thermionic tube having an anode, a cathode, a looped resistance heater for the cathode, a helical control electrode, and a helical auxiliary control electrode adjacent one end of the cathode and adjacent the end of the first control electrode, said helical electrodes consisting of different numbers of turns of substantially the same diameter.

1,677,897. ANALYZER UNIT FOR TABULATING MACHINES. WILLIAM W. LASKER, Brooklyn, N. Y., assignor, by mesne assignments, to Remington Rand Inc., New York, N. Y., a Corporation of Delaware. Filed Apr. 29, 1925. Serial No. 26,686. 1 Claim. (Cl. 235—58.)



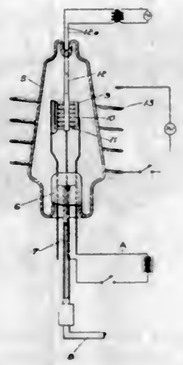
In a device of the character stated, an analyzing unit, a support frame for said unit including two spaced rods, apertured ears secured to one side of said unit and mounted on one of said rods for movement relative thereto, keepers respectively mounted on opposite ends of said unit, means on said keepers for respectively interlocking with the other of said rods to lock said unit in analyzing position, springs holding said keepers respectively in locked position, and means manually engageable at will for releasing said keepers to swing said unit out of operative position.

1,677,898. PLANING CUTTER. JOHAN OSCAR LIFLANDER, Stockholm, Sweden, assignor to J. & C. G. Bolinders Mek. Verkstads Aktiebolag, Stockholm, Sweden, a Corporation. Filed Jan. 27, 1925. Serial No. 5,121, and in Sweden Feb. 7, 1924. 1 Claim. (Cl. 144—233.)

A rotary planing cutter comprising a plurality of annular sections mounted on a shaft, the adjacent surfaces of said sections being recessed to form inwardly

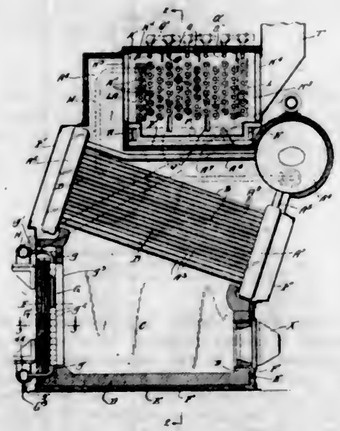
tapering annular spaces of approximately trapezoidal cross section between the sections, annular locking members fitting in said spaces and having surfaces engaging said adjacent surfaces of the sections, the surfaces of said locking members being roughened to enable the locking members to securely grip said adjacent surfaces,

each of said sections being provided with longitudinally extending blade portions of greater width than the remainder of the section, the blade portions of the several sections being adapted to be aligned with each other when the cutter is assembled, to form substantially continuous cutting blades, and means exerting axial pressure on said sections.



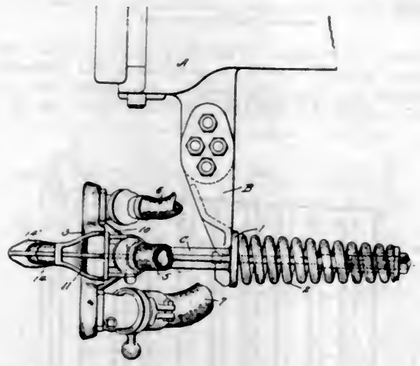
1,677,899. AUTOMATIC STOP MECHANISM FOR LOOMS. JONATHAN LUCAS, Savannah, Ga., assignor to Lucas-Lamborn Loom Corporation, New York, N. Y., a Corporation of New York. Original application filed May 7, 1924, Serial No. 711,581. Divided and this application filed Feb. 15, 1927. Serial No. 168,255. 3 Claims. (Cl. 139—370.)

1. In a loom including an electric controlling circuit, the combination of harness whereby a shed of warp threads is provided, a travelling shuttle carrying a supply of filler thread, means for passing said shuttle through said shed to place the filler thread in position, a lever on said shuttle, clamping means on said lever whereby the latter is connected with said filler thread and is held in an inoperative position as long as said filler thread is under tension, said lever assuming an operative position when the filler thread breaks, and switching means adapted to be acted upon directly by said lever when in its operative position to break the electric circuit and stop the loom.



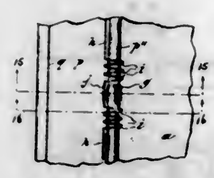
1,677,900. METHOD OF DEGASIFYING RADIOTUBES. FREDERICK S. MCCULLOUGH, Wilkinsburg, Pa. Filed May 6, 1925. Serial No. 28,340. 3 Claims. (Cl. 250—27.5.)

1. A method of de-gasifying electron tubes having low temperature high emission sheet metal cathodes which includes the steps of connecting the tube in a pumping system, baking the tube, heating the cathode by energizing its heater from a source of alternating current, applying an oscillating field to the tube while the cathode remains heated, shutting off the oscillating field, applying a plate



voltage to the tube while the cathode remains heated, and after the oscillating field has been shut down, and then sealing off the tube.

1,677,901. MARINE STEAM-GENERATING UNIT. JOSEPH JOHN NELIS, Brooklyn, N. Y., assignor to Foster Wheeler Corporation, New York, N. Y., a Corporation of New York. Filed May 10, 1923. Serial No. 637,997. 11 Claims. (Cl. 122—477.)



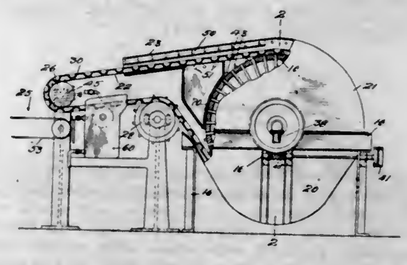
1. A marine boiler comprising a combustion chamber, a bank of water tubes above said combustion chamber, upper and lower headers connected to said tubes, a steam and water drum above said lower header and extending transversely to said tubes, tube connections between said drum and headers, a radiant heat superheater incorporated in a wall of said combustion chamber and adapted to absorb radiant heat from the other walls of said chamber and an economizer located above said water tubes and the tube connections between the upper header and drum.

1,677,902. AUTOMATIC TRAIN-PIPE CONNECTER. JOSEPH ROBINSON, Morristown, N. J. Filed Oct. 18, 1921. Serial No. 508,583. 16 Claims. (Cl. 285—24.)

1. In a train pipe connecter, mating coupling devices, having normally engaging, non-oscillatory, central bearing surfaces, each comprising funnel and pin members at opposite sides of said bearing surfaces, the pin member having a centering head, and the funnel member having a socket element continuing from its body portion and adapted to receive the centering head of a mating pin member, the head and socket element forming the sole bearing of the pin member on the funnel member when coupling members are coupled, and said bearing being sufficiently extended to counteract any tendency of the coupling members to rock upon one another when coupled.

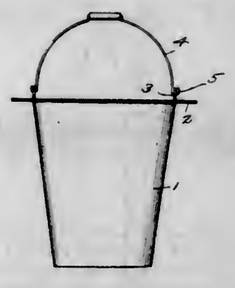
1,677,903. GARMENT-FASTENER MEANS. LEO ROSEMAN, Newark, N. J. Filed July 1, 1926. Serial No 119,851. 7 Claims. (Cl. 2—265.)

1. A fastening means for separable engagement with opposed hook fastener devices of a garment or other closure, comprising in combination with one marginal portion of the closure a pocket forming strip applied thereupon to project inwardly from the free edge thereof means to form an enlarged reenforced lip coincident with the inner rearward free edge of said strip, and means to interruptedly secure the inner rearward edge of said strip to such marginal portion to form at the points of interruption rearwardly open hook-bill receiving pockets entering under said edge and beneath said strip.



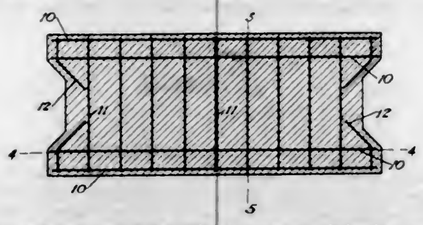
1,677,904. GARMENT-FASTENER TAPE. LEO ROSEMAN, Newark, N. J. Filed Apr. 1, 1927. Serial No. 180,115. 1 Claim. (Cl. 2—265.)

In a fastener tape for garments, a tape body, a cover strip disposed in overlying relation to and upon the rearward portion of said tape body, fasteners disposed between said tape body and cover strip with their operative ends projecting exteriorly beyond the forward edge of said cover strip, stitching joining said forward edge of said cover strip and tape body and transversing said fasteners, said stitching including at each side of each fastener outwardly extending transverse bar stitches extending across said forward edge of said cover-strip, and the rearward free portion of said cover-strip being initially folded outwardly from said stitching to expose the garment receiving portions of said tape body, the fold edge of



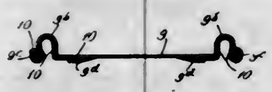
the thus disposed cover-strip being adapted to serve as a guiding abutment against which a garment may be aligned and stopped during the operation of applying said fastener tape thereto, said cover-strip being further adapted to be turned rearwardly and over upon the applied garment edge-portion.

1,677,905. CONTINUOUS PROCESS APPARATUS FOR FORMING ARTICLES FROM PULP. ORANGE J. SALISBURY, Salt Lake City, Utah. Original application filed Sept. 13, 1921, Serial No. 500,300. Divided and this application filed July 24, 1923. Serial No. 653,409. 9 Claims. (Cl. 92—43.)



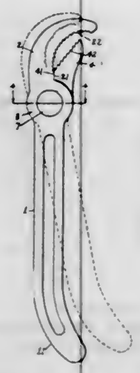
1. In a pulp forming and moulding apparatus, a suction drum and a mould carrying belt, said belt adapted to make tight contact with said drum and to transmit suction therefrom to the aforesaid moulds.

1,677,906. PAIL. GEORGE W. SMITH, Forbes, N. Dak. Filed Jan. 12, 1927. Serial No. 160,701. 2 Claims. (Cl. 31—54.)



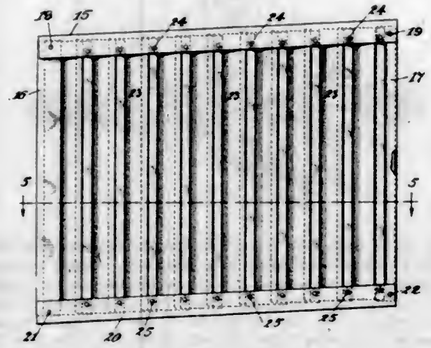
1. As a new article of manufacture, a pail comprising a body having a substantially wide annular rim formed upon the upper edge thereof, a plurality of ears struck from said rim and extending substantially in line with the walls of the pail, and a handle having its ends extending through said ears for constituting a carrier for said pail.

1,677,907. WEIGHT-SUPPORTING TILE. NEAL D. SMITH, Chicago, Ill., assignor to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 4, 1922. Serial No. 592,285. 6 Claims. (Cl. 72—68.)



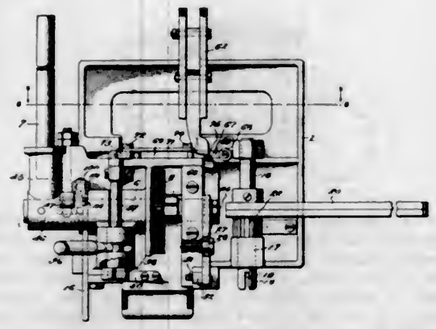
6. In a reinforced flat tile, groups of reinforcing rods rectangularly spaced and extending lengthwise thereof adjacent the opposite faces at the sides, and transverse reinforcing rods extending around and connected to the separate rods of each group to hold them rectangularly spaced apart.

1,677,908. PITMAN FOR PNEUMATIC MOTORS. FRED VOLARE, Scotch Plains, N. J., assignor to The Aeolian Company, a Corporation of Connecticut. Original application filed Oct. 26, 1923, Serial No. 670,887. Divided and this application filed June 11, 1926. Serial No. 115,259. 3 Claims. (Cl. 74—17.)



1. A pitman for connecting the crank shaft of a pneumatic motor with an elongated round cross-sectioned part on the related slide valve of said motor, said pitman consisting of a strip of spring-metal provided with bent-up, substantially U-shaped ends whose sides extend transversely to the body portion of said strip, said U-shaped ends being adapted in size and shape to be sprung over the crank shaft and said round cross-sectioned part and to be retained in place thereon by the resilience of the sides of said U-shaped ends.

1,677,909. WRENCH. BENJAMIN ORRIN WADE, White Pigeon, Mich. Filed Oct. 16, 1925. Serial No. 62,770. 3 Claims. (Cl. 81—80.)

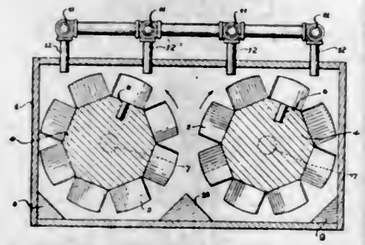


1. A wrench comprising opposed pivotal members, with parallel handle bars which are identical in form and curved to one side toward the open side of said jaws, an outwardly curved overhanging jaw with inwardly projecting teeth and a flat inner part forming a stop, and an opposed inner jaw with outwardly projecting teeth and a flat inner part forming a stop cooperating therewith, as specified.

1,677,910. FLEXIBLE VENTILATOR. CHARLES M. WILLS, Atlantic City, N. J., assignor to The American Transom Co. Inc., Philadelphia, Pa. Filed Feb. 19, 1927. Serial No. 169,526. 3 Claims. (Cl. 98—87.)

1. In a ventilator, in combination, a casing the top and bottom of which are pivotally attached to the ends thereof, and a plurality of overlapping leaves pivotally attached to the top and the bottom of the casing.

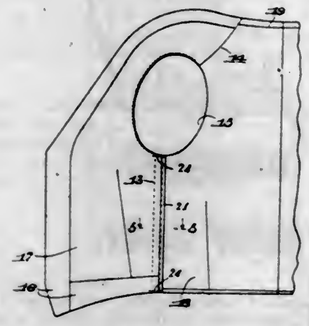
1,677,911. BOX-STRAPPING MACHINE. PARVIN WRIGHT, Chicago, Ill. Filed July 23, 1924. Serial No. 727,771. 2 Claims. (Cl. 140—93.)



1. In a wire tying machine the combination of means for twisting two portions of a wire together after it has been trained around a box; and package engaging means to aid in forcibly moving the machine away from said twisted portions.

1,677,912. METHOD OF COOKING AND APPARATUS USED IN SUCH METHOD. ALFRED F. BARTLESON, Sodus Center, N. Y., assignor to Fruit Belt Preserving Company, East Williamson, N. Y., a Corporation of New York. Filed Dec. 10, 1927. Serial No. 239,241. 4 Claims. (Cl. 99—2.)

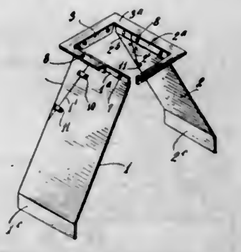
1. The method of cooking which consists in moving a mass bodily through a cooking chamber, simultaneously lifting the middle portion of the mass upwardly, and



subjecting the lifted portion of the mass to jets of steam.

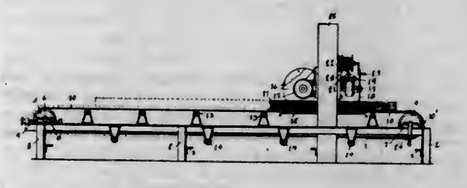
2. A cooking apparatus comprising a cooking chamber having an intake at one end and a discharge at the opposite end, two combined feeders and agitators rotatably mounted in the cooking chamber to feed the mass

from the intake to the discharge, means driving said feeders and agitators in opposite directions with their adjacent portions moving upwardly to lift the central portion of the mass, and means providing steam jets discharging on the lifted portion of the mass.



1,677,913. VEST. FRANK A. BIEBERSTEIN, Milwaukee, Wis. Filed Sept. 22, 1926. Serial No. 137,006. 2 Claims. (Cl. 2—102.)

1. In a vest, the combination of front and back vest portions secured at their meeting edges to form a flap extending between the arm hole and the lower edge of the vest, a length of piping covering the longitudinal edge of said flap and having its ends reversely turned at the ends of said flap for disposition between the flap and one of said vest portions, a line of stitching joining said front and back portions to form a side seam and defining the inner edge of said flap, and stitched tackings at the end portions of said flap securing said flap against one of said vest portions and passing through the reversely turned ends of said piping interposed between said flap and the adjacent vest portion.

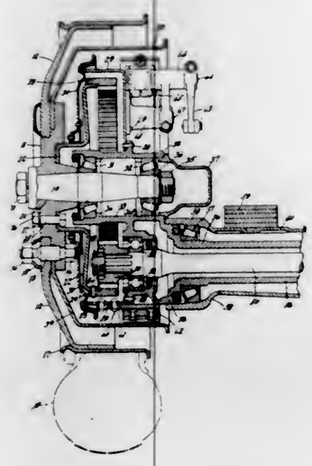


1,677,914. SMOKE-CHAMBER LINING. JAMES D. COVERT, Montclair, N. J. Filed Jan. 26, 1927. Serial No. 163,627. 2 Claims. (Cl. 72—94.)

1. A fireplace smoke chamber lining comprising a collar having greater length than width, a pair of plates adapted to be secured thereto at the upper ends, the collar being arranged to register with a chimney flue with the plates diverging downwardly from the collar, the plates being provided with detachable sections at the upper portions along corresponding edges, and means for detachably securing the sections to the plates, whereby

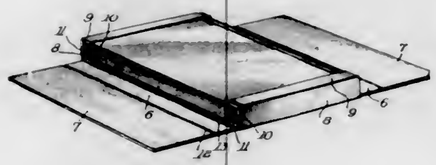
the plates and sections may be secured to the greater length of the collar and the plates without the sections may be secured to the lesser width of the collar.

1,677,915. SLITTING MACHINE. FRANK G. CRANE, Montague, Mich., assignor of one-half to Detroit Sulphite Pulp & Paper Co., Detroit, Mich. Filed Nov. 7, 1927. Serial No. 231,582. 7 Claims. (Cl. 164—61.)



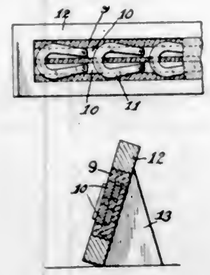
6. In a machine of the class described, the combination of conveyer apron supporting and driving means, a conveyor apron having a pile-like work supporting face, and a driven rotary cutter positioned relative to said apron so that its periphery extends into the pile but is spaced from the body of the apron.

1,677,916. PRESS FOR THE QUICK DRYING AND GLAZING OF PHOTOGRAPHIC PRINTS. LÉON CRAYSSAC, Cette, France. Filed Aug. 20, 1927, Serial No. 214,391, and in Germany Aug. 26, 1926. 3 Claims. (Cl. 34—17.)



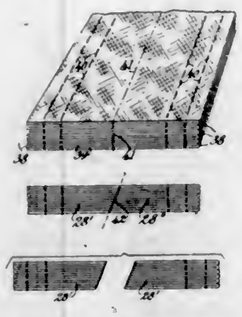
1. A device of the character described, comprising in combination, a frame having in its top surface a pair of parallel marginal grooves disposed at opposite edges thereof, an upwardly curved sheet-metal plate secured to said frame between said grooves, a sheet of fabric stretched over said plate and grooves and secured to opposite edges of the frame, a frame hinged to said first frame at one edge thereof and having a pair of beads adapted to fit into said marginal grooves, a sheet of fabric stretched on said second frame, and means for fastening said frames together at the edge opposite said hinged edge.

1,677,917. MOTOR-VEHICLE CONSTRUCTION. DAVID F. DOMIZI, Cleveland, Ohio, assignor, by mesne assignments, to Relay Motor Products Corporation, Bridgeport, Conn., a Corporation of Delaware. Filed Jan. 7, 1927. Serial No. 159,597. 6 Claims. (Cl. 180—10.)



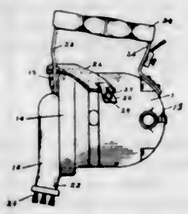
1. In combination, a wheel having a spindle, a dust cap for one end of said spindle, an axle housing swingable about said spindle, and means on said housing adapted to strike said cap to prevent complete rotation of the axle housing about the spindle.

1,677,918. SHIPPING BOX FOR ARTICLES. CLARENCE P. GALLISTEL, Chicago, Ill., assignor to Mid-West Box Company, Chicago, Ill., a Corporation of Indiana. Filed June 17, 1925. Serial No. 37,617. 2 Claims. (Cl. 229—87.)



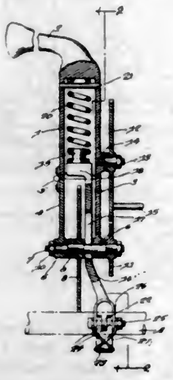
1. A shipping case for a book or similar article consisting of a single sheet of paper board and comprising a rectangular member adapted to enclose one side of the book, a pair of flaps connected to the side margins of the member and adapted to be secured and folded together to enclose the front and back and the other side of the book, and a pair of flaps connected to the bottom and top margins of said member and adapted to space the side forming portions apart and be folded to enclose and form hollow engagement-cushions for the top and bottom of said book, each of said last mentioned flaps being provided with portions adapted to be folded to form inner and outer walls, a connecting wall between the inner and outer walls and adapted to underlie the side forming portions of said first mentioned flaps, and a spacing wall between said inner and outer walls, the flaps being creased so that their several portions will fold correctly into operative position.

1,677,919. INTERCHANGEABLE SIGN OR BULLETIN BOARD. CHRISTIAN HANSEN, Woodcliff, N. J. Filed Nov. 11, 1927. Serial No. 232,502. 5 Claims. (Cl. 40—142.)



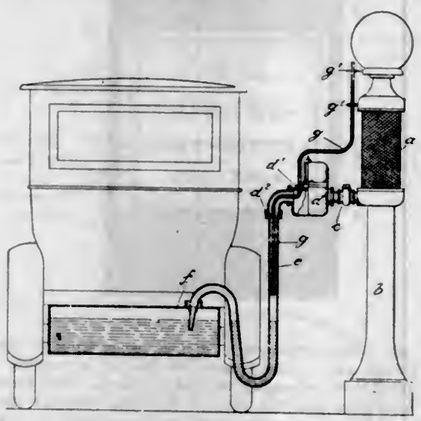
1. In a sign, a plate of non-magnetic material, strips of magnetizable material inlaid in the plate in spaced and parallel relation, and magnets arranged with the poles in parallel and having one pole in contact with one strip and the other pole with another strip.

1,677,920. METHOD OF MAKING BRUSHES. CECIL R. HUBBARD, Newark, N. Y., assignor to The Garlock Packing Company, Palmyra, N. Y., a Corporation of New York. Filed June 11, 1927. Serial No. 198,076. 9 Claims. (Cl. 300—21.)



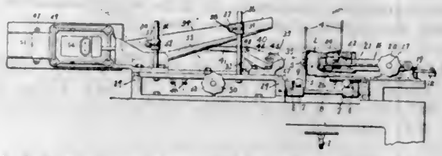
1. The method of making brushes, which consists in folding sheet material into a structure having a plurality of superimposed layers and having folds along two margins, securing said layers together, and severing the structure intermediate said folded margins.

1,677,921. VACUUM CLEANER. JULES K. JOHNSON, Pittsburgh, Pa. Filed July 16, 1925. Serial No. 44,032. 2 Claims. (Cl. 15—16.)



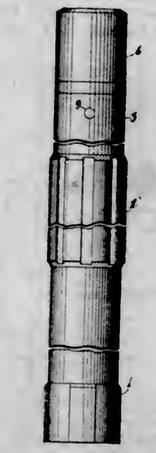
1. In a vacuum cleaner, a casing, a dust bag connected therewith and adapted to be folded and placed in folded condition against the casing, and cooperable elements on said bag and casing to engage one another when the bag is folded and placed against the casing to hold the bag in such position.

1,677,922. HAND-OPERATED CUTTING IMPLEMENT. JOHN KASZTELER, Chicago, Ill. Filed Apr. 8, 1927. Serial No. 182,083. 4 Claims. (Cl. 20—75.)



4. In a device of the class described, a body member having a handle at one end, spaced supporting arms at the other end, a shaft removably mounted in the outer ends of said arms, a cutting implement carried by said arm, means for rotating said shaft, and means for engaging the work being operated upon, including an arm formed with a slot to receive the shaft, a spring connecting the inner end of the arm to the inner end of the hollow portion of the body and a spring actuated clamping jaw for clamping the work to the outer end of said arm.

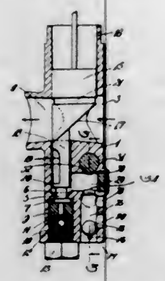
1,677,923. GASOLINE FILLING STATION AND THE LIKE. WILLIAM L. MARDEN New York, N. Y., assignor to Neptune Meter Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 10, 1927. Serial No. 160,102. 1 Claim. (Cl. 221—99.)



In an apparatus of the character described, the combination of an elevated source of liquid supply, a gravity delivery hose leading therefrom of such length that a portion thereof may extend below the delivery end, and a vent pipe having its lower end in operative connection with the delivery hose at a point a substantial distance below the inlet end of the hose and having its upper end above the level of the source of supply.

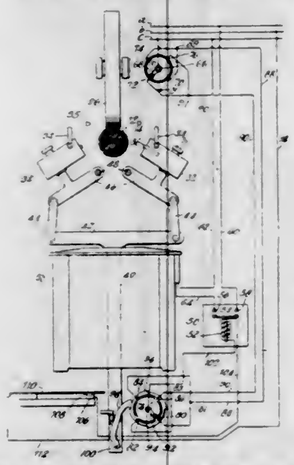
1,677,924. WRAPPING MACHINE. HOWARD H. METCALF, Battle Creek, Mich., assignor to Battle Creek Bread Wrapping Machine Co., Battle Creek, Mich. Filed Aug. 3, 1925. Serial No. 47,822. 15 Claims. (Cl. (93—2.)

1. In a structure of the class described, the combination of a feed plunger, a wrapping conveyor means to which said plunger delivers, downwardly curved wrapper draping members disposed on opposite sides of the path of said feed plunger, slide rods on which said draping members are slidably mounted for adjustment relative to each other, a folder carriage, a front bottom folder mounted on said carriage, front end flap folders provided with vertically adjustable sections, means for adjustably supporting said front end flap folders on said carriage comprising a supporting rod on which they are slidably mounted and a coacting reversely threaded rod, a folder way comprising slidably mounted outer sections, a reversely threaded rod for adjusting said sections relative to each other, rear end flap folders, rearwardly projecting creasing fingers mounted on said rear end flap folders and comprising adjustably connected front and rear sections, the front sections being adjustably mounted on said rear end flap folders, bottom flap folders having forwardly inclined edges disposed at the rear of said rear end flap folders, top flap folders mounted for vertical and tilting adjustment in coacting relation to said creasing fingers and having rearwardly inclined outwardly flanged lower edges, said rear end, bottom and top flap folders being mounted on said way members for adjustment therewith, a bottom sealing plate, a delivery way at the rear thereof, rearwardly projecting brackets on said adjustable way members, and end sealing plates yieldably mounted on said brackets at the sides of said delivery way.



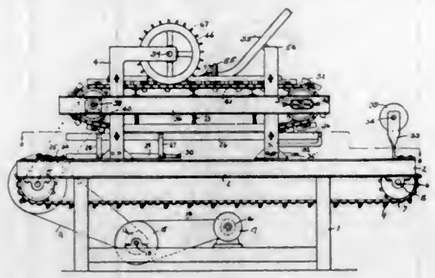
1,677,925. CORE DRILL. JOSEPH S. MITCHELL, Chicago, Ill., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Nov. 5, 1923. Serial No. 672,795. 4 Claims. (Cl. 255—72.)

1. A core barrel comprising a head forming a drill rod connection and having a circumferentially extending groove formed on the periphery thereof, and a plurality of recesses, a tubular core receiving barrel member having



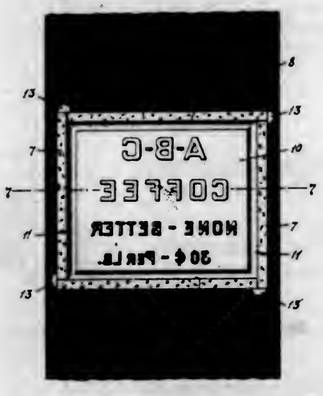
a drive fit with said head and having its extremity adjacent said head peened into said groove partially filling the latter, said barrel member having perforations in registry with said recesses, and bodies of metal in the unfilled portion of said groove and in said perforations and recesses and welded to the adjacent portions of said head and barrel member respectively.

1,677,926. CARBURETOR. MAX CYRIL MORRIS, Castlebellingham, Ireland. Filed Oct. 10, 1923, Serial No. 667,602, and in Great Britain Oct. 21, 1922. 3 Claims. (Cl. 261—44.)



1. In a carburetor, the combination of a plunger valve movable diametrically across the main passage, said plunger valve having a circumferential groove thereon adapted to permit an inleak of air through the main passage past the said valve when the latter is in the closed position and during a small degree of opening movement thereof, and to be enclosed by the casing on continued opening movement of the said valve, a tubular member carried by the plunger valve, a well-shaped chamber formed in the casing opposite to the said valve, and a fuel nozzle disposed axially in the said well-shaped chamber, the said tubular member being adapted to reciprocate synchronously with movement of the said plunger valve loosely within the annular space between the wall of the well-shaped chamber and the fuel nozzle and being provided on the engine side thereof with a wide longitudinally disposed opening which is progressively exposed to the main passage on the engine side as the throttle valve is progressively opened.

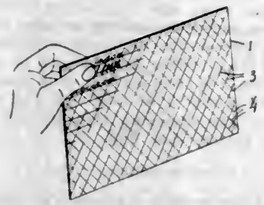
1,677,927. CABLE-MARKING MACHINE. ALLEN D. PETTEE, Mount Vernon, N. Y. Filed Mar. 9, 1927. Serial No. 174,062. 9 Claims. (Cl. 101—18.)



1. A machine for measuring and marking cable including a stamping head carrying a numbering device, electrically operated means for moving said head to impress a number on said cable, and a measuring wheel actuated by the movement of the cable and arranged to control the operation of the head moving means.

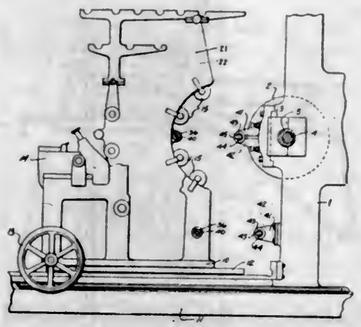
1,677,928. MACHINE FOR TOPPING CANS. WILLIAM LEE PHILLIPS, Houston, Tex. Filed Apr. 1927. Serial No. 182,167. 14 Claims. (Cl. 113—27.)

1. In a device of the character described, an endless conveyer for can tops, a chute to deliver tops to said conveyer, top receiving cups spaced uniformly apart on said conveyer, a rotatable frame above said conveyer, adjustable plungers on said frame positioned to fit within said cups and force said tops tightly therein, a can conveyer spaced a predetermined distance below said top conveyer, means to space and retain the cans on said can conveyer to register with said cups, and means to release said tops from said cups.



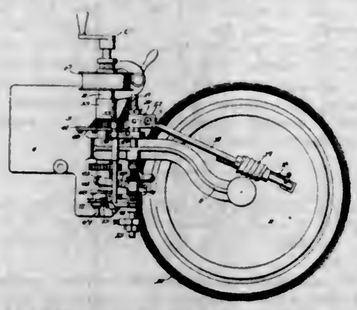
1,677,929. PRINTING IMPRESSION PLATE AND PROCESS OF MAKING SAME. WILLIS J. PIPPERT, Ridlonville, Me. Filed Jan. 28, 1927. Serial No. 164,145. 3 Claims. (Cl. 41—25.)

3. An elastic impression surface comprising a sheet of flexible and resilient material having a backing of non-stretchable screening imbedded therein, said screening providing the sole support for said resilient material and being of such length as to overlap the ends of said sheet, thereby providing means for attaching it to a printing block.



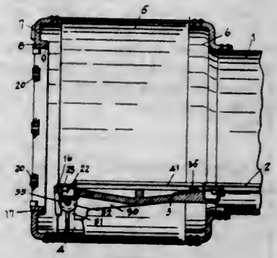
1,677,930. WRITING PAPER. HENRY G. PROSSER, Chicago, Ill., assignor to Bermingham and Prosser Co., Kalamazoo, Mich. Filed Sept. 6, 1927. Serial No. 217,672. 2 Claims. (Cl. 283—45.)

1. As an article of manufacture, a sheet of writing paper having a plurality of distinct horizontal parallel lines thereon, and a plurality of indistinct parallel diagonal lines disposed in crossing relation relative to the



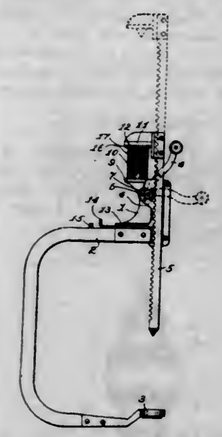
distinct lines, the indistinct lines being watermarks and becoming distinct when the sheet is supported to permit light to pass therethrough.

1,677,931. PRINTING PRESS. RALPH C. SEYMOUR, Short Hills, N. J. Filed Aug. 30, 1923, Serial No. 660,141. Renewed Jan. 24, 1928. 20 Claims. (Cl. 101—351.)



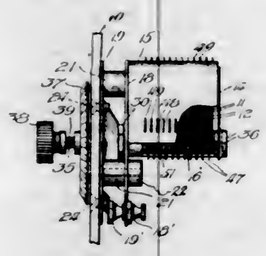
1. A printing press including in combination a form cylinder, an inking mechanism therefor, means for moving the inking mechanism into and out of operative relation with the form cylinder and means exerting a force parallel to the axis of the form cylinder for holding the inking mechanism in operative position including a plurality of clamping devices at either side of the press and means for operating said clamping devices from one side of the press.

1,677,932. SEWING MACHINE. WILLIAM J. STEERE, Rockwood, Tenn., assignor to Southern Textile Machinery Company, Paducah, Ky., a Corporation of Kentucky. Filed Dec. 15, 1923. Serial No. 680,900. 2 Claims. (Cl. 112—25.)



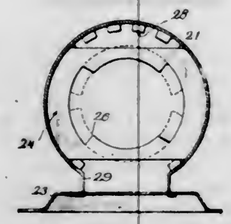
1. In a machine for uniting fabrics, the combination with a continuously rotating dial having a ring of impaling pins, a driving shaft, a curved thread needle, a supporting arm for said needle, means for oscillating said arm to carry the needle adjacent the pins, a looper, a bracket carrying said needle, means for moving said bracket laterally to impart a lateral movement to the needle during its oscillatory movement whereby the same is carried laterally while in the loops to correspond with the movement of the subjacent impaling pins, said last mentioned means being actuated from the driving shaft, and including a cam driven from the driving shaft, means connecting said cam with the bracket, and means for adjusting the cam to vary the extent of the lateral movement of said bracket.

1,677,933. GATE FOR LEERS, OVENS, AND THE LIKE. ROBERT B. STUCKEY, Bucyrus, Ohio, assignor to W. A. Riddell Company, Bucyrus, Ohio, a Corporation of Ohio. Filed Feb. 13, 1928. Serial No. 253,840. 7 Claims. (Cl. 25—133.)



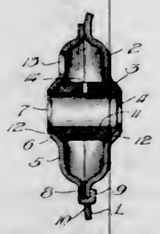
1. A gate for hardening cylinders and the like, comprising a movable gate member, means for pivotally and slidably supporting one end of the gate member and located on the inside of the cylinder, a frame for engaging the outside of the gate member, and means for drawing the gate member against the frame.

1,677,934. SPRING RECOMPRESSOR. NICHOLAS SULENTIC, Waterloo, Iowa. Filed Aug. 15, 1927. Serial No. 213,068. 2 Claims. (Cl. 29—87.1.)



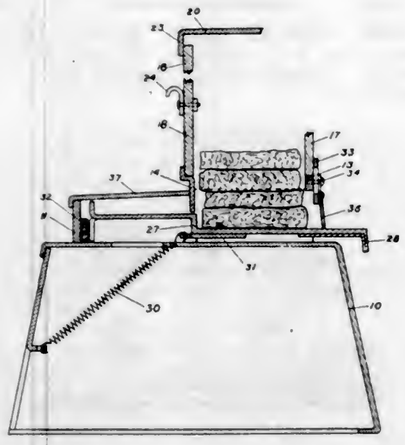
1. A spring re-compressor, comprising rigid spring engaging and clamping jaws connected to be moved to and from each other, one jaw having an upwardly projecting cylindrical boss, and the other jaw having a depending conical boss vertically alined centrally with said cylindrical boss, and said jaws being narrower than a coiled compression spring mounted between them around said bosses.

1,677,935. ADJUSTABLE ELECTRIC CONDENSER. CHESTER H. THORDARSON, Chicago, Ill. Filed Dec. 26, 1922. Serial No. 608,861. 14 Claims. (Cl. 175—41.5.)



1. A variable electrical condenser, comprising stationary plates and interleaved relatively movable plates, and a curved, continuous support for the stationary plates including means integral with said support to independently space each plate on the support relatively to the other to avoid accumulative spatial error due to varying thickness of plates.

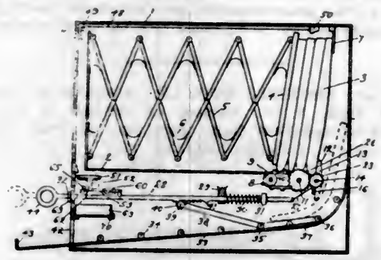
1,677,936. ELECTRIC MOTOR. CHESTER H. THORDARSON, Chicago, Ill. Filed Feb. 27, 1925. Serial No. 12,045. 2 Claims. (Cl. 172—36.)



1. In an electric motor, the combination of a field magnet core and a frame comprising a ring-like member having spurs to engage on and hold the core therein, combined with a sheet metal base, and said ring member being provided with extensions adapted to extend through said base and to be clenched thereunder.

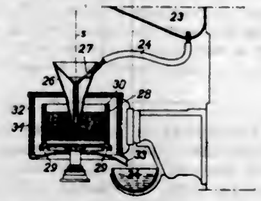
1,677,937. ADJUSTABLE BEARING STRUCTURE. CHESTER H. THORDARSON, Chicago, Ill. Original application filed Feb. 27, 1925, Serial No. 12,045. Divided and this application filed Mar. 7, 1927. Serial No. 173,499. 1 Claim. (Cl. 30—72.)

In combination, a wall having a concave recess provided with a central opening, the material of the wall immediately surrounding said opening being shaped to form a second smaller concave recess, a cup lying against said wall over said recesses, that portion of said cup opposite said recesses and the corresponding portion of said wall being symmetrical with respect to the plane separating them, said cup having a central opening registering with the opening in the wall, and a bearing sleeve arranged in the chamber between the cup and the wall and resting at its ends in the central concave recesses, said wall having holes therein in the vicinity of the periphery of said cup, and there being prongs on said cup extending through said holes and bent laterally against said wall.



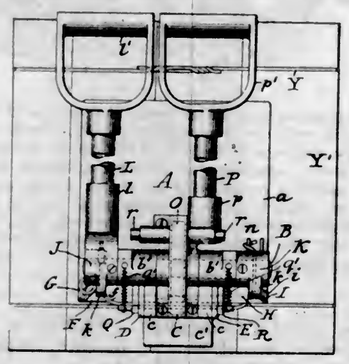
1,677,938. SERVER FOR SLICES OF BREAD AND THE LIKE. WILTON VAN SICKLE, Lincoln, Nebr. Filed June 24, 1924. Serial No. 722,101. Renewed Apr. 12, 1928. 1 Claim. (Cl. 312—67.)

In a serving machine for slices of bread and like articles, a base, a receptacle on the base for housing slices of bread in a vertical stack, a slide on the base in the lower end of the receptacle to traverse the bottom of said stack, said slide comprising a flat member offset intermediate its ends to provide a lower fore part and a raised rear part with a forwardly facing shoulder therebetween, said receptacle having a stepped rear wall providing a housing for the raised rear part of the slide, the upper part of the rear wall projecting into the housing into close proximity to the slide, said raised rear part having upwardly extending projections at its rear edge for movement in said housing between said projecting portion of the upper part of the rear wall and the lower part thereof to limit the movement of the slide, a spring between the base and the slide for normally urging the latter backwardly and holding said shoulder of the slide in registry with said projecting portion of the upper part of the rear wall of the receptacle, and means on the front wall of the receptacle adjustably spaced above the base for admitting a slice of bread of desired thickness to pass from beneath the stack on the fore part of the slide.



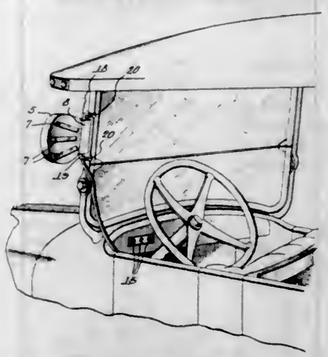
1,677,939. AUTOMATIC NEWSPAPER-VENDING MACHINE. EUGENE VINOGRADOV, New York, N. Y. Filed Mar. 24, 1927. Serial No. 177,944. 2 Claims. (Cl. 312—57.)

1. In an automatic newspaper vending machine, the combination with a housing of a means to hold a plurality of folded papers in said housing, means to manually clamp the lower edge of the last paper and to manually rotate said clamping means thereby releasing said last paper from said holding means, means to move the rest of the papers for a distance of one paper during said rotative movement, means to prevent the release of the



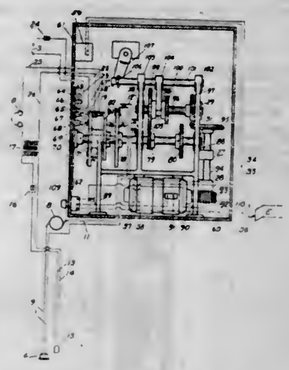
next to the last paper, a plurality of rollers adapted to conduct the released paper to the outside of said housing, and means to rotate said rollers.

1,677,940. SPINNING MACHINE FOR SPINNING ARTIFICIAL SILK. ALBERT WAGNER, Gross-Zschachwitz, near Dresden, Germany, assignor to the Firm Fr. Küttner, Pirna, Saxony. Filed Mar. 16, 1927, Serial No. 175,871, and in Germany May 4, 1926. 2 Claims. (Cl. 118—1.)



1. A spinning machine for the production of artificial silk by the stretch spinning method comprising the combination with a can and a casing surrounding said can, a perforated drum positioned centrally in the said can for receiving and enclosing the spun filaments, as and for the purpose set forth.

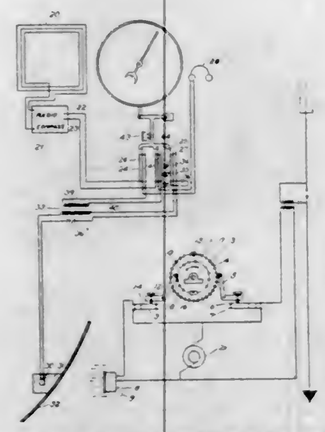
1,677,941. PACKAGE-BANDING MACHINE. CHARLES S. WEEKS, South Orange, N. J., assignor, by mesne assignments, to The Gerrard Company, Inc., San Francisco, Calif., a Corporation of Delaware. Filed Sept. 13, 1923, Serial No. 662,464. Divided and this application filed May 15, 1924. Serial No. 713,418. 22 Claims. (Cl. 254—80.)



1. In a package banding machine, tension means including a plurality of members turnable on an axis substantially parallel to the plane of a looped band, said members being provided with means for the attachment of the respective end portions of said looped band, means for turning said members concurrently whereby the members cooperate for tensioning said band, and band-holding means separate from said turnable members and engageable with said looped band for retaining said band under tension.

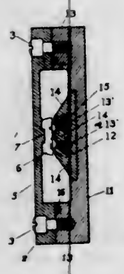
1,677,942. ELECTRIC TRAFFIC SIGNAL. WILBER W. WHITMORE, Denver, Colo. Filed Sept. 22, 1924. Serial No. 739,162. 1 Claim. (Cl. 177—329.)

A signaling device including a body portion having an open end and having display openings formed in the sides thereof, a base to which the open end of the body portion is secured, said base having a recessed rear surface and having socket openings formed therein, lamp sockets in the socket openings and having their rear ends housed within the recessed portion of the base, a cover plate fitted over the recessed portion to close the recess, and arms for supporting the base portion.



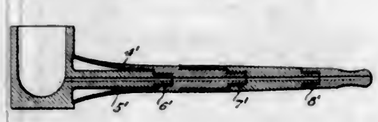
1,677,943. METHOD AND APPARATUS FOR MEASURING DISTANCE. ROBERT LONGFELLOW WILLIAMS, Newton, Mass., assignor to Submarine Signal Corporation, Boston, Mass., a Corporation of Delaware. Filed Jan. 17, 1924. Serial No. 686,922. 7 Claims. (Cl. 177—386.)

1. A method of distance and depth measurement with the aid of a sound producer, a sound receiver and a measuring device, including an indicator rotating at a constant speed with respect to a dial graduated in units of depth, which consists in emitting a succession of sound signals, each occurring when said rotating indicator is at a definite position with respect to said dial, in the direction of the object whose distance is to be measured, detecting the signals reflected from said object and



transmitting the reflected signals to the ears of an observer to establish a succession of signals which may be associated with a second position on the dial to give a depth indication.

1,677,944. METHOD AND APPARATUS FOR DISTANCE AND DIRECTION MEASUREMENT. ROBERT LONGFELLOW WILLIAMS, Newton, Mass., assignor to Submarine Signal Corporation, Boston, Mass., a Corporation of Delaware. Filed Mar. 26, 1924. Serial No. 702,082. 5 Claims. (Cl. 177—386.)

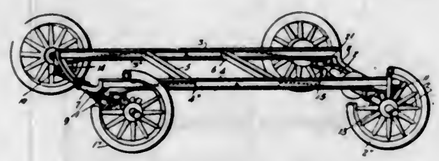


1. A means for measuring distance by the use of electromagnetic and sound signals which are sent simultaneously from a sending station, comprising means for receiving said electromagnetic signal, means for receiving said sound signals, said means having a common indicating means, switching means for changing the connections of said indicating means from said electromagnetic receiving means to said sound receiving means, a normally inoperative timing mechanism, manually operated means for simultaneously setting said timing means into operation and operating said switching means to change the connection of the indicating means from the electromagnetic receiver to the sound receiver.

1,677,945. METHOD AND APPARATUS FOR SOUND TRANSMISSION. ROBERT LONGFELLOW WILLIAMS, Newton, Mass., assignor to Submarine Signal Corporation, Boston, Mass., a Corporation of Delaware. Filed June 20, 1924. Serial No. 721,231. 15 Claims. (Cl. 177—386.)

10. A submarine sound signaling device comprising a watertight casing composed of two vibratory plates recessed to provide heavy outer rims forming space for the sound generating mechanism, and means contained within said space operating directly upon the two plates for generating the sound vibrations, said vibrations being tuned to the same frequency as that of the front plate and said back plate being tuned to a higher frequency.

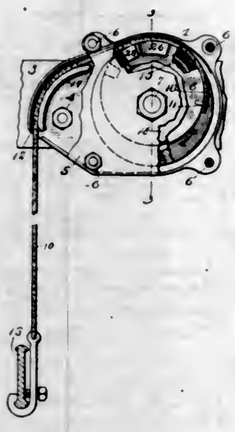
1,677,946. SMOKER'S ARTICLE. ABRAHAM A. BADLER, New York, N. Y., assignor of one-half to Jay H. Kamarek, New York, N. Y. Filed Mar. 27, 1925. Serial No. 18,912. 1 Claim. (Cl. 131—12.)



The herein described combined pipe, cigar holder and cigarette holder, the same consisting of a pipe bowl formed laterally on a face thereof with oppositely-disposed projections which, together with the bowl, are recessed, a bowl stem projecting centrally from said recess and having a reduced threaded end, a cigar-holder member having a conical hollow flared portion loosely embracing said stem with the edge thereof received in said recessed portion of the bowl, the other end having a reduced threaded portion, and a cigarette holding member detachably engaged with the cigar holding member and provided with a mouth piece serving when the device is used as a pipe, a cigar holder or a cigarette holder.

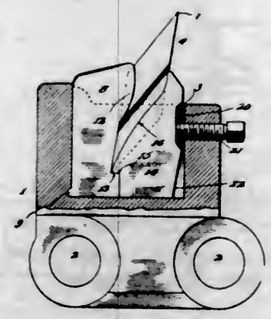
1,677,947. REVIVIFYING OF SPENT DECOLORIZING MATERIALS. OSCAR L. BARNEBEY, Columbus, Ohio. Filed Apr. 12, 1924, Serial No. 706,100. Renewed Mar. 15, 1928. 10 Claims. (Cl. 252—3.)

1. A composition for decolorizing liquids comprising the charred and activated product of a mixture of decolorizing carbon and cellulose fibre.



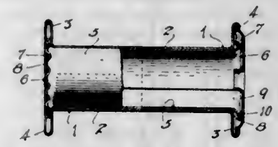
1,677,948. SPRING SUSPENSION FOR AUTOMOBILE CHASSIS FRAMES. RUPERT CARL BICKNELL, Toronto, Ontario, Canada. Filed Mar. 22, 1927. Serial No. 177,385. 3 Claims. (Cl. 280—104.)

2. In a spring suspension device for automobiles, the combination with the front and rear axles, chassis frame and spring supports at the end of the frame, of side suspension means comprising an inverted U-shaped channel member mounted centrally of its length within the side bars of the chassis frame to swing in a vertical plane, leaf springs secured at their ends within the ends of the channel bar, and means for supporting the outer end of the spring upon the front and rear axles.



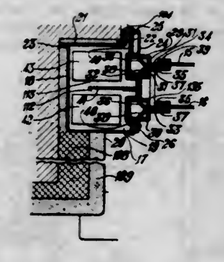
1,677,949. SHOCK ABSORBER. CHARLES E. BOND, Spencerville, Md. Filed Dec. 3, 1924. Serial No. 753,569. 8 Claims. (Cl. 267—10.)

1. In a snubber, the combination of an eccentric drum adapted to be rotatably mounted on one member of a vehicle, a strap connected to and arranged to be wound on the drum and adapted to be connected to another member of the vehicle movable to and from the first, a spring acting on the drum to rotate the same and wind the strap thereon, and a fixed friction surface over which the strap travels in its winding and unwinding move-



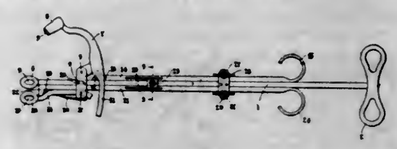
ments, the form of said surface and its relation to the drum being such that when the members of the vehicle move away from each other and the strap is unwound from the drum, the strap will be disengaged from a portion of said friction surface.

1,677,950. BIT. NEWTON K. BOWMAN, Bowdil, Ohio. Filed Aug. 21, 1926. Serial No. 130,636. 3 Claims. (Cl. 262—33.)



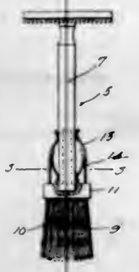
1. The combination of a mining machine chain lug, a holder seating in the lug and having a forwardly and outwardly inclined straight front face, a wedge seating in the lug in advance of the holder and having its rear face disposed obliquely relative to the front face of the holder, a rhomboidal bit disposed between the holder and the wedge and held by the same, the opposed faces of the holder and the wedge conforming to the bit so as to closely engage the same and the entire area of the rear end face of the bit abutting the front face of the holder, and means mounted in the lug and engaging the wedge to prevent withdrawal from the lug.

1,677,951. SPOOL. HENRY BRUCKER, Newark, N. J., assignor to American Aluminum Ware Company, a Corporation of New Jersey. Filed June 17, 1926. Serial No. 116,586. 1 Claim. (Cl. 242—123.)



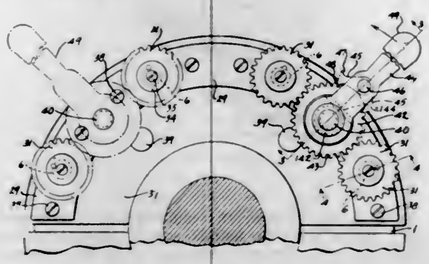
A spool comprising two tubular body sections arranged co-axially end to end to form a drum, and a tie tube passing through said body sections and having its ends upset or turned outwardly to form flanges overlying the corresponding ends of said body section, said flanges being corrugated.

1,677,952. METAL WINDOW. JAMES H. BYRNES, Flushing, N. Y. Filed July 8, 1922, Serial No. 573,541. Renewed Dec. 7, 1927. 13 Claims. (Cl. 189—72.)



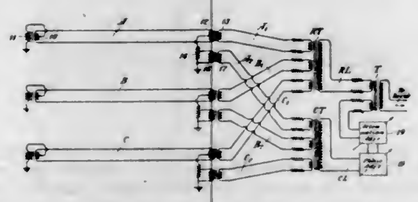
1. In a metal window, the combination of oppositely disposed jambs, each of hollow metal construction, the exposed faces of which are provided with longitudinally extending depressions, hollow races for the respective upper and lower window sash, said races having frontal faces disposed respectively adjacent the lateral faces of the sash, said frontal faces being provided with slots and means accessible through said slots for removably positioning said races respectively in said depressions.

1,677,953. IMPLEMENT FOR FACILITATING THE HANDLING OF ANIMALS. SAMUEL CAMPBELL, Charlottetown, Prince Edward Island, Canada. Filed July 5, 1927, Serial No. 203,653, and in Canada May 16, 1927. 5 Claims. (Cl. 128—223.)



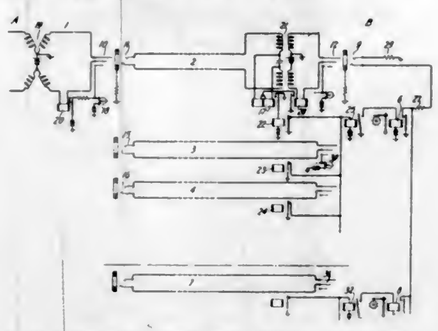
1. An implement of the kind described comprising a main bar, a pair of members mounted adjacent the end of said bar and normally arranged closely together one above the other so that the upper and lower teeth of an animal may engage the upper and lower members respectively, manually operable means for pressing the animal's nose onto said upper member, and manually operable means for moving one of said members away from the other when desired.

1,677,954. SHAVING COMBINATION. ROY LEE CLEARY, Kerlin, Ark. Filed Aug. 16, 1927. Serial No. 213,370. 3 Claims. (Cl. 132—80.)



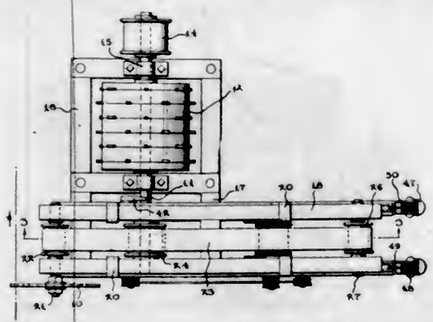
1. In a shaving appliance of the class described, in combination, a razor including a handle, a shaving brush including a bristle backing, a head, said head having a depression for reception of said handle, and a clamping means carried by said head and detachably connected with said handle.

1,677,955. QUICK LOCKUP FOR PLATE CYLINDERS. CURTIS S. CRAFTS, Oak Park, Ill., assignor to Goss Printing Press Company, a Corporation of Illinois. Filed May 18, 1926. Serial No. 109,816. 8 Claims. (Cl. 101—378.)



8. A quick lock-up for plate cylinders including in combination a plate cylinder having a plurality of clip rods provided with plate clamping clips, a gear wheel on each clip rod, and a removable gear wheel adapted to mesh with a plurality of said gear wheels to simultaneously operate the corresponding clip rods.

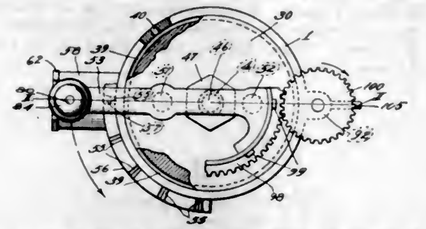
1,677,956. BROADSIDE ANTENNA ARRAY. SAMUEL W. DEAN, Houlton, Me., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed June 3, 1926. Serial No. 113,506. 5 Claims. (Cl. 250—11.)



5. In a transmission system, a plurality of directive antenna combinations arranged side by side and a fraction of a wave length apart in a direction at right angles from the direction in which signals are to be received, a common receiving circuit, a separate line extending from each antenna combination to said receiving circuit, a transformer arrangement for connecting said lines to said receiving circuit, and resistance combinations associated with each line having such values as to in effect build out the transformer arrangements so that each line is terminated in a combined impedance including that of the receiving circuit and other lines substantially equal to its own impedance.

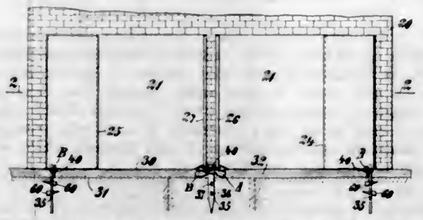
1,677,957. TELEPHONE SYSTEM. LLOYD L. EAGON, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 9, 1926. Serial No. 153,702. 5 Claims. (Cl. 179—175.)

1. In a telephone system, two stations, trunks originating at one of said stations and terminating at the other, a register at the trunk terminating station, means at the trunk originating station for making all of said trunks busy, means at the trunk terminating station for actuating said register in response to the busy condition of all of said trunks, and means for indicating the actuation of the register at the trunk originating station.



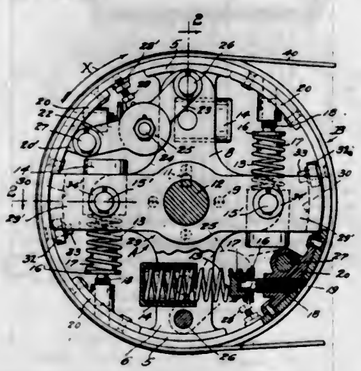
1,677,958. COMBINATION TRIMMING SAW AND SLAB KICKER. WEB M. EDDINS, Barnett, Miss. Filed Apr. 28, 1926. Serial No. 105,241. 4 Claims. (Cl. 143—1.)

1. Apparatus for the purpose indicated comprising a toothed kicker drum, a bodily movable saw frame, a rotary saw carried at one extremity of said saw frame, and a common means for rotating the drum, effecting bodily movement of the saw frame and rotating the saw on its own axis.



1,677,959. FLUID-PRESSURE-CONTROL DEVICE. JOHN C. ERICKSEN, Falls City, Nebr. Filed Sept. 15, 1927. Serial No. 219,658. 10 Claims. (Cl. 303—52.)

2. A pressure fluid control device comprising a casing having two series of correlated ports, a pressure fluid supply pipe communicating with said casing, a rotor, movable in said casing, having exhaust passages and inlet passages, means for moving said rotor to and from its neutral and operative positions, all of the ports of one of said series of ports and all the ports of the other of said series of ports being in communication with said exhaust passages and inlet passages respectively when the

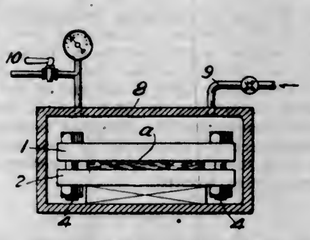


rotor is in its neutral position, and means, including said rotor, whereby the correlated ports of the two series may be successively or selectively connected with the opposite passages, with which they are in communication when the rotor is in the neutral position, as the rotor is moved to the various operative positions.

1,677,960. DOORSTOP AND LATCH. JOHN W. ESKHOLME, Glen Ridge, N. J. Filed Mar. 14, 1925. Serial No. 15,502. 2 Claims. (Cl. 292—110.)

1. In a door stop and latch the combination of a post, a latch having a tapered nose end and a tail end, and pivoted in proper position to the post to overbalance said tail end, said latch having a recess adjacent to its nose end, a turned over flange at the top edge of the nose end and a stop at the bottom edge of the latch adapted to contact with the post to limit the swing of the latch.

1,677,961. GOVERNOR. JOSEPH G. FAY, Seattle, Wash. Filed Dec. 9, 1925. Serial No. 74,254. 4 Claims. (Cl. 192—150.)



1. A governor comprising a driving member, and a driven member disposed one within the other, springs providing power transmission connections between the members, toggle devices providing yielding connections between said members, said toggle devices including heavy bodies subjected to centrifugal force and cooperating with said springs to impart differential rotary movement to said members responsive to speed reductions of said members, a shiftable member rotatively carried by the driven member, and means carried by the driving member and acting responsive to changes in the relative speeds of the driving and driven members to actuate said means for actuating said shifting member.

1,677,962. FLYING MACHINE. THOMAS M. FINLEY, St. Louis, Mo. Filed Mar. 23, 1927. Serial No. 177,623. 3 Claims. (Cl. 244—3.)

1. In a flying machine, a body having a longitudinal channel open at the bottom and provided with a substantially funnel-shaped entrance, the walls of the entrance having receding concave inner portions arranged to form a vacuum or suck when air is drawn into the funnel-shaped entrance whereby head resistance is eliminated and a forward impulse created.

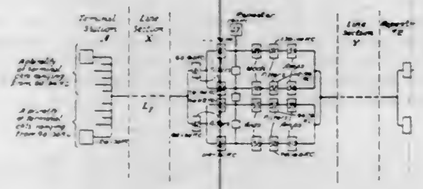
1,677,963. TREATMENT OF WOOD AND PRODUCT THEREOF. BRUCE FORD, Philadelphia, Pa. Filed Sept. 22, 1922. Serial No. 589,930. 8 Claims. (Cl. 34—24.)

2. The process of treating wood which consists in vaporizing moisture in the pores faster than it can escape therefrom by the application of heat to the wood, opposing the disruptive tendency of the vapor accumulating in the pores by mechanically restraining the wood against expansion, and while the wood is mechanically restrained permitting the evacuation of the vapor from the pores.

1,677,964. SALTS OF 3-ACETYLAMINO-4-HYDROXYPHENYL ARSENIC ACID AND METHOD OF PREPARING THE SAME. ERNEST FOURNEAU, Paris, France, assignor to Les Etablissements Poulenc Freres, a Corporation of France. Filed Jan. 18, 1927, Serial No. 161,967, and in France Jan. 19, 1926. 6 Claims. (Cl. 260—14.)

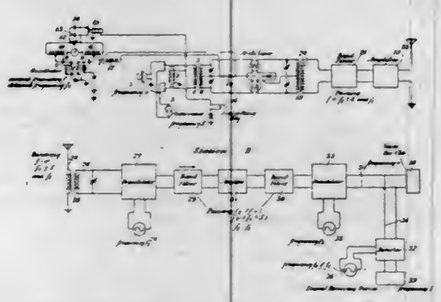
1. A composition of matter containing the ammonium salt of acetylamino-phenylarsenic acid.

1,677,965. PROCESS AND MEANS FOR PRODUCING DESIGNS FOR REPRODUCTION. ARTHUR FRUWIRTH, Brooklyn, N. Y. Filed Sept. 17, 1925. Serial No. 56,820. 24 Claims. (Cl. 95—5.)



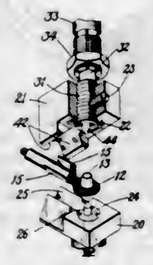
1. The process of producing a printing plate or other design bearing surface which comprises making a nega-

tive of an original, making a positive of the original, placing the negative and positive in spaced apart relation, placing a light-sensitive surface in contact with the



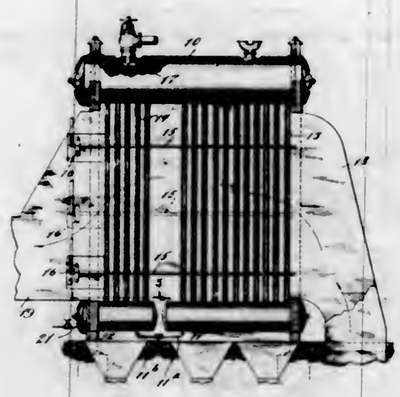
positive, and exposing the light sensitive surface to light passing obliquely through the spaced-apart negative and positive.

1,677,966. CARRIER SIGNALING SYSTEM. ESTILL I. GREEN, East Orange, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 30, 1925. Serial No. 78,455. 9 Claims. (Cl. 179—15.)



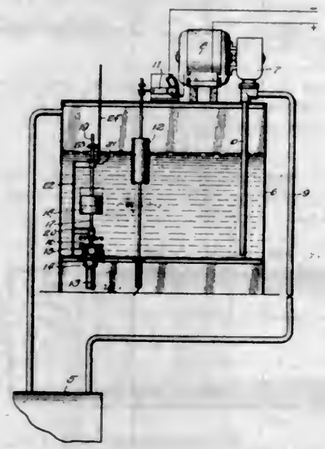
1. The method of equalizing transmission of a plurality of carrier channels transmitted over or through the same medium, which consists in dividing the channels into two groups, beating the frequencies in each group by a frequency equal to the sum of the lowest and the highest frequencies in both groups, selecting the frequencies representing the difference between the beating frequency and the frequencies in each group, and impressing upon the same transmitting medium the resulting frequencies as selected.

1,677,967. RADIO SIGNALING SYSTEM. WILLIAM H. T. HOLDEN, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed May 29, 1924. Serial No. 716,793. 11 Claims. (Cl. 250—6.)



1. In a signaling system, the combination with a modulator of a source of carrier current, separate sources of current to modulate the said carrier current, and means operated by the connection of one of said modulating sources with the said source of carrier current to change the frequency of the said carrier current.

1,677,968. FASTENER-APPLYING DEVICE. WILLIAM HUGHES, Taunton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 8, 1923. Serial No. 611,461. 7 Claims. (Cl. 153—1.)



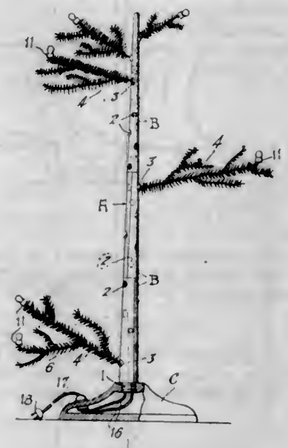
1. A fastener-applying device comprising two relatively movable pressure-applying members, and two dissimilar pairs of fastener-engaging dies carried by said members, one of said pairs of dies being formed and arranged to clench a holding portion of a fastener and the other one of said pairs being otherwise formed and arranged to transform another portion of said fastener while said clenching dies are functioning.

1,677,969. STEAM BOILER. DAVID S. JACOBUS, Jersey City, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed June 1, 1922. Serial No. 565,062. 7 Claims. (Cl. 122—7.)

1. In a steam boiler, an upper steam and water drum, two physically distinct lower mud drums, means for introducing feed water to one of said mud drums, economizer tubes connecting said steam and water drum to the feed-water drum, boiler tubes connecting said steam and water drum to the other mud drum, and means for directing heated gases over the boiler tubes and then over the economizer tubes.

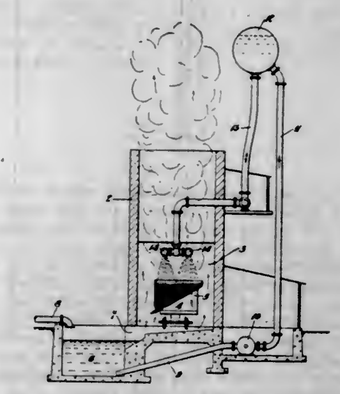
1,677,970. SAFETY DEVICE FOR FUEL SYSTEMS. JOHN T. JANETTE, Chicago, Ill. Filed Feb. 6, 1926. Serial No. 86,487. 6 Claims. (Cl. 137—68.)

6. In an apparatus of the character set forth, the combination of a receptacle having an outlet and means for closing the outlet, which means is normally inoperative but which is adapted to close the outlet when liquid is discharged from the chamber at a rate in excess of the normal discharge.



1,677,971. CARBON ROLL AND CORE FOR MANIFOLDING MACHINES. LAWRENCE EDWARD LENTZ, Harrisburg, Pa., assignor to Elliott-Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 27, 1925. Serial No. 11,995. 2 Claims. (Cl. 242—73.)

1. A carbon roll reel including, a rotatable shaft, a pair of flanges, and an intermediate sleeve, said flanges and sleeve being unconnected and splined to the shaft to be directly driven thereby and relatively separable to extend the capacity of the reel in degree limited only by the length of the shaft.

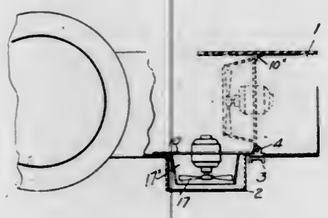


1,677,972. ELECTRICALLY-ILLUMINATED ARTIFICIAL TREE. EMANUEL S. MARKS, Brooklyn, N. Y. Filed Aug. 3, 1927. Serial No. 210,245. 6 Claims. (Cl. 240—10.)

1. An artificial electrically illuminated tree, comprising a trunk portion, a plurality of electric outlet fixtures mounted therein, means for connecting all of said fixtures in an electric circuit, a plurality of branches each having electric wires extending therethrough, an

electric connector element to separately fit any of said outlet fixtures and electrically connected to said wires, and a lamp socket electrically connected to said wires.

1,677,973. METHOD OF QUENCHING COKE. FRANK F. MARQUARD, Clairton, Pa. Filed Aug. 8, 1925. Serial No. 49,038. 3 Claims. (Cl. 202—11.)



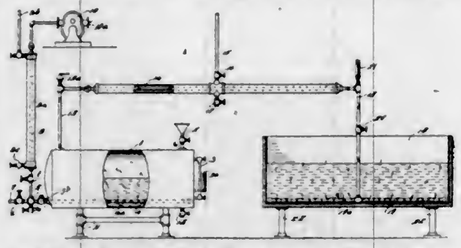
1. The method of quenching hot coke which includes intermittently spraying the hot coke with water for relatively short periods, and permitting the coke to drain and cool for relatively long periods between the successive spraying periods.

1,677,974. AIR-CIRCULATING DEVICE FOR AIR DUCTS. HENRY GRATTAN MCCAFFREY, Galt, Ontario, Canada. Filed Oct. 27, 1927. Serial No. 229,138. 4 Claims. (Cl. 126—110.)

1. The combination with an air duct, of a shutter hingedly mounted at one side of the duct so as to ex-

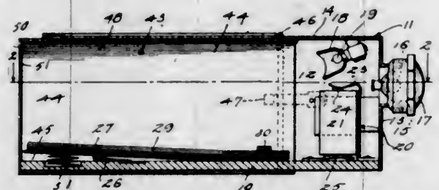
tend either longitudinally of the duct against the side thereof or transversely across the duct, a force fan carried by the shutter, and exerting air pressure, for

automatically swinging the shutter to the transverse position and means for returning the shutter to the longitudinal position when the pressure is relieved.



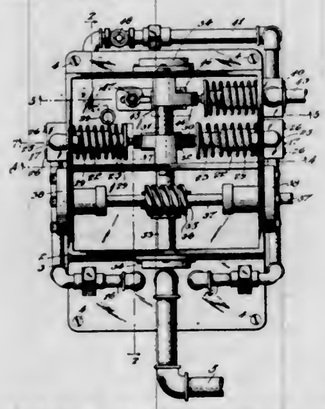
1,677,975. METHOD OF CEMENTING OIL WELLS. MIERLEY T. MCKEE, Zanesville, Ohio. Filed Nov. 26, 1926. Serial No. 150,793. 6 Claims. (Cl. 166—21.)

1. The method of cementing wells, which consists in pumping a drilled well to remove heavy mud laden water from the well casing and the space outside thereof, in lowering the casing so that the same will rest on the bottom of the well, displacing a portion of the water from said casing, placing a body of cementitious material in said casing between a pair of upper and lower plug members raising the casing slightly from the bottom of the well, forcing these materials downwardly in said casing to the bottom of the well with the lower plug member in contact with said bottom, elevating the casing to allow continued pressure applied to the upper plug member to force the cementitious material out of the bottom of the casing and into the lower part of the well and upwardly between the walls of the well and the casing, and in again lowering the casing so that the same rests upon the bottom of the well.



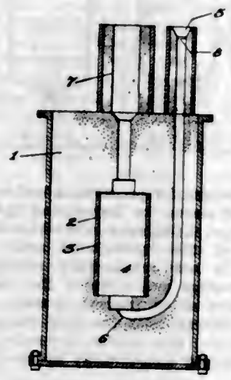
1,677,976. METHOD FOR DELACTATING DAIRY PRODUCTS. WILLIAM J. MCLAUGHLIN, Owatonna, Minn. Filed June 22, 1925. Serial No. 38,785. 2 Claims. (Cl. 99—11.)

2. The process of preparing, mixing and purifying gas and air for introduction into milk to aerate the same, consisting of mixing a gas producing chemical with clean water in a closed vessel, introducing steam into the bottom of the vessel to produce the gas and heat the same, introducing heated air into the bottom of the said vessel to cleanse the air, mix same with



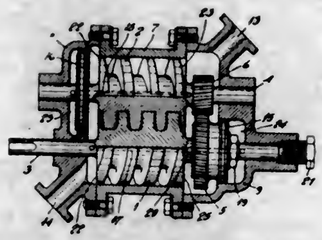
the gas and to drive off the mixture and heating the driven off mixture to from 140° to 200° F. before introduction into the milk.

1,677,977. CHECKER'S PAD HOLDER. JAMES H. MENASCO, Cushing, Okla. Filed Mar. 6, 1928. Serial No. 259,492. 7 Claims. (Cl. 240—6.4.)



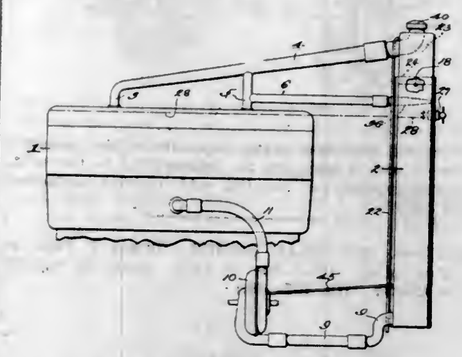
6. In a pad support for memoranda pads, a base, a hood carried by one end of the base, means for supporting a pad upon the base, an electrical illuminating element and a reflector therefor carried by said hood and adapted to direct light downwardly and outwardly upon the base to illuminate said pad, a circuit for said illuminating element including a spring open switch underlying the pad and applied to the base and closed by the application of pressure to the pad, and a shield detachably engageable with the sides of the opposite end of the base and having a transparent top through which a pad supported by the pad supporting means may be observed.

1,677,978. OIL-SUPPLY-CONTROLLING APPARATUS FOR LIQUID-FUEL BURNERS. GEORGE H. MESSER, Newark, N. J. Filed Apr. 6, 1926. Serial No. 100,199. 5 Claims. (Cl. 103—1.)



1. Apparatus of the character described comprising a reservoir for oil, a pump including an unpacked cylinder and piston arranged in said reservoir so that said cylinder and piston are sealed by the oil in said reservoir, said pump having an inlet to be connected to an oil supply and an outlet discharging into said reservoir, a second pump including an unpacked cylinder and piston arranged in said reservoir and sealed by the oil therein, said second pump having an inlet connected to said reservoir for withdrawing the oil therefrom and an outlet for delivering said oil to a desired point.

1,677,979. METHOD OF CASTING ARTICLES HAVING CHROMIUM-ALLOY SURFACES. WALTER M. MITCHELL, Philadelphia, Pa., assignor, by mesne assignments, to Electro Metallurgical Company, a Corporation of West Virginia. Filed Sept. 24, 1924. Serial No. 739,459. 8 Claims. (Cl. 22—203.)



5. In the production of ferrous metal castings having a chromium alloy surface, which production includes coating the mold surface, with chromium and a binder, and casing in such mold; the method of preventing the running of the alloy coating on the casting comprising pouring the base metal under a ferrostatic head substantially between 20 and 30 inches.

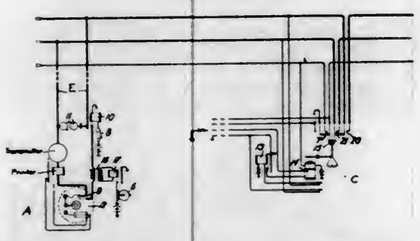
1,677,980. ROTARY PUMP, MOTOR, METER OR THE LIKE. CARL OSCAR JOSEF MONTELIUS, Stockholm, Sweden. Filed July 28, 1926, Serial No. 125,486, and in France Aug. 5, 1925. 6 Claims. (Cl. 103—128.)

1. A rotary pump, motor, meter or the like, comprising a housing and at least two intermeshing screws rotatably mounted in said housing, the latter fitting tightly to the tops of the screw threads, the threads of the intermeshing screws being cut in such a way that the thickness of the threads of the one screw increases gradually from one end of the screw towards the opposite end, whereas the thickness of the threads of the cooperating screw decreases in the same direction, adjusting means being provided for axially displacing and simultaneously turning the one screw relatively to the other screw.

1,677,981. PROCESS OF AND MEANS FOR COOLING INTERNAL-COMBUSTION ENGINES. WELLINGTON W. MUIR, Lockport, N. Y., assignor to Harrison Radiator Corporation, Lockport, N. Y. Filed Aug. 23, 1924. Serial No. 733,697. 17 Claims. (Cl. 123—174.)

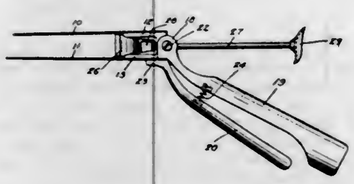
1. In a cooling system for engines the combination of a jacket; a radiator; a connection between said jacket and said radiator; return connections between said radiator and said jacket; and means associated with the system by which there is continually supplied to said jacket automatically and alternately too little, and too much cooling fluid to continuously maintain said jacket at a predetermined desired temperature.

1,677,982. COMBINED PACKING CASE AND TRAY FOR STORAGE-BATTERY CELLS. WILLIAM H. PALMER, Jr., Wayne, Pa. Filed July 10, 1926. Serial No. 121,555. 2 Claims. (Cl. 217—35.)



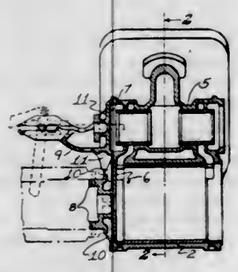
1. A combined packing case and tray for storage battery cells comprising a two-part detachable structure of which one part includes a subdivided tray having end walls and slat sides of which the intermediate slats are removable, and of which the other part includes a housing having a peaked top and side bars of which elongations constitute handles and ends arranged in overlapping relation with the end walls of the tray and adapted for detachable connection therewith.

1,677,983. PRINTING-TELEGRAPH EXCHANGE SYSTEM. RALZEMOND D. PARKER, Brooklyn, N. Y., and DONALD B. PERRY, Maplewood, N. J., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 23, 1922. Serial No. 608,775. 8 Claims. (Cl. 178—2.)



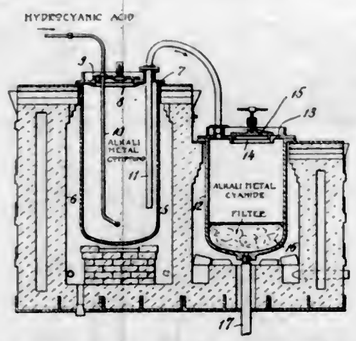
1. A printing telegraph exchange system comprising a plurality of printing telegraph stations, printing telegraph transmitting and receiving mechanisms at each of the stations, a central office, line conductors connecting the stations to said central office, means at said cen-

tral office for establishing connections between said lines to permit the transmission of direct current telegraph signals between the connected line conductors, and means



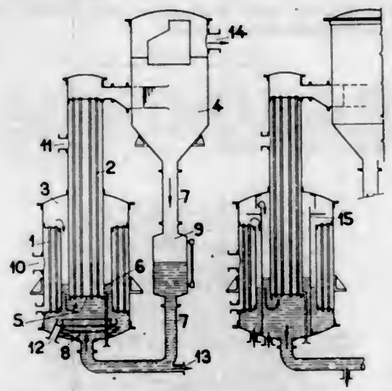
associated with said means responsive to the connection thereof with a busy line for transmitting to the calling station impulses for operating said receiving mechanism.

1,677,984. ICE-CREAM DISHER. GEORGE T. PABE, St. Paul, Minn. Filed July 16, 1923. Serial No. 651,722. 4 Claims. (Cl. 107—48.)



1. An ice cream disher comprising a pair of normally parallel plates, a pair of arcuate attaching members secured to said plates, hinge members formed on said attaching members for hingedly connecting said plates together and handles for moving said plates relative to one another, said hinge members being spaced apart, a plunger operable between said hinge members and extending between said plates and an ejector secured to the end of said plunger.

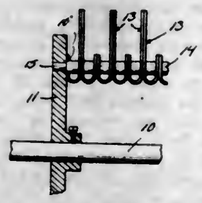
1,677,985. LOCOMOTIVE STRUCTURE. HARRY M. PFLAGER, St. Louis, Mo., assignor to Commonwealth Steel Company, Granite City, Ill., a Corporation of New Jersey. Filed Aug. 30, 1926. Serial No. 132,509. 12 Claims. (Cl. 105—44.)



2. A locomotive bed casting, including a cylinder provided with an integral head, and an integral cross head guide bracket.

1,677,986. APPARATUS FOR THE PRODUCTION OF ALKALI-METAL CYANIDES. ROBERT W. POINDEXTER, Jr., Los Angeles, and PAUL T. DOLLEY, Los Angeles County, Calif., assignors to California Cyanide Company, Incorporated, New York, N. Y., a Corporation of Delaware. Original application filed Apr. 17, 1926, Serial No. 102,612. Divided and this application filed Feb. 9, 1927. Serial No. 166,936. 6 Claims. (Cl. 23—79.)

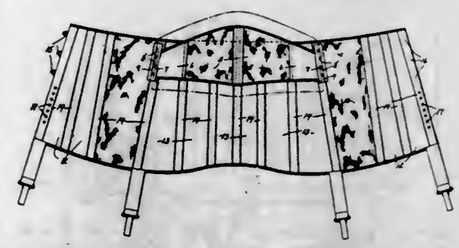
1. In an apparatus for preparing alkali metal cyanides, a converter and means for introducing hydrocyanic acid into the converter, including a tube which does not cause decomposition of the hydrocyanic acid, a protecting sheath which is not substantially attacked by fused alkali metal cyanides and a tip at the end of the tube and sheath, adapted to prevent contact of fused material in the converter with the tube, the tip being composed of a material that neither decomposes hydrocyanic acid nor is attacked substantially by fused alkali metal cyanides.



1,677,987. EVAPORATING APPARATUS. ERMIN POKORNY, Prague, Czechoslovakia. Filed Jan. 4, 1927, Serial No. 159,009, and in Czechoslovakia Jan. 16, 1926. 2 Claims. (Cl. 159—14.)

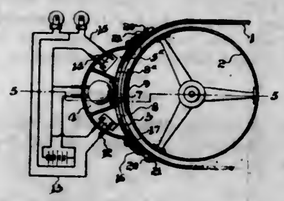
1. An evaporating apparatus comprising, in combination, an outer encompassing inclosed chamber, an enclosed annular heating chamber within and contiguous to the inner surface of the wall of the said outer chamber and including tubes extending vertically therethrough, a second heating chamber having vertically disposed tubes arranged centrally within said annular heating chamber, there being a space between said heating chambers, constituting open communication between the tubes in both heating chambers, said second heating chamber having its lower end positioned above the lower end of the annular heating chamber and its other end situated above said annular heating chamber and the top of the outer enclosed chamber, a steam and juice receptacle, means communicating said receptacle with said centrally disposed heating chamber, a juice container beneath said steam and juice receptacle and communicating with said steam and juice receptacle and with the lower end of the said outer encompassing chamber, said encompassing chambers and centrally disposed heating chambers having inlets for steam, and said outer encompassing chamber having an outlet for juice.

2. An evaporating apparatus, comprising, in combination, an outer encompassing enclosed chamber, an enclosed annular heating chamber within and contiguous to the inner surface of the wall of the said outer chamber and including tubes extending vertically therethrough, a second heating chamber having vertically disposed tubes disposed centrally within said annular heating chamber, there being a space between said heating chambers constituting open communication between the tubes in both heating chambers, a partition within said space forming compartments between said annular and centrally disposed heating chambers and having open communication with each other at their upper ends, said second heating chamber having its lower end situated above the lower end of the annular heating chamber and its other end situated above said annular chamber and the top of the outer enclosed chamber, a steam and juice receptacle communicating with said centrally disposed heating chamber and having a steam outlet, a juice container beneath said steam and juice receptacle, means communicating said container with said juice and steam receptacle and with the lower end of the said encompassing chamber, said encompassing and centrally disposed heating chambers having inlets for steam, and said encompassing chamber having an outlet for juice.



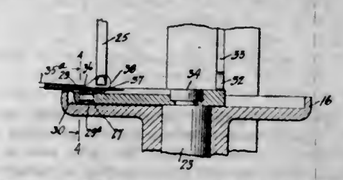
1,677,988. GRINDING MACHINE. ERNEST POLESKE and SEARS POLESKE, Manilla, Iowa. Filed Jan. 14, 1928. Serial No. 246,724. 4 Claims. (Cl. 83—11.)

1. A grinding machine comprising a housing having a grinding chamber, disks rotatably mounted in said chamber, pivot rods extending between said disks, a plurality of hammers pivotally mounted in contiguous relation on said pivot rods between said disks, said hammers comprising flat J-shaped bars presenting opposed spaced portions having alined openings therein through which the pivot rods extend.



1,677,989. REDUCING CORSET. MICHAEL J. REYNOLDS, West Haven, Conn., assignor, by mesne assignments, to The Strouse, Adler Company, New Haven, Conn., a Corporation. Filed Dec. 13, 1924. Serial No. 755,680. 1 Claim. (Cl. 2—48.)

A solid-back open-front reducing-corset having a corset-body comprising a solid-back section, two complementary hip sections, and two complementary front-sections, means for fastening the free edges of the said front-sections together, two flaps respectively applied to the inner face of the corset-body in substantially vertical positions near the upper edge thereof at points adjacent to the rear edges of the hip-sections thereof, a removable vertically-adjustable diaphragm-reducing belt comprising an elastic central section and non-elastic end-sections and having its upper edge symmetrically sloped downward

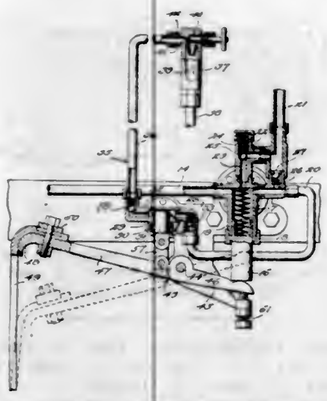


from its center, and fastening means for vertically adjusting the ends of the said belt to the said flaps with respect to which it is vertically adjustable.

1,677,990. SPEEDOMETER. PERCY A. ROBBINS, Highland Park, Ill. Filed Dec. 13, 1926. Serial No. 154,581. 8 Claims. (Cl. 116—57.)

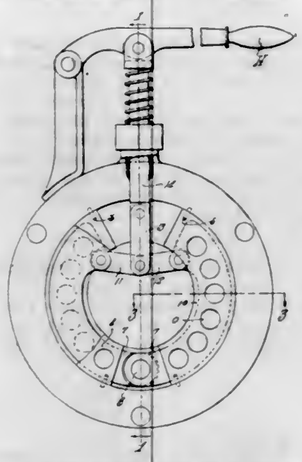
1. A speedometer having a part rotatable to indicate speed; a segmento-cylindrical mirror mounted on said part concentric with its axis; a lamp; a wall separating the lamp from the said part and provided with a window through which light may shine on the mirror when the latter is brought to a suitable position by the movement of said rotatable part; a second window through which light passing through the first window to the mirror is reflected; and means for utilizing light so reflected to give a warning signal.

1,677,991. NEEDLE PLATE FOR FUR-SEWING MACHINES. HARRY ROSS, New York, N. Y., assignor to Fur Guide Machine Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 10, 1927. Serial No. 167,121. 4 Claims. (Cl. 112—16.)



1. In combination with a sewing machine provided with material feeding disks, a needle plate associated with one of the disks, a resilient member on the plate in co-operative engagement with the said disk to prevent tipping thereof, and means on the resilient member to form a loop of needle thread.

1,677,992. REGULATING APPARATUS. ERNEST J. SERPAS, New Orleans, La. Filed Sept. 19, 1927. Serial No. 220,599. 6 Claims. (Cl. 184—7.)

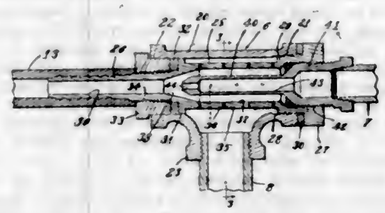


1. In combination with a lubricating system for vehicles having lubricant carrying conduits in connection with a pump, a piston in said pump and means having

connection with the axle of the vehicle for operating said piston, a supplemental system, a ram in said supplemental system having a piston connected with said operating

means, a pipe forming communication between the pump and the ram casing, a check valve interposed between said pipe and said ram casing, and means for controlling the flow of lubricant through the supplemental system.

1,677,993. VALVE. WILLIAM H. STADDEN, Springfield, Mass. Filed July 25, 1927. Serial No. 208,270. 6 Claims. (Cl. 251—18.)

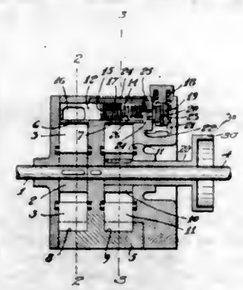


1. A valve construction, including a curved valve seat having a tapered cross section, with a plurality of port openings therein on each side of the valve seat, a pivoted valve closure of curved form having a wedge shaped cross section adapted to fit the tapered cross section of the valve seat and of approximately the same curvature as the seat, and mechanism to force the closure to turn on its pivot and wedge in said seat.

1,677,994. BRIQUETTE AND PROCESS OF MAKING THE SAME. ALBERT L. STILLMAN, Plainfield, N. J., assignor to The General Fuel Briquette Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 21, 1927. Serial No. 162,682. 4 Claims. (Cl. 44—16.)

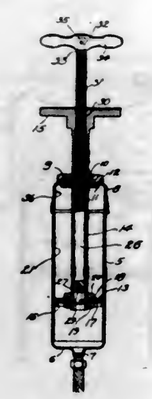
1. The method of making briquettes which comprises bringing together approximately 90% of powdered carboniferous fuel and approximately 5% to 7% molasses lees and from 5% to 3% of sulphite liquor, grinding, crushing, and kneading the thus assembled mixture until an intensely interacted moldable agglomerate is formed, shaping the agglomerated mixture into briquettes under pressure and then subjecting the briquettes to a carbonizing temperature.

1,677,995. MIXING VALVE. JOHN H. TRITZ, Clinton, Iowa, assignor to Cotta Transmission Corporation, Rockford, Ill., a Corporation of Illinois. Filed Apr. 5, 1926. Serial No. 99,760. 1 Claim. (Cl. 103—263.)



A spray fitting for the purpose described, comprising a hollow T-shaped body member having a pair of aligned end openings and an intermediate side opening, a hollow tubular jet element extending through said body member between the aligned open ends thereof, having the intermediate portion thereof spaced from the inside walls of said body member, there being a plurality of restricted openings provided in the wall of the jet element in said intermediate portion, the ends of said jet element serving to close the aligned end openings of the body member, at least one of said ends being externally threaded and the corresponding end of said body member being internally threaded for threaded reception thereof whereby the jet element is arranged to be threaded tightly in place in the body member, the other end of said jet element being smaller than the bore at that end of the body member and being externally threaded, the said end of the bore being smooth, a packing washer on the said end of the jet element, a packing nut threading on said end and arranged when tightened to spread the washer so as to make a sealing fit in the bore, the tightening of the packing nut being unaffected by the tightening of the jet element by reason of the arrangement set forth, and vice versa, an air injector nozzle mounted in the rearward end of said jet element and extending centrally therein toward the opposite end thereof in spaced relation to the inside walls of said jet element, means for supplying air under pressure to said injector, means for supplying liquid under pressure to the intermediate side opening of the body member for discharge into the jet element through the restricted openings in the walls thereof, and means communicating with the forward end of said jet element for conducting a spray discharged from said fitting resulting from the action of the air with the liquid.

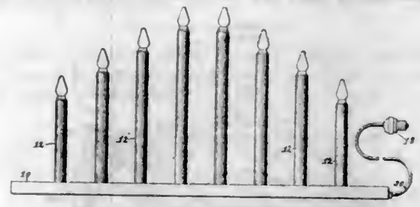
1,677,996. HYDRAULIC CHANGE-SPEED GEAR. SVEN GUSTAF WINGQUIST, Gottenborg, Sweden. Filed Jan. 24, 1924, Serial No. 688,248, and in Sweden Feb. 28, 1923. 13 Claims. (Cl. 192—58.)



1. A hydraulic change speed gear, comprising a rotary delivery pump device and a rotary receiving pump device, each of said pump devices comprising at least one pump element, at least one pressure channel forming a communication between said delivery pump device and said receiving pump device, a valve disposed in said pressure channel and controlled by the fluid pressure set up in said delivery pump device in overcoming the load to be driven and tending to open said valve, a spring device tending to close said valve, and means for automatically

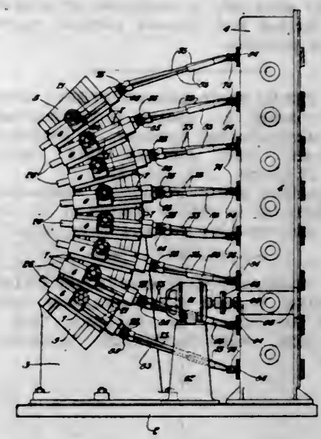
altering the hydraulic control of said valve when one of the rotary members of the change speed gear exceeds a certain speed, so that said valve is caused by the said

spring device to take up its closed position, said means comprising a valve device controlled by centrifugal force and by a spring device.



1,677,997. GREASE GUN. HENRY S. BEAL, Springfield, Vt. Filed Jan. 13, 1921. Serial No. 436,881. 14 Claims. (Cl. 221—47.3.)

1. A grease gun comprising a main cylinder having a nipple at one end for the emission of lubricant, a main plunger movable in said cylinder, said plunger having a stem projecting from the opposite end of the cylinder and having a bore which constitutes a supplemental cylinder, and a supplemental plunger normally movable by and with the main plunger and operable in the supplemental cylinder to eject grease through said nipple when the main plunger is relatively stationary.

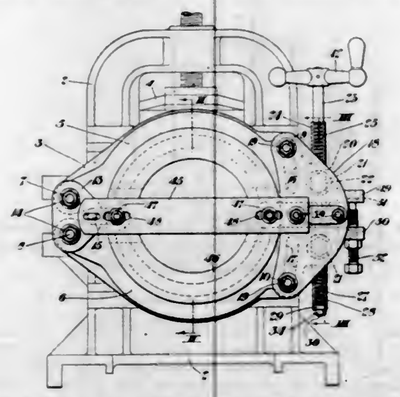


1,677,998. ELECTRICAL CHRISTMAS CANDLES. CHESTER T. BLISS, Melrose Highlands, Mass., assignor to Chetlew Manufacturing Company, a Copartnership comprising Lewis J. Sage and himself, Malden, Mass. Filed Oct. 9, 1925. Serial No. 61,520. 1 Claim. (Cl. 240—10.)

An illuminating device of the character described, comprising an elongated substantially flat portable base capable of being set upon and supported by the sill of a window and provided with a wire-receiving chamber and having in its upper surface a plurality of openings spaced apart and communicating with said wire-receiving chamber, a plurality of tubular members of different lengths inserted into the openings in said hollow base and projected upwardly from the latter, socket-supporting members inserted into said hollow tubular members and connected with the wires in the chamber in said base, and relatively small tapering lamps of low voltage

in said sockets, said tubular members being arranged to decrease in length in opposite directions from the center of the base toward the ends thereof.

1,677,999. RADIAL MULTIPLE-SPINDLE DRILL. JOHN J. BOAX, McKeesport, and BORIS S. ROBINOFF, Pittsburgh, Pa., assignors to National Tube Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Dec. 12, 1922. Serial No. 606,464. 4 Claims. (Cl. 77—26.)

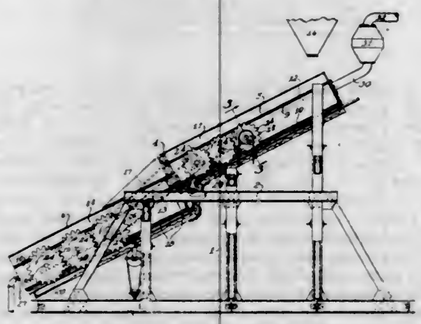


1. A radial multiple spindle drilling machine, comprising an upright drill-head support provided with an upright arcuate guideway, an upright series of drill-heads mounted on said guideway and adjustable along said guideway relative to each other, drill spindles mounted for rotation on said drill-heads, in combination with an upright housing separate from and in rear of said support, an upright main drive shaft in said housing, an upright series of substantially horizontal sub-drive shafts in said housing and geared to said main drive shaft, and drill driving means including longitudinally expansible shafts for connecting the said drill driving means and also including means to permit individual adjustment of the drill-heads along the arcuate guideway without interfering with the drill driving means.

1,678,000. ADJUSTABLE DIE HOLDER. JOHN J. BOAX, McKeesport, Pa., assignor to National Tube Company, a Corporation of New Jersey. Filed Oct. 26, 1926. Serial No. 144,304. 5 Claims. (Cl. 10—89.)

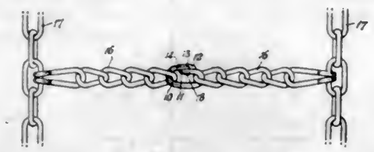
1. The combination with a die shoe holder, and a pair of die shoes pivotally supported at one end on said die shoe holder, of means associated with the other end

of said die shoes for moving said die shoes about said pivotal supports, said means including a nut revolvably mounted in each of said shoes, an adjusting screw member having right and left-hand threaded portions in



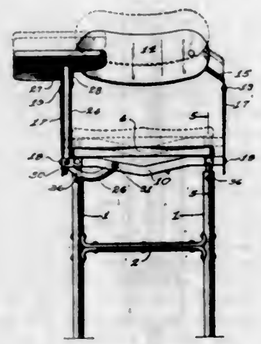
threaded engagement with said nut members, one of said threaded portions being movable relative to the other so that said die shoes may be independently adjuated, and means for locking said threaded portions together for simultaneous operation.

1,678,001. PERMANENT-MAGNET STEEL. PORTER H. BRACE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 16, 1919. Serial No. 271,480. 13 Claims. (Cl. 175—21.)



1. A magnetized member comprising substantially 1% to 10% cobalt, 1% to 10% of a metal of the chromium group and the remainder iron and minor impurities.

1,678,002. COMBINED MILL, CONVEYER, DRIER, AND CLASSIFIER. WALTER DUISENBERG, Los Gatos, and JOHN H. MACARTNEY, San Francisco, Calif. Filed Dec. 21, 1927. Serial No. 241,526. 14 Claims. (Cl. 83—11.)

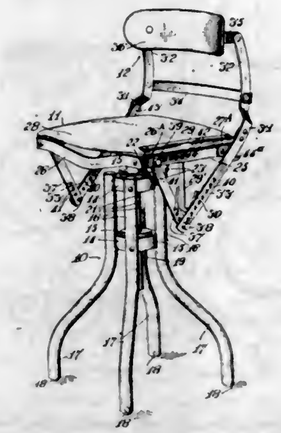


1. A device of the class described comprising superimposed elongated conveying surfaces mounted at an incline and downwardly over which material passes by gravity, a grizzly at the upper end of the upper surface and through which material passes onto the upper end of the lower conveying surface, means for feeding material onto the grizzly, and a plurality of material disintegrating mill members rotatably mounted between the surfaces to coact with the surfaces to crush the material passing through the grizzly in its travel downwardly over the lower surface.

1,678,003. REPAIR DEVICE FOR AUTO SKID CHAINS. FERDINAND G. FAHRBACH, Pelham Manor, N. Y. Filed Apr. 19, 1927. Serial No. 184,850. 1 Claim. (Cl. 59—85.)

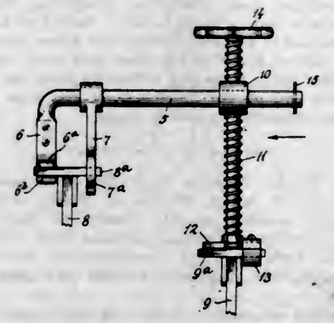
A repair device for the cross-chains of anti-skid chains comprising a link of rubber having opposite ends overlapping each other in separable engagement for connecting said rubber link with the terminal links of a broken cross-chain, one of said ends being provided with an opening, and a pin embedded in the other of said link ends and projecting transversely therefrom for insertion into said opening whereby said link ends are detachably connected with each other.

1,678,004. CHAIR. WILLIAM S. FERRIS, Elkhart, Ind. Filed Jan. 8, 1924. Serial No. 685,005. 3 Claims. (Cl. 155—128.)



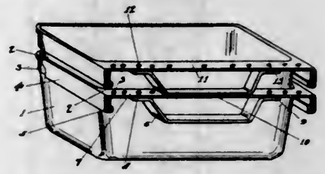
1. A chair embodying therein a plurality of legs, a rectangular metallic seat frame including side and front frame members, a tablet disposed above one side of the frame, an upright member secured at its top end to the front end of the tablet and having a curved bottom end disposed below the seat frame and secured to the front member thereof at a plurality of points and a second upright member secured at its top end to the rear end of the tablet, and at its bottom end to the side member of the frame.

1,678,005. BAIL HANDLE. FRANK W. A. HALLERMAN, St. Louis, Mo. Filed June 12, 1925. Serial No. 36,570. 2 Claims. (Cl. 220—94.)



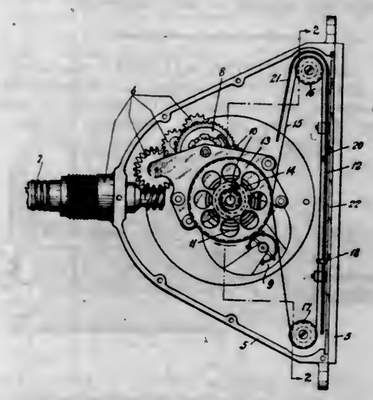
1. A bail handle, comprising, a resilient strip curled to provide a handle and having a recess therealong to receive the bail, and having a pair of inturned flanges along said recess, adapted to clamp the bail between said flanges.

1,678,006. METALLIC CHAIR, STOOL, SEAT, AND THE LIKE. FREDERICK H. HEADLEY, Northfield, near Birmingham, England. Filed Jan. 19, 1924, Serial No. 687,184, and in Great Britain Sept. 18, 1923. 6 Claims. (Cl. 155—155.)



1. In a chair or the like, the combination of a seat frame, a seat member carried thereby, a back rest frame comprising two laterally spaced arms, a brace bar and a back rest member connecting the top ends of said arms together, links connecting the bottom ends of said arms with the front end of the seat frame, a hook member depending from the rear end of the frame at its middle and hook devices carried on the inner surfaces of said arms below the brace bar and adapted to hook over parts of the seat frame near its rear end to hold the back rest frame in its operative position, said hook devices being capable of being disengaged from the seat frame so that said back rest frame may be swung downwardly into a position below the seat frame, wherein the brace bar engages the depending hook member to support the back rest frame in this last mentioned position.

1,678,007. ATTACHMENT FOR AUTOMOTIVE VEHICLES. JOHN J. HILLERY, Boonton, N. J. Filed Dec. 22, 1926. Serial No. 156,438. 3 Claims. (Cl. 29—84.)

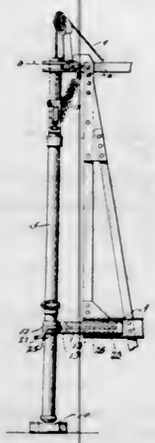


1. An attachment of the kind described comprising a supporting rod, a clamping device at one end of said rod for clamping it upon the pedal of an automotive vehicle, a yoke slidably mounted upon said rod for engagement with said pedal to fix said rod in position thereon and pressure developing means adjustably carried by said rod for depressing an adjacent pedal of said automotive vehicle.

1,678,008. BAKING PAN. JOSEPH GEORGE JACKSON, Chicago, Ill. Filed June 8, 1927. Serial No. 197,387. 4 Claims. (Cl. 53—6.)

3. In a baking pan a flat deck portion extending horizontally an appreciable distance and surrounding said pan and a depending spacing member attached to said deck portion.

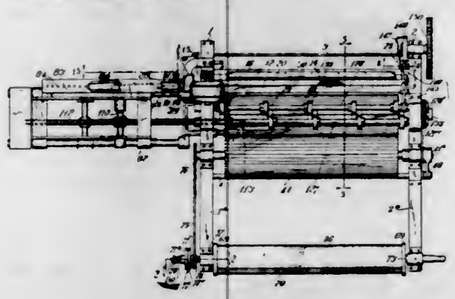
1,678,009. STRAIGHT-LINE INDICATING MECHANISM. JOSEPH LEOPOLD, New York, N. Y., assignor to Consolidated Instrument Company of America, a Corporation of New York. Filed Aug. 14, 1926. Serial No. 129,205. 6 Claims. (Cl. 235—104.)



5. In association with a plane chart and an index rectilinearly movable thereover, a guide member parallel to the chart, said guide member being adapted to control the normal travel of the index between the limits of the chart and the abnormal travel thereof beyond one of said limits.

1,678,010. CRANE ATTACHMENT. ERICH H. LICHTENBERG, Milwaukee, Wis., assignor to Koehring Company, Milwaukee, Wis., a Corporation. Filed May 8, 1923. Serial No. 637,594. 12 Claims. (Cl. 212—50.)

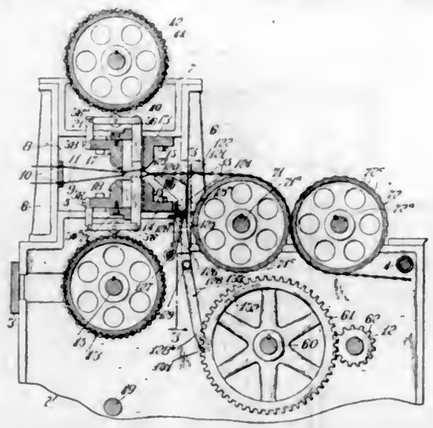
1. In combination, a support, a crane thereon embodying a horizontally swinging boom, a load engaging apparatus on said boom, a mast supporting the boom and mounted out of true vertical line so as to automatically cause swinging of the boom in one direction, cable operating means for the load engaging apparatus for raising a load and thereby initiating said swinging movement of the boom in one direction, and means for causing a swinging movement of the boom in another direction, adapted to have its operation initiated by action of said cable means.



12. In combination, a portable machine comprising a framework, a crane attachment carried thereby and em-

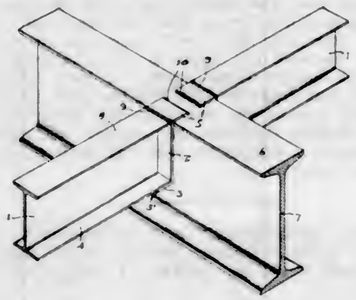
bodying a boom, cable hoisting means associated with said boom for raising loads to be handled by the attachment, a bracket co-operating to support said crane attach-

ment on the portable machine, and means for adjusting said bracket longitudinally of the framework of said machine and also laterally of said framework.



1,678,011. REED-WEAVING MACHINE. MARSHALL B. LLOYD, Menominee, Mich., assignor to Heywood-Wakefield Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 29, 1925. Serial No. 53,281. 21 Claims. (Cl. 139—28.)

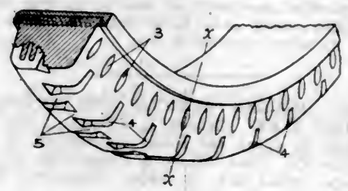
1. A reed weaving machine embodying therein, means for forming a plurality of strands into a shed, means for introducing stakes into said shed, and means for straightening each stake when in the fabric and at a plane spaced from that of its introduction into the shed.



1,678,012. REED-WEAVING MACHINE. MARSHALL B. LLOYD, Menominee, Mich., assignor to Heywood-Wakefield Company, Boston, Mass., a Corporation of Massachusetts. Filed Sept. 14, 1925. Serial No. 56,139. 17 Claims. (Cl. 139—28.)

1. A reed weaving machine embodying therein, sets of top and bottom strand manipulating members adapted to engage portions of alternate and intermediate strands respectively and to move them from one side to the other and vice versa of a neutral plane to form successive sheds, a cylinder disposed above and associated with the top strand manipulating members and a second cylinder disposed below and associated with the bottom strand manipulating members, said cylinders each having such a contour as to impart movement to all of its associated manipulating members for a predetermined time, and less than all of said members at another time to form a shed

wherein adjacent alternate and intermediate strands are in the same common plane, and means for inserting stakes into said sheds.

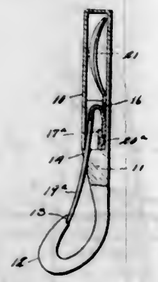


1,678,013. STRUCTURAL-STEEL FABRICATION. ROBERT L. MCINTYRE, Toronto, Ontario, Canada. Filed Aug. 2, 1926. Serial No. 126,676. 4 Claims. (Cl. 189—36.)

1. A structural steel fabrication, comprising in combination with a beam a metal member formed of Z-shape abutting the end of the beam having one flange extending under the bottom flange of the beam and fused thereto, and the other flange extending outwardly from the beam, the abutting end of the top flange of the beam being fused to the outwardly extending flange.

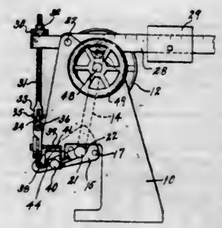
1,678,014. TIRE. CHARLES M. MANLY, Richmond Hill, N. Y.; John M. Manly, William G. Manly, and Basil M. Manly, executors of said Charles M. Manly, deceased, assignors to Overman Cushion Tire Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 4, 1922. Serial No. 579,646. 4 Claims. (Cl. 152—1.)

1. A cushion tire having a series of deep spaced apart transverse clefts extending radially into it from the tread and extending laterally from the middle portion through its right and left sides alternately; and a series of spaced apart cavities extending transversely through the radially-outer ends of said cavities being located in subsection a long radially-extending dimension and a short circumferentially-extending dimension, said cavities alternating in circumferential location with said tread-



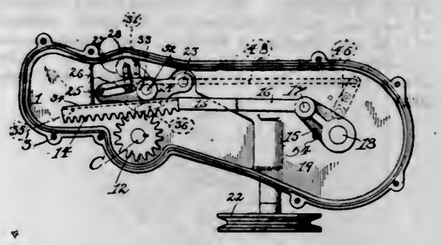
clefts, the radially-inner ends of said clefts and the radially-outer ends of said cavities being located in substantially the same cylindrical zone of the tire.

1,678,015. METHOD OF MAKING INNER TUBES. ERNEST W. MELVIN, Milwaukee, Wis., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Dec. 17, 1924. Serial No. 756,622. 1 Claim. (Cl. 18—53.)



The method of making inner tubes for pneumatic tires which comprises, tubing the stock to desired shape but of a cross sectional diameter less than the cross sectional diameter of the mandrel upon which it is to be cured by an amount such that when the tube is stretched upon the mandrel the tendency of the tube to hug the mandrel is sufficient by and of itself to prevent the penetration of the vulcanizing fluid between the tube and the mandrel, stretching the so formed tube onto the mandrel and subjecting the tube to vulcanization.

1,678,016. KEY-RING HOLDER. ROBERT F. MENKE, Bessmay, Tex. Filed Dec. 31, 1927. Serial No. 243,955. 7 Claims. (Cl. 24—3.)

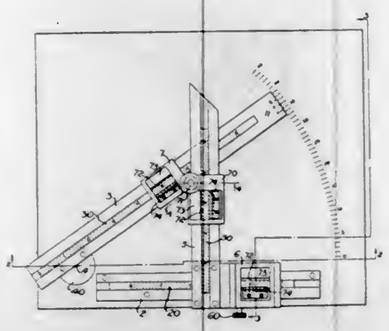


1. A key ring holder of the character described comprising a belt loop, a snap hook extending from one end of the belt loop and having a returned bill, a belt-retaining spring disposed within the belt loop, the spring having a base fitting within the belt loop adjacent the snap hook and attached to the belt loop, said base being formed with an integral, longitudinally extending, outwardly curved belt-retaining spring.

1,678,017. FLEX-TESTING MACHINE. THOMAS MIDGLEY, Hampden, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Apr. 25, 1924. Serial No. 709,040. 4 Claims. (Cl. 73—51.)

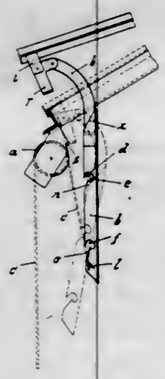
1. The method of testing material comprising arranging strips of the material in a cruciform test piece so as to form a central multi-ply portion, and rapidly flexing the test piece back and forth at this central portion over a member without substantial slipping between the member and the test piece.

1,678,018. GEARING FOR WASHING MACHINES. GLENN MORE and GUNNARD OBERG, Jamestown, N. Y., assignors to The Blackstone Mfg. Co., Jamestown, N. Y., a Corporation of New York. Filed Feb. 3, 1926. Serial No. 85,760. 5 Claims. (Cl. 74—14.)



1. A gearing for washing machines comprising a fixed support, an upright shaft operatively mounted therein, a spur gear on said shaft, an arm pivotally mounted on the support and provided with two spaced apart, projecting members, a rack bar provided with a flange and adapted to reciprocate between said members, means for actuating the rack bar and manually operated means for actuating the pivoted arm, whereby the rack bar is shifted into and out of mesh with said gear, one of the projecting members of the pivoted arm being a flange with which the flange of the rack bar has sliding contact.

1,678,019. CALCULATING DEVICE. NORFORD L. OATES, Seattle, Wash. Filed July 22, 1927. Serial No. 207,658. 2 Claims. (Cl. 33—97.)



1. An instrument for solving right angled triangles comprising a base having an arcuate scale, three bars positioned to represent the three sides of a right angle triangle, one of said bars being pivoted at the center of the arcuate scale, a second bar being fixed upon the base in parallelism with an adjacent side of a triangle of which said center is an apex, means for slidably connecting said third bar to the fixed bar, said means holding said third bar at right angles to the said fixed bar, all of said bars having thereon scales which for the pivoted and for the fixed bars are based upon the

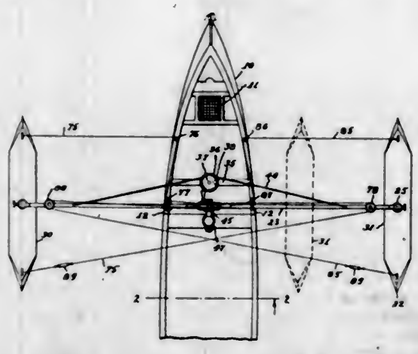
apex of the triangle represented by the said pivot point and for the third bar upon the side of the triangle to which it is perpendicular, two slides carried one by each movable bar and pivoted together at the intersection of

the two sides of the triangle represented by said two bars, said slides carrying indicia cooperating with the scales upon said two bars and each provided with a scale cooperating with the scale upon the respective bars to give vernier readings.

1,678,020. DEVICE FOR OPENING AND CLOSING ATTIC WINDOWS. FRITZ PETERSEN and HERMANN KAUSSMANN, Recklinghausen-Sud, Germany, assignors to Firm of: Tischler & Seichter, Recklinghausen-Sud, Germany. Filed Jan. 18, 1927, Serial No. 161,781, and in Germany May 6, 1926. 1 Claim. (Cl. 268—103.)

A device for opening and closing attic windows, comprising, in combination, a depending hook and a roller guide both fixed to the window frame, said roller guide having a notch therein, a roller in said roller guide, a knee-lever fulcrumed to the window and having a hook-shaped free foot end for engagement in said notch with closed window, an operating lever with notched front edge at its top end somewhat bent in forward direction and there pivoted to said knee-lever, said operating lever having a double bend and an inclined race at the upper end of its straight part facing said hook in the closed position of the window, counterhooks at the lower parts of the notches in the front edge of said operating lever, and a cord attached to the lower end of said operating lever and guided over said roller with its free end depending therefrom and adapted when pulled to unlock said knee-lever from its notch and to effect an engagement of said operating lever with said hook thereby holding the window in open position, and finally when further pulled to disengage the notched front edge of said lever from said hook and when released to effect a descent of said lever with its rear edge sliding along said hook until the lever again assumes its initial position of rest.

1,678,021. MOLDED ARTICLE AND METHOD OF MAKING SAME. GEORGE L. PREBLE, Lynn, Mass., assignor, by direct and mesne assignments, to Preble Box Toe Co., Lynn, Mass., a Corporation of Massachusetts. Filed Mar. 18, 1924. Serial No. 700,005. 5 Claims. (Cl. 91—68.)

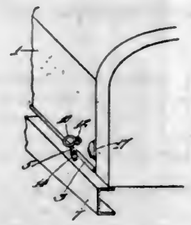


1. The method of making material for molded articles which comprises incorporating in fibrous material a cellulosic solution and comminuted absorptive substance, partially drying the material, compacting the material in sheet form, and then drying the material.

1,678,022. PROCESS FOR TREATING RUBBER LATEX AND PRODUCTS OBTAINED THEREBY. OMAR H. SMITH, New York, N. Y., assignor to General Rubber Company, New York, N. Y., a Corporation of New Jersey. Filed June 25, 1925. Serial No. 39,626. 15 Claims. (Cl. 18—50.)

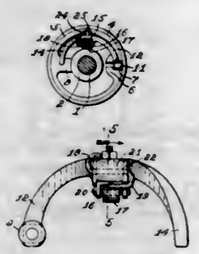
1. A process for treating rubber latex which consists in thickening the latex with a buffer solution, separating water-soluble substances therefrom and recovering a purified dispersible product.

1,678,023. CANOE WITH STEERABLE PONTOON. JOSEPH D. STITES, Whitestone, N. Y. Filed July 9, 1926. Serial No. 121,406. 17 Claims. (Cl. 114—123.)



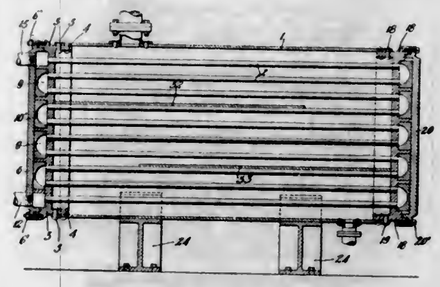
1. An attachment for a boat comprising supports extending from opposite sides of the boat; floats pivoted on said supports; and means for operating said floats; the center of the floats being to the rear of the center of the boat.

1,678,024. CONDENSATION PRODUCT AND METHOD OF MAKING THE SAME. CHARLES O. TERWILLIGER, Mount Vernon, N. Y., assignor to Fritz v. Briesen, trustee, New York, N. Y. Filed Oct. 17, 1924. Serial No. 744,283. 5 Claims. (Cl. 260—3.)



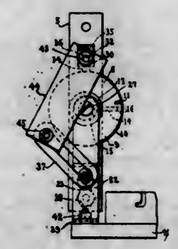
1. A method of making condensation products which comprises providing a solution containing urea, formaldehyde and a phenolic body, in which the ratio of 40% by weight aqueous formaldehyde to urea is less than 2.5 to 1.0, and heating the same to form a condensation product.

1,678,025. HOOD LATCH FOR AUTOMOBILES. MILLARD H. TONCRAY, Detroit, Mich., assignor to Hudson Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed July 27, 1923. Serial No. 654,152. 4 Claims. (Cl. 292—114.)



1. In combination with a bonnet for an automobile having an aperture, in its side above the lower edge thereof, of a latch therefor comprising a rod having a hook member at its upper end to engage said aperture, a spring exerting downward and inward pull on the rod and a rubber cushioning member surrounding the rod contacting with the lower edge of the bonnet and taking the inward thrust of the rod.

1,678,026. FRICTION CLUTCH. JOHN R. VOORHEES, Cedar Falls, Iowa. Filed Jan. 31, 1927. Serial No. 164,811. 2 Claims. (Cl. 192—78.)

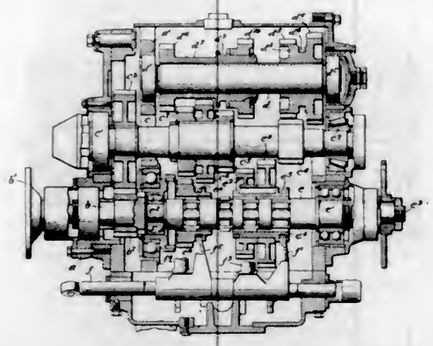


1. A friction clutch, comprising in combination, a rotatable shaft, an open cylindrical clutch-member mounted loosely non-slidably thereon, an elastic split-ring clutch-body fixed on said shaft within said clutch-member, a terminally coned sleeve slidably mounted upon said shaft adjacent said clutch-body, an arcuate arm astride of the coned part of said sleeve and having a squared termination seated between the separated ends of said split-ring clutch-body, spaced lugs on said arcuate arm, an arm pivotally mounted between said lugs, a pintle-rod connecting said lugs and on which said arm is mounted, an anti-friction roller on said arm, and said pintle-rod having its ends hooked to act as stops against unrestricted swinging of said arm, and means movably mounted on the arcuate arm for adjusting the position of the last-mentioned arm and roller relatively to said coned sleeve.

1,678,027. HEATER. CHARLES L. WAGNER, Boonton, N. J., assignor to C. L. W. Patents Corporation, a Corporation of New Jersey. Filed Mar. 28, 1925. Serial No. 19,016. 2 Claims. (Cl. 257—289.)

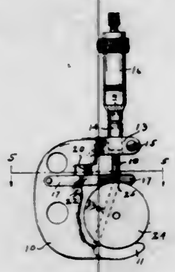
1. A heater comprising a shell, a header, tubes within said shell to conduct the medium to be heated, the ends of said tubes connected with said header, replaceable blocks within said header, said blocks forming chambers in said header, the walls of said chambers being curved to change the direction of flow of the medium to be heated from one tube to the next adjacent tube.

1,678,028. RESISTANCE-CONTROL APPARATUS. HENRY J. WIEGAND, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed July 18, 1923. Serial No. 652,462. 13 Claims. (Cl. 201—55.)



10. The combination with an insulating base, a resilient conductive clamping bracket secured thereto, a resistance element to be inserted and retained between said base and said bracket and means to electrically connect the resistor of said resistance element with said bracket, of a co-operating contactor for said resistance element, a conductive contactor support carried by said base and relatively adjustable, terminals carried by said support and said bracket to provide for mechanical securement and electrical connection of an associated control instrumentality.

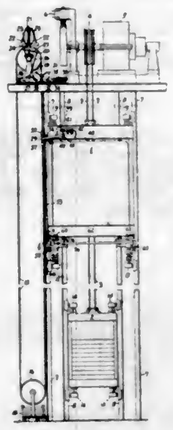
1,678,029. SELECTIVE CHANGE-SPEED MECHANISM WITH TWO REVERSE GEARS. GOTTFRIED WIEBER, Plainfield, N. J., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed May 5, 1927. Serial No. 188,899 5 Claims. (Cl. 74—57.)



1. In a motor vehicle transmission of conventional design having a splined shaft, a countershaft, gears mounted thereon, a reverse shaft, sliding change speed

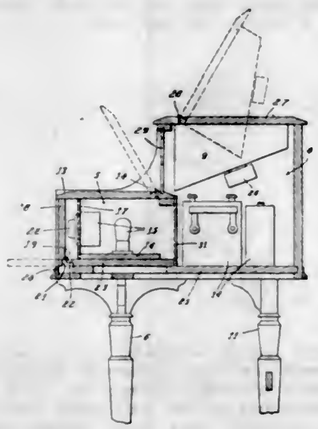
gears mounted on certain of the shafts, means to cause the slidable gears to cooperate selectively with the gears on the countershaft for operation of the vehicle in a plu-

rality of forward speeds and a reverse speed, means mounted on the reverse shaft and on the countershaft to provide selectively for an additional speed in reverse.



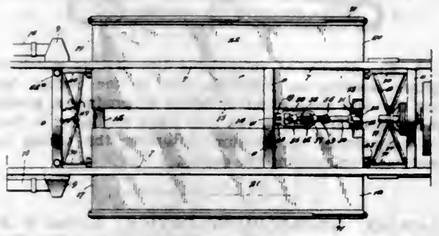
1,678,030. MICROMETER CALIPER. HORACE J. YOUNT, Indianapolis, Ind. Filed Aug. 9, 1927. Serial No. 211,817. 4 Claims. (Cl. 33—164.)

1. In a micrometer caliper, a caliper body, a micrometer head adjustably secured to the body, a bifurcated member extended from the body to form a pair of spaced anvils, an H-shaped jaw straddling said body by ite rear legs and pivoted thereby to said body, a spring bearing between said body and said jaw normally causing said jaw to swing toward said anvils, a shaft extending from said micrometer head, and said jaw having its forwardly projecting legs positioned to permit said shaft to pass therebetween.



1,678,031. ELEVATOR SAFETY APPLIANCE. JOHN N. ANDERSON, Hoboken, N. J., assignor to Otis Elevator Company, Jersey City, N. J., a Corporation of New Jersey. Filed Aug. 17, 1926. Serial No. 129,748. 7 Claims. (Cl. 187—88.)

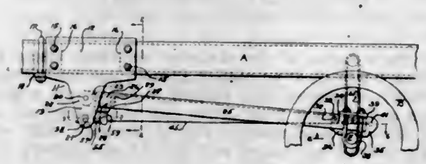
5. In an elevator system; a guide rail; a body movable along said guide rail; and a safety appliance for said movable body comprising, a housing carried by said movable body, two jaw members pivotally carried by said housing and arranged at opposite sides of said guide rail, a roller positioned between one jaw member and a side of the guide rail and movable with respect to the jaw member, a wedge positioned between the second jaw member and the other side of the guide rail and movable with respect to said second jaw member, mechanism for moving said roller with respect to the first jaw member to effect the operation of said safety appliance, motive means for causing said wedge to move with respect to the second jaw member to effect the release of said



safety appliance, and spring means for resisting the movement of the wedge with respect to the second jaw member.

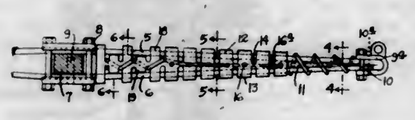
1,678,032. CONSOLE RADIOCABINET. JOHAN O. BERGMAN, Rockford, Ill., assignor to Rockford Novelty Furniture Company, Rockford, Ill., a Corporation of Illinois. Filed Apr. 9, 1926. Serial No. 100,781. 2 Claims. (Cl. 312—7.)

2. A radio cabinet comprising a base, a cabinet thereon providing a shallow front radio instrument compartment extending widthwise thereof, and a relatively deep rear compartment therebehind for battery and other storage purposes having a front wall projecting above said front compartment at the rear thereof provided with a grilled opening, a lid for said rear compartment, and a horn mounted on said lid to swing into and out of said compartment and normally terminating adjacent said grilled opening.



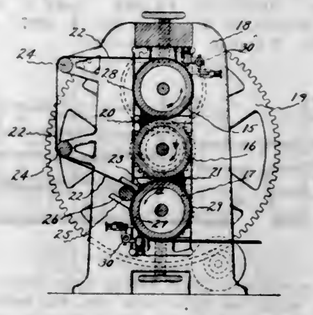
1,678,033. STORAGE-BATTERY CONTAINER. ANDREW K. BRUMBAUGH, Ardmore, Pa., assignor to The Autocar Company, Ardmore, Pa., a Corporation of Pennsylvania. Filed Feb. 23, 1924. Serial No. 694,662. 11 Claims. (Cl. 180—68.5.)

10. A battery carrier for vehicles comprising a battery supporting frame, rigid means connected to said frame and adapted for connection to a part of the vehicle, whereby said frame will be capable of horizontal reciprocation, and means for yieldably controlling such movement of said frame.



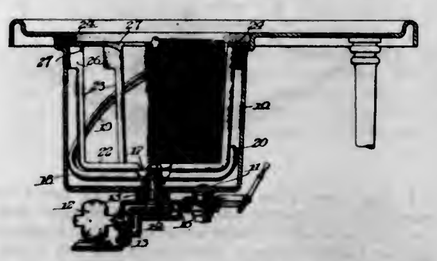
11. Means for carrying a storage battery beneath the frame of a motor-vehicle, comprising a rigid support, rigid hangers adapted for swingably connecting each end of said support to the vehicle frame and means yieldable in the direction of movement of said support to control such movement.

1,678,034. RESILIENT SUPPORT. ROBERT W. DAVIS, Ozone Park, N. Y., assignor to himself and Zeno Littman, New York, N. Y. Filed Mar. 31, 1923, Serial No. 629,088. Renewed Oct. 31, 1927. 25 Claims. (Cl. 267—2.)



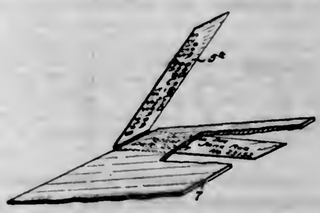
9. A resilient support including elements arranged for subjection solely to uni-directional tension and compression stresses respectively, said elements being respectively designed to permit stressing of their fibres up to a predetermined limit.

1,678,035. VEHICLE SPRING. ROBERT W. DAVIS, New York, N. Y., assignor to himself and Zeno Littman, New York, N. Y. Filed July 13, 1923, Serial No. 651,252. Renewed Nov. 25, 1927. 20 Claims. (Cl. 267—47.)



1. A spring comprising a plurality of leaves subjected to separate stresses of tension or compression, and means for holding said leaves definite distances apart thruout their lengths.

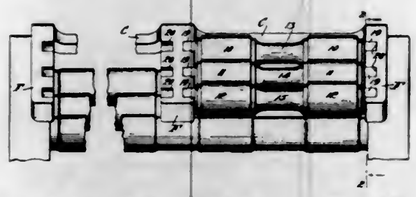
1,678,036. APPARATUS FOR CUTTING RUBBER SHEETS. CHARLES H. DESAUTELS, Springfield, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Apr. 19, 1926. Serial No. 102,930. 6 Claims. (Cl. 270—93.)



1. In combination, a roll for supporting a rubber sheet, means for cutting the sheet, and means for turning back upon itself the marginal portions of the sheet.

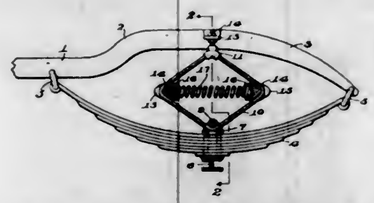
1,678,037. CLEANSING MACHINE. WILLIAM H. DUNN, Chicago, Ill., assignor to Dunn Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed July 19, 1920. Serial No. 397,406. 11 Claims. (Cl. 141—9.)

1. In a cleansing machine the combination of a fluid container, agitating means arranged in the container, a receptacle into which the articles to be cleansed are placed, said receptacle having means for directing the fluid towards the center of the container, said means having portions which extend into the path of the fluid arranged between the container and the receptacle.



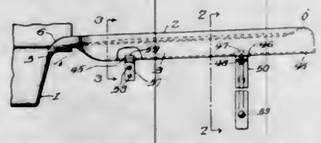
1,678,038. METHOD OF MARKING X-RAY FILMS. PHILIP K. EATON, Olympia, Wash. Filed May 9, 1927. Serial No. 189,953. 2 Claims. (Cl. 250—34.)

1. The method of marking an X-ray film which consists in placing against the two surfaces of an X-ray film a paper which has two pieces of written matter thereon, said written matters being placed directly opposite each other and being the same in all respects except that one



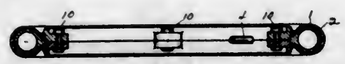
is reversed with respect to the other, each of such written matters lying in direct contact with one surface of the film, and then subjecting the film to the action of the X-ray.

1,678,039. SPINNING FRAME. JOHN P. GAREY, Elmira Heights, N. Y. Filed Feb. 4, 1927. Serial No. 165,787. 5 Claims. (Cl. 19—142.)



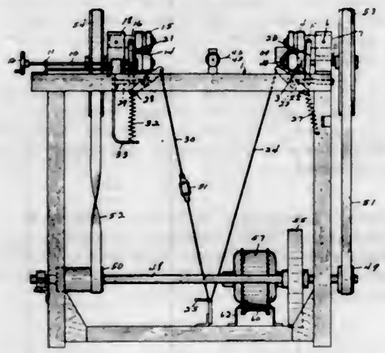
1. In a spinning frame having upper rolls, and lower rolls on which the upper rolls rest, the combination of metal upper rolls and non-metallic bearing pieces engaging said rolls and holding them parallel to the axes of the lower rolls.

1,678,040. SHOCK ABSORBER FOR VEHICLES. MARTIN E. GREENHOUSE, Philadelphia, Pa. Filed Apr. 2, 1927. Serial No. 180,360. 7 Claims. (Cl. 267—28.)



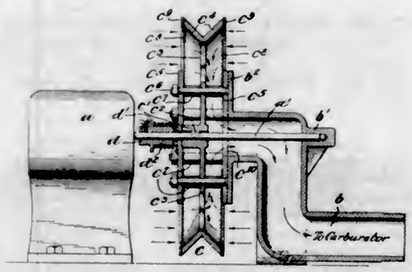
1. The combination of a vehicle, an axle and a spring operatively connecting and tending to separate said vehicle and axle, with a shock absorber in turn comprising a pair of flexible elements connected at one end to the vehicle and at their other ends to the axle, and a resilient member extending between said elements intermediate of their ends, mounting blocks engaging said elements intermediate their ends on which said spring is solely supported, said spring serving to hold the blocks in engagement with the elements and operative to separate their intermediate portions, thus drawing their respective opposite ends together and partially counterbalancing the tension of said member.

1,678,041. DRAIN BOARD. WILLIAM U. GRIFFITHS, Philadelphia, Pa. Filed Mar. 3, 1924. Serial No. 696,719. 5 Claims. (Cl. 141—11.)



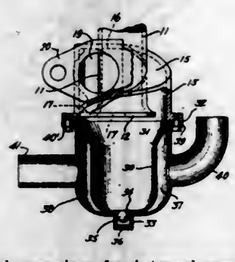
1. In a drain-board structure, in combination, a drain-board having depending flanges at its opposite side edges from the lower edges of which inwardly extending flanges project, a cross bar secured to the inwardly extending flanges at points approximately midway of the opposite ends thereof, a bracket secured to said cross bar and to a support, and means for preventing tilting movement of the said drain-board with respect to the said bracket.

1,678,042. VULCANIZING. RAYMOND HANSEN, Cudahy, Wis., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Oct. 24, 1924. Serial No. 745,610. 2 Claims. (Cl. 18—53.)



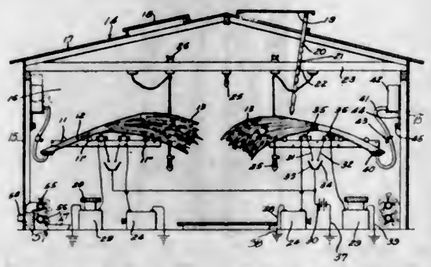
1. The process of vulcanizing tire casings which comprises securing an inflatable core in the casing, inflating the core an amount sufficient to produce a predetermined pressure within the core when the latter is heated to vulcanizing temperature, inserting the casing in a mold and vulcanizing the casing.

1,678,043. BEAD-FORMING DEVICE. DANIEL E. HENNESSY, Milwaukee, Wis., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Jan. 12, 1924. Serial No. 685,818. 5 Claims. (Cl. 154—9.)



1. In a device of the character described means for folding a web about an endless angular core comprising a plurality of grooved rolls adapted to engage the angular edges and adjacent faces of the core to progressively apply the web longitudinally around the core, said rolls being adapted to support said core at substantially diametrically opposed points.

1,678,044. AIR FILTER. EDWARD R. HEWITT, Midvale, N. J., and ALFRED F. MASURY, New York, N. Y., assignors to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 8, 1926. Serial No. 93,024. 3 Claims. (Cl. 183—77.)

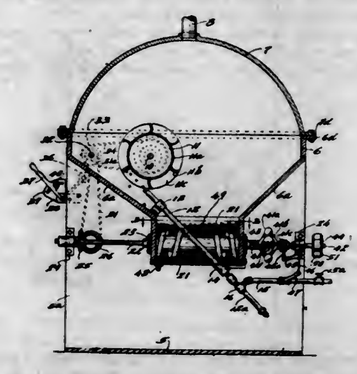


1. In a filtering device, a hollow rotor, the outer side thereof formed as outwardly diverging walls extending from an inwardly located apex to the outer end extremities of each transverse side of the rotor, screens mounted in the transverse sides thereof, means to withdraw a filtered medium from the interior of the rotor and means to rotate the same.

1,678,045. FUEL VAPORIZER. WILLIAM H. HILL, Canton, Ohio. Filed July 16, 1925. Serial No. 43,958. 2 Claims. (Cl. 48—180.)

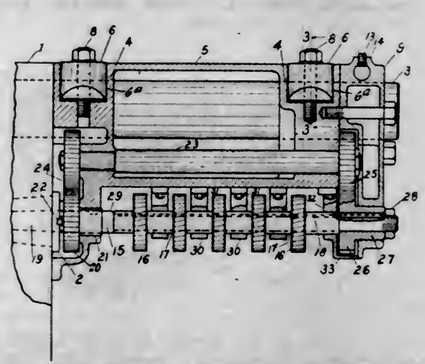
1. In a fuel vaporizer for internal combustion motors, an intake manifold, a housing cast integral with said intake manifold, enclosing the inlet end thereof and itself having a flanged open side, a stamped metal receptacle having a flanged open end adapted to abut the flanged open end of the housing, a tubular extension projecting from said stamped metal housing and formed with a valve seat, a valve member adapted to engage said seat, a second stamped metal receptacle adapted to enclose the first-mentioned receptacle in spaced relation thereto and provided with an opening for the reception of said tubular extension, a flange formed integral with said second-mentioned receptacle and adapted to abut the flange of the first-mentioned stamped metal receptacle, and means for securing all of said flanges together.

1,678,046. PROCESS FOR MATURATION OF FRUIT. DYER B. HOLMES, Los Angeles, Calif. Filed Jan. 19, 1926. Serial No. 82,283. 2 Claims. (Cl. 47—58.)



1. A method of conditioning soft and edible fruits containing sugar and growing in clusters which comprises: cutting the cluster stems thereof at a time when the first units are approximately ripe; removing the same to an enclosure and maintaining the same in artificial conditions more continuously favorable to a desired effect than are thereafter provided in nature; and subsequently picking said fruit units from said cluster stem,—said cluster stems being controllably supplied with a nutrient solution simulating the natural juice thereof

---

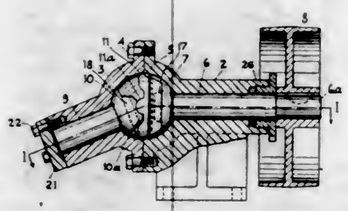


1,678,047. MOTOR USING PROJECTILES. JOSEPH C. JOHNSTON, Minneapolis, Minn. Filed June 3, 1925. Serial No. 34,628. 3 Claims. (Cl. 60—40.)

1. A motor having in combination, a casing having walls converging toward the bottom thereof, an impulse wheel in said casing, a pipe below said wheel and alined therewith, a multiplicity of balls in said casing, said pipe having a lateral opening therein adapted to receive said balls, means communicating with said pipe below said opening for supplying steam thereto, a plunger carrying a valve adapted to close the lower end of said pipe to prevent said balls passing downward there-

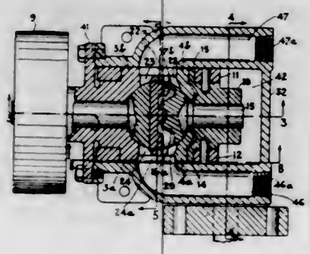
in, a piston in said pipe below said means for supplying steam and attached to said plunger, and a spring below said piston normally urging said valve to closed position whereby when said steam is admitted to said pipe said piston will be depressed against the pressure of said spring and said valve opened.

1,678,048. MILLING-MACHINE ARBOR DRIVE AND SUPPORT. EDWARD J. KEARNEY, Wauwatosa, Wis., assignor to Kearney & Trecker Corporation, West Allis, Wis., a Corporation of Wisconsin. Filed Feb. 28, 1925. Serial No. 12,254. 3 Claims. (Cl. 90—18.)



1. In a milling machine the combination of a column, a tool spindle journaled therein, a housing removably supported from said column, a tool arbor journaled in said housing, and transmission mechanism connecting said arbor to be driven at opposite ends from said spindle including a shaft and gearing rotatably supported from said housing, said shaft and gearing being adapted to materially reduce the torsional deflection of said arbor.

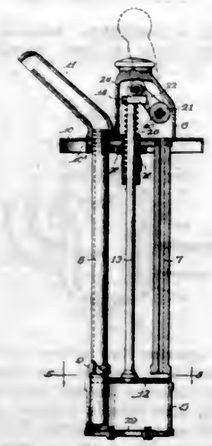
1,678,049. FLUID-CONTROL DEVICE. EDWARD J. KEARNEY, Wauwatosa, Wis., assignor to Kearney & Trecker Corporation, West Allis, Wis. Filed May 26, 1926. Serial No. 111,727. 7 Claims. (Cl. 103—134.)



1. A device of the nature disclosed comprising a housing having interior wall surface portions substantially corresponding to surface portions of a sphere, a

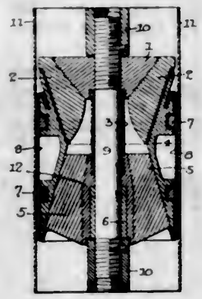
plurality of members rotatable therein about different axes in a common plane and intersecting at the center of said sphere, a member positioned between the other members for rotation therewith and pivoted for oscillation relative thereto about different axes respectively and intersecting at the center of said sphere; whereby chambers are formed within said housing and alternately expanding and contracting during rotation of said members, said housing providing ports respectively positioned on opposite sides of said plane and said members being formed to close the one port from the other, said

other members being free for axial movement away from the intermediate member whereby thrusts set up by the oscillatory movement thereof may cause adjacent surfaces of said other members and the interior housing wall to fit closely together during rotation to substantially prevent fluid leakage from one to the other of said ports between said adjacent surfaces, the intersecting axes of said other members forming an angle substantially less than 45 degrees whereby to limit the pressure between said adjacent surfaces.



1,678,050. ADJUSTABLE FLUID-CONTROL DEVICE. EDWARD J. KEARNEY, Wauwatosa, Wis., assignor to Kearney & Trecker Corporation, West Allis, Wis., a Corporation. Filed June 7, 1926. Serial No. 114,116. 25 Claims. (Cl. 103—120.)

1. A device of the nature disclosed comprising a housing defining portions of a variable volume chamber, a member relatively oscillatable within said housing to vary the volume of said chamber, and a part relatively rotatable within said housing to oscillate said member; said part being bodily adjustable to change the amount of oscillatory movement of said member.

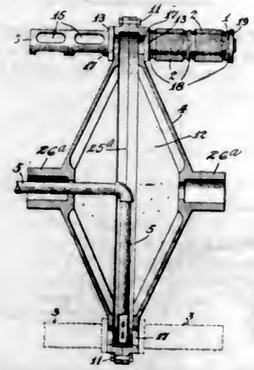


1,678,051. DISPENSING PUMP. CHARLES L. BASTIAN, Chicago, Ill., assignor to The Bastian-Blessing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 1, 1926. Serial No. 151,947. 3 Claims. (Cl. 225—35.)

1. In a dispensing pump, the combination of a charge chamber, a discharge tube leading from the chamber, a plunger operating in the chamber, a plunger rod connected to the plunger, a cap on the upper end of the plunger rod, a head enclosing the capped end of the plunger rod, a handle rotatably mounted outside of said head, lever devices operated by said handle and unconnected with said cap but operating thereon during ro-

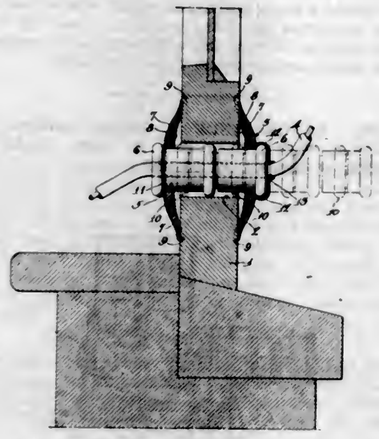
tatable movement of said handle for depressing the plunger and plunger rod, and a spring for returning the plunger and plunger rod to normal position.

1,678,052. FLUID PUMP. MARK BENNITT, San Francisco, Calif. Filed Nov. 6, 1922. Serial No. 599,436. 8 Claims. (Cl. 103—89.)



1. In a rotary pump unit, the combination of a shaft, a tapered rotor mounted thereon having spiral impeller blades, a rotor-seat for said rotor loosely mounted on said shaft and inwardly tapered to correspond to the tapered rotor and a collar on said shaft to support said rotor-seat.

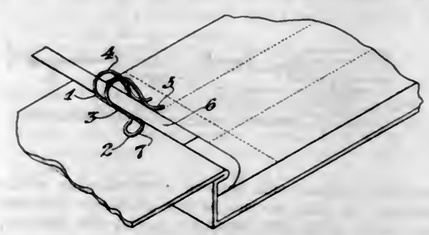
1,678,053. MEANS FOR WASHING OR DYEING MATERIAL. JULIUS BRENZINGER, Fairfield, Conn., assignor to The Max Ams Chemical Engineering Corporation, Bridgeport, Conn., a Corporation of Connecticut. Filed Dec. 12, 1925. Serial No. 75,093. 6 Claims. (Cl. 8—19.)



1. A washing or dyeing machine including: a tank for containing a body of treating fluid, a hollow member mounted to rotate, on a horizontal axis, in said tank, a hollow, perforated work-holder carried by said

member, the interior of the work-holder communicating with the interior of the member, a non-rotatable exhaust pipe extending from a point outside the tank into the

member in line with its axis of rotation and then interiorly of said member toward the bottom of the tank, and a suction device associated with said exhaust pipe.

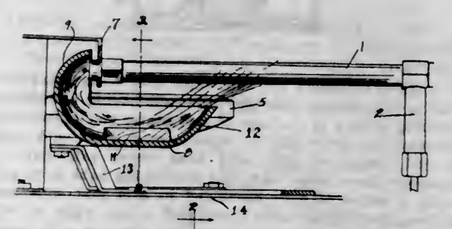


1,678,054. TUBULAR INSULATOR. EDWARD H. BUCKLEY, Philadelphia, Pa. Filed Oct. 27, 1925. Serial No. 65,081. 3 Claims. (Cl. 173—311.)

1. In an insulator of the character described, a tube adapted to pass through an opening in a support, a shoulder formed on the end of the tube, and an elastic cupped washer on the tube and adapted to abut the shoulder and a face of the support; said washer being imperforate except for a central tube receiving aperture whereby the washer will seal the opening through which the tube passes.

1,678,055. CHECK-BOOK CLAMP. JOSEPH C. BUECHLER, Hague, N. Dak. Filed Nov. 26, 1926. Serial No. 150,884. 1 Claim. (Cl. 24—66.)

A device of the kind described comprising a single strand of resilient wire bent medially its ends so as to have its intermediate portions extending in a common plane in spaced and parallel relation, the medial portion of the strand being bent at right angles to the common plane of the intermediate portions, each of the terminal portions of the strand being bent in the form of a clamping loop, each loop being in a plane at right angles to the common plane of the intermediate portions and normally closing upon the said common plane, the end of each loop being flared outwardly from its corresponding intermediate portion so as to fall laterally outside of the same, and being also curved out-

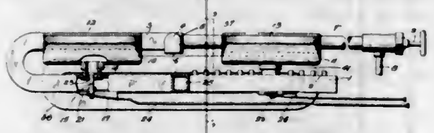


wardly from the said common plane so as to facilitate the entrance of used check stubs into the said clamping loops.

1,678,056. PROCESS FOR MAKING A MEAT CURATIVE. SALADINE EUGENE COLGIN, Dallas, Tex. Filed Apr. 21, 1926. Serial No. 103,646. 1 Claim. (Cl. 99—1.)

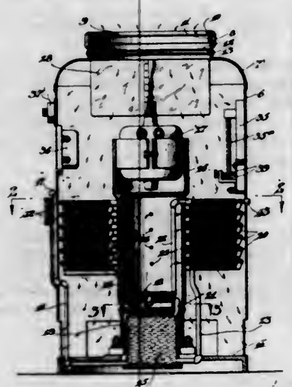
A process for producing a meat curative consisting in first mingling salt, sugar, saltpeter, black and red pepper, and soda until a thorough admixture of all of the ingredients is obtained, after which pyroligneous acid is sprayed on the mass during the presence of heat and the mass agitated until thoroughly dry.

1,678,057. PRIMING DEVICE FOR HYDROCARBON BURNERS. WILLIAM C. COLEMAN, Wichita, Kans., assignor to Coleman Lamp and Stove Co., Wichita, Kans., a Corporation of Kansas. Continuation of application Serial No. 618,056, filed Feb. 9, 1923. This application filed Sept. 12, 1925. Serial No. 56,079. 8 Claims. (Cl. 158—83.)



1. In a burner unit for liquid hydrocarbons, a vaporizing tube and a priming cup, the priming cup comprising an elongated body having a concave, upstanding wall projecting from the edge of one end thereof, and having a shorter, inclined wall at the other end, the inner surface of the shorter inclined wall being symmetrical with the lower portion of the other wall with reference to the bottom, the surfaces of the two walls and bottom being so formed that liquid delivered against the inner surface of the upstanding wall will be directed through the cup in easy stream lines without appreciably decreasing its velocity so that the combusted fuel will impinge upon the vaporizing tube in the form of a hot blast.

1,678,058. LIQUID-HYDROCARBON BURNER. WILLIAM C. COLEMAN, Wichita, Kans. Filed Oct. 6, 1925. Serial No. 60,759. 3 Claims. (Cl. 158—61.)

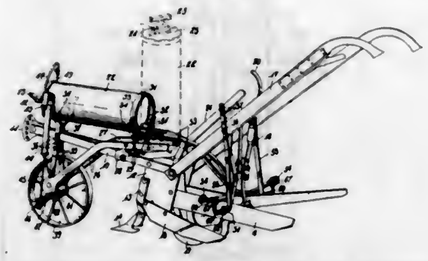


1. A burner comprising a manifold, a goose neck at one end of the manifold to provide a mixing chamber, elongated ported elements for the passage of air into the mixing chamber, a vaporizing tube communicating with the mixing chamber, horizontal burners above the manifold, one of said burners lying on either side of the mixing chamber, another of said burners having ports lying

on both sides of the generating tube, jets on the manifold in line with and below the generating tube, horizontally disposed conduits communicating with the manifold, and

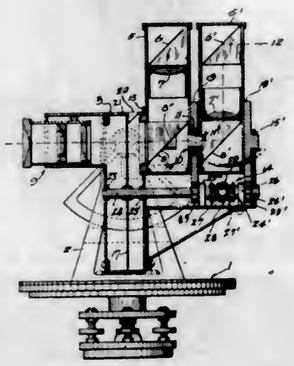
vertically disposed side burners communicating with the conduits, the side burners having discharge openings in their outer faces, and means for valving the burners.

1,678,059. HEATER. WALTER H. D'ARDENNE, Philadelphia, Pa. Filed Dec. 8, 1926. Serial No. 153,321. 6 Claims. (Cl. 219—39.)



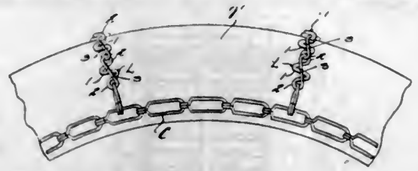
1. In combination air and water heater, an outer casing, a top portion telescoped thereon having a screened opening, a tank in the base of said heater and connections therefor, an electrical unit superimposed above said tank, a coil connected with said tank above said unit, a chamber above said tank and enveloping said unit and coils, a series of coils connected to said first coils and surrounding the chamber, apertures in the walls of said chamber for air therein to reach said series of coils, automatic means for causing said unit to heat said reservoir and first coils to cause a circulation of water in connection with said series of coils, said unit heating the air in said chamber, and means for sucking in air from the atmosphere surrounding said heater through said opening in the top portion, circulating it through the heater, and emitting it through openings adjacent the base of the casing.

1,678,060. SHEET-GLASS-PRODUCING APPARATUS. JOHN L. DRAKE, Toledo, Ohio, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed June 21, 1926. Serial No. 117,280. 14 Claims. (Cl. 49—17.)



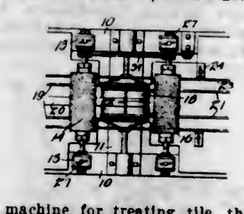
1. In sheet glass apparatus, means for drawing a sheet upwardly from a mass of molten glass, and a flattening member for said sheet arranged after the drawing means, the peripheral speed of the drawing means being relatively slower than the peripheral speed of the flattening member.

1,678,061. INSECTICIDE DISTRIBUTOR. EDWARD FOWLER and JOHN VICTOR LEWIS, Chattanooga, Tenn. Filed Jan. 16, 1923. Serial No. 612,913. 7 Claims. (Cl. 299—30.)



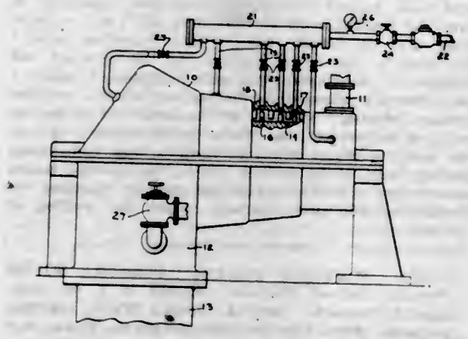
1. An insecticide distributor comprising a wheeled vehicle, an elongated container for the insecticide, means for normally supporting said container in horizontal position, said means comprising a pivotal connection between one end of said container and the vehicle and a rest on the vehicle for the other end of the container, said container having a filling opening at its end remote from said pivotal connection and being swingable about the latter into an upright position, and a delivery nozzle supported by said vehicle and connected to said container.

1,678,062. RANGE FINDER. GRAVES GRIFFITH, San Francisco, Calif. Filed Oct. 11, 1926. Serial No. 140,863. 8 Claims. (Cl. 88—2.7.)



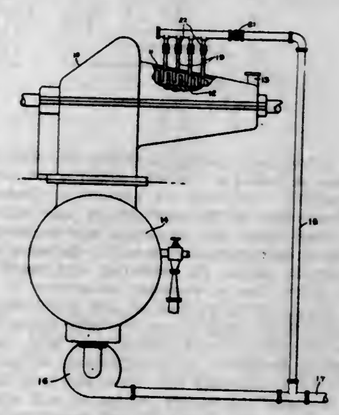
1. A light reflective element of prism form having centrally and exteriorly of its reflective face and cemented thereto a light transmissive cylindrical element fashioned to conform to said face and having its entrant face in parallelism with that of the emergent face of said prism, a reflective prism element in co-operative association with said cylindrical element and having the axis of reflection of its reflective surface in co-axial alignment with the axis of said cylindrical element, and a tubular connecting means revolubly uniting said prism elements and adapted to permit their rotation in opposite directions through quadrant and about said co-axis as the axis of rotation.

1,678,063. CROSS MEMBER FOR NONSKID CHAINS. EDWIN J. HERCHERT, Guttenberg, Iowa. Filed Mar. 5, 1927. Serial No. 173,124. 1 Claim. (Cl. 59—90.)



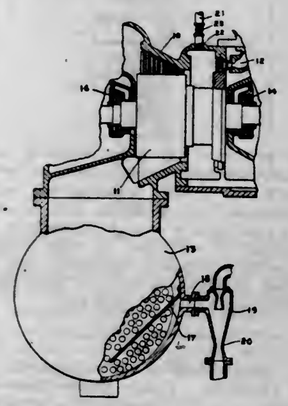
A chain link consisting of a continuous strand formed in the general shape of a loop, said loop having a Z-shaped side bar and a straight side bar, said bars being disposed in parallel planes, said strand having eyes formed at the ends of the loop, said eyes being disposed in the plane of the Z-shaped bar, and having at their inner sides laterally disposed shank portions which merge with the ends of the straight side bar.

1,678,064. MACHINE FOR TREATING TILE. LOUIS S. JONES, GARFIELD W. FISHER, and CARL G. HENRIKSON, Anderson, Ind., assignors to The National Tile Company, Anderson, Ind., a Corporation of Ohio. Original application filed Mar. 20, 1925, Serial No. 17,079. Divided and this application filed June 23, 1927. Serial No. 200,996. 3 Claims. (Cl. 15—21.)



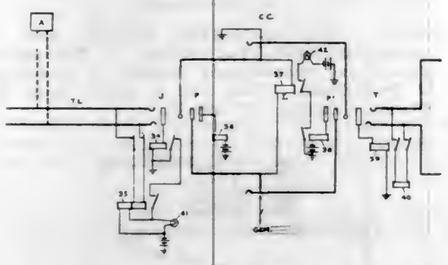
1. In a machine for treating tile, the combination of conveying means, means disposed above and below the conveying means for brushing the upper and lower faces of the tile during its movement, a second conveying means offset from the first mentioned conveying means, and a second set of brushes associated with the second conveying means for brushing the portion of the tile not operated upon by the first set of brushes, substantially as set forth.

1,678,065. TURBINE. CARL J. LAMB, Philadelphia, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 17, 1925. Serial No. 37,732. 11 Claims. (Cl. 253—1.)



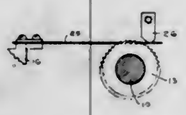
1. The combination with a multi-stage turbine having a rotor and a casing, of means for securing an even distribution of heat through the turbine along the rotor when idle, comprising a distributing manifold adapted to be connected to a source of gaseous medium under pressure, conduits leading from the manifold to the various turbine stages in the upper part of the turbine casing, and means for withdrawing the gaseous medium from the lower part of the casing.

1,678,066. TURBINE-COOLING MEANS. CARL J. LAMB, Philadelphia, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 4, 1925. Serial No. 66,830. 9 Claims. (Cl. 253—1.)



1. The combination with a turbine standing idle, of means for maintaining a circulation of liquid through said turbine.

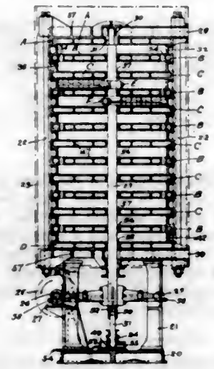
1,678,067. TURBINE-COOLING MEANS. CARL J. LAMB, Philadelphia, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 4, 1925. Serial No. 66,831. 9 Claims. (Cl. 253—1.)



1. In a turbine, the combination of a casing, a rotor having a shaft and mounted within the casing, fluid pressure sealing glands for preventing the flow of elastic fluid to or from the interior of the casing when running, said glands permitting said flow when the turbine is idle, and means supplying air under pressure into the interior of the casing when the turbine is idle for cooling the rotor, whereby air circulates through the turbine and leaks outwardly through the glands.

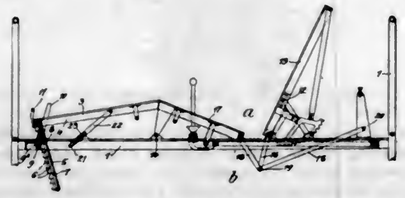
1,678,068. MANUAL TELEPHONE SYSTEM. JOHN H. LEVIS, Jr., Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Dec. 23, 1925. Serial No. 77,197. 10 Claims. (Cl. 179—41.)

1. In a telephone system, a calling line and a called line, means including a cord circuit and trunk circuit for interconnecting said lines, an operator's telephone set, means responsive to the extension of said calling line to said trunk circuit for connecting said operator's telephone set to said trunk circuit to the exclusion of other trunk circuits, means for extending said trunk circuit to said called line, a plurality of sources of ringing current for signalling stations on said called line, means including a single ringing key for each source of ringing current common to a plurality of said trunk circuits, means responsive to the depression of one of said ringing keys for selecting the proper source of signalling current to signal the wanted station on said called line, and means controlled from said cord circuit for applying said proper source of signalling current to said called line.



1,678,069. PAWL-AND-RATCHET MECHANISM. RAY H. MANSON, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Nov. 2, 1921. Serial No. 512,344. 7 Claims. (Cl. 74—54.)

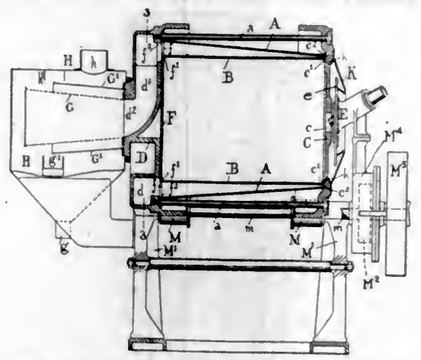
1. In an article of the class described, a frame, a shaft rotatably supported in said frame, a ratchet wheel on said shaft, said ratchet wheel having teeth each of which is provided with a sliding face, a pivoted arm, and a pawl substantially straight throughout its length, rigidly mounted on said arm at right angles thereto, said pawl normally engaging the sliding face of a tooth of said wheel, said face lying in a plane extending at substantially right angles to said arm.



1,678,070. APPARATUS FOR COOLING OIL OR OTHER LIQUIDS. JAMES MOORE, Burmah, British India, assignor to The Burmah Oil Company Limited, Glasgow, Scotland, a British Company. Filed July 13, 1923, Serial No. 651,429, and in Great Britain Aug. 15, 1922. 4 Claims. (Cl. 257—118.)

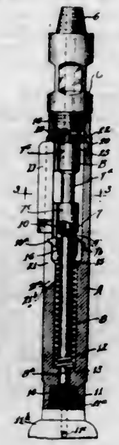
3. Heat-exchange apparatus comprising a plurality of contiguous cells, each cell comprising a cooled space and a cooling space, means for guiding a cooling medium through said cooling space in a circuitous path, an inlet port on one face of said cell at one end of said path, an outlet port on the other face of said cell at the other end of said path, said inlet port and said outlet port being adapted to register with the outlet port and inlet port, respectively, of contiguous cells, a central

aperture through each alternate cooling space and apertures through each of the other cooling spaces near the peripheries thereof.



1,678,071. ADJUSTABLE COUCH AND THE LIKE. HEINRICH JULIUS MÜLLER, Schaffhausen, Switzerland. Filed Nov. 2, 1925, Serial No. 66,341, and in Switzerland Nov. 18, 1924. 1 Claim. (Cl. 5—69.)

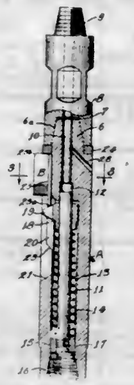
In an arrangement for adjusting the leg rest of reclining surfaces and the like, a regulating rail at either side of the end of the leg rest of a reclining surface, pivotally attached to said leg rest and forming a support for the foot end of this leg rest, a longitudinal guide and downwardly directed ratchet teeth on said regulating rail, a bedstead carrying the reclining surface, a crank-shaft journaled in the lateral portions of the bedstead, a cranked part on this shaft capable of directly engaging in said ratchet teeth and of being automatically disengaged by upward movement of the said teeth, a hand lever fixed to the said crankshaft to turn the cranked part of the crank shaft into engagement with the ratchet teeth of the regulating rails, a pin fixed to the lateral portions of the bedstead and adapted to coact with the said longitudinal guide, a seat pivotally attached to the leg rest of the reclining surface, forming a support for the outer end of the leg rest and carried by arms pivoted at their lower ends to the lateral portions of the bedstead, a back rest, means pivotally supporting the back rest on the bedstead, means connecting the back rest and seat whereby changing the position of the back rest will adjust the position of the seat.



1,678,072. TUMBLING BARREL. FREDERICK WALTER NEVILLE, Salford, England, assignor to J. W. Jackman & Company Limited, Vulcan Works, Salford, England. Filed Nov. 30, 1925, Serial No. 72,416, and in Great Britain Feb. 9, 1925. 2 Claims. (Cl. 51—13.)

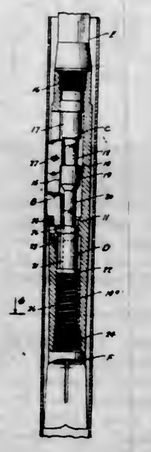
1. A tumbling barrel for cleaning foundry castings comprising the combination with a perforated inner barrel to receive the castings, of a conical outer barrel to collect the fine material as it falls through the perforations, a casting at one end with an aperture through which abrasive material may be injected, a casting at

the other end provided with a discharge chamber to receive the spent abrasive tailings and dust from the conical barrel and a hollow trunnion leading from the discharge chamber through which the tailings and dust are discharged.



1,678,073. WELL APPARATUS. JOHN T. PHIPPS, Huntington Park, Calif., assignor to John Grant, Los Angeles, Calif. Filed Oct. 10, 1925. Serial No. 61,808. 25 Claims. (Cl. 255—75.)

1. An expansible underreamer comprising a slotted body, a mandrel therein having a reduced portion intermediate its ends, and cutters; each cutter having lateral projections and a recess on its inner face intermediate its ends, said lateral projections bridging the slots in said body to limit displacement of said cutters, said mandrel constituting an abutment for said cutters to hold the cutters in expanded position and to permit collapsion, and said recess bridging the reduced portion of said mandrel when the cutters are in expanded condition.

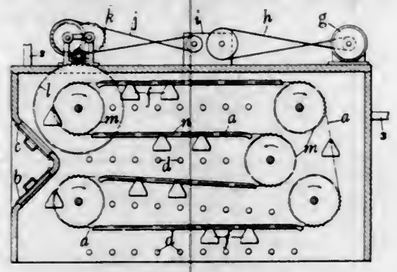


1,678,074. WELL APPARATUS. JOHN T. PHIPPS, Huntington Park, Calif., assignor to John Grant, Los Angeles, Calif. Filed Oct. 26, 1925. Serial No. 64,839. 4 Claims. (Cl. 255—75.)

1. In a device of the character disclosed, a body provided with an upper mandrel portion integral therewith, the body being slotted adjacent the upper mandrel portion, a cutter mounted in the body slot for longitudinal movement, the body having a bore below the mandrel

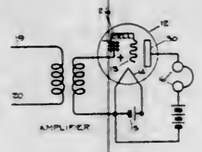
portion, a lower mandrel portion in said bore, and a cutter propeller and spring in said body bore, the propeller and spring surrounding and sliding on the lower mandrel portion.

1,678,075. EXPANSIBLE ROTARY UNDERREAMER. JOHN T. PHIPPS, Los Angeles, Calif., assignor to John Grant, Los Angeles, Calif. Filed Dec. 14, 1925. Serial No. 75,275. 17 Claims. (Cl. 255—75.)



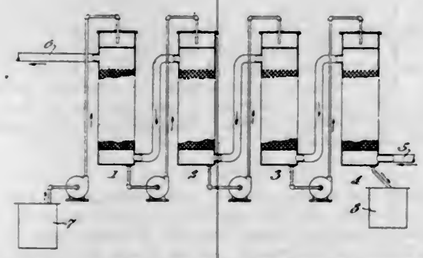
1. An expansible underreamer comprising a body, cutters mounted therein to play lengthwise, means urging said cutters lengthwise into expanded condition; and hydraulic indicator means for signalling when the cutters are in expanded condition comprising a cutter impeller, there being a water course for directing water against said cutters controlled by said impeller so as to permit the passage of water therethrough when said cutters are expanded.

1,678,076. BAKING OVEN. JOHN EDWARD POINTON, Peterborough, England, assignor to Baker Perkins Company, Incorporated, New York, N. Y. Filed July 12, 1927, Serial No. 205,212, and in Great Britain Sept. 1, 1926. 2 Claims. (Cl. 107—57.)



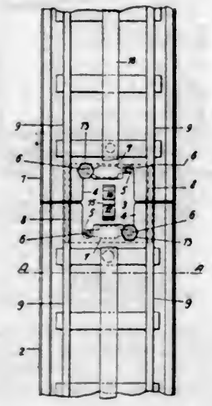
2. In baking ovens, the combination comprising a baking chamber, a conveyor passing in a circuitous course through said chamber, heating elements disposed between

the respective straight lengths or runs of the conveyor, an angular projection from the wall of the baking chamber into the interior of the latter, a door in each of the sides of said projection, said doors giving access to the



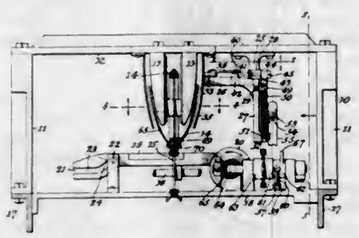
conveyor at various positions in its circuitous course from the one position on the exterior of the chamber, and means providing steam laden and dry atmospheres for said course.

1,678,077. THERMIONIC-TUBE CIRCUITS. WINFRED T. POWELL, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, New York, a Corporation of New York. Filed Sept. 17, 1924. Serial No. 738,206. 5 Claims. (Cl. 179—171.)



1. In an amplifier device, a thermionic tube including a filament, a plate element and a controlling element, an input circuit connecting said filament and said controlling element, an output circuit connecting said filament and said plate element, heating current for said filament, and a light controlled unit for developing a difference of potential between one of the elements of said thermionic tube and said filament proportional to said heating current.

1,678,078. PROCESS OF TRANSFORMING LIGHT PARAFFIN HYDROCARBONS INTO OTHER PRODUCTS. ALEXANDER S. RAMAGE, Detroit, Mich., assignor to Bostaph Engineering Co., Detroit, Mich., a Corporation of New York. Filed June 19, 1925. Serial No. 38,302. 3 Claims. (Cl. 260—170.)

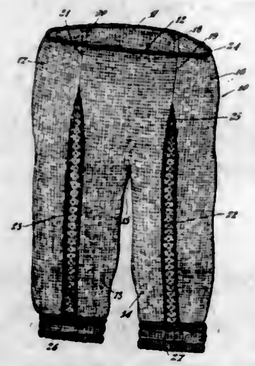


1. Process which comprises contacting a mixture of light paraffin hydrocarbons substantially unmixed with reactive oxygen with a reducible metal oxid at a reacting temperature not substantially in excess of 550° C.

1,678,079. RAIL-JOINT CONNECTION FOR TOY RAILWAYS. LUDWIG REISCHL, Nuremberg, Germany, assignor to Doll & Co. Aktiengesellschaft, Nuremberg, Germany. Filed Nov. 3, 1927, Serial No. 230,879, and in Germany Aug. 3, 1927. 4 Claims. (Cl. 238—10.)

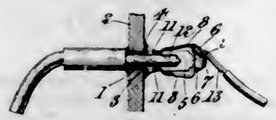
1. A rail joint connection for toy railways, comprising in combination a plurality of pieces of track, openings at the ends of the said pieces of track, a connecting plate, screw bolts fixed to the said connecting plate, capable of being inserted through the said openings and nuts for screwing on to the said bolts for securing the pieces of track and the connecting plate together, as set forth.

1,678,080. CUTTING MECHANISM. FREDERICK RENZ, Brooklyn, N. Y. Original application filed Feb. 16, 1927, Serial No. 168,753. Divided and this application filed Nov. 28, 1927. Serial No. 236,233. 6 Claims. (Cl. 164—49.)



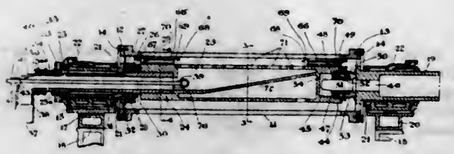
1. In a machine for feeding a continuous line of tape connected spaced books, means controlled by the movement of said books for severing the said tape connection between them, consisting of a normally horizontal knife having a tail slot, a pin entering said slot to support and guide the rear end of the knife and mechanism for operating said knife across the path of the said books and between the same.

1,678,081. GARMENT. JULIUS RIMPLER, Hoboken, N. J. Filed Mar. 29, 1926. Serial No. 98,078. 1 Claim. (Cl. 2—224.)



A garment having a back center portion extending from the waistband to the crotch, a front center portion similarly extending from the waistband to the crotch two half leg portions each integral with both of said center portions, all of said portions being formed by a single

unitary piece of woven fabric, a relatively narrow strip of fabric secured to each edge of said leg portions and extending nearly to the waistband of said garment, the



upper end of each of said strips being tapered, and side portions secured to said strips and said front and back portions.

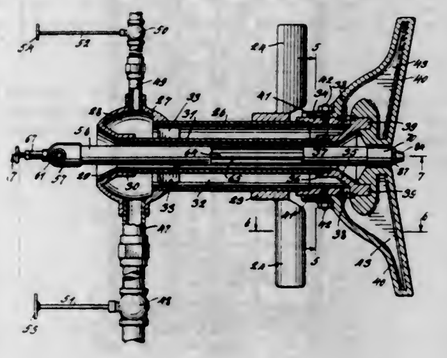
1,678,082. PLUG AND SOCKET CONNECTER AND THE LIKE. HENRY ROTTENBURG, Cambridge, England. Filed Feb. 18, 1926, Serial No. 89,172, and in Great Britain Mar. 9, 1925. 3 Claims. (Cl. 173—363.)

1. A socket member for a plug and socket connecter comprising a tubular member, a spring member of U-shape secured thereby having depressions in its legs and a second member of U-shape having a depression towards its base which is engaged by a depression in a leg of the first mentioned U-shaped member.

1,678,083. SUCTION ROLL. ANDREW N. RUSSELL and BERNARD A. MALKIN, Lachine, Quebec, Canada, assignors to The Paper and Textile Machinery Company, Sandusky, Ohio. Filed June 3, 1924, Serial No. 717,588. Renewed Feb. 15, 1926. 10 Claims. (Cl. 92—53.)

1. In a carrier roll for paper making machines or the like, a roll, means for rotatably supporting said roll, a suction box mounted within the roll, guides formed in the suction box, channel-shaped members mounted in the guides, packing or sealing means within the channel members and adapted to contact with the roll, wedges secured directly to the underside of the channels, wedges mounted in the guides and adapted to engage with the channel wedges, and means connected to one set of the wedges so that on movement of same the channels will rise or fall in the guides.

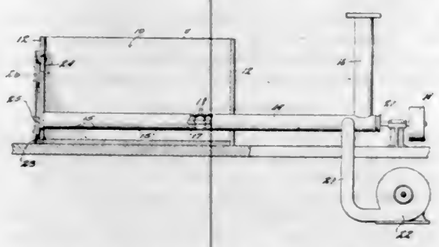
1,678,084. PROCESS OF PRODUCING VULCANIZED RUBBER. WINFIELD SCOTT, Akron, Ohio, assignor to The Rubber Service Laboratories Co., Akron, Ohio, a Corporation of Ohio. Original application filed Sept. 9, 1925, Serial No. 55,386. Divided and this application filed May 19, 1926. Serial No. 110,294. 14 Claims. (Cl. 18—53.)



6. The process of manufacturing vulcanized rubber which comprises heating rubber and sulphur in the presence of the carbon bisulfid derivative of the reaction product of di-ethyl amine with paraformaldehyde.

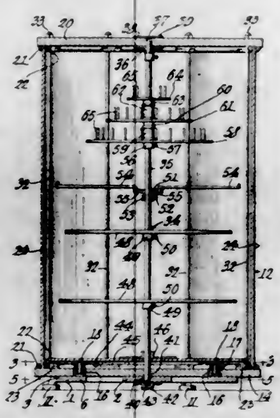
1,678,085. METHOD OF PRODUCING VULCANIZED RUBBER. WINFIELD SCOTT, Akron, Ohio, assignor to The Rubber Service Laboratories Co., Akron, Ohio, a Corporation of Ohio. Original application filed Sept. 9, 1926, Serial No. 55,386. Divided and this application filed May 19, 1926. Serial No. 110,295. 29 Claims. (Cl. 18—53.)

1. The process of manufacturing vulcanized rubber which comprises heating rubber and sulphur in the presence of the carbon bisulfid derivative of the reaction product of a secondary amine and an unsaturated aldehyde.



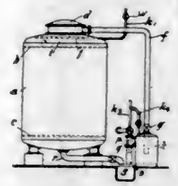
15. The process of manufacturing vulcanized rubber which comprises heating rubber and sulphur in the presence of the carbon bisulfid derivative of the reaction product of piperidine and furfuraldehyde.

1,678,086. GAS BURNER. HAROLD D. SCHRADER, Denver, Colo. Filed Oct. 25, 1926. Serial No. 143,945. 6 Claims. (Cl. 158—99.)



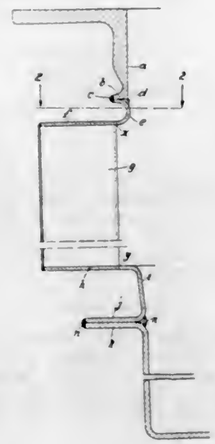
1. A gas burner comprising a hollow body member having a mixing chamber and two axially aligned openings, one of which is of greater diameter than the other, a pipe secured to the side of the opening having the larger diameter, said pipe extending outwardly from said body member, a second pipe, whose exterior diameter is smaller than the interior diameter of the first mentioned pipe located within the latter, one end of said smaller pipe extending through the mixing chamber and threadedly connected with the wall of the smaller opening, a hub member having a central opening and an annular chamber concentric therewith, the outer wall of the annular chamber being connected with the larger pipe and the inner wall of said annular chamber being connected with the smaller pipe, whereby the annular chamber is put into communication with the mixing chamber through the annular cylindrical space between the pipes and a plurality of hollow burner arms secured to the hub member and having their interiors in communication with the annular space in the hub.

1,678,087. FLOTATION MACHINE. EDWARD HASKINS SHACKELFORD, Jr., Joplin, Mo., assignor to Hebbard Manufacturing Company, Joplin, Mo., a Corporation of Missouri. Filed Aug. 30, 1927. Serial No. 216,461. 4 Claims. (Cl. 209—168.)



1. A flotation concentrator of the character described including a spitzkasten, an elongated casing entering the bottom of the spitzkasten and extending longitudinally therealong and formed with openings discharging into the spitzkasten, means disposed within the casing for mixing pulp and oil, and means for discharging pulp into the entrance end of said casing and discharging the air into this entrance end.

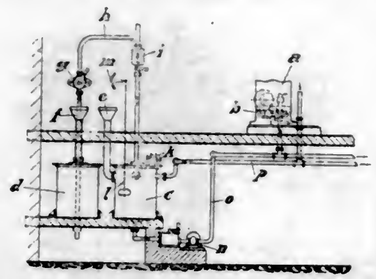
1,678,088. SHOW CASE. REUBEN SIDEMAN, San Francisco, Calif. Filed May 22, 1925. Serial No. 32,154. 1 Claim. (Cl. 312—135.)



In a device of the class described, a base, a case comprising a bottom, a top, and a body extended between the bottom and the top, the bottom resting on the base, a first shaft extended through the bottom of the case and journaled in the top of the case, display means on the first shaft, a platform secured to the first shaft and located above the bottom, a rack on the platform, a pinion meshing with the rack, a second shaft on which the pinion is mounted, and anti-friction bearings engaging the platform—the device being characterized by the provision of end-thrust means for supporting the first shaft detachably on the base, means for supporting the anti-friction bearings on the base, the bottom having openings for the reception of the bearings and the pinion, means for supporting the second shaft for rotation on the base, and securing elements forming a detachable connection between the bottom and the base; whereby the case and the first shaft may be removed, leaving the anti-friction devices, the second shaft, and the pinion, on the base.

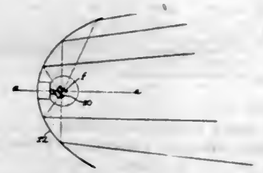
1,678,089. METHOD OF AND APPARATUS FOR CLEANING HIGH-PRESSURE BOILING APPARATUS. GUSTAV ULLMANN, Vienna, Austria. Filed Aug. 23, 1926, Serial No. 131,090, and in Austria Aug. 28, 1925. 8 Claims. (Cl. 8—18.)

1. A method of cleaning high pressure boiling apparatus employing chemical solution for purifying or dissolving materials, on release of the pressure within said apparatus, comprising, introducing into the boiler at the same time as it is blown off, a cool liquid diluent for diluting and cooling the solution and sludge thereof which are to be blown off from said boiler.



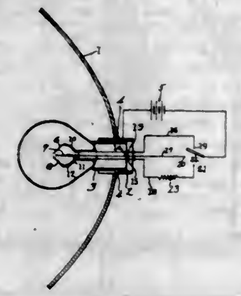
1,678,090. CASING FOR ELECTRIC TRANSFORMERS AND THE LIKE. OTTO WEHRLE, Emmendingen, Germany. Filed Apr. 24, 1926, Serial No. 104,343, and in Germany May 9, 1925. 9 Claims. (Cl. 220—75.)

1. In an oil container especially for electric transformers, a corrugated casing, a plate secured to and closing the tops of the corrugations of said casing and having an outwardly bent inner border, and a cover frame welded to said outwardly bent border.



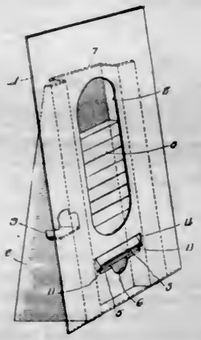
1,678,091. ADJUSTING THE PROPORTION OF COLOR TO THINNING AGENT IN CONNECTION WITH INTAGLIO PRINTING MACHINES. OTTMAR WILHELM, Augsburg, Germany, assignor to the Firm: Maschinenfabrik Augsburg-Nuernberg Aktiengesellschaft, Augsburg, Germany, a Corporation of Germany. Filed Feb. 4, 1927, Serial No. 165,766, and in Germany Feb. 9, 1926. 2 Claims. (Cl. 101—364.)

2. In combination, a color box for an intaglio printing machine, a container for color, a container for color thinning agent, a mixture receptacle, means for feeding color and color thinning agent from said containers to said receptacle, means for regulating the proportion of color and color thinning agent fed, means for thoroughly



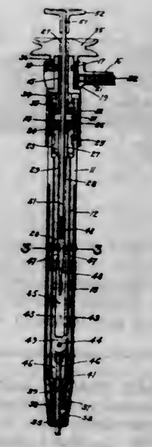
mixing the fed ingredients in the receptacle, and means for circulating the mixture between the color box and the receptacle.

1,678,092. AUTOMOBILE LAMP. WILLIAM H. WOOD, South Euclid, Ohio. Filed Mar. 25, 1925. Serial No. 18,097. 1 Claim. (Cl. 240—41.)



In an automobile light, the combination with a substantially paraboloid reflector having its axis substantially horizontal of two independently usable light sources inside said reflector, one of said sources defining and substantially confined within a plane which intersects said reflector axis substantially at its focal point and also confined substantially to the region above the reflector axis, the other source being substantially parallel to the plane of the first source and spaced slightly beneath the same.

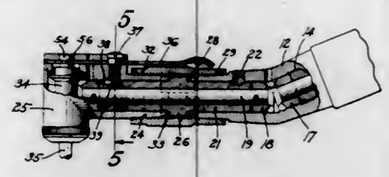
1,678,093. VEHICLE HEADLIGHT. WILLIAM H. WOOD, South Euclid, Ohio. Filed Jan. 16, 1926. Serial No. 81,730. 2 Claims. (Cl. 240—41.)



1. In a vehicle headlight, a substantially paraboloid reflector, a lamp bulb comprising three independent concentrated filaments one above the other, one of which defines and is substantially confined within the horizontal plane which includes the reflector axis, and the other two of which define and are substantially confined within planes which intersect said first plane obliquely along a line perpendicular to said reflector axis substantially at its focal point, said last two filaments being located in regions between the vertex and parameter of said reflector, in combination with three circuits, one for each filament, and a switch and battery, that circuit which corresponds to the lowermost filament including a resistance element.

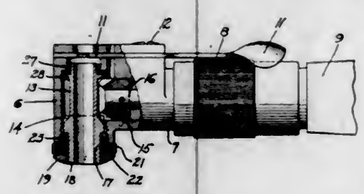
1,678,094. DISPLAY DISPENSER. HENRY ZIEMMERMAN, Chicago, Ill., assignor to Chicago Card Board Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 2, 1927. Serial No. 165,252. 8 Claims. (Cl. 312—42.)

1. A collapsible display device comprising an apertured frontpiece and a foldable backpiece connected therewith, a tongue from the frontpiece extending rearwardly and upwardly to incline an article outwardly in the aperture, and engaging the backpiece to hold it in distended position.



1,678,095. TOOL HANDLE. LAURITZ BREDENBERG ANDRESEN, Minneapolis, Minn., assignor to M. F. Patterson Dental Supply Co., St. Paul, Minn., a Corporation of Illinois. Filed Nov. 12, 1923. Serial No. 674,277. 8 Claims. (Cl. 32—15.)

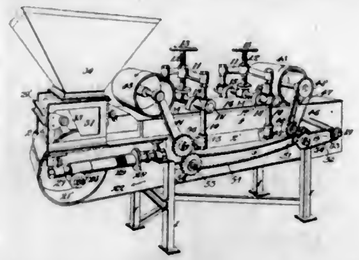
1. In a dental tool handle, the combination of a casing, having a removable end-piece at one end and a removable head at the other end thereof, a radial bearing adjacent each end of the casing, a drive shaft mounted in the bearings and having a driving means at one end thereof, means for taking up end play of the drive shaft-



in either direction, opposed clutch members pivotally mounted within the drive shaft, a clutch-actuating means slidably mounted within the drive shaft and having one end outwardly projecting through one end of the tool handle to provide an operating means therefor, and a demountable end cap having a removable packing washer therein, fitted over the end of the casing end-piece to prevent dust and grit from entering the casing.

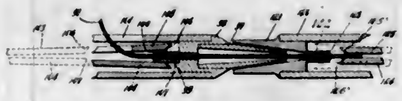
1,678,096. CONTRAANGLE ATTACHMENT FOR DENTAL HANDPIECES. LAURITZ B. ANDRESEN, Minneapolis, Minn., assignor to M. F. Patterson Dental Supply Co., St. Paul, Minn., a Corporation of Illinois. Filed Mar. 26, 1925. Serial No. 18,492. 9 Claims. (Cl. 32—11.)

3. A contraangle attachment adapted to be connected to a dental hand-piece, a sleeve member mounted in said attachment, an angular tool-supporting head adjustably mounted on said sleeve member, and toothed means on said head adapted to interlockingly engage toothed means on said sleeve member to lock the head against relative rotation thereon when in locked position, the toothed means on said sleeve member being integrally formed therewith.



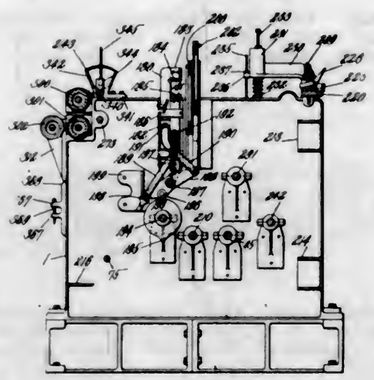
1,678,097. BEARING FOR ANGLE ATTACHMENTS FOR DENTAL HANDPIECES. LAURITZ B. ANDRESEN, Minneapolis, Minn., assignor to M. F. Patterson Dental Supply Co., St. Paul, Minn., a Corporation of Illinois. Filed Mar. 26, 1925. Serial No. 18,493. 5 Claims. (Cl. 32—11.)

2. A dental tool head in combination with a burr tube having bearings therein, a member mounted on said tube and having means interlocking with one of said bearings to form a tortuous passage between them to prevent the entrance of dust and grit into said bearing.



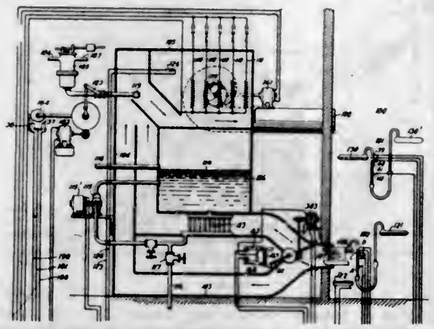
1,678,098. CRACKER PLATE. DAVID R. BAILEY, Sacramento, Calif., assignor to California Almond Growers Exchange, San Francisco, Calif., a Corporation of California. Filed Oct. 7, 1924. Serial No. 742,124. 3 Claims. (Cl. 146—11.)

1. A nut cracking apparatus comprising a framework, an endless conveyor mounted in said frame having an upper horizontal flight, said conveyor having a plurality of cracking elements secured thereto in a predetermined manner, a cracker plate mounted in the frame and supporting the upper horizontal flight of said conveyor, roller frames pivotally mounted on said framework, cracker rollers rotatably mounted in said frames for cooperation



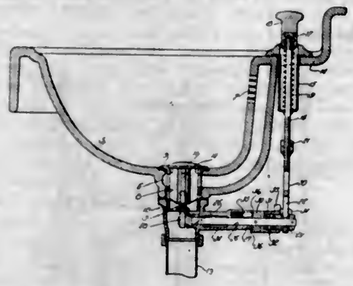
with said conveyor at points overlying said cracker plate, means for adjusting said roller frames on their pivots, and driving means for the rollers and conveyor.

1,678,099. LOOM. EARL F. BALDWIN, Gardner, Mass., assignor to American Fibre Corporation, Gardner, Mass., a Corporation of Massachusetts. Filed Dec. 12, 1921. Serial No. 521624. 9 Claims. (Cl. 139—11.)



1. A pick laying means comprising a reciprocable bar having a strand channel therein, jaws reciprocably carried by said bar for gripping a strand in said channel, means actuable to close and open said jaws by their reciprocation relative to said bar, and means actuated by the reciprocation of said bar for reciprocating said jaws relative thereto.

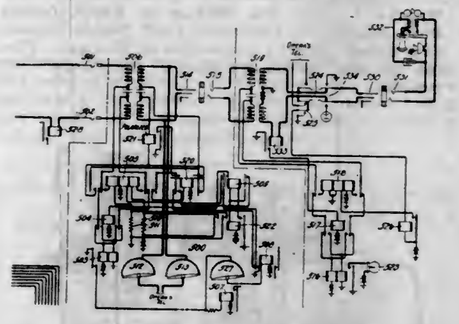
1,678,100. STRAND-SEVERING MECHANISM. EARL F. BALDWIN, Gardner, Mass., assignor to American Fibre Corporation, Gardner, Mass., a Corporation of Massachusetts. Original application filed Dec. 12, 1921, Serial No. 521,624. Divided and this application filed May 28, 1927. Serial No. 194,866. 7 Claims. (Cl. 139—127.)



1. In a loom of the class described, in combination with the picking means, a pair of vertical slides having jaws extending at opposite sides of the line of action of said picking means, and means for intermittently reciprocating the slides in opposite phase.

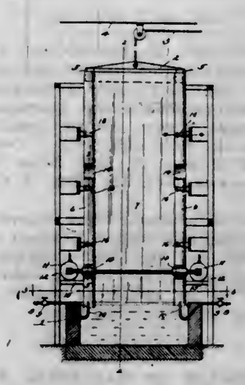
1,678,101. AIR-CONDITIONING SYSTEM. JUSTUS H. BOWER, Rutherford, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 29, 1923. Serial No. 648,464. 8 Claims. (Cl. 236—78.)

1. In combination, an air filled enclosure, means for withdrawing air from said enclosure and redelivering it to the enclosure; means for heating and means for cooling the withdrawn air, means responsive to the temperature conditions in said enclosure and relays responsive to said means for controlling the operation of said heating and said cooling means.



1,678,102. WASTE-VALVE-OPERATING MECHANISM. BENJAMIN R. BRESLER, Bridgeport, Conn. Filed July 5, 1927. Serial No. 203,840. 2 Claims. (Cl. 4—208.)

1. Means for operating a valve, said means including a hand piece, a shaft, a cam on said shaft and in contact with said valve, a rod connected with said hand piece, a yoke adjustably connected with said rod, means for maintaining said hand piece and rod in normal position, a clutch on said shaft and comprising a pair of complementary members one of which is secured to and the other of which is turnable relative to the shaft, means normally maintaining said elements in clutching engagement, means for maintaining said shaft against casual movement, and a pin and slot connection between the yoke and turnable clutch element whereby partial turning movements may be imparted to said clutch element on depressing said hand piece and a step-by-step turning movement imparted to the shaft to open and close the valve.

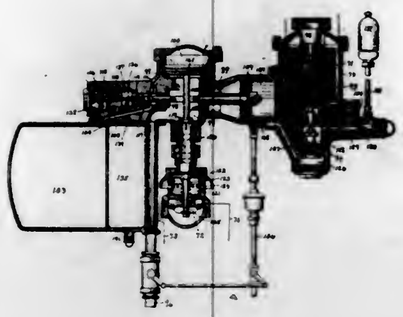


1,678,103. TELEPHONE SYSTEM. HARRY C. CAVERLY, East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 4, 1927. Serial No. 223,880. 17 Claims. (Cl. 179—27.)

1. In a telephone exchange system, a machine switching office, a tandem office, a manual office, means for registering a telephonic designation comprising an office designation and a numerical designation at said machine switching office, means for establishing a connection from said machine switching office to said tandem office, means responsive to the establishment of said connection to transmit said office designation to said tandem office, means to thereupon extend said connection to said manual office, and means responsive to said extension to transmit said numerical designation to said manual office.

13. In a telephone system, a telephone circuit, means for reversing the direction of current flow over said circuit comprising a pair of relays, means controlled by the first of said relays to extend said circuit to a current source in one direction through the windings of the second of said relays, means controlled by said second relay for operating said first relay, and means thereupon controlled by said first relay for extending said circuit to said current source in the opposite direction through windings of said first relay.

1,678,104. APPARATUS FOR DRAWING SHEET GLASS. RAUL F. COLE, Mount Vernon, Ohio. Filed Nov. 12, 1926. Serial No. 148,064. 4 Claims. (Cl. 49—17.)



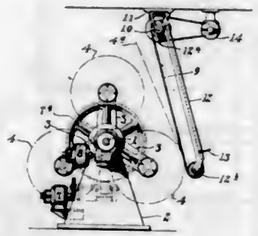
1. In glass drawing apparatus for producing flat glass sheets, a furnace containing a body of molten glass, an elongated bait vertically movable with respect to said furnace for drawing flat glass sheets therefrom, said bait being provided at the ends thereof with cylindrical enlargements, for producing enlarged cylindrical edges on the glass sheets produced thereby, means for introducing a gaseous fluid into the cylindrical edges as the latter are being formed by the upward movement of the bait, and means operating upon said edges to hermetically seal the fluid within said edges at intervals throughout the length of the sheet.

1,678,105. PLASTIC COMPOSITION. COURTNEY CONOVER, Crafton, Pa., assignor to The Selden Company, Pittsburgh, Pa. Filed Sept. 4, 1923. Serial No. 660,933. 8 Claims. (Cl. 260—8.)

1. A resinous plastic composition comprising the reaction product of glycerol, phthalic anhydride and furfural.

1,678,106. AIR-BRAKE-CONTROL MECHANISM. WILLIAM L. COOP and CHARLES B. STONE, Detroit, Mich., assignors to Continuous Train Control Corporation, Detroit, Mich., a Corporation of Michigan. Filed Dec. 8, 1926. Serial No. 153,258. 12 Claims. (Cl. 303—18.)

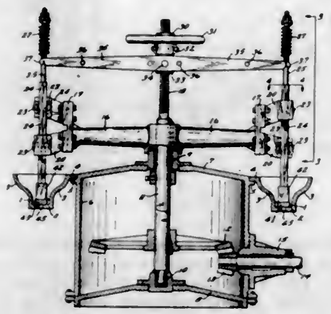
5. In a brake control mechanism of the character described, the combination with the train-pipe, a normally energized electro-pneumatic valve, a control valve governed thereby, automatic means embodying said two valves for causing the reduction of pressure in said train-pipe when said electro-pneumatic valve is de-energized, an electric switch, and means responding to the discharge of air from said train-pipe to open said switch.



1,678,107. PROCESS OF PRODUCING LIGHT-COLORED AND COLOR-FAST, HARD, INFUSIBLE, AND INSOLUBLE PRODUCTS OF CONDENSATION OF PHENOLS AND ALDEHYDES. LEONHARD DEUTSCH and ISAK THORN, Vienna, Austria, assignors to The Selden Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Sept. 15, 1923. Serial No. 662,997, and in Yugoslavia Sept. 28, 1922. 2 Claims. (Cl. 260—4.)

1. A process of producing light colored and color fast, hard, infusible and insoluble products of condensation from phenols and aldehydes consisting in subjecting the same to condensation with an alkali and subsequently adding to the product of reaction boric acid in order to form the salt of this acid.

1,678,108. PROCESS OF HARDENING THE PRODUCTS OF CONDENSATION OF PHENOLS AND ALDEHYDES. LEONHARD DEUTSCH and ISAK THORN, Vienna, Austria, assignors to The Selden Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Sept. 15, 1923, Serial No. 662,999, and in Yugoslavia Sept. 28, 1922. 6 Claims. (Cl. 18—55.)

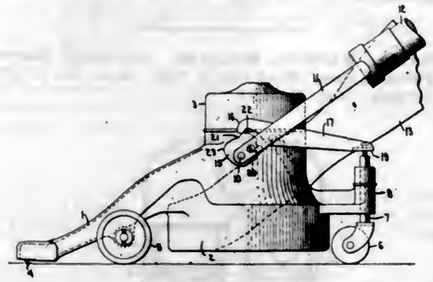


1. A process of hardening fusible condensation products of phenols and aldehydes, which comprises carrying out the hardening in a mold, which laterally supports the material to be molded, but which is open at least at the bottom, and maintaining a liquid of higher specific gravity than the material to be molded below and in contact with the bottom surface thereof.

1,678,109. TENSION DEVIE FOR NEWSPAPER-ROLL STANDS. CHARLES A. DRESSER, Greenburg, N. Y., and EDWIN W. HAMMER, South Orange, N. J., assignors to Cline Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 23, 1926. Serial No. 150,213. 9 Claims. (Cl. 242—75.)

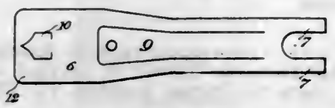
1. A tension device for newspaper roll stands comprising a frame pivoted at one end, a pulley at each end of said frame, a belt carried by said pulleys and contacting with and driven exclusively by a roll of paper carried by the roll stand, a shaft driven by one belt pulley, a dynamo connected to said shaft, a resistance to receive and limit the dynamo current to impose a dynamic braking upon said shaft and means for automatically increasing the dynamo output when the press is to be stopped.

1,678,110. APPARATUS FOR TESTING ABRASION RESISTANCE. FRANK A. FAHRENWALD, Chicago, Ill. Filed Dec. 16, 1926. Serial No. 155,185. 10 Claims. (Cl. 73—51.)



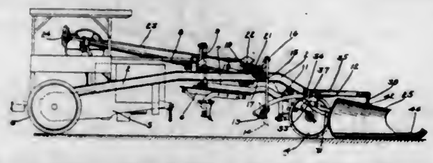
1. A machine for testing abrasion resistance, comprising a circular raceway, a rotatable shaft coaxial with said raceway and normal to the plane thereof, arms rigid with said shaft, a plurality of carriers carried by said arms and vertically movable relative thereto and traversing said raceway, means for rotating said shaft, and means for forcing said carriers toward said raceway with predetermined force, said carriers adapted to receive specimens of materials to be abraded.

1,678,111. SUCTION CLEANER. WALTER A. FRANTZ, Cleveland, Ohio. Filed Dec. 4, 1922. Serial No. 604,790. 2 Claims. (Cl. 15—8.)



1. In a suction cleaner, in combination, a casing having at its forward part a collecting nozzle formed with a narrow elongated inlet mouth arranged transversely of the cleaner axis, a pair of carrying wheels

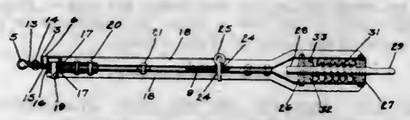
journaled to said cleaner one at each side between said mouth and the center of gravity of the casing, a carrying wheel at the rear of the center of gravity and vertically movable relatively to the casing, an operating handle pivoted to said casing upon a transverse axis



between said first wheels and said last wheel, a cam carried by said handle, and a lever pivoted to said casing, one end of said lever engaging said cam and the other end thereof operatively connected to raise and lower said last wheel.

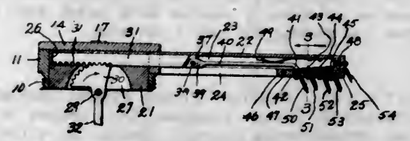
1,678,112. CAN OPENER. ALBERT N. FROST, Vancouver, British Columbia, Canada. Filed Nov. 26, 1927. Serial No. 235,610. 1 Claim. (Cl. 164—119.)

A device for a can perforating tool comprising, a flat stamping of substantially rectangular elongated form and having one of its ends bifurcated by the removal of a central U-shaped portion, an elongated U-shaped incision in the body of said flat stamping, the open end of the last U-shape being adjacent the said bifurcation, and a second incision of substantially V-shaped form adjacent the end of the said stamping opposite the bifurcation.



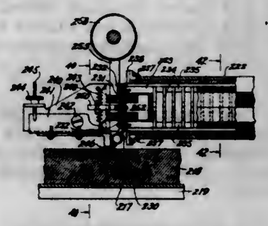
1,678,113. ROAD-MAINTENANCE MACHINE. CARL A. GUSTAFSON, Minneapolis, Minn., assignor to Russell Grader Manufacturing Co., Minneapolis, Minn., a Corporation of Minnesota. Filed May 31, 1927. Serial No. 195,484. 12 Claims. (Cl. 37—145.)

2. The combination with a road maintenance machine, having a scarifier pivotally connected with the forward end thereof, of a snow plow having means for detachably connecting it to said scarifier.



1,678,114. DRAFT APPLIANCE. CARL A. GUSTAFSON, Minneapolis, Minn., assignor to Russell Grader Manufacturing Company, Minneapolis, Minn., a Corporation of Minnesota. Filed July 25, 1927. Serial No. 208,255. 6 Claims. (Cl. 280—33.44.)

1. In a draft appliance, the combination of a triangular frame having a rear cross member provided with means for pivotally connecting it to a grader, a draft bar pivotally connected with said rear frame member, said draft bar comprising opposed members connected together in spaced relation, a plate secured to the forward end of said frame and received between said members to provide a guide therefor, a series of spaced



apertures in said plate, alined apertures in said members adapted selectively to be moved into registration with one of the apertures in said plate, and a locking bolt adapted to be received in said alined apertures to lock the draft bar in adjusted position.

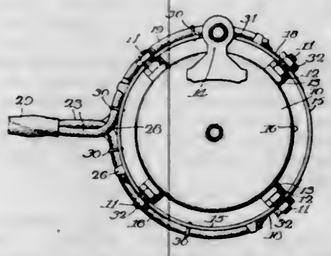
1,678,115. GASOLINE GAUGE. CYRUS E. HANON, St. Louis, Mo. Filed July 12, 1926. Serial No. 122,022. 4 Claims. (Cl. 200—84.)

1. In a gasoline gauge a circuit controller comprising a housing having an arm projecting therefrom, a plunger slidably located in said housing and arm, a contact arm pivotally secured at one end to said plunger and movable longitudinally in said arm, a plurality of longitudinally spaced contact plates located in said arm and adapted to be sequentially contacted with by said contact arm, means for securing said housing to a liquid container, and means carried by said housing and located within said container whereby the rise and fall of liquid in said container imparts a longitudinal movement to said plunger and contact arm.

1,678,116. DEVICE FOR THE TRANSMISSION OF MECHANICAL VIBRATORY ENERGY. HENRY C. HARRISON, Port Washington, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 16, 1928, Serial No. 668,801. Renewed Oct. 11, 1927. 56 Claims. (Cl. 179—100.1.)

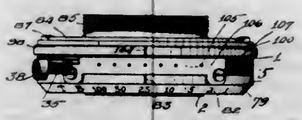
17. A speech frequency system comprising as one element an electric line and as another element a mechanical vibratory element, means for coupling said elements whereby signaling energy from one of said elements may be translated into signaling energy in the other of said elements, said means comprising a mechanical device having a length greater than its width and thickness and having such elasticity and mass per unit length that said means freely transmits substantially uniformly over a wide frequency range.

51. A phonographic device comprising a stylus and a mechanical line attached thereto, said line comprising



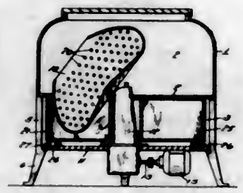
mass elements effectively in series and elastic elements effectively in shunt to the line of propagation of vibratory energy, said elements being so proportioned as to give said line a substantially uniform impedance over a wide range of frequencies to make the ratio of maximum to minimum response of said device not greater than the square root of ten over a range of frequencies at least as great as the order of three octaves.

1,678,117. METHOD OF MOLDING ALBUMEN-CONTAINING MASSES. FELIX HOMBERG, Barmen, Germany, assignor to American Nuplax Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 28, 1926, Serial No. 84,438, and in Germany Apr. 28, 1925. 1 Claim. (Cl. 18—47.)



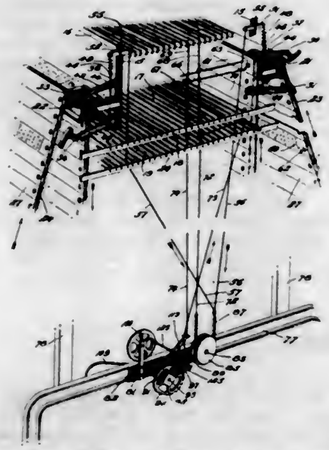
The method of molding albumen containing bodies which comprises providing a metallic mold coated with chromium, and molding sad body n sad mold.

1,678,118. IGNITION-TIMER WIRING ASSEMBLY. NORMAN G. HOVLID, Longmont, Colo., assignor to Belden Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed June 28, 1926. Serial No. 119,261. 12 Claims. (Cl. 173—324.)



1. In combination, an ignition timer having a plurality of spaced terminals, and a wiring assembly for connecting a plurality of conductors to said terminals and comprising a flexible member adapted to embrace a part of said timer, a plurality of relatively insulated contacts mounted on said member in spaced relation according to the spacing of said terminals and adapted to respectively engage the latter, and a conductor connected to each of said contacts.

1,678,119. PHOTOGRAPHIC SHUTTER. RUDOLPH KLEIN, Rochester, N. Y., assignor to Ilex Optical Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 11, 1921. Serial No. 491,404. 25 Claims. (Cl. 95—63.)



1. In a photographic shutter, a casing embodying two members, one of which is in the form of an annular plate provided with a peripheral flange extended in one direction to provide a chamber for the reception of the shutter blades and provided also with a flange extended in the other direction about the opening in the annular plate to provide a lens tube, and the other member of the casing being in the form of a circular plate fitting over the lens tube and having an annular peripheral flange co-operating with the first named member, shutter blades mounted in the chamber formed by the peripheral flange on the first named member, and shutter operating mechanism mounted between the members.

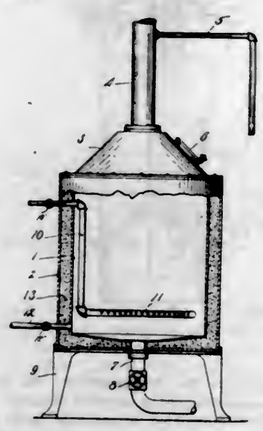
1,678,120. WASHING MACHINE. THOMAS M. KLUTTS, Portland, Oreg. Filed June 4, 1926. Serial No. 113,671. 1 Claim. (Cl. 68—18.)

A washing machine, consisting in a casing having a washing-space and a wringing-chamber thereabove, a floor between said space and said chamber having an opening into which said floor drains, a washing-basket arranged to be rotated in a horizontal plane in said chamber and in an inclined direction through said opening extending into said space, and a water-receptacle in said space having a plurality of compartments movable into alignment with said opening.

1,678,121. PATTERN-REVERSING MECHANISM. RAPHAEL LEVEILLEE, Esmond, R. I. Filed Aug. 29, 1927. Serial No. 216,009. 9 Claims. (Cl. 139—324.)

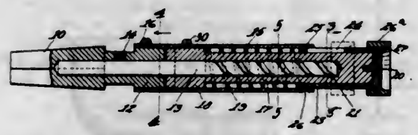
1. The combination of a card cylinder, means for operating the cylinder, means for reversing the operation, a counter connected with the operating and reversing means, an indicator or signal, and means controlled by the counter for bringing said indicator or signal into display position preliminarily to the initiation of the reversing means.

1,678,122. DOOR CONTROLLER. FELIX E. MARTIN, Los Angeles, Calif. Filed Feb. 5, 1927. Serial No. 166,134. 2 Claims. (Cl. 292—201.)



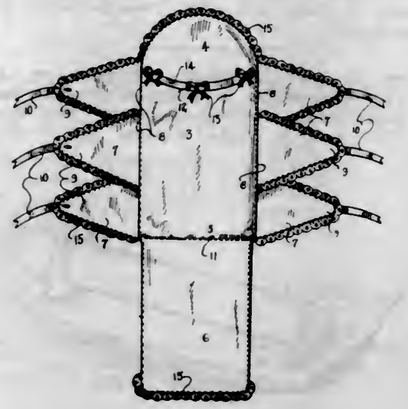
1. In a device of the class described, the combination with a door, a cross-head operatively connected with said door, and means for reciprocating said cross-head; of a

pivotally supported, horizontally extending bar, a J-bolt fixed to said bar, an eye bolt carried by said door with which said J-bolt co-operates, and a cam carried by said



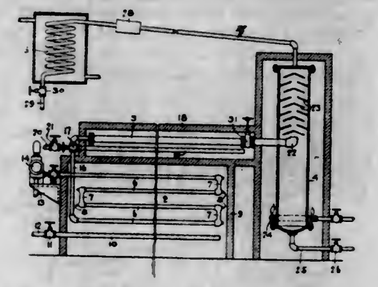
bar to co-operate with said cross-head for the purpose of fastening and unfastening said door at predetermined positions of said cross-head.

1,678,123. APPARATUS FOR REMOVING OIL FROM COD LIVERS. JAMES A. PATCH, Stoneham, Mass. Filed Nov. 27, 1925. Serial No. 71,731. 3 Claims. (Cl. 87—13.)



1. Apparatus for extracting oil from oleaginous material comprising a closed vertical digester for the material, an upstanding open ended stand-pipe connected with the digester, and of such small diameter as to preclude agitation of oil therein due to movement of the digester and pipe, means for introducing steam into the digester to disintegrate the material and extract the oil therefrom, means for introducing water into the digester near the bottom thereof to raise the oil extracted from the material into said stand-pipe, and a second pipe leading from said sand-pipe at a point substantially above the top of the digester, adapted to decant from said stand-pipe the oil upraised therein.

1,678,124. SCREW DRIVER. GEDEON PERREAULT, Gardner, Mass. Filed Dec. 29, 1925. Serial No. 78,228. Renewed Nov. 7, 1927. 3 Claims. (Cl. 145—51.)

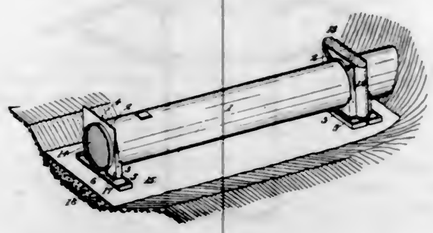


1. In a tool of the character described, the combination with a holder adapted to receive the shank of a tool therein, of a tube fixed thereto and surrounding said tool, a member secured within the tube and having a recess or bore for receiving said tool, a slide yieldingly mounted on said member and having a head with a conical inner surface for engaging the head of a screw, yielding means located in an annular space between said member and tube for forcing the slide outwardly and a screw-driver blade mounted on the end of said member within the head.

1,678,125. SLEEPING BAG. MARY PETRESCU, Wheat Stone, Saskatchewan, Canada. Filed May 19, 1927. Serial No. 192,704. 4 Claims. (Cl. 5—343.)

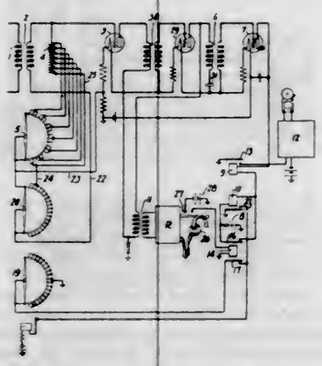
1. A sleeping bag comprising a main body section, an end flap extending from an end thereof and adapted to be folded to overlie said main body section and fastening flaps arranged in registering pairs on opposite sides of said main body section and adapted to extend over said end flap when folded to secure the same.

1,678,126. PROCESS AND APPARATUS FOR CRACKING MINERAL OIL. JAMES M. SCHOONMAKER, Jr., Sewickley, Pa., assignor, by mesne assignments, to The Texas Company, New York, N. Y., a Corporation of Delaware. Filed May 15, 1922, Serial No. 560,986. Renewed June 3, 1925. 50 Claims. (Cl. 196—58.)



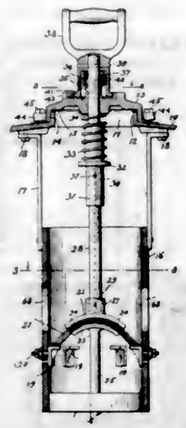
1. In the cracking of relatively heavy hydrocarbons to produce lighter hydrocarbons of the gasoline type, the step that comprises inhibiting the cracking of the hydrocarbons by applying pressure to the oil in addition to the vapor pressure of the oil while heating the oil to a temperature within its critical cracking range said critical cracking range being defined as that temperature range within which cracking can be inhibited by pressure and which exists for 10° F. to 50° F. above the normal cracking range at low pressures of the order of 100 pounds per square inch.

34. Apparatus for cracking hydrocarbons comprising a tubular heater, means for introducing oil under pressure into said heater, a cracking chamber communicating with



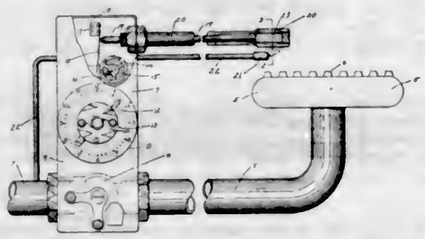
said heater, said cracking chamber being of somewhat larger diameter than the tubes of said heater, a separating chamber of relatively larger diameter communicating with said cracking chamber through an opening at least as large as the diameter of said cracking chamber, independent means for heating said heater, said cracking chamber, and said separating chamber, baffles disposed in said separating chamber, means for withdrawing vapors and gases from the top of said separating chamber and for condensing light-boiling hydrocarbons therefrom, and means for withdrawing residues from the bottom of said chamber.

1,678,127. METHOD OF POSITIONING AND ALIGNING STRUCTURES IN AQUEOUS BODIES. FRANCIS BETTS SMITH, San Francisco, Calif. Filed Mar. 31, 1926. Serial No. 98,854. 8 Claims. (Cl. 61—43.)



1. The method of submerging and aligning structures in aqueous bodies, which consists in lowering on to a bed a structure rendered buoyant with foundation members adjustably suspended therefrom which overcome the buoyancy thereof while suspended with the foundation members resting on the bed and maintaining the structure submerged, adjusting the suspension connections to properly position the structure to line and level, and bedding the positioned structure.

1,678,128. TRANSMISSION-CONTROL SYSTEM. KERMIT O. THORP, River Edge, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 3, 1925. Serial No. 72,924. 4 Claims. (Cl. 178—44.)

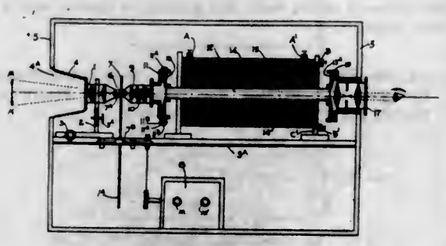


2. A transmission control system comprising a transmission line, means for receiving and demodulating a modulated carrier wave transmitted over said line, means for controlling the amplitude of the demodulated wave, means for receiving call signaling current transmitted over said line, and means for rendering inoperative said volume control means while said call signaling current is being received.

1,678,129. TAP CHANGER. GEORGE H. TUTTLE, Warren, Ohio, assignor to The Packard Electric Company, Warren, Ohio, a Corporation of Ohio. Filed Apr. 13, 1927. Serial No. 183,324. 8 Claims. (Cl. 200—4.)

1. In tap-changers for transformers, the combination of a tank, a removable cover secured thereon, a tube of insulating material supported within said tank, a plurality of contacts individually secured on the interior of said tube, an axially movable and rotatable rod arranged within said tube and projecting through said cover, an arcuate laminated brush carried by said rod and arranged to engage said contacts, a handle secured to said rod on the exterior of said tank, and cooperating means on said cover and said handle for locating said brush in its different positions.

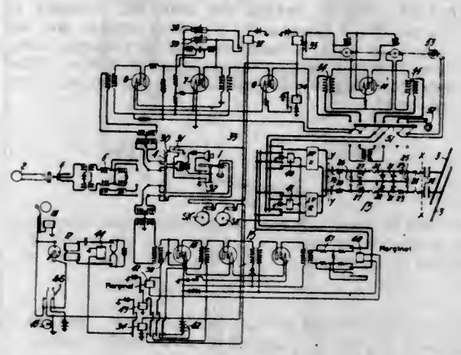
1,678,130. TIME-CONTROLLED GAS-BURNING APPARATUS. VICTOR M. TYLER, New Haven, Conn., assignor to The Sentinel Mfg. Co., New Haven, Conn., a Corporation. Filed Nov. 23, 1926. Serial No. 150,234. 2 Claims. (Cl. 67—87.)



1. In a time-controlled gas-burning apparatus, the combination with a gas burner; of a pilot-light jet therefor; a timing-mechanism constructed and arranged to automatically turn on the supply of gas to the said burner; a yielding stop-member exerting a constant effort to engage a running part of the said timing-mechanism; and a thermostat constructed and arranged to normally hold the said stop-member out of engagement with the timing-mechanism and located adjacent to the said pilot-light jet, so as to be affected by the heat developed thereby, whereby, when the pilot-light becomes extinguished, the automatic turning-on of the gas by the said timing-mechanism will be forestalled and prevented.

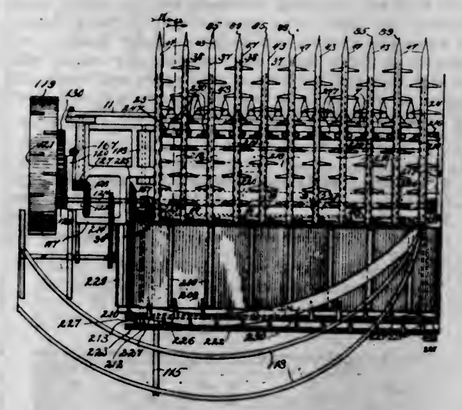
1,678,131. SAFETY FUSE. THOMAS L. VAUGHN, Jr., Charlotte, N. C. Filed Jan. 4, 1926. Serial No. 79,151. 4 Claims. (Cl. 200—119.)

1. A safety fuse structure comprising a supporting block, fuse engaging terminals carried thereby, and a metal spring clip secured to the block adapted to clamp an insulated fuse to the terminals and to be destroyed by the passage of the line current through the clip when the fuse is substituted by a bare conductor.



1,678,132. ART OF TELEVISION. LJUBOMIR WILLIAM SKALA, Riverside, Ill., assignor of forty-five one-hundredths to Frank J. Schraeder, Jr., Glen Ellyn, Ill. Filed Oct. 1, 1924. Serial No. 741,025. 21 Claims. (Cl. 178—6.)

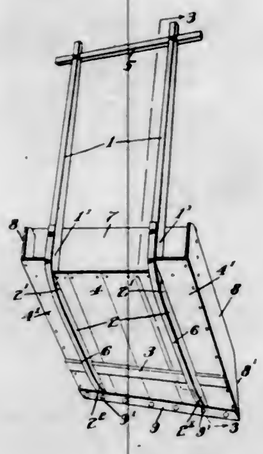
2. The art of transmitting an image in motion and natural colors to a distance which includes the steps of detecting and transforming the light rays received from said image through an optically inactive medium into corresponding waves in an electric current, transmitting said electric waves to a receiving apparatus to affect an electromagnetic field therein, passing a beam of plane-polarized parallel rays of white light through said magnetic field to retransform said beam of light into said image.



1,678,133. POWER-LINE SIGNALING. WALLACE V. WOLFE, Glen Ridge, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 22, 1923. Serial No. 664,147. 15 Claims. (Cl. 179—2.)

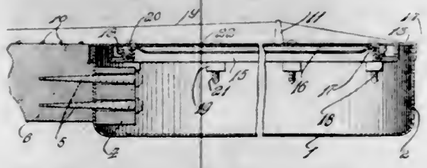
1. In a two-way signaling system, terminal apparatus comprising incoming and outgoing channels, a selective circuit in each channel designed to pass waves of a certain frequency and to exclude waves of the frequency passed by the other, and means, operated as a result of

an essential action in attempting to use said apparatus, for interchanging said selective circuits with respect to the incoming and outgoing channels.



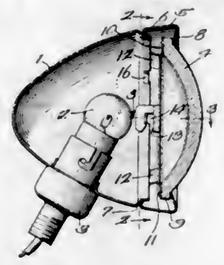
1,678,134. REAPING OR HARVESTING MACHINE FOR HARVESTING HEMP OR SIMILAR STALKS OR CROPS. HARRY IRWIN CROMER, Oak Park, Ill. Filed Aug. 25, 1924. Serial No. 733,969. 5 Claims. (Cl. 56—182.)

1. In a machine of the class described, the combination of a series of forward conveyor members each having stalk-engaging teeth thereon adapted to move rearward in extended stalk-engaging position above the level of the back of a sickle, portable supporting means upon which said toothed conveyor members are mounted, stalk-supporting means on said portable conveyor-supporting means and adapted to support stalks located back of such sickle, endless transverse conveyor mechanism located back of and having an upper stalk-engaging portion movable transversely with respect to the rearwardly movable stalk-engaging toothed portions of said for-



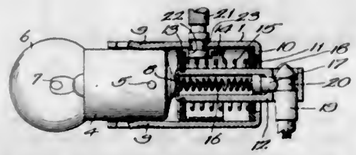
ward conveyor member, a traction wheel, and means for operatively connecting said forward conveyor members and said transverse endless conveyor mechanism with the traction wheel.

1,678,135. SNOW SCOOP OR SHOVEL. GEORGE L. CROSMAN and ARTHUR P. NASON, Portland, Me., assignors to G. A. Crosman & Sons Co., Deering Junction, Portland, Me., a Corporation of Maine. Filed Jan. 21, 1926. Serial No. 82,813. 3 Claims. (Cl. 37—53.)



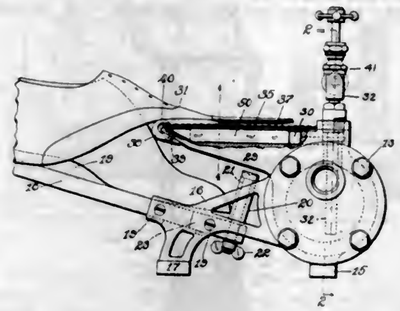
1. In a snow scoop, a floor, a pair of runners beneath said floor and extending longitudinally the entire length thereof, the front ends of said runners being formed as prows and merging with said floor, metal shoes on said runners, a folded metal strip covering the bottom edge of said floor and the ends of said prows and shoes, and means set through said floor, said shoes, and said prows to hold the same in rigid relation to each other.

1,678,136. STRINGED MUSICAL INSTRUMENT. CLARENCE L. DEWEY, Elkhart, Ind., assignor to Outing Manufacturing Co., a Corporation of Indiana. Filed Dec. 10, 1926. Serial No. 153,752. 6 Claims. (Cl. 84—267.)



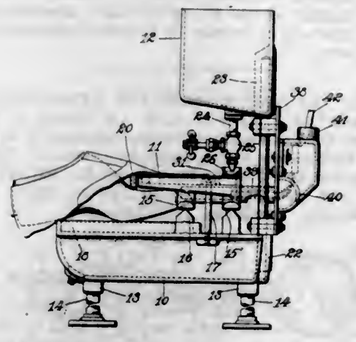
1. In a stringed musical instrument of the class described the combination with a housing, of a grooved top member rigidly secured thereon, a beveled flange formed on the inner periphery of said top member affording an annular ridge, tongues struck from said top member, nuts rigidly secured to said top member, between said tongues, a skinhead positioned on said top member and resting on the annular ridge, a ring interfitting said top member, and screws carried by said member and engaged in said nuts to force the ring member into the top member against the margin of the skinhead to force the margin of the skinhead into pockets formed by said tongues to cause the skinhead to be stretched into position while dry over said annular ridge.

1,678,137. CASING HAVING LIGHT-TRANSMITTING CLOSURE. HARRY A. DOUGLAS, Bronson, Mich. Filed July 2, 1928. Serial No. 203,224. 1 Claim. (Cl. 240—41.)



A casing including a casing body; a light transmitting closure at the rear of which said body is disposed; an annular frame surrounding the closure and having an internal shoulder at the front side of the closure and an additional internal shoulder which is at and spaced apart from the rear side of said closure; a resilient retaining ring having portions flexible perpendicularly to the general plane of said closure and interposed between said closure and the aforesaid additional internal shoulder of the annular frame, said ring having rearwardly extending fingers upon its aforesaid flexible portions and pressing upon this shoulder to press the first aforesaid internal shoulder upon the front side of the closure; and catches carried by said retaining ring and engaging the aforesaid casing body and holding it against said annular frame.

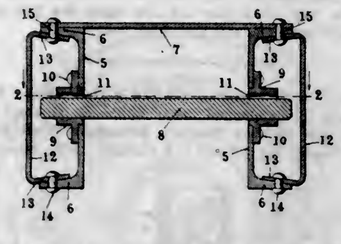
1,678,138. CIRCUIT CONNECTER. HARRY A. DOUGLAS, Bronson, Mich. Filed Nov. 17, 1927. Serial No. 233,875. 7 Claims. (Cl. 173—346.)



6. In a circuit connecter, the combination with a metallic shell formed, at its front end, to receive a contact carrying plug and having an abutment at its other end; of a contact member surrounded by the shell; a skirt member carried upon the front end of said contact member; a spring interposed between said skirt member and abutment and urging said contact member against a contact upon a plug received in the front end of the shell, the skirt member being in close proximity to the shell; and a handle secured to said skirt and projecting through a slot formed through said shell and shaped to locate the handle in a circuit opening position and to permit the handle to have a circuit closing position.

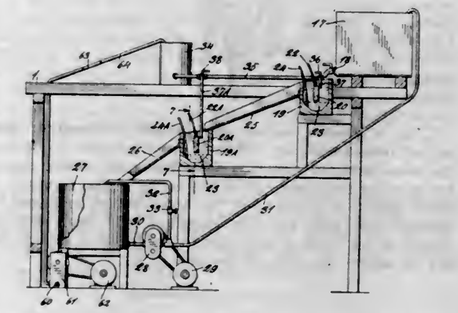
1,678,139. METHOD OF AND APPARATUS FOR SOFTENING SHOE MATERIALS. FREDERICK M. FURBER, Revere, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 10, 1923. Serial No. 618,374. 73 Claims. (Cl. 12—1.)

1. A softening apparatus comprising a heat-radiating element formed to enter between the last and upper of an assembled shoe, and means for supplying a liquid to said element.



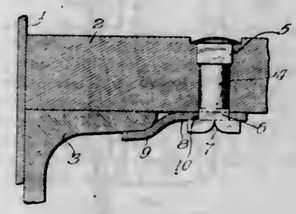
1,678,140. APPARATUS FOR HEATING AND SOFTENING SHOES AND PARTS THEREOF. FREDERICK M. FURBER, Revere, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 9, 1923. Serial No. 637,891. 16 Claims. (Cl. 12—1.)

1. A shoe-treating apparatus comprising a heat-radiating element adapted to convert water into hot moist vapor, a tank for supplying water to said heat-radiating element, and an overflow tank having a capacity as great as that of said supply tank and arranged to catch any water that overflows said heat-radiating element.



1,678,141. DRAFT GEAR. LOUIS A. HOERR, St. Louis, Mo., assignor to Western Railway Equipment Company, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 24, 1925. Serial No. 51,923. 2 Claims. (Cl. 213—61.)

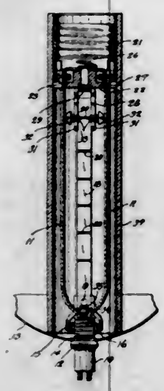
1. In a device of the class described, the combination with a pair of draft sills each having upper and lower flanges of a draft key extending laterally, through the said sills, a stop plate provided with substantially



horizontal wings above and below the plane of said key, and means for securing said wings to the flanges of the sill, said plate limiting the lateral movement of the key.

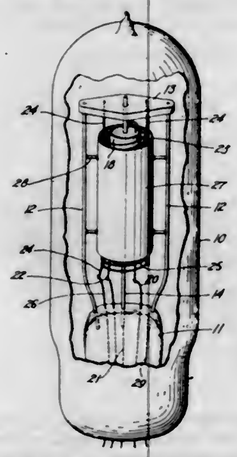
1,678,142. APPARATUS AND METHOD FOR RECOVERING PRECIOUS METALS. JAMES E. HOPKINS, Denver, Colo. Filed June 21, 1926. Serial No. 117,383. 6 Claims. (Cl. 209—177.)

1. In combination, a plurality of amalgamating plates in tandem, means for flowing pulp containing values over said plates in succession, a means for preparing alkali metal amalgam and means for conveying said amalgam directly from said preparing means independently to the head of each of said plates and distributing it thereover.



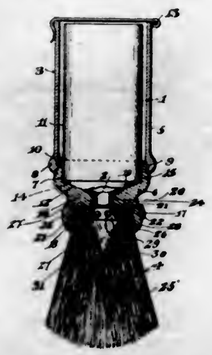
1,678,143. FLOOR CLIP. CHARLES L. HOWARD, Chicago, Ill., assignor to Western Railway Equipment Co., St. Louis, Mo. Filed Aug. 8, 1927. Serial No. 211,273. 1 Claim. (Cl. 189—35.)

In a device of the class described, the combination with a floor sill, of a floor board supported thereby having a circular bore therethrough, a clip having a square shaped opening therein, a bolt adapted to be run through the bore in said floor and having an enlarged upper square portion adapted when driven in position to pre-



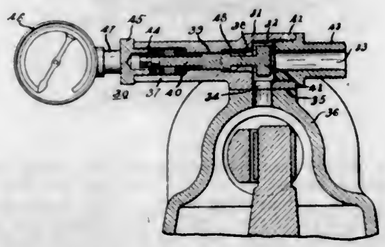
vent rotation of the bolt in said bore and said bolt also having a lower square portion adapted to fit the opening in the clip to prevent rotation of the clip upon the bolt, and means comprising a slotted portion in the end of the bolt to retain the clip upon the bolt and in engagement with the sill and floor board.

1,678,144. ADJUSTABLE CANDLE SOCKET. HARVEY HUBBELL, Bridgeport, Conn.; Louie E. Hubbell executrix of said Harvey Hubbell, deceased. Filed July 13, 1925. Serial No. 43,142. 4 Claims. (Cl. 240—52.)



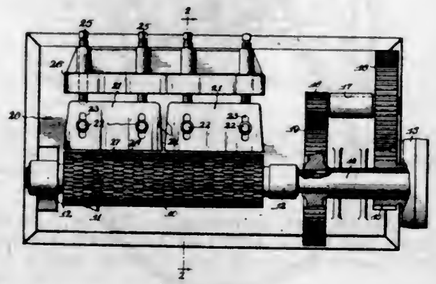
1. In a candle socket, an upright rectangular bar scored transversely at different spaced points to reduce its cross sectional area and form break off points, means for securing the lower end of the bar to a pipe terminal, a lamp socket, a support for the lamp socket arranged to embrace one side and the edges of said bar, and set screws in the sides of said support arranged to engage the bar to secure the support thereto.

1,678,145. ELECTRON-DISCHARGE DEVICE. MERVIN J. KELLY, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 8, 1924. Serial No. 724,754. 7 Claims. (Cl. 250—27.5.)



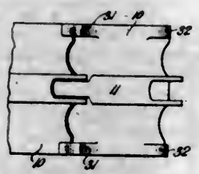
4. An electron discharge device comprising a vessel having a stem, a plurality of rods sealed in said stem, a block of insulating material connecting the free ends of said rods, the end of one rod being slidable in said block, a thermionically active member supported by said last named rod, a metallic cylinder supported by said other rods, and leading-in wires connected to certain of said rods.

1,678,146. SHAVING BRUSH. SAMUEL W. KENDRICK and JOHN E. MARTIN, Great Falls, Mont. Filed Feb. 11, 1927. Serial No. 167,552. 3 Claims. (Cl. 15—185.)



1. In a shaving brush a combined bristle anchoring, separating and thinning element comprising a hollow annular structure formed with an open bottom and consisting of a top in the form of an annulus and outer and inner sides integral with the top and forming respective tubular walls, said top spacing said sides, and the tube formed by said inner side wall gradually decreasing in diameter from said open bottom to said top and with said outer side wall providing a chamber for receiving the inner and terminal portions of a set of bristles, said inner wall providing means for anchoring the bristles to said element adjacent the inner ends of the bristles and further forming axially of the set of bristles a shaving cream passage gradually increasing in diameter outwardly from said annulus.

1,678,147. VALVED FITTING FOR REFRIGERATING APPARATUS. JESSE G. KING and HARRY B. HULL, Dayton, Ohio, assignors, by mesne assignments, to Frigidaire Corporation, a Corporation of Delaware. Original application filed May 7, 1928, Serial No. 637,136. Divided and this application filed July 30, 1927. Serial No. 209,587. 12 Claims. (Cl. 251—43.)

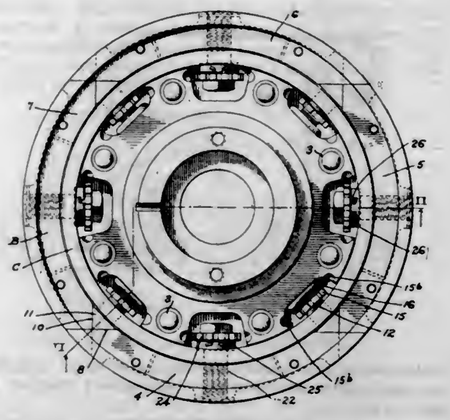


12. A fitting for refrigerant lines of a refrigerating apparatus, comprising a valve casing provided with a valve chamber and with inlet and outlet passageways, and a valve structure enclosed within said valve casing for opening or closing one of said passageways, said casing being constructed to permit the securing of connections thereto communicating with said inlet and outlet passageways, said connections being arranged to connect the fitting into the refrigerant circuit of a refrigerating apparatus including an evaporator.

1,678,148. APPARATUS FOR PRODUCING RODS FOR WELDING. CHARLES KOTCHI, Bay City, Mich., and FREDRICH J. RODE, Chicago, Ill., assignors, by mesne assignments, to Koro Corporation, Waukegan, Ill., a Corporation of Illinois. Filed Nov. 24, 1924. Serial No. 752,040. 3 Claims. (Cl. 80—18.)

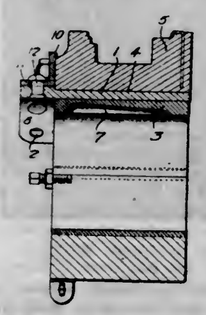
3. An apparatus for use in producing by a pressing operation a rod for welding, said apparatus including an extended roller, a surface co-operating between which roller and surface the rod is rolled, the said surface being formed in independent sections arranged lengthwise of the roller and end to end, means for adjusting said sections independently one with respect to the other in directions toward and away from the axis of the roller, the proximate ends of adjacent sections exerting a greater pressure upon the rod than the remaining portions of the sections to squeeze the material in the rod to cause metal to flow outwardly toward the ends of the rod, and means for rotating the roller.

1,678,149. ENDLESS TRACK FOR VEHICLES. FREDERICK BRIDDON LAMB, London, England, assignor to Roadless Traction, Limited, Hounslow, Middlesex, England. Filed Feb. 1, 1924, Serial No. 690,057, and in Great Britain Feb. 5, 1923. 3 Claims. (Cl. 305—10.)



3. In endless tracks which comprise a plurality of track shoes having surfaces on each side of their central longitudinal axis, a central connection between adjacent shoes which permits movement about two axes, and means carried by the shoes at their outer edges for limiting the movement thereof about their central longitudinal axes which means consists of coacting lugs that also serve as teeth for engagement with a driving-sprocket.

1,678,150. PRODUCTION OF GLYCERINE BY FERMENTATION. JAMES W. LAWRIE, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed July 27, 1922. Serial No. 577,992. 14 Claims. (Cl. 195—20.)

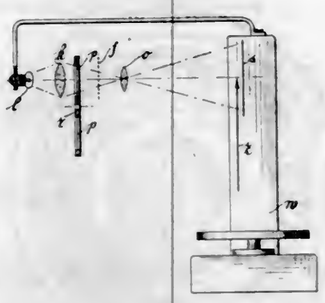


1. The process of producing alcohol and glycerol which comprises fermenting a molasses mash with a yeast, and adding, during said fermentation, a mixture of substantially the same composition as the incinerated ash of a fermented molasses mash.

1,678,151. PISTON STRUCTURE. ARTHUR H. LIGHT, Oakland, Calif. Filed May 3, 1927. Serial No. 188,418. 8 Claims. (Cl. 74—109.)

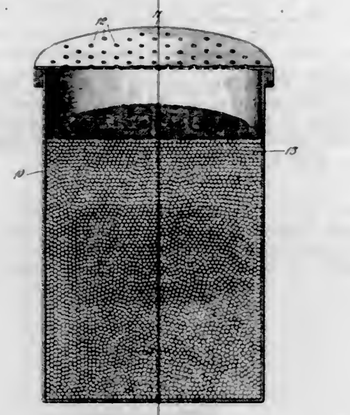
1. A piston of the character described having an annular groove formed in its peripheral surface, a floating ring mounted in said groove, a second ring consisting of a plurality of segments mounted in the groove exteriorly of the floating ring, means engageable with the segments to force them outwardly in a radial direction and means carried by the floating ring whereby outward radial movement of the segments is limited.

1,678,152. BEARING. HAROLD G. MARTIN, Philadelphia, Pa., and MICHAEL H. NEWGIRG, Baltimore, Md., assignors to Martin & Newgirg, Inc., Baltimore, Md., a Corporation of Maryland. Filed Feb. 19, 1924. Serial No. 693,872. 4 Claims. (Cl. 308—54.)



1. A crown bearing for locomotives or the like, having a longitudinal recess formed in its bearing surface at substantially the peak of the bearing, said recess being of increasing width and depth toward the inner end of the bearing, the crown bearing comprising a reinforce plate and a brass section intimately associated in casting, the reinforce plate being extended beyond the end of the brass section to provide a flange for use in withdrawing the bearing from the box.

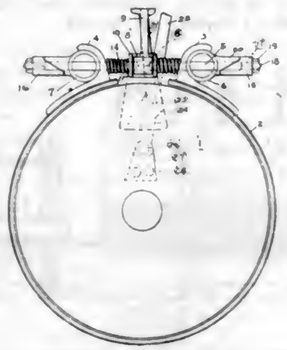
1,678,153. PRICE-INDICATING BALANCE. KARL MARTIN, Rathenow, Germany. Filed July 14, 1926, Serial No. 122,491, and in Germany July 1, 1925. 2 Claims. (Cl. 88—24.)



1. In a balance having a weight-indicating scale and a needle co-operating therewith, an independent transparent

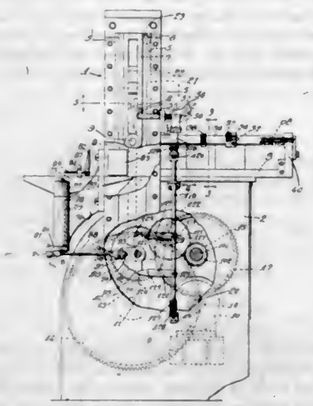
price-indicating scale, a source of light, a system of lenses arranged co-axially thereto, said scale being disposed in the course of the light-rays, passing through said lenses.

the image of said price indicating scale being projected by said system of lenses into cooperative relation to said needle.



1,678,154. SPECIAL PACKAGE OF HYDROSCOPIC MATERIAL. CARL E. MENSING, Somerville, and ROY E. WILEY, Plainfield, N. J. Filed Nov. 10, 1926. Serial No. 147,428. 2 Claims. (Cl. 206—46.)

1. A package of hydroscopic material designed to permit free flow of said material in damp weather, comprising a hydroscopic substance which has been fused and formed into globules, each of such globules thereby having only a point contact with adjacent globules, and a container therefor having a dispensing opening of a diameter greater than that of the globules.

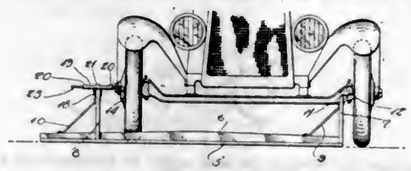


1,678,155. BRAKE EQUALIZER. JOHN L. MESPLE, San Francisco, Calif. Filed Jan. 25, 1926. Serial No. 83,486. 4 Claims. (Cl. 188—194.)

1. In a brake adapted to be applied to the front wheel of an automobile, said wheel being secured to the front axle of the automobile by the usual steering knuckle, a brake band, a drum upon the wheel cooperably associated with the band, means including a lever for forcing the band into frictional engagement with the drum, said lever being mounted so as to swing about an axis substantially normal to the axis of said steering knuckle, an actuating member adapted to be moved in a direction substantially normal to the axis of the steering-knuckle, and linkage

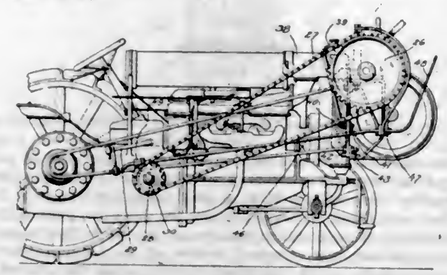
mechanism anchored to the front axle and cooperably associating said lever and actuating member for applying a braking force to said lever.

1,678,156. PAPER-CUTTING MACHINE AND GAUGE AND CARRIER THEREFOR. JOHN E. MULRONEY, Chicago, Ill.; Margaret B. Mulroney, executrix of said John E. Mulroney, deceased, assignor to Edward M. Brackett and Fred Bracket, Copartners doing business as The Brackett Stripping Machine Company, Topeka, Kans. Filed Mar. 29, 1926. Serial No. 98,306. 17 Claims. (Cl. 164—48.)



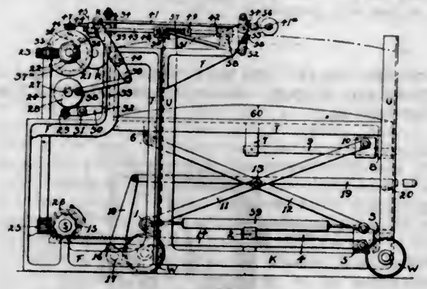
1. In a paper cutting machine, the combination of a movable knife, a feed table extending forward of the knife and adapted to support paper in position to be operated upon by the same, a reciprocatory paper-supporting carrier table mounted back of the knife and adapted to swing upon a vertical axis toward and from the knife, for supporting and carrying ent paper from the knife, and means for operating said carrier member.

1,678,157. WHEEL-ALIGNING GAUGE. ISAAC W. MUNDEN, Tampa, Fla. Filed June 15, 1927. Serial No. 199,096. 4 Claims. (Cl. 33—203.)



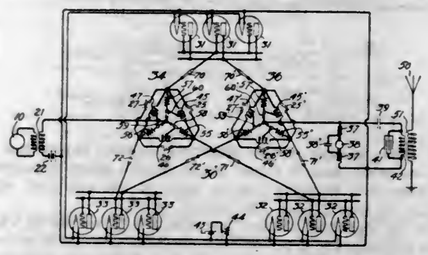
1. A wheel-aligning gauge including a base-beam, uprights on opposite end portions of the base-beam, gauging abutments supported by the said uprights and including

straight tire contacting surfaces facing in the same general direction, one of said gauging abutments being adjustable towards and from the other, and an index



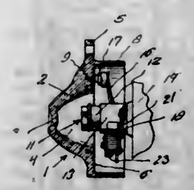
combining with the adjustable gauging abutment for indicating its position with respect to the other gauging element.

1,678,158. HOIST ATTACHMENT FOR TRACTORS. HARRY S. MYERS, Van, Pa. Filed Oct. 10, 1922, Serial No. 593,592. Renewed Mar. 7, 1927. 3 Claims. (Cl. 254—166.)



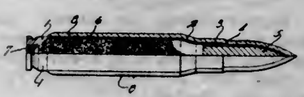
1. In combination with a tractor whose body is made up of sections including a rear axle housing, of a frame carrying active winch elements mounted on the front of said tractor, means for holding said frame against vertical movement, and a rod bent to encircle the axle housing of the tractor and having its ends attached to said winch frame.

1,678,159. AUTOMATIC FEED DEVICE. JOHN WILLIAM NASMITH, Manchester, England, assignor to Nasmith's Patents Limited, Manchester, England. Filed Oct. 10, 1924, Serial No. 742,852, and in Great Britain Oct. 27, 1923. 6 Claims. (Cl. 271—62.)



1. An automatic feed device for feeding sheets singly from a sheet pile, comprising gripper rollers, a vertically movable table on which the sheet pile rests, feeding devices to feed the top sheet of the pile to the gripper rollers, a truck on which the table is borne, means carried by the truck for raising the table bearing the sheet pile, a shaft put in rotation or stopped by clutch means operated by the movement of the feeding devices, and transmission gearing between said shaft and the table raising mechanism, part of such gearing being borne by the truck and separable from the other and stationary transmission elements.

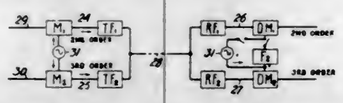
1,678,160. ELECTRIC-WAVE-TRANSLATION SYSTEM. ARTHUR A. OSWALD, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 20, 1924. Serial No. 700,558. 11 Claims. (Cl. 179—171.)



1. In a space discharge tube system including a number of units greater than two each unit comprising one or more tubes and common paths for desired and undesired waves, the method of preventing the transmission of waves of undesired frequency between units in said system which comprises causing waves of desired frequency to traverse said common paths in parallel, and causing waves of undesired frequency to traverse said paths in series.

1,678,161. TIMER. FRANK J. PALKY, Dorchester, Nebr. Filed May 5, 1926. Serial No. 106,883. 1 Claim. (Cl. 200—25.)

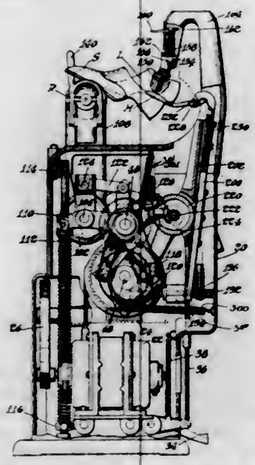
In a timer of the class described, in combination, a shell provided with a flat annular race, circumferentially spaced stationary contact elements embedded in said race, a timer shaft extending into said shell, a rotary circuit closer mounted on said shaft and comprising a sleeve fixedly mounted on the timer shaft, said sleeve being provided with a rigid laterally extending ear, a collar mounted for oscillation on said sleeve, said collar being provided with a radiating extension carrying a longitudinally bowed resilient arm, said arm having a socket at its free end, a contact element in said socket adapted to engage the aforesaid contact elements, links pivotally connected to said ear and said radiating extension respectively, said links being pivoted together, and a governor weight carried by the ends of the links pivotally connected to each other.



1,678,162. CARTRIDGE. JOHN D. PEDERSEN, Springfield, Mass. Filed May 20, 1926. Serial No. 110,559. 2 Claims. (Cl. 102—12.)

1. A cartridge comprising a case of drawn metal coated with an extremely thin film of hardened ceresin, adapted both as a protective covering for said case against a

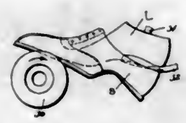
corrosion and for lubrication of said case, said coating film being the air dried product resulting from an application to said case of a solution of ceresin in carbon tetrachloride.



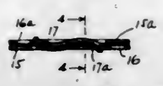
1,678,163. MODULATION. EUGENE PETERSON, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 29, 1923. Serial No. 683,301. 38 Claims. (Cl. 179—171.)

1. The method which comprises jointly impressing a carrier wave and a signal wave on the same distorting medium, and utilizing one or more of the resultant side bands of higher than the second order.

20. A signaling system comprising a plurality of one-way channels for different transmissions and means whereby each channel employs an order of modulation different from the others.



1,678,164. RELASTING MACHINE. ARTHUR F. PYM, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 7, 1921. Serial No. 443,043. 93 Claims. (Cl. 12—15.)

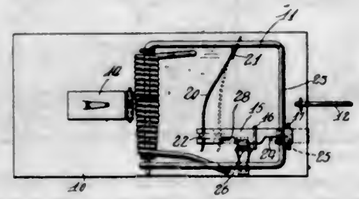


1. In a relasting machine, a support to engage a last partially inserted in a shoe, means to engage a shoe on a last supported thereby and comprising a surface which will slip under excessive resistance, mechanism to cause relative movement between the support and the shoe-engaging means to seat the shoe on the last while simultaneously broadening the forward portion of the upper to facilitate the insertion of the last therein, and means to contract the forward portion of the upper after the seating of the last, to bring the upper into snug engagement with the last.

1,678,165. MANUFACTURE OF SHOES. ARTHUR F. PYM, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 28, 1921. Serial No. 518,204. 20 Claims. (Cl. 12—142.)

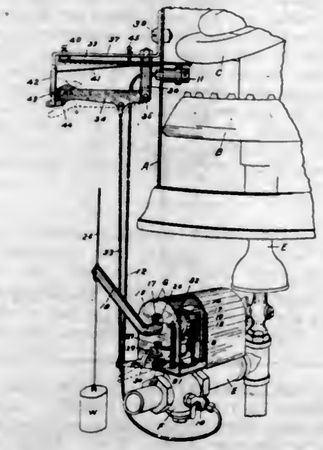
1. That improvement in methods of relasting shoes which comprises partially inserting a last in a shoe, supporting the last and engaging the shoe in a manner to allow for slippage under excessive resistance without changing the point of engagement with the shoe, and then relatively moving the shoe and the last and simultaneously broadening the shoe upper to facilitate the seating of the last and continuing said relative movement until the seating of the last causes slippage to occur.

1,678,166. SEPARABLE FASTENER. THEODORE REPAY, Los Angeles, Calif., assignor to Fernando Spangenberg, Los Angeles, Calif. Filed Nov. 22, 1926. Serial No. 150,105. 1 Claim. (Cl. 24—230.)



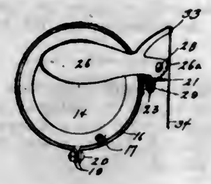
In a two part separable fastener, a fastener comprising a flat body having an elongated tongue outstruck from one side of the body and only free of the body at one end and along a portion of the sides of the tongue, the tongue being of ogee form in longitudinal section with its free end flared outwardly from the body to permit the insertion of an identical tongue on the flat body of a second fastener, the attached portion of the tongue extending partially along the sides of the tongue and forming a dished pocket to receive the free end of the tongue of the second fastener and cooperating with the ogee form of the tongue to prevent rotational movement between the two fasteners.

1,678,167. PROCESS OF REMAKING CHEESE. SANFORD K. ROBINSON, Chicago, Ill., assignor by mesne assignments, to Kraft-Phenix Cheese Company, Chicago, Ill., a Corporation of Illinois. Filed June 21, 1923. Serial No. 646,921. 5 Claims. (Cl. 99—11.)



3. The improvement in the art of remaking cheese of a normally solid variety by a process which includes the steps of comminuting the cheese, heating the same and stirring same, which consists in adding to the material during the process, a small quantity of the double tartrate of sodium and potassium.

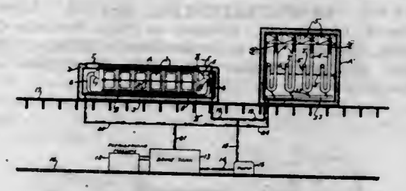
1,678,168. TRAP. EMIEL P. SEGHERS, Chicago, Ill. Filed July 2, 1923. Serial No. 648,900. 28 Claims. (Cl. 43—96.)



1. A trap comprising a fall or jaw, trigger mechanism for releasably retaining said fall in set position, a safety catch for preventing operation of said fall arranged to automatically engage said fall when said fall is moved into position to be set, and means for retaining said catch out of operative position to permit operation of said

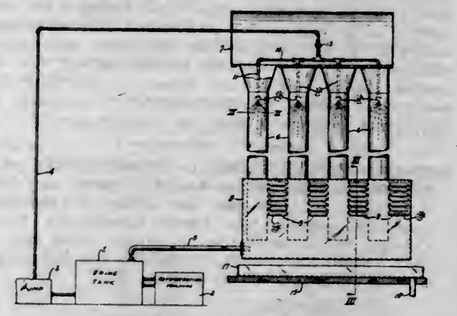
1,678,169. THERMOSTATIC CUT-OUT FOR GAS VALVES. RICHARD H. SHADRICK, Minneapolis, Minn., assignor to Andrew E. Carlsen, Minneapolis, Minn. Filed Aug. 14, 1925. Serial No. 50,246. 15 Claims. (Cl. 67—116.)

1. The combination with a heater, having a main burner and a pilot burner, of a valve to control the supply of gas to the main burner, a rotatable cam having a cam face normally held in engagement with the valve to open and close the same, means for manually actuating the cam, and thermostatically operated means influenced by the pilot burner for releasing the cam from its normal position so as to render it ineffective for opening the valve.



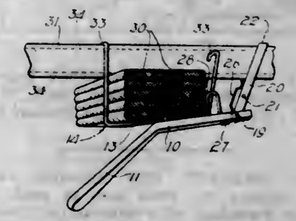
1,678,170. LIGHT-CONTROL DEVICE FOR HEADLIGHTS. ALEX S. TJADEN, Sioux City, Iowa. Filed Jan. 23, 1928. Serial No. 248,736. 6 Claims. (Cl. 240—45.6.)

4. In a device of the class described, a headlight dimmer adapted to be interposed at an angle across he path of light rays from the head light so as to intercept the upper portion of said rays and to deflect them to the side of the road, a bracket upon which said dimmer is hinged on a horizontal axis, transverse to its own plane, and a bracket upon which said first mentioned bracket is journalled on a vertical axis, said latter bracket being supported at the side of a headlight, and means to move the first mentioned bracket upon its axis and to swing the dimmer about its axis, the dimmer being linked to the second mentioned bracket so as to automatically translate rotating movement about the vertical axis to swinging movement about the horizontal axis.



1,678,171. REFRIGERATOR. HELMUTH W. TOHTZ and KIRKE L. BONNELL, St. Louis, Mo. Filed Mar. 17, 1926. Serial No. 95,168. 3 Claims. (Cl. 62—104.)

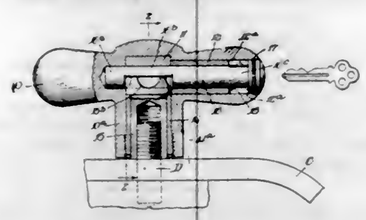
2. A refrigerator comprising a horizontally elongated box with a support for the articles to be cooled located between the end portions of said box, and an air conductor in the form of a horizontally elongated U comprising a down duct having a funnel shaped inlet near the top of one end of the box, and an up duct having a funnel shaped outlet near the top of the other end,



said funnel shaped members being turned toward each other, a nozzle in said conductor, and means whereby refrigerant is forcibly projected from said nozzle to force the air through said ducts.

1,678,172. REFRIGERATING SYSTEM. HELMUTH W. TOHTZ and KIRKE L. BONNELL, St. Louis, Mo. Filed Aug. 10, 1926. Serial No. 128,358. 1 Claim. (Cl. 261—116.)

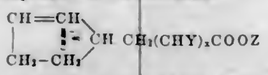
A refrigerating system comprising an air conductor having an inlet at its upper end for the admission of relatively warm air and an outlet at its lower end for the discharge of cold air, means whereby a refrigerant is forcibly projected into said conductor to force the air toward said outlet, a separating chamber surrounding said outlet to separate the cold air from the refrigerant, a closure at the top of said separating chamber, said conductor being made of thin sheet metal having its outer face directly exposed to the surrounding air so as to collect moisture from the surrounding air and retain it in the form of frost, and a receptacle located below said separating chamber to receive liquid falling from the outer face of said conductor.



1,678,173. TOOL. EDWARD PAUL TOURNIER, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 17, 1925. Serial No. 23,861. 6 Claims. (Cl. 81—3.)

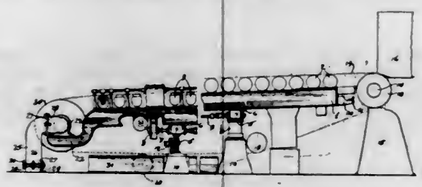
1. A tool comprising a lever adapted to engage and guide an element to operatively engage a support therefor, a member providing a fulcrum point for the lever

and having a portion for operatively engaging the said support, and means for normally holding said member in a predetermined position relative to the lever.



1,678,174. THEFT-PREVENTING DEVICE. JOHN F. WHITE, Chicago, Ill., assignor to White Products Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 22, 1925. Serial No. 3,895. 11 Claims. (Cl. 70—90.)

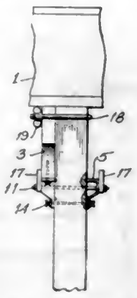
1. A theft preventing device comprising an operating member having a handle, an operated member rotatably housed in the operating member and arranged for connection to a support, an interlocking bolt completely housed in the operating member and having interlocking engagement with the operated member through the top portion thereof, and a lock housed in the operating member for holding the interlocking bolt selectively in and out of engagement with the operated member.



1,678,175. CYCLOPENTENYL SUBSTITUTED ALIPHATIC ACIDS. ROGER ADAMS, Urbana, Ill., CARL R. NOLLER, St. Louis, Mo., and JAMES A. ARVIN, Urbana, Ill., assignors to Abbott Laboratories, North Chicago, Ill., a Corporation of Illinois. Filed July 9, 1927. Serial No. 204,658. 2 Claims. (Cl. 260—112.)

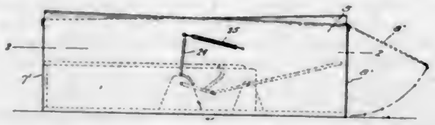
1. New compounds of the formula

in which Y represents a monovalent atom or group, X represents one or more, and Z represents hydrogen or a substituted hydrogen, such as a metal or an alkyl group.



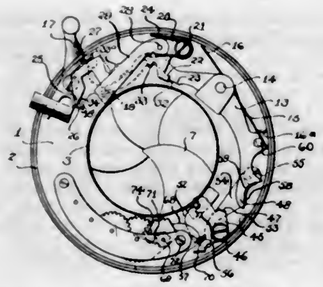
1,678,176. REMOVABLE-TYPE FOURDRINIER PAPER-MAKING MACHINE. EARL E. BERRY, Beloit, Wis., assignor to Beloit Iron Works, a Corporation of Wisconsin. Filed Apr. 16, 1926. Serial No. 102,388. 16 Claims. (Cl. 92—44.)

1. In a removable type Fourdrinier paper machine, the combination with a removable table, of a suction couch roll adapted to be supported thereon for removal therewith.



1,678,177. BRACKET FOR SHORES. GEORGE B. Bosco, Chicago, Ill. Filed Mar. 10, 1927. Serial No. 174,195. 3 Claims. (Cl. 304—40.)

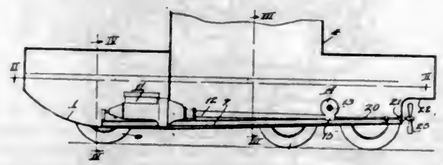
3. A bracket comprising a bearing plate, a pair of depending side walls on said bearing plate arranged in substantially parallel spaced relation, opposite ends of said bearing plate projecting beyond said side walls, a depending end flange connecting together said walls and plate, a locking bolt extending through said end



flange for securing said bracket to a supporting member, and a latch pivoted on said end flange and movable into position to form a stop projecting beyond said plate.

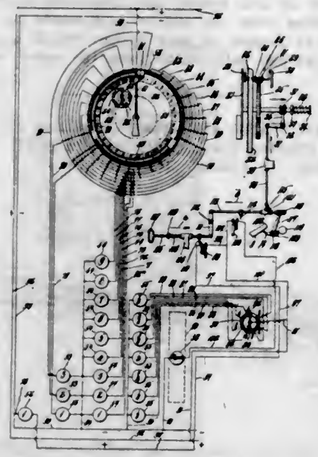
1,678,178. EXTERMINATING DEVICE FOR RATS, SQUIRRELS, AND OTHER PESTS. JAMES H. BROPHY, Deer Park, Wash., assignor of one-half to Vincent C. Emerick, Locke, Wash. Filed June 25, 1927. Serial No. 201,523. 3 Claims. (Cl. 43—58.)

1. In an animal exterminating device of the character described, a housing open at one end to permit the animal to enter therein, a platform within the housing upon which the animal is to walk, a knife normally disposed beneath the platform, and a trip platform at the end of the first-mentioned platform operatively associated with said knife to cause the upward movement of the body of the animal, when the trip platform is depressed.



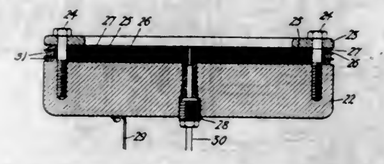
1,678,179. PHOTOGRAPHIC SHUTTER. THEODORE M. BRUECK, Rochester, N. Y., assignor to Ilex Optical Company, Rochester, N. Y., a Corporation of New York. Filed Oct. 8, 1926. Serial No. 140,249. 8 Claims. (Cl. 95—63.)

1. A photographic shutter comprising a master member, a spring for moving the master member in one direction, a blade mechanism, an exposure member connected with the blade mechanism, for moving the latter in opposite directions, a spring acting on the blade mechanism to effect the closing of the shutter, a lost motion



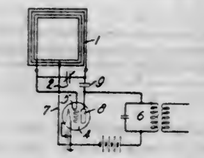
connection between the master member and the exposure member constructed to permit the master member to move past the exposure member when moved to store energy in the master member spring and to effect connection between the master member and the exposure member to shift the exposure member in order to effect the opening of the shutter and then to permit the master member to release the exposure member to permit the shutter to close under the action of the shutter closing spring, and a connecting means between the master member and the exposure member moved by the master member on the return movement of the latter under the action of the spring and after the master member releases the exposure member to effect the movement of the exposure member in a direction to close the blades.

1,678,180. AUTO MARINE VEHICLE. ALBERT E. COOK, Evanston, Ill., assignor to Charles B. Cook, Chicago, Ill. Filed Aug. 29, 1925. Serial No. 53,265. 3 Claims. (Cl. 115—1.)



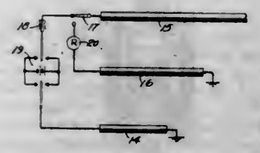
1. An auto marine vehicle comprising a body, wheels supporting the same, an automobile chassis framework mounted within the body, shafts mounted thereabove and supporting said wheels, a propeller mechanism supported by the body and an automobile power plant mechanism supported on the chassis framework and connected to drive the rear wheels and said propeller mechanism.

1,678,181. MEASURING AND RECORDING MACHINE. LEON A. DURGIN, Danvers, Mass. Filed June 29, 1925. Serial No. 40,173. 10 Claims. (Cl. 235—92.)



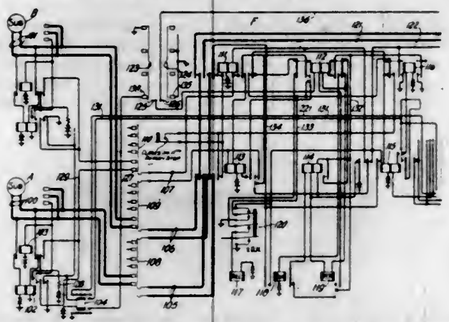
1. The combination of a measuring machine having an indicating dial and pointer, an adding machine having keys, actuating electromagnets arranged in position to operate different ones of the keys of said adding machine, a series of electrical contacts insulated from one another and spaced according to the indications of the dial, said contacts being in parallel circuits with the several key actuating magnets, and a contact carried by the pointer complemental to said dial contacts and in series connection with said magnets and a source of electrical energy.

1,678,182. TRANSMITTER FOR HIGH-FREQUENCY SOUND SIGNALING. MARION S. ESTES, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 25, 1919. Serial No. 340,555. 4 Claims. (Cl. 177—386.)



2. A condenser transmitter comprising condenser plates of opposite polarity, a conductive base member supporting said plates, an electrical connection between one of said plates and said base member, solid insulating means surrounding the other of said plates and insulating it from the medium surrounding said transmitter, and means for making electrical connection with each of said plates.

1,678,183. SIGNAL RECEPTION. HARALD T. FRIIS, Cliffwood, N. J., assignor to Western Electric Company, Incorporated. New York, N. Y., a Corporation of New York. Filed May 28, 1923. Serial No. 641,810. 6 Claims. (Cl. 250—20.)

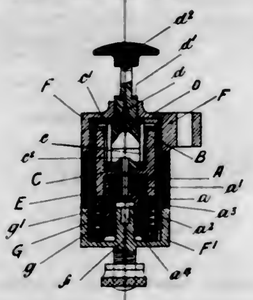


1. In a receiving apparatus a rotatable wave-intercepting inductance coil, a tuning condenser connected across the terminals of said coil, a connection to earth from the electrical center point of said coil, an electric discharge tube having a cathode, an anode and a grid or impedance controlling element, said cathode being connected to earth and said grid being connected to a terminal of said coil.

1,678,184. SUBMARINE SIGNALING. JOHN J. GILBERT, Port Washington, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 30, 1923. Serial No. 648,690. 14 Claims. (Cl. 178—63.)

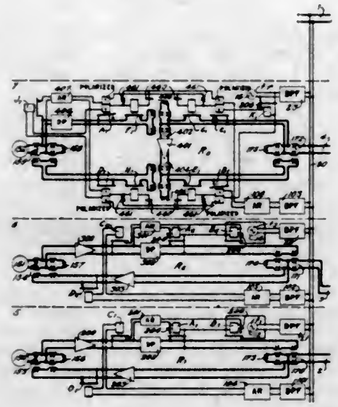
1. A terminating impedence for a loaded cable having a resistance equal to $\sqrt{\frac{L}{C}}$ where L and C are the inductance and capacity respectively of the loaded cable.

1,678,185. TELEPHONE SYSTEM. ROBERT W. HARPER, East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed May 18, 1927. Serial No. 192,176. 6 Claims. (Cl. 179—18.)



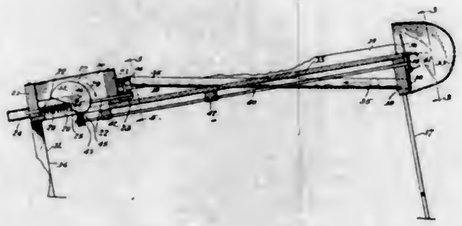
1. In a telephone system, a line finder having groups of terminals, lines appearing in said terminals, groups of trunks, a selector having access to said trunks, means for operating the finder to extend a calling line to said selector, means for operating the selector to select a group of trunks and to seize an idle one, an auxiliary switch driven by said finder and closed in certain group selecting positions thereof, and means controlled by the auxiliary switch for rendering said selector ineffective to seize an idle trunk.

1,678,186. PATTERN CUTTER. HERMAN E. HOELZEL, Elmhurst, Ill. Filed Jan. 14, 1926. Serial No. 81,329. 2 Claims. (Cl. 164—60.)



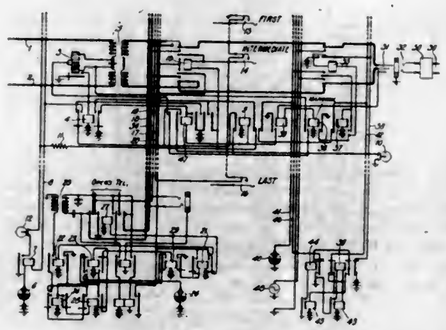
1. A pattern cutter comprising a base, a power source at one end thereof, a work table at the other end, shafts leading from the power source to the work table, cooperating rotary cutters mounted on the shafts in the region of the work table, and a separating guide for the work at the issue point thereof from the cutters, such guide following the profile of the cutters where the work issues whereby to part and shield the same during the courses of its progress.

1,678,187. ELECTRICAL CUT-OUT. WILLIAM HENRY ILLINGWORTH, Halifax, England. Filed July 12, 1922, Serial No. 574,573, and in Great Britain Sept. 26, 1921. 8 Claims. (Cl. 200—113.)



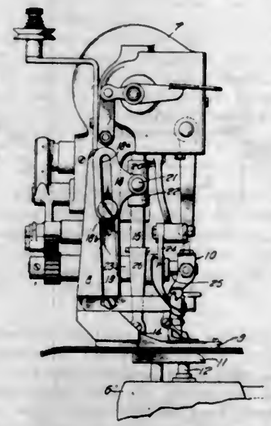
1. In an electrical cut-out in which a column of conducting liquid constitutes the circuit breaking element, the combination of a tubular body, a metal contact situated at each end of such body, a chamber slidably mounted in the tubular body, a tubular core of refractory material rigidly connected to such chamber, a valve stationarily mounted in the chamber, a spring for retaining the chamber in a raised position in relation to such valve, and externally operated means for depressing the chamber and core against the action of the spring.

1,678,188. ELECTRIC WAVE TRANSMISSION. ROBERT C. MATHES, Wyoming, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 1, 1925. Serial No. 53,777. 16 Claims. (Cl. 178—44.)



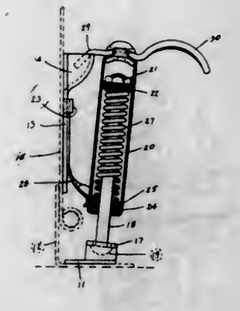
1. In combination, a plurality of translating devices, apparatus, including current transmission means having said translating devices distributed therealong, for controlling said translating devices over said means from each end of said means, and apparatus controlled over said means from one end of said means for annulling control of certain of said devices which has been obtained through said means from the other end of said means.

1,678,189. GAME APPARATUS. LELAND STANFORD MCVEY, Fontana, Calif. Filed Apr. 13, 1927. Serial No. 183,486. 10 Claims. (Cl. 273—121.)



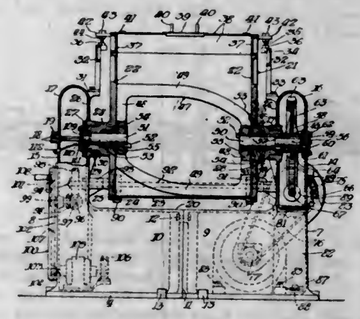
10. A game apparatus comprising a board, means for projecting balls over the board, targets mounted for movement to occupy displayed and concealed positions with respect to the surface of the board, and means for actuating the targets concurrently with the actuation of the ball projecting means to bring a new target into view upon each actuation of the projecting means.

1,678,190. TELEPHONE SYSTEM. LOUIS A. MORTIMER, Hohokus, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed June 2, 1927. Serial No. 195,943. 10 Claims. (Cl. 179—41.)



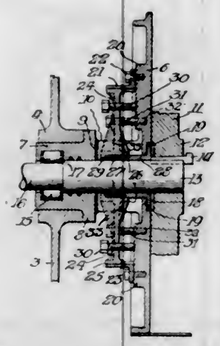
1. In a telephone system, a link circuit, a trunk line, means for connecting said link circuit to said trunk line and means common to said link circuit responsive to the establishment of said connection for impressing signaling current on said trunk line for a single period of predetermined duration.

1,678,191. FEEDING MECHANISM FOR SEWING MACHINES. CHARLES W. MUELLER, St. Louis, Mo., assignor to Lewis Invisible Stitch Machine Company, St. Louis, Mo., a Corporation of Maine. Filed July 19, 1926. Serial No. 123,376. 4 Claims. (Cl. 112—212.)



4. A feeding mechanism for sewing machines, comprising in combination a frame, a feed dog, a rotary shaft journaled in the frame, an actuating lever directly connected with the feed dog and having operative connection with said shaft, said frame being provided with a groove inclined to the axis of the lever, a fulcrum block for the lever adjustable along the groove, and means for securing said block against movement at any predetermined position of adjustment thereof.

1,678,192. AUTOMOBILE HOOD LATCH. QUINTIN G. NOBLITT, Indianapolis, Ind., assignor to Indianapolis Pump & Tube Company, Indianapolis, Ind., a Corporation. Filed July 11, 1927. Serial No. 204,882. 2 Claims. (Cl. 292—114.)



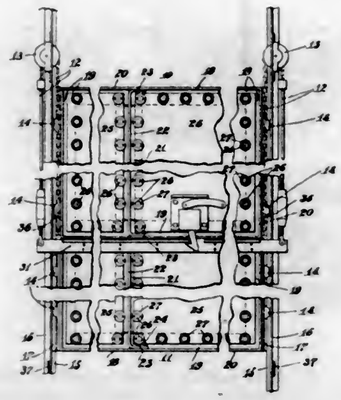
1. The combination with a vehicle hood and frame, of a latch therefor, comprising a keeper secured to said hood, a latch member yieldingly connected with said frame adjacent said hood, means thereon for engaging said keeper and exerting a downward pressure thereon, and a spring arm having one end thereof rigidly secured to the upper portion of said keeper plate and the free end thereof extending downwardly and outwardly toward said member in position to engage its lower end for causing a yielding lateral force to be exerted thereby against the hood when said latch member is in latching position.

1,678,193. DOUGH-MIXING MACHINE. FELIX NOTZ and GEORGE ROYAN, Chicago, Ill., assignors to American Oven & Machine Company, Chicago, Ill., a Corporation of Illinois. Filed July 23, 1925. Serial No. 45,491. 12 Claims. (Cl. 259—46.)

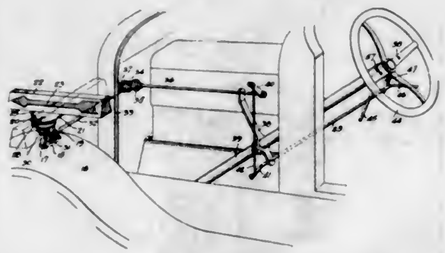
1. In a dough mixing machine, a frame formed with a divided base, the respective sections of which are separable, and each of said sections adapted to receive a relatively separate and independent power plant, a housing formed on each section of the base, and said housings extending upwardly in spaced relationship to each other to form a passage therebetween adapted to receive a mixing frame and mixing chamber of a dough mixing machine, the latter being journalled in the housings, and the respective housings each receiving the drive connections from one of the power plants in the base to the mixing frame and chamber.

1,678,194. PACKING RETAINER FOR DOUGH-MIXING MACHINES AND THE LIKE. FELIX NOTZ and GEORGE ROYAN, Chicago, Ill., assignors to American Oven & Machine Company, Chicago, Ill., a Corporation of Illinois. Filed July 23, 1925. Serial No. 45,492 4 Claims. (Cl. 286—33.)

4. A packing device of the class described, comprising a pair of members adapted for rotation with respect to each other, one of said members having a bearing portion, a packing gland on the other member adapted to engage the bearing portion, a packing retainer on the latter member, guideways on the latter member receiving the retainer for sliding movement axially, means for drawing the retainer against the packing and forcing the packing gland against the bearing portion, and means carried by the retainer and engaging the latter member to hold the retainer in adjusted position.



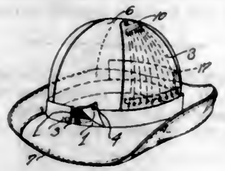
1,678,195. MECHANISM FOR CONVEYING AND WATER-COOLING TIE-PLATES. MELVIN OVESTRUD, Stillwater, Minn., assignor to Twin City Forge & Foundry Company, Stillwater, Minn., a Corporation of Minnesota. Filed Apr. 29, 1925. Serial No. 26,673. 7 Claims. (Cl. 266—6.)



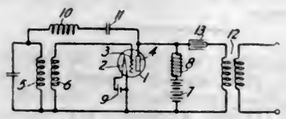
1. In a device of the class described, an inclined trough constituting spaced rails for slidably supporting objects along said trough, a conveyor adapted to slide objects along side rails from bottom to top of the trough, said conveyor being arranged to one side of said trough to provide an unobstructed way in the trough in which the most highly heated portions of said objects may be disposed, and means for introducing water into said trough at the upper end thereof.

1,678,196. ELEVATOR DOOR. CHARLES W. PEELLE, New York, N. Y., assignor to The Peelle Company, Brooklyn, N. Y., a Corporation of New York. Filed June 22, 1926. Serial No. 117,748. 10 Claims. (Cl. 189—46.)

1. An elevator door embodying therein an angle metal frame, one flange of which extends substantially parallel with the wall of an elevator shaft, and the other flange of which extends inwardly of the shaft, a flat metal plate closing the opening in said frame, and having dimensions to space the edges thereof away from said inwardly extending flange, and bolt openings about the edges thereof, bolts of smaller dimensions than said openings passing through the flange of said frame parallel with the wall and through said openings, and heat destructible means interposed between said bolts and said panel adjacent said openings, whereby, at normal temperatures, said bolts will hold said plate firmly in relation to said frame, and with the destruction of said heat destructible means clearance will be afforded for the expansion of said plate.

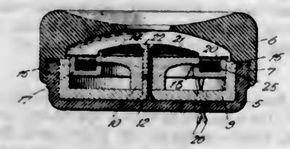


1,678,197. DIRECTION SIGNAL. DON W. PRATT, Santa Monica, Calif. Filed Feb. 15, 1926. Serial No. 88,382. 4 Claims. (Cl. 116—36.)



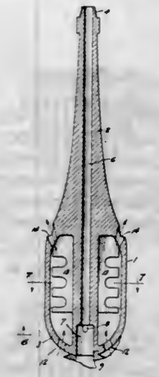
1. In a direction signal, rotatable mechanism for rotating a signal element in either direction including a manually operable shaft rotatable and movable longtudinally, means for urging the shaft longitudinally in one direction, arms fixed on the shaft, cams correlated to the arms for moving the shaft longitudinally against the action of said urging means when the shaft is rotated in either direction from its normal position, notches in the cams for latching the arms against movement following rotation of the shaft, tripping levers operable to remove the arms from the notches after the steering mechanism has been wholly turned and thereby permit the urging means to return the shaft to its normal longitudinal position and to cause the cams to rotate the shaft to its normal circumferential position, and detents adapted for mounting on a steering wheel and operable thereby to engage and trip the levers.

1,678,198. FISHERMAN'S HAT. PHILIP L. REHDER, Bayview, Idaho. Filed Dec. 10, 1926. Serial No. 153,831. 1 Claim. (Cl. 2—179.)



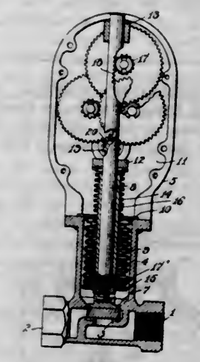
The combination of an annular, longitudinally foldable hat band for fisherman's use, including an inner fold, an outer fold having separable fastening devices on its adjoining ends for coaction with complementary devices on the inner fold, said folds adapted to form a pocket for leaders, and said leaders adapted to join the adjoining ends of the annular band when it is in place on a hat.

1,678,199. OSCILLATION GENERATOR. FRANCIS X. REITTENMEYER, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 27, 1926. Serial No. 84,056. 6 Claims. (Cl. 250—36.)



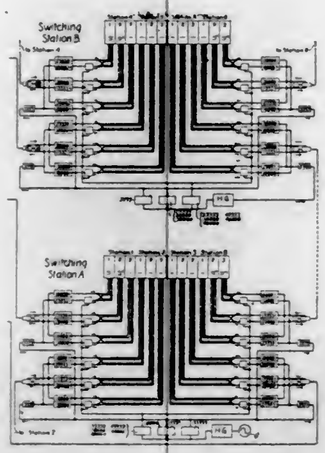
2. An oscillating circuit comprising a space discharge device having a discharge path and a control electrode, a circuit including in series said discharge path and a network of reactive impedances, the elements of said network being proportioned to make the network antiresonant at a preassigned frequency and resonant at a harmonic of said frequency, and impedance means for coupling said network and said control electrode, whereby the discharge device is caused to generate oscillations of said preassigned frequency.

1,678,200. TELEPHONE RECEIVER. MALCOLM C. RORTY, Paris, France, and JOHN C. POTTER, Madrid, Spain, assignors, by mesne assignments, to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 5, 1926. Serial No. 79,294. 9 Claims. (Cl. 179—120.)



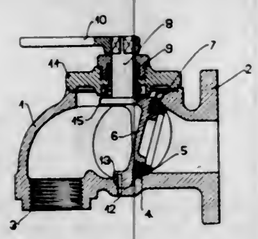
1. In a telephone receiver, a permanent magnet structure providing an annular gap, a soft iron pole piece located in said annular gap, a coil cooperating with said pole piece, and a diaphragm rigidly supported at its central portion and having its edge extending into cooperative relation with said pole piece.

1,678,201. ROTARY DRILL BIT. JOHN P. SAMUELSON, Compton, Calif. Filed Sept. 17, 1923. Serial No. 663,291. 10 Claims. (Cl. 255—61.)



1. A rotary drill bit comprising a shell having cutting blades secured to the bottom thereof and a hollow shaft extending through the shell for admitting water to the bottom of a well to be drilled with perforations in front of the blades for allowing mud to enter into the shell and perforations in the top of the shell for allowing the mud to leave the shell.

1,678,202. ELECTRIC VALVE. PAUL F. SHIVERS, Wabash, Ind., assignor, by mesne assignments, to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a Corporation of Delaware. Filed May 24, 1926. Serial No. 111,154. 5 Claims. (Cl. 137—139.)

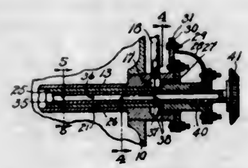


1. The combination with a valve casing and a reciprocating valve therein, means biasing said valve to closed position, of a rotary electric motor supported by the valve casing and arranged when energized to move said valve to and maintain it in open position against the biasing means, a power multiplying gear train supported by the valve body and connecting the rotor of said motor with said valve, and operable in one direction by said biasing means and means for stalling said motor while energized with the valve in open position, whereby said motor will maintain the valve opened, said biasing means being sufficient to overcome the inertia of the motor and gearing train and move the valve to closed position when the motor is de-energized.

1,678,203. COMMUNICATING AND SWITCHING SYSTEM. EDWIN H. SMYTHE, Evanston, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 27, 1923. Serial No. 621,635. 88 Claims. (Cl. 179—15.)

1. In a carrier wave communicating system, two lines, means for transmitting signals over each of said lines in the form of variations of a carrier wave, automatic switch mechanism, and means operating in response to variations in the carrier wave transmitted over one line for actuating said switch mechanism to operatively associate said two lines so that the signals transmitted over one line are repeated into the other line and transmitted thereover in the form of variations of a carrier wave.

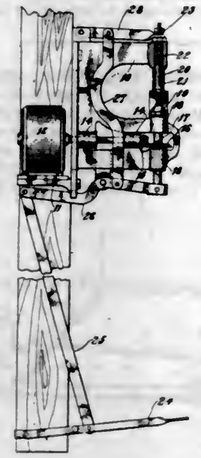
1,678,204. SHUTTING-OFF DEVICE FOR STEAM PIPES AND THE LIKE. HERMANN SRULOWITZ, Vienna, Austria. Filed Jan. 6, 1926, Serial No. 79,625, and in Austria Jan. 19, 1925. 10 Claims. (Cl. 251—102.)



1. A stop valve of the rotary type comprising a valve casing with a passageway for a fluid, provided with a metallic rubbing surface, a metallic valve body capable of angular movement around an axis and comprising an operative part adapted to cover said passageway and capable of being rotated around an angle so as to be withdrawn into an inoperative operation, said operative part being at a certain distance from the metallic rubbing surface, both surfaces being arranged so as to leave a constant free gap between them during the rotary movement of the valve, an inflatable packing ring seated in the operative part of said valve body and capable of being inflated by the pressure of the fluid, said packing ring when inflated bridging the gap between the metallic valve body and the metallic rubbing surface.

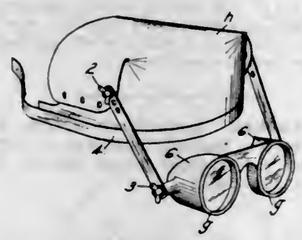
1,678,205. BLOW-OUT DEVICE. CHARLES W. WYMAN, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Apr. 10, 1922. Serial No. 551,388. 4 Claims. (Cl. 200—106.)

1. In a circuit breaker, a casing, a contact member fixed in said casing, a cooperating movable contact member telescopically received in said casing, catch means carried by said movable member and engaging said casing for maintaining said contact members in operative assembled relation, means responsive to excessive current flow for releasing said catch means, and means for ejecting said movable contact member from said casing on release of said catch means.



1,678,206. OILER. MATTHEW E. BENESH, Cicero, Ill., assignor to The Connersville Blower Co., Connersville, Ind., a Corporation of Indiana. Filed Feb. 28, 1927. Serial No. 171,590. 4 Claims. (Cl. 184—14.)

1. A lubricator comprising, an outer tube provided with discharge openings through its wall, an intermediate adjustable tube mounted in the outer tube and having through its wall a series of openings adjustably registrable to various extents with the openings through the outer tube, means for holding said intermediate tube in various adjusted positions, an inner tube journaled within the intermediate tube and having openings formed through its wall, registrable with the openings through the intermediate tube, means by which said inner tube may be rotated, and a supply line delivering into the interior of the inner tube.

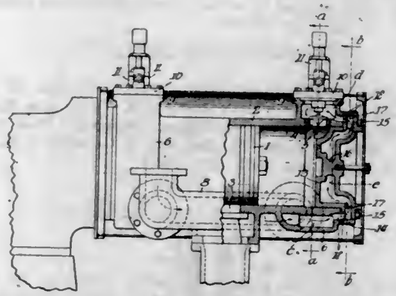


1,678,207. MACHINE FOR DRILLING AND COUNTERSINKING DRAKE LININGS. RUDOLPH BRANDT, San Francisco, Calif., assignor to Petry and Brandt, San Francisco, Calif., a Copartnership composed of Victor Petry and Rudolph Brandt. Filed Oct. 10, 1923. Serial No. 667,657. 2 Claims. (Cl. 77—5.)

1. In a drilling machine of the character described, a downwardly pointing stationary abutment of sleeve-like construction adapted to have a brake band placed against the underface thereof, a retractable pointer slidable within the sleeve and projecting downwardly therefrom and allowing a series of rivet holes in the brake band to be engaged therewith in quick succession while being viewed from above, a drill reciprocable below and in axial alignment

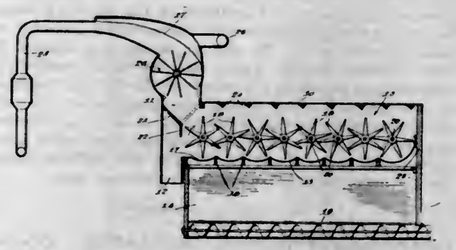
with the pointer and adapted to be advanced toward the pointer, and means for advancing the drill and for retracting the pointer in timed relation.

1,678,208. ADJUSTABLE HELMET AND GOGGLES. HOWARD E. CHAMBERS, Los Angeles, Calif. Filed Jan. 13, 1925. Serial No. 2,079. 3 Claims. (Cl. 2—14.)



3. An adjustable head and eye protector, comprising a helmet of stiff fire resisting material adapted to fit over the front and top of the head of the wearer, and being open at the back of the head, securing means for the helmet extending from the open back thereof, a pair of links pivoted to the sides of the helmet at the forward end of the latter, a pair of goggles pivoted to the free ends of the links, said links adapted to extend vertically downward to support the goggles in front of the eyes of the wearer and adapted to be swung upwardly to position the goggles above the helmet, and clamping means for the links to bind the same in adjusted positions and support the links and goggles from the stiff helmet.

1,678,209. UNIFLOW ENGINE. HARRY A. CHUSE, Mattoon, Ill., assignor, by mesne assignments, to Mattoon Engine Works, Mattoon, Ill., a Corporation of Illinois. Filed Feb. 7, 1923. Serial No. 617,463. 5 Claims. (Cl. 121—181.)



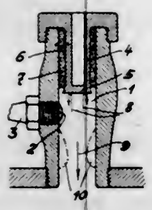
1. In a terminal exhaust steam engine, a cylinder having a steam jacket confined to and encircling its inlet end, said jacket being divided into two segmental chambers, one having a steam supply, an inlet valve arranged in the other of said chambers, and a hollow head for the cylinder having a circular series of ports arranged closely adjacent

the periphery of its chamber and communicating with the chambers of the cylinder jacket, the ports communicating with one of said jacket chambers being symmetrically and

diametrically disposed with reference to the ports communicating with the other of said chambers substantially as described.

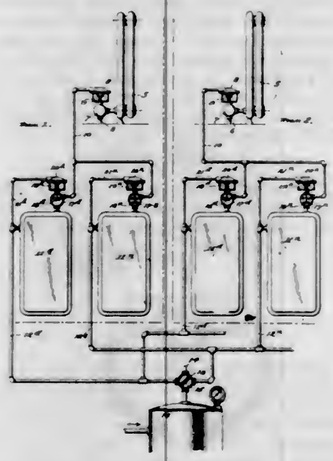
1,678,210. COTTON-BOLL BREAKER AND CLEANER. FREDERICK T. CUMPSTON, Blooming Grove, Tex. Filed Apr. 20, 1926. Serial No. 103,343. 9 Claims. (Cl. 19—38.)

1. A cotton boll breaking and cleaning apparatus including a casing having an upper inlet and a lower outlet at the same end, a series of beaters therein arranged to receive unopened bolls and cotton from said inlet upon the upper portions of the beaters at one end of the series, a series of breaker bars arranged above and between the beaters, means for imparting rotation to the beaters whereby to cause the same to throw the bolls and cotton upwardly against the breaker bars and from one beater to the other throughout the series, and a screen below the series of beaters extending to the outlet of the casing and along which the cotton and trash are pushed by the lower portions of the beaters.



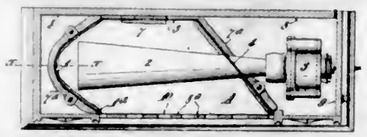
1,678,211. PNEUMATIC TIRE. GEORGE FREDERICK DAVIDSON, Shortlands, England. Filed Oct. 11, 1924, Serial No. 743,065, and in Great Britain Jan. 1, 1924. 1 Claim. (Cl. 152—10.)

A pneumatic tire comprising in combination a tread, a textile carcass two side walls integral with said tread and means for supporting said side walls when the tire is



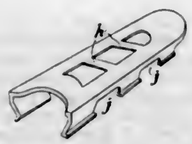
under load, comprising a rigid self-supporting and floating tubular band of substantially triangular cross-section embedded in the tire so as to reside between the textile carcass and the tread with its base opposing the tread and its apex serving to deform the textile carcass inwards to the air space of the tire.

1,678,212. AUXILIARY COMBUSTION SPACE IN INTERNAL-COMBUSTION ENGINES. WILHELM EBERHARD ERNST, Berlin-Schoneberg, Germany. Filed Nov. 11, 1924, Serial No. 749,298, and in Germany Nov. 16, 1923. 3 Claims. (Cl. 123—143.)



1. In an internal combustion engine, in combination, a main combustion chamber, an auxiliary combustion chamber freely communicating with the main combustion chamber, ignition means arranged in the auxiliary chamber, and a reflecting surface in the auxiliary chamber at some distance behind the ignition means and adapted to reflect initial ignition waves into the main combustion chamber and providing chambers suitable for the reception of non-ignitible gases during the compression, the reflecting surface and the igniting means being so arranged relative to the spaces for receiving the combustion gases that at the moment of the ignition, the ignition means and the reflecting surface are free of exhaust gases.

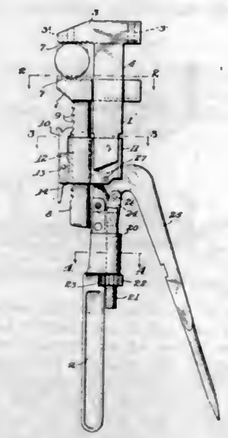
1,678,213. TEMPERATURE REGULATION. CHARLES LYMAN FORTIER, Milwaukee, Wis., assignor to Johnson Service Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 27, 1926. Serial No. 157,345. 12 Claims. (Cl. 236—36.)



1. The combination of pressure actuated heat controlling means; a plurality of fluid pressure controlling thermostats adapted in alternation one with another to control the supply of motive fluid to said means; individual pressure fluid supply lines connected with corresponding ones of said thermostats; and adjustable means for supplying pressure fluid to said lines selectively.

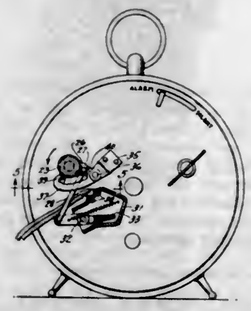
1,678,214. ACOUSTIC AMPLIFIER AND RADIATOR. EDWARD ALFRED GRAHAM, deceased, Brockley, London, England, by Maria Graham, executrix, Beckenham, England, and Alfred Graham, executor, Forest Hill, London, England, assignors to Graham Amplion Limited, London, England. Filed Dec. 24, 1926, Serial No. 156,967, and in Great Britain Feb. 20, 1926. 25 Claims. (Cl. 181—27.)

24. An acoustic amplifier and radiator comprising a cabinet having a sound exit at the front and a door at one end, a concave reflector, a flat reflector, and a rear wall connecting the rear ends of said reflectors, said reflectors and rear wall being arranged vertically within said cabinet between the top and bottom walls thereof with the flat reflector inclined to the axis of said concave reflector and to the front of said cabinet, a straight sound conduit extending through the flat reflector and having its outlet end disposed opposite said concave reflector, the axes of said concave reflector and conduit being substantially coincident, and a telephonic receiver connected to the inlet end of said conduit and located between said flat reflector and door.



1,678,215. MARKER. ALBERT CECIL GREENE, Willesden Junction, London, England. Filed Apr. 7, 1926, Serial No. 100,356, and in Great Britain Aug. 15, 1925. 9 Claims. (Cl. 94—1.5.)

6. A road or ground marker comprising a rigid sheath composed of a surface member having a top to lie flush with the ground surface, longitudinal converging side members depending from each lateral edge of the said top and laterally projecting and diverging lugs at the bottom of said side members, the said lateral lugs being located within the vertical planes including the longitudinal edges of the top.

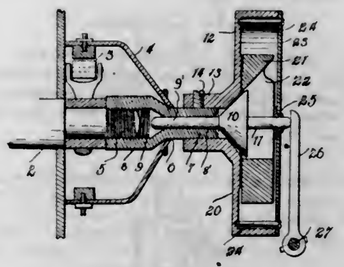


1,678,216. WRENCH. BENJAMIN J. GREER, Athens, Tex., assignor of one-half to Merriott A. Jackson, Athens, Tex. Filed Mar. 12, 1927. Serial No. 174,835. 3 Claims. (Cl. 81—88.)

1. A wrench including a body portion, fixed and movable jaws on said body portion, means for permitting a coarse adjustment of said movable jaw, a toggle for moving said jaw to clamping position, and threaded means

having a non-yielding connection with said toggle for giving a finer adjustment to said movable jaw prior to moving the same to clamping position.

1,678,217. TIME-CONTROLLED CIRCUIT CONTROLLER. ROBERT R. GONSETT, Los Angeles, Calif., assignor, by direct and mesne assignments, of one-half to Amory J. Smith, one-eighth to Wesley D. Spencer, and one thirty-second to Virgil V. Ullom, Los Angeles, Calif. Filed Aug. 12, 1926. Serial No. 128,841. 3 Claims. (Cl. 200—38.)

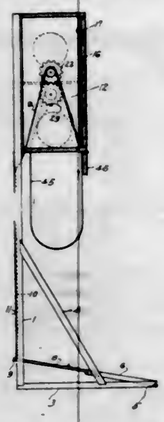


1. A circuit controller comprising a stem adapted for connection with the alarm winding arbor of a clock to rotate with the arbor, a lug fixed on the stem, an arm rotatable on the stem, a switch having a movable contact arm, a connecting link between the contact arm and the rotatable arm, an extension on the rotatable arm adapted to be engaged by the lug, and an escapement pawl capable of pivotal and lateral movements and disposed in the paths of movement of the lug and extension, the original set position of the lug and extension being such that when the stem rotates in its unwinding movement the lug through the extension actuates the link to move the contact arm and close the switch, with the extension being ultimately engaged by the pawl and thus checking further movement of the lug and consequently further unwinding movement of the stem.

1,678,218. ANTIGLARE SHIELD AND METHOD OF MAKING THE SAME. ROLAND M. GRUSS, San Francisco, Calif. Filed June 21, 1926. Serial No. 117,451. 8 Claims. (Cl. 296—97.)

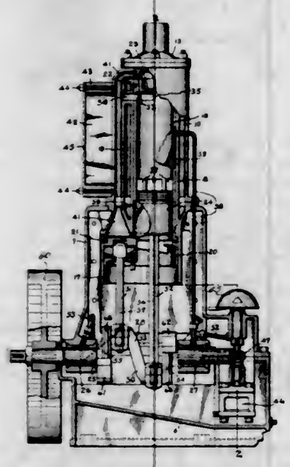
1. An anti-glare shield comprising two panes of solid transparent material slightly separated from each other and secured together, and a dilute, non-freezing solution of fluorescein compound therebetween.

1,678,219. GOVERNOR FOR EXPLOSIVE ENGINES. ALBERT HANSEN and MORTEN J. TORP, Harlan, Iowa. Filed Mar. 17, 1927. Serial No. 176,252. 1 Claim. (Cl. 264—16.)



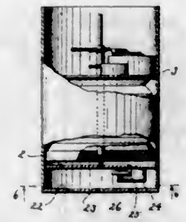
A governor for explosive engines, in combination with the cam shaft and throttle valve thereof, said cam shaft having a threaded end, a distributer associated with the cam shaft and including a shell having an opening therein, a spindle engaged in said opening and having a head for detachable engagement with the threaded end of the cam shaft, a casing rotatable with the spindle, governor weights pivotally mounted in the casing and including angularly disposed arms, certain of the arms having beveled faces, a cone carried by the spindle, a pin carried by the cone, the governor weights being operable by centrifugal force to cause the beveled faces to engage the cone to slide the pin, and means operable by the pin for controlling the movement of the throttle valve.

1,678,220. SANITARY ROLL-TOWEL CABINET. EDWARD TROY HAILS, Montgomery, Ala., assignor to Steiner Sales Company, Salt Lake City, Utah, a Corporation of Utah. Filed Oct. 18, 1923. Serial No. 669,333. 5 Claims. (Cl. 312—38.)



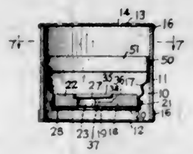
1. A roll towel cabinet having a clean towel roll in its bottom portion, a soiled towel roll in its upper portion, feed rolls connected together for simultaneous movement, one of said feed rolls being in frictional engagement with the towel of the soiled towel roll, the toweling from the clean towel roll passing to the rear of the clean towel roll, thence downwardly and upwardly in front of the clean towel roll to the soiled towel roll, an apron in front of the clean towel roll, an apron in front of the clean towel roll having a groove therein and a door out-

side the apron, the construction being such that the clean towel roll may be first inserted in the cabinet, the towel threaded over a roller and thence downwardly



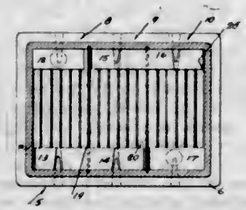
through the loop and said groove, thence upwardly in front of the clean towel roll and around the other roll onto the soiled towel roll.

1,678,221. INTERNAL-COMBUSTION ENGINE. JOHN B. HIRD, Jr., Seattle, Wash., assignor, by direct and mesne assignments, to Hird-Anderson Machinery Co., a Corporation. Filed Sept. 5, 1924. Serial No. 736,005. 3 Claims. (Cl. 123—50.)



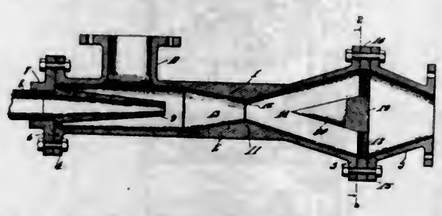
1. In an engine, a cylinder having, at the lower end, an eccentrically arranged chamber of larger diameter and having a fuel passageway connecting the upper end of the cylinder with the upper end of the enlarged eccentric chamber, said cylinder having exhaust ports and having inlet ports that communicate with said fuel passageway, a tubular piston reciprocable in said cylinder and having an enlarged eccentrically disposed bottom end reciprocable in said enlarged piston chamber, said tubular piston having exhaust and inlet ports arranged to register with the respective exhaust and inlet ports of said cylinder and another piston reciprocable in said tubular piston.

1,678,222. DOLL'S VOICE. THEODORE HUTNIKOW, Brooklyn, N. Y., assignor to Voices Incorporated, Newark, N. J., a Corporation of Delaware. Filed Sept. 13, 1922, Serial No. 587,888. Renewed Nov. 19, 1927. 14 Claims. (Cl. 46—46.)



13. In a device of the class described, sound producing means including a reed and an air chamber having a movable wall to cause a flow of air through said reed, and means for controlling the emission of sound from said reed comprising an arm pivoted intermediate of its ends, a valve element on said arm at one side of its pivot, a yieldable member on said arm at the other side of its pivot and having a part substantially parallel with the movable chamber wall, and means coacting with said part of the yieldable member to actuate said valve arm.

1,678,223. SOUND-PRODUCING DEVICE. THEODORE HUTNIKOW, Brooklyn, N. Y., assignor to Voices Incorporated, Newark, N. J., a Corporation of Delaware. Filed Nov. 30, 1925. Serial No. 72,098. 3 Claims. (Cl. 46—46.)



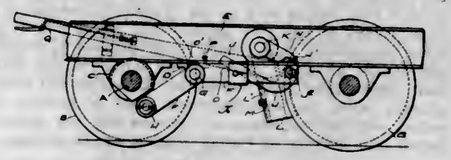
1. In a sound producing device, a cylindrical casing of uniform diameter, a flexible tubular bellows wall within said casing having an open end fixed to the inner face of the casing wall intermediate the ends thereof, a weighty head closing the other end of said tubular wall and movable through the open end thereof to positions adjacent the opposite ends of the casing, and a sound producing element operated by a flow of air in the movement of said weighty member.

1,678,224. LEAD STORAGE BATTERY. ANTHONY KASTELIC, Richmond, Calif. Filed Jan. 28, 1926. Serial No. 84,469. 2 Claims. (Cl. 136—6.)

1. In a storage battery of the character described, a container having positive and negative plates arranged therein in alternating succession, lead partitions interposed between sets of plates and forming separate sections, and straps interconnecting plates of the same polarity in each section and plates of opposite polarity in adjacent sections, the said straps being electrically connected to the partitions separating adjacent sections.

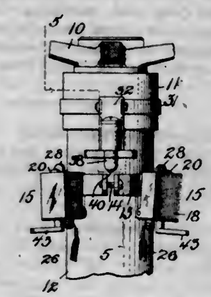
1,678,225. AGITATOR FOR CHEMICALLY PURIFYING OIL. JERRY W. KINCADE, Lethbridge, Alberta, Canada. Filed Oct. 28, 1926. Serial No. 144,882. 1 Claim. (Cl. 259—4.)

1. An injector of the class described, comprising a casing consisting of a pair of sections, a baffle member including a ring for engagement between the ends of the sections, means engaged with the sections and ring for maintaining said sections and ring in fixed engagement, said ring having radially disposed spreader bars merging at their inner ends with a hub, a conical spreader carried by the hub, said bars and conical spreader being disposed in opposition to the flow of fluid through the casing.



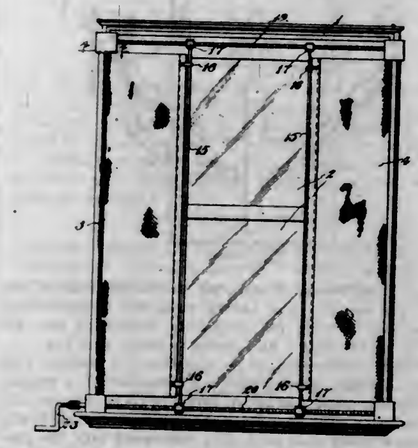
1,678,226. TOY REPRESENTING A TURKEY GOBBLER. ITURA ROSALIEN LEIGH, Grantville, Ga. Filed Oct. 8, 1927. Serial No. 224,932. 1 Claim. (Cl. 46—40.)

1. A toy in the form of a miniature turkey gobbler comprising an entire pine cone, legs comprising four strands of wire partly covered with tissue paper the whole being bent at its middle portion unto U-shape and inserted between the burrs of the cone and closely surrounding the core of the cone and glued thereto the ends of the strands being spread out to form the toes, the neck and head of the top being made of papier-mâché covered with tissue paper and coated with hardening material soaked thereinto to hold the parts in shaped position, the head and neck terminating at its lower portion in a concave surface with a tassel attached to its inner surface, and the neck portion glued to the end of the cone.



1,678,227. BRAKE FOR VEHICLES. GEORGE MCGHEE, Tollcross, Scotland. Filed Apr. 28, 1925. Serial No. 26,460, and in Great Britain May 9, 1924. 2 Claims. (Cl. 888—181.)

1. Brake for vehicles arranged to be applied automatically when the vehicle moves at greater than the determined speed and comprising a revoluble element, a cam thereon, a lever having a fixed support and engaged and arranged to be operated by the cam, a weighted lever pivoted to the free end of the first named lever and



having a finger piece, a brake block, and a lever to operate said brake block, said last named lever being engageable by said finger piece when the extent of movement of the first lever by said cam is sufficient.

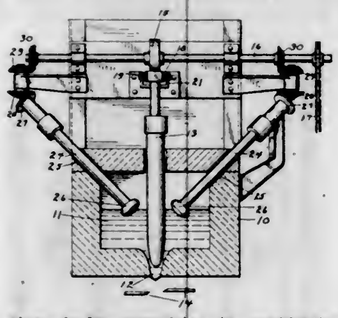
1,678,228. CIRCUIT-CLOSING DEVICE. CHARLES E. MORRIS, Newark, N. J. Filed May 20, 1926. Serial No. 110,333. 6 Claims. (Cl. 200—59.)

1. A circuit closing device comprising a set of switches, an actuating means for the switches, and a trip to make the actuating means inoperative after it passes the first switch that it actuates and resets it on its return toward said first switch.

1,678,229. CURTAIN AND OPERATING MEANS THEREFOR. RINO PARISI, Rimer, Pa. Filed Nov. 30, 1927. Serial No. 236,777. 5 Claims. (Cl. 156—26.)

1. In a structure of the character described, vertically disposed rollers, means to rotatably mount the rollers at opposite sides of a passage, curtains wound upon said

rollers and when unwound therefrom having movement towards each other across the opening, rods connected with the free ends of the curtains and projecting above and below the same, internally threaded sleeves carried by said rods, shafts each having oppositely threaded portions, means to rotatably support said shafts above and below said rollers, said sleeves being threaded upon adjacent shafts, means to import rotary motion to one shaft, and interengaging gears carried by the shafts and rollers whereby when the last-mentioned shaft is rotated the rollers will be simultaneously rotated and the curtains moved into and out of closing relation to the passage.

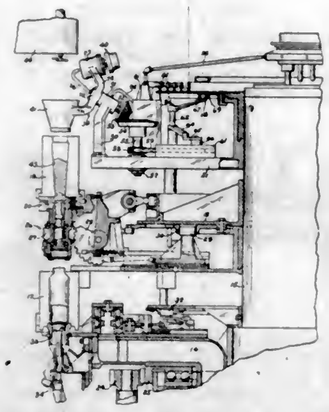


1,678,230. PROCESS FOR THE PRODUCTION OF HIGH-ALPHA-CELLULOSE FIBER. GEORGE A. RICHTER, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Apr. 28, 1925, Serial No. 26,362. Renewed July 9, 1927. 11 Claims. (Cl. 92—13.)

1. A process which comprises digesting predigested pulp in an alkaline liquor containing sodium compounds, re-employing one portion of the spent liquor in another digestion of like pulp and recovering the sodium compounds in the other portion of spent liquor, together with the sodium compounds contained in the spent liquor resulting from the production of pulp from raw cellulosic material.

1,678,231. STEEL PRINTING BODY AND METHOD OF PRODUCING THE SAME. HELENA S. SADTLER, Springfield Township, Montgomery County, Pa. Filed June 6, 1924. Serial No. 718,237. 2 Claims. (Cl. 41—43.)

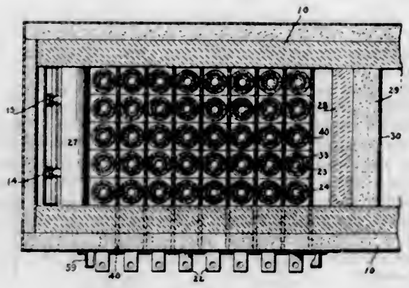
1. The method of producing steel printing bodies, which consists in subjecting the same to a hardening process including the addition of carbon to carbonize the same, grinding and polishing the hardened body to provide the same with a true and even surface, and thereafter etching said surface to form characters or designs thereon.



1,678,232. GLASS FEEDER. LEONARD D. SOUBIER, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 3, 1924. Serial No. 696,501. 10 Claims. (Cl. 49—55.)

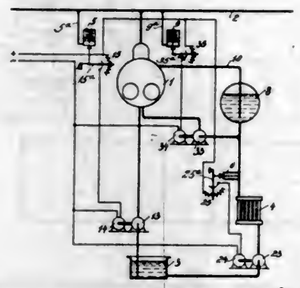
4. A glass feeder comprising in combination a container for molten glass having an outlet in its bottom, an inclined stirring rod projecting downward into the glass above the outlet, and means to rotate said rod.

10. The combination of a container for molten glass having an outlet opening in the bottom thereof, a regulating plug extending downward into the glass over the outlet, means to periodically reciprocate said plug vertically, inclined stirring rods projecting downward into the glass at opposite sides of the plug and formed at their lower ends with stirring heads dipping into the glass, and automatic means for continuously rotating the stirring rods about their own axes.



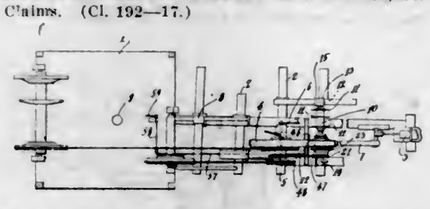
1,678,233. GLASS-FORMING MACHINE. LEONARD D. SOUBIER, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 8, 1926. Serial No. 100,518. 14 Claims. (Cl. 49—5.)

1. A glass forming machine comprising in combination, a rotary mold carriage, a mold thereon open at its upper end to receive a charge of glass, a guide for directing the charge into the mold, a carrier for the guide, mounted on the mold carriage and means to oscillate the carrier about a non-vertical axis and thereby alternately lift and lower the guide out of and into a position over and in register with the mold.



4. A glass forming machine comprising in combination, a rotating mold carriage, a mold thereon, a shaft mounted on said carriage with its axis inclined to the axis of the mold carriage, a guide mounted on the shaft for directing charges of glass into the mold, and means controlled by the movement of the carriage to revolve the guide about the axis of the shaft into and out of charge guiding position over the mold.

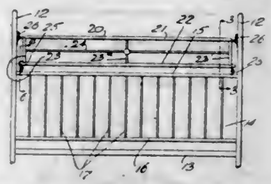
1,678,234. GLASSWARE-ANNEALING LEER. LEONARD D. SOUBIER, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed July 2, 1927. Serial No. 203,188. 18 Claims. (Cl. 49—47.)



9. A heating unit of the class described comprising sets of transversely spaced tubes, electric heating elements individual to the tubes, means to supply electric current to the heating elements, current flow regulators individual to each transverse set of tubes, and means whereby adjustment of each regulator functions to vary the number of effective heating elements in each transverse set.

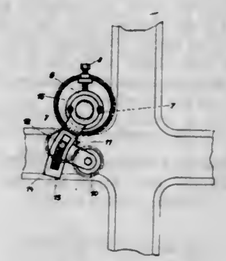
1,678,235. STEAM BOILER. WALDEMAR STENDER, Berlin-Charlottenburg, Germany, assignor to Siemens-Schuckertwerke Gesellschaft mit beschränkter Haftung, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed Sept. 30, 1924, Serial No. 740,752, and in Germany Sept. 27, 1923. 8 Claims. (Cl. 122—35.)

1. In a steam boiler plant the combination of a boiler, a waste gas water heater, means for feeding the boiler with cold water, means for feeding the boiler with waste gas heated water, means for substantially continually feeding cold water through said water heater, means for storing the heated water and means responsive to load variations of the boiler for controlling the ratio between the amount of heated and cold water, to be fed into the boiler, in dependence from the boiler load.



1,678,236. CHAIN-DRIVE SAND-REEL ATTACHMENT. EDWARD TIMBS, Los Angeles, and LEWIS E. ZEABE, Moneta, Calif., assignors to The National Supply Company of Delaware, New York, N. Y., a Corporation of Delaware. Filed Oct. 4, 1926. Serial No. 139,468. 6 Claims. (Cl. 192—17.)

3. In a sand reel attachment, the combination of a quill shaft, a sprocket slidably mounted on the shaft, a hub splined to the said quill shaft, a hub journaled on the shaft, means secured to the said hub for holding a clutch ring of a clutch, a spider journaled on the said quill shaft intermediate the splined hub and the journaled hub, an inner clutch plate and an outer clutch plate, means secured to the said spider and adapted to be actuated from the splined hub for engaging the inner and outer plates with the said clutch ring, and braking means mounted on the said spider.



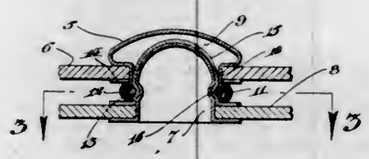
1,678,237. CRIB OR BED AND THE LIKE STRUCTURE. CHARLES VALLONE, Buffalo, N. Y., assignor to Barcalo Manufacturing Company, Buffalo, N. Y. Filed Sept. 26, 1925. Serial No. 58,904. 6 Claims. (Cl. 5—100.)

1. In a side frame for a crib or the like, the combination of an upright stationary section, a movable section adapted to occupy an upright, operative position above and adjacent said stationary section, securing means for holding said movable section in said upright position and which is constructed to permit said section to be released therefrom by an upward and forward movement to swing to a downwardly extending, inoperative position alongside said stationary section, and a hinge connection between said sections which is constructed to permit such movements, said hinge comprising a fixed arm extending upwardly from the top of said stationary section, a fixed arm extending outwardly and downwardly from the bottom of said movable section and having its free end offset and extending downwardly, said other arm having its end disposed in horizontal alinement with said offset end of said second arm and both of said ends

being arranged in a vertical transverse plane, a transverse link disposed alongside of, and pivotally connected to the ends of said arms, a stop on said link extending laterally therefrom into said plane of said arms, and a stop shoulder on said first mentioned arm adapted to be engaged by said stop on said link to hold said movable section in upright, operative position, and a second stop shoulder on said arm also adapted to be engaged by said stop on said link to limit said upward releasing movement of said section.

1,678,238. CRANK-SHAFT MECHANISM FOR THE SLAY OF LOOMS. HERBERT WOLFF, Polzig, Germany, assignor to Progress Gesellschaft für Textilmaschinen mit beschränkter Haftung, Nuremberg, Germany, a Corporation of Germany. Filed Jan. 26, 1927, Serial No. 163,657, and in Germany Aug. 14, 1926. 2 Claims. (Cl. 139—190.)

1. In crank shaft driving mechanism for the slay of looms including its crank shaft, a construction including a toothed driving wheel, an eccentrically mounted toothed wheel in connection with the crank shaft for the slay and a resiliently mounted intermediate toothed wheel in engagement with both the first mentioned wheels, substantially as described.

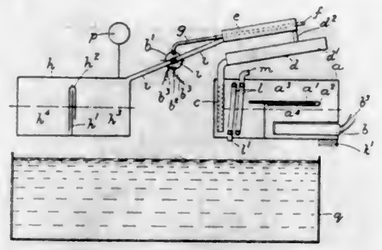


1,678,239. METHOD OF MANUFACTURING JOINTED JEWELRY. ARMAND BAYARDI and ETTORE E. BAYARDI, Chicago, Ill. Filed Mar. 10, 1925. Serial No. 14,385. 9 Claims. (Cl. 29—160.6.)

1. The method of manufacturing jointed jewelry from an integral channel shaped bar to produce a plurality of sections pivotally connected, which consists in forming

hinge receiving recesses in and extending through the walls of the channel in the bar, the walls of the recesses being substantially parallel, then bending the bar to cause the recess walls to converge from the base of the recesses outwardly for temporarily holding against displacement hinge plates that are inserted in said recesses, then securing the hinge members in said recesses, and then severing the bar in alinement with the knuckle of the hinge.

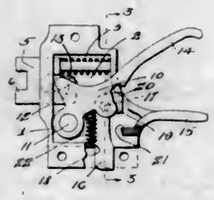
1,678,240. SNAP FASTENER. GUSTAV A. BENZ, Philadelphia, Pa. Filed Apr. 22, 1927. Serial No. 185,705. 2 Claims. (Cl. 24—208.)



1. A snap fastener for securing two pieces of material together including a socket member, a shank formed integral with the socket member and extending through one piece of material, shoulder on the socket member disposed at right angles to the shank and abutting one side of the material, a washer on the shank abutting the other side of the material, an expanded end on the shank, a spring ring in the expanded end, an apertured retainer shaped over the expanded end and abutting the washer, and a dome shaped stud secured to the other piece of material and provided with an annular groove adapted to be engaged by the spring ring for holding the stud in the shank; but slight clearance being provided between the stud and shank whereby it is necessary to move the stud directly away from the socket member in order to remove same therefrom.

1,678,241. SHOE-FASTENING DEVICE. GUSTAV A. BENZ, Philadelphia, Pa. Filed May 24, 1927. Serial No. 193,788. 1 Claim. (Cl. 24—73.)

Means for fastening together the uppers of a shoe comprising a gripping device on one of the uppers, said device having a holding shank between the leather and lining of the upper, a fastening means on said upper, an eyelet in the other upper in alignment with the gripping device and fastening means, the underside of the eyelet being secured between the leather and lining of said second upper, a washer between the leather and underside of the eyelet for keeping the eyelet rigidly in place, the eyelet and gripping device being positioned close together so that a foot may be shielded therefrom by the tongue of the shoe, a strap passing through the eyelet adapted to have one end adjustably positioned within the gripping device and means on the other end for securing said strap to the fastening means in a position covering the gripping device.

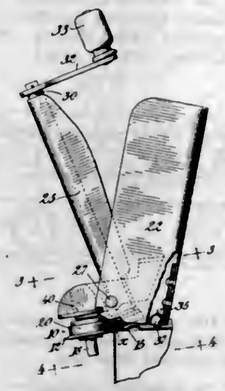


1,678,242. ABSORPTION REFRIGERATING APPARATUS. JENS ORTEN BOVING, Westminster, London, England. Filed Dec. 22, 1926, Serial No. 156,275, and in Great Britain May 21, 1926. 6 Claims. (Cl. 62—118.)

1. In a rocking reversing absorption refrigerating apparatus, a boiler-absorber, condenser and evaporator, intercommunication means between said boiler-absorber and said condenser and evaporator, and means restraining and eventually abruptly effecting the distribution of liquid in said boiler-absorber.

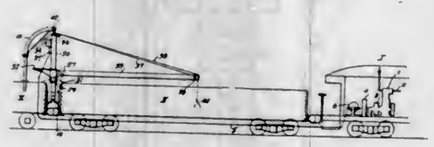
2. In a reversing absorption refrigerating apparatus, a boiler-absorber, condenser and evaporator, intercommunication means between said boiler-absorber and said condenser and evaporator, and means restraining and means eventually abruptly effecting the distribution of liquid in said evaporator.

1,678,243. COMBINED SASH HOLDER AND STARTER. EDWARD F. CHAFFEE, Syracuse, N. Y., assignor to The O. M. Edwards Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed Apr. 14, 1927. Serial No. 183,880. 1 Claim. (Cl. 292—5.)



A combined sash holder and starter comprising a base, sash holding mechanism carried by the base including a movable element, a vertically movable sash starter pivotally connected to said element to be actuated thereby and to shift laterally relatively thereto, the said member being formed with an angular radially extending arm, and the base being formed by spaced apart shoulders arranged to engage said arm, one shoulder being arranged to engage one arm when the member approaches the end of its throw in one direction, and the other being arranged to engage said arm when said member is at the limit of its throw in the other direction.

1,678,244. CAN OPENER. SEWELL DAVIS and ALPHONSE LA FON, Newark, N. J., assignors to Polly Wiggin, Inc., Newark, N. J., a Corporation of Delaware. Filed Sept. 23, 1925. Serial No. 58,080. 9 Claims. (Cl. 30—3.)

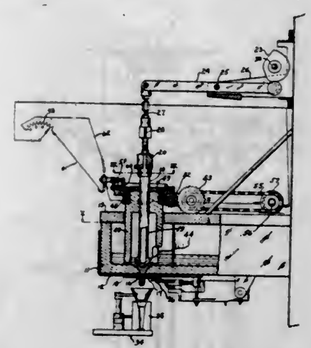


1. A can opener comprising a cutter and a feed and pressure roller coacting with said cutter, a pair of

levers on which said cutter and said feed and pressure roller are respectively mounted and by which said cutter and roller are adapted to be brought together from

opposite sides of the seam of a can, a drive shaft carrying said feed and pressure roller mounted longitudinally of the lever on which said roller is mounted.

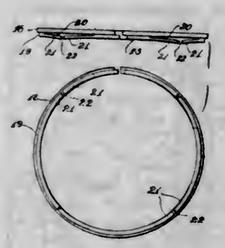
1,678,245. CAR-UNLOADING APPARATUS. WILLIAM E. DICKINSON and JOSEPH J. MORGAN, New Haven, Conn. Filed Oct. 19, 1926. Serial No. 142,579. 18 Claims. (Cl. 212—65.)



1. In an apparatus of the character described, a derrick support embodying a suitable base adapted to be positioned between the contiguous ends of two adjacent cars of a train and below the tops of said cars, means for securing the forward end of the base to the forward car, means for securing the rearward end of the base to the rear car, and a derrick stepped upon said base for rotary movement thereon.

1,678,246. PRODUCTION OF ALKALI-METAL COMPOUNDS FROM SILICATES CONTAINING THEM. THOMAS A. EDISON, Llewellyn Park, N. J., assignor to Thomas A. Edison, Incorporated, West Orange, N. J., a Corporation of New Jersey. Filed June 28, 1922. Serial No. 571,394. 5 Claims. (Cl. 23—33.)

5. The herein described method which consists in mixing finely divided silicate containing an alkali metal with an alkaline earth hydrate and water, subjecting the mixture to sufficient heat to free the alkali metal from the silicate, and subjecting the resultant mass to a head of liquid sufficient to remove therefrom by displacement the water and soluble salts therein, substantially as described.

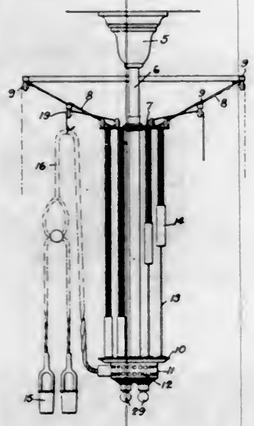


1,678,247. METHOD AND MEANS FOR FEEDING AND SHAPING MOLTEN GLASS. ENOCH T. FERNGREN, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Dec. 1, 1924. Serial No. 753,107. 24 Claims. (Cl. 49—55.)

6. The combination with a container for molten glass having an outlet opening in the bottom thereof, means to supply molten glass to the container at one side of said outlet, a baffle extending into the glass, means to rotate the baffle and thereby shift the path of flow of the glass to the outlet, and means to periodically vary the speed of rotation of the baffle.

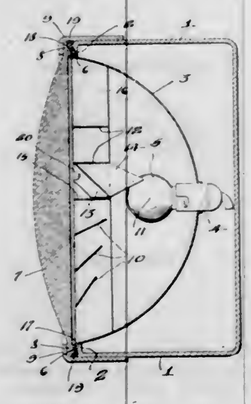
24. The method of keeping the glass which is circumlocal to a glass releasing outlet, in a state of like mobility, consisting in constantly changing at a periodically varying rate of speed, the path of movement of a major portion of a stream of glass flowing to the outlet, and correspondingly changing the path of movement of a minor portion of said stream of glass.

1,678,248. PISTON RING. HARRY S. FRANK, Brooklyn, N. Y. Filed Jan. 15, 1925. Serial No. 2,480. 3 Claims. (Cl. 74—109.)



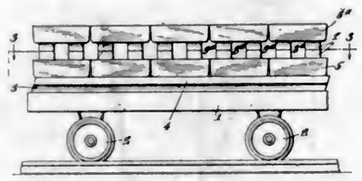
1. A laterally expanding piston ring comprising a ring body having facial prong-shaped resilient extensions expanding axially and radially outwards.

1,678,249. FIXTURE. ERNEST O. FREDERICS, New York, N. Y., assignor to E. Frederics, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 23, 1926. Serial No. 130,873. 10 Claims. (Cl. 219—24.)



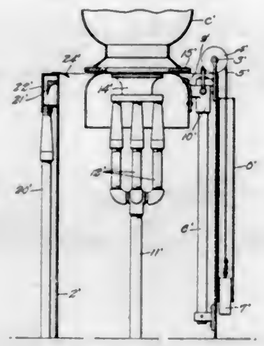
9. A fixture, including a stem, an outlet block at the lower end of the same, a ring member within said block,

a pair of semicircular ring members also disposed within said block and spaced from each other and from said first ring member, a source of electrical current supply having one of its leads connected with said first-mentioned ring member, the other of its leads being connected with both of said semi-circular ring members,



current-consuming elements, connecting members extending between the same and said ring members, means for disconnecting said source of current supply from either of said semi-circular ring members, and signalling means associated with each of said semi-circular ring members for indicating when they are in closed circuit.

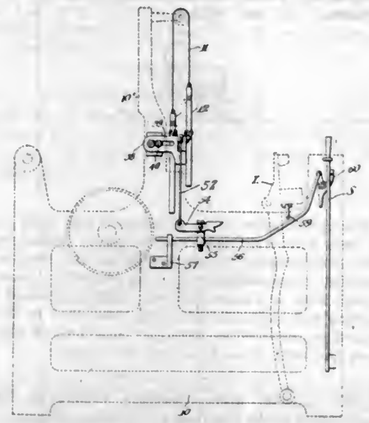
1,678,250. REFLECTOR SHIELD FOR HEADLIGHTS. GEORGE A. HENDEY and RUDOLPH A. SCHATZEL, Rome, N. Y.; said Schatzel assignor to said Hendey. Filed Nov. 10, 1926. Serial No. 147,558. 4 Claims. (Cl. 240—48.4.)



4. In a headlight, a reflector, a lamp located with its source of light near the axis of the reflector and a deflector located in the angle formed by the horizontal and vertical planes intersecting in the axis of the headlight, the deflector being arranged in front of the lamp at one side of and above the axis and inclining downwardly and laterally, said deflector also extending forwardly and rearwardly in a general direction parallel to the axis of the reflector and terminating short of the lamp.

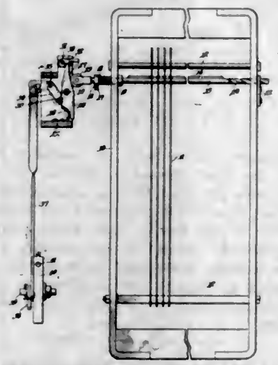
1,678,251. SUPERSTRUCTURE FOR TUNNEL-KILN CARS. DWIGHT BUSHNELL HENDRYX, Bradford, Pa., assignor to Hanley Company, Bradford, Pa., a Corporation of Pennsylvania. Filed July 21, 1927. Serial No. 207,441. 5 Claims. (Cl. 25—142.)

1. A tunnel kiln car having a superstructure comprising a course of blocks of refractory material, supported upon blocks of standard brick size.



1,678,252. CAN-WASHING DEVICE. IRA H. KENDALL, Potsdam, N. Y., assignor to The Kendall Patents, Inc., Potsdam, N. Y., a Corporation of New York. Filed Dec. 29, 1923. Serial No. 683,308. 6 Claims. (Cl. 141—7.)

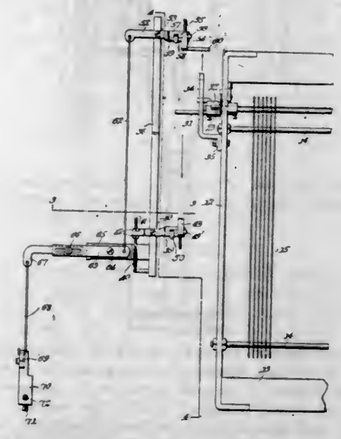
1. In washing devices for cans or other receptacles, the combination of a tank, a support therein for the can adapted to be moved upwardly and downwardly, a washing device located within said tank and a shield movable with said support located within said tank and adapted to prevent any spattering of the water supplied to the washing device.



1,678,253. WARP STOP MOTION. HARRY E. KHOURY, New Bedford, Mass. Filed July 6, 1926. Serial No. 120,738. 12 Claims. (Cl. 139—364.)

1. In a warp stop motion for looms, the combination with a heddle frame having a series of heddles supported by warp threads, a rockable bar mounted in the heddle frame, the heddles being formed to engage and lock the bar against movement when one of the warp threads breaks, of means on the loom adapted to rock the bar as the heddle frame moves, said means comprising a bracket, a member pivotally mounted about a horizontal axis on said bracket but yieldingly held against movement, said member being movable by the bar when locked as the heddle frame moves, a continuously moving element on the loom lay, and means having a link connection with

said member and the loom shipper lever and adapted to be moved into the path of said continuously moving element only when said bar is locked and moves said member.

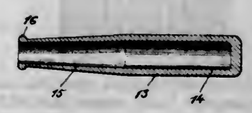


1,678,254. WARP STOP MOTION. HARRY E. KHOURY, New Bedford, Mass. Filed July 6, 1926. Serial No. 120,739. 13 Claims. (Cl. 139—364.)

1. In a warp stop motion for looms, the combination with a heddle frame and a series of heddles adapted to be supported therein by the warp threads, of a rockable longitudinally movable bar mounted in the heddle frame, the heddles having the bar associated therewith and being adapted to engage and lock the bar against movement when one of the warp threads breaks, means on the loom separate from the bar adapted to rock and longitudinally move the bar as the heddle frame moves, and power actuated means to stop the loom, said stop means being maintained inoperative as long as the bar is free to move under the influence of said actuating means.

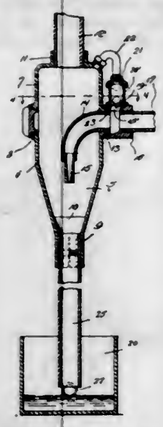
1,678,255. WARP STOP MOTION. HARRY E. KHOURY, New Bedford, Mass., assignor to Khoury Warp Stop Motion, Inc., a Corporation of Massachusetts. Filed Sept. 21, 1926. Serial No. 136,832. 19 Claims. (Cl. 139—364.)

1. In a warp stop motion for looms, the combination with a heddle frame having a series of heddles supported by warp threads, of a movable detector bar mounted in the heddle frame, the heddles being formed to engage and lock the bar against movement when a warp thread breaks, and means adapted to give the bar a detecting movement as the heddle frame moves and effective to stop the loom when the bar is locked against movement, said means



comprising a bracket positioned upon the loom frame, an element on said bracket adapted to impart a detecting movement to the bar, a yielding element movable through the bar when the latter is locked, and means mounted for movement with the heddle frame and movable with the detector bar serving to engage said yielding member only when the detector bar is locked.

1,678,256. PROCESS OF MANUFACTURING WHITE ACETATE OF LEAD SOLUTIONS OR CRYSTALS OUT OF PYROLIGNEOUS ACID. MAX KLAR, Holzminden, Germany. Filed Dec. 22, 1925, Serial No. 77,095, and in Germany Oct. 28, 1924. 2 Claims. (Cl. 260—11.)

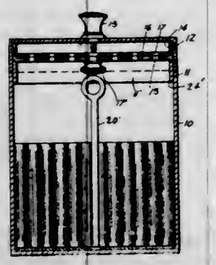


1. The process of obtaining white lead acetate from pyroligneous acid containing organic coloring impurities by neutralizing the said pyroligneous acid with lead or lead compounds, producing from the said solution lead acetate in solid form, heating the said solid lead acetate to temperatures between 200–220° centigrade at which temperatures the organic coloring impurities become insoluble in water but below the decomposition temperature of lead acetate, lixiviating the said lead acetate with water and filtering, evaporating and crystallizing the same.

1,678,257. BLASTING-CAP PROTECTOR. GEORGE A. LIVERMORE, Joplin, Mo., assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Jan. 19, 1927. Serial No. 162,172. 2 Claims. (Cl. 102—9.)

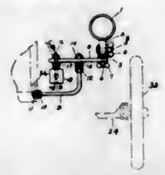
1. A protector for blasting fuses comprising a deep, cup-shaped member of soft-rubber composition, whose aperture tapers to a reduced diameter at the mouth end, the walls surrounding said tapering portion of the aperture also tapering to a reduced thickness toward the mouth end.

1,678,258. HYDRAULIC VACUUM CLEANING DEVICE. CLAYTON F. MACDONALD, Asheville, N. C. Filed Nov. 4, 1926. Serial No. 146,220. 6 Claims. (Cl. 230—92.)



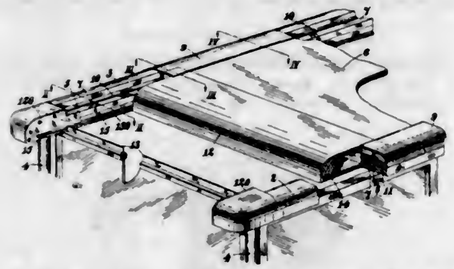
1. In a vacuum cleaning device of the character described, a vacuum chamber having a suction inlet at one end, and a pair of exhaust pipes at its opposite end, a double jet nozzle arranged within the vacuum chamber each of said nozzles being centered above the respective exhaust pipes of the vacuum chamber, a common fluid pressure inlet for said jet nozzle, and means automatically operable for introducing a charge of the fluid into the chamber above the nozzle during low pressures of the fluid, said means being inoperative when the pressure of the fluid reaches a predetermined degree.

1,678,259. PROCESS OF CONCENTRATING MIXED-SULPHIDE ORES. HAROLD S. MARTIN, Garfield, Utah. Filed June 30, 1927. Serial No. 202,744. 4 Claims. (Cl. 209—167.)



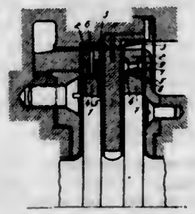
1. The method of effecting the selective froth flotation of copper sulphides from ores containing iron sulphides, which comprises rendering the ore pulp alkaline, adding a substance capable of liberating sulphite radicle and hydrogen ions under the conditions obtaining in the flotation process, and subjecting the resulting pulp to a flotation operation.

1,678,260. HUMIDOR. NATALE MARTINO, PHILIP FRASCA, and JOHN E. OSTER, New York, N. Y. Filed July 13, 1927. Serial No. 205,360. 4 Claims. (Cl. 131—30.)



1. A humidifier comprising an open top casing, a perforated tray supported in the upper part of the casing, a plate rotatably movable on the tray bottom and having holes arranged to be brought into or out of registry with the perforations of the tray, complementary abutments on said plate and casing cover to limit the movement of the plate and a cover fitting over the tray and against the upper part of the casing in a manner to break joints with the tray.

1,678,261. SIDE LIGHT. ARTHUR J. MARSHALL, Dalton, Mass., assignor of one-fourth to Edward T. Heaphy, Lee, Mass., and one-fourth to William A. Heaphy, Pittsfield, Mass. Filed July 23, 1927. Serial No. 208,031. 4 Claims. (Cl. 240—62.)

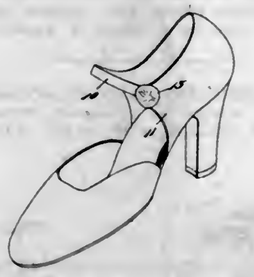


2. The combination of an adjustable side light mounted on a cross arm, the cross arm pivotally connected to a bracket arm adapted to be secured to the chassis of an automobile, a connecting rod block pivotally connected to the cross arm, a connecting rod rigidly attached to the connecting rod block and pivotally connected to the steering rod of an automobile, means to absorb shock and vibration on the said cross arm and side light.

1,678,262. ROOF FOR CLOSED VEHICLE BODIES. REGINALD WALTER MAUDSLAY, Coventry, England. Filed Aug. 10, 1926, Serial No. 128,425, and in Great Britain Mar. 27, 1926. 3 Claims. (Cl. 296—137.)

1. In a closed vehicle body, the combination of a roof, an aperture in front thereof, a stepped rail at each side of said aperture provided with a longitudinal slot in the upper vertical face of the step, said rail extending to the extreme front of the roof, a rigid hatch adapted to slide on said steps and when in one position to close said aperture, a member interposed between the rail and the hatch adapted to engage the longitudinal slot and embrace the lateral edges of the hatch and cover the joint therebetween.

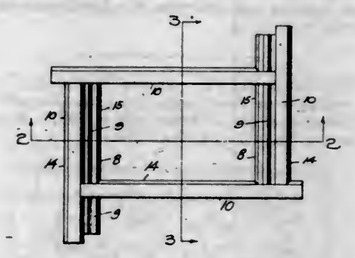
1,678,263. RUNNER BLADE FOR STEAM TURBINES. GUSTAV MENZ, Berlin-Charlottenburg, Germany, assignor to Siemens-Schuckertwerke Gesellschaft mit beschränkter Haftung, Berlin-Siemensstadt, Germany, a Corporation of Germany. Filed Feb. 12, 1927, Serial No. 167,741, and in Germany Feb. 17, 1926. 3 Claims. (Cl. 253—77.)



1. In a rotor for steam turbines, the combination of a runner, a blade ring mounted on the periphery of said runner, runner blades integral with said blade ring, at least one retaining ring for said blade ring, there being an annular recess extending over a portion of the blade ring and of the runner for receiving said retaining ring, and means for pressing said ring against the blade ring and the runner to hold the former in place, whereby the transmission of streases between the runner and the blade ring is prevented.

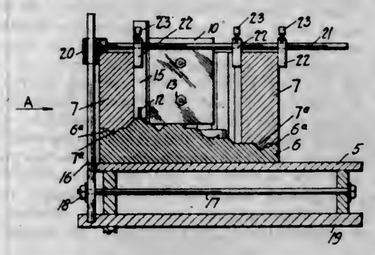
1,678,264. SLIDE BUCKLE. ROSWELL A. MOORE and JEROME R. LA VIGNE, Waterbury, Conn., assignors to Waterbury Buckle Co., Waterbury, Conn., a Corporation. Filed Feb. 21, 1928. Serial No. 255,908. 1 Claim. (Cl. 24—169.)

A one-piece slide buckle, consisting of a single piece of metal of relatively narrow width as compared with its length, having parallel side-bars, parallel end-bars, a center-bar joining the end-bars, narrow threading-slots located between the inner edges of the side-bars and the outer edges of the center-bar, and a plurality of gripping-fingers struck out of the main portion of the center-bar, and two inwardly-turned gripping-fingers struck out of the respective ends of the center-bar and extending inwardly at a right angle to the gripping-fingers before mentioned, the said fingers being adapted to receive under them the selvage edges and the cut edge of the fixed end of the webbing, upon which they are closed to grip the same.



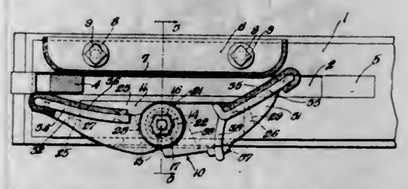
1,678,265. BUTTON COVER. WILLIAM L. MYERS, Newark, and GEORGE D. HARRISON, Belleville, N. J., assignors to L. A. Myers, Jr., Inc., Newark, N. J., a Corporation of New Jersey. Filed Feb. 29, 1928. Serial No. 257,893. 6 Claims. (Cl. 24—113.)

1. A button cover for shoe straps, comprising an ornamental cover member having a cross bar on its back between which and the cover the strap is threaded, and means carried by said cover for releasably retaining the same in adjusted position over the button.



1,678,266. METHOD AND MEANS FOR MAKING MOLDS FOR BUILDING BLOCKS AND THE LIKE. ERNEST S. NIESTRADT, Denver, Colo., assignor to The Northwestern Terra Cotta Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 28, 1926. Serial No. 138,233. 9 Claims. (Cl. 25—121.)

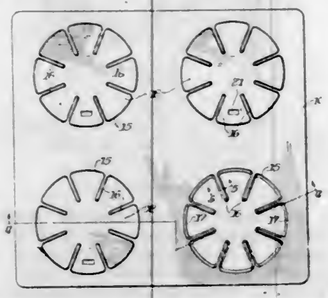
7. In apparatus for making a mold for building blocks and the like, the combination with a base-member of the mold and opposite side-members of the same, of means for closing an end of the mold, and a partition spaced from



said end and composed of a middle section and outer sections slidably connected with the middle section and engaging the side-members of the mold.

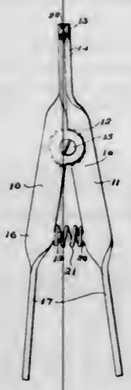
1,678,267. APPARATUS FOR MAKING MOLDS FOR BUILDING BLOCKS. EARNEST S. NIESTRADT, Denver, Colo., assignor to The Northwestern Terra Cotta Company, Chicago, Ill., a Corporation of Illinois. Filed June 14, 1927. Serial No. 198,723. 6 Claims. (Cl. 25—121.)

4. A holding appliance for mold members comprising in combination with a support for the mold, a standard on the support, a laterally projecting arm slidable on the support, sliding stops on the arm for engagement with members of a mold on the support, and set screws to secure the stops in adjusted positions.



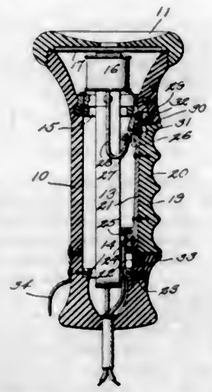
1,678,268. PICKER-STICK-CONTROLLING MEANS FOR LOOMS. JONAS NORTHROP, Hopedale, Mass., assignor, by mesne assignments, to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Mar. 24, 1925. Serial No. 17,880. 3 Claims. (Cl. 139—164.)

1. Picker stick controlling means for looms having, in combination, a lay provided with a picker stick slot, a picker stick, a picker stick check lever pivoted on the lay upon a vertical axis and having two arms each provided with large friction surfaces for engagement with the picker stick extended in opposite directions therefrom at different angles to the picker stick, the inner arm offering greater checking resistance to the picker stick than the outer arm, the pivot being positioned so that either the one or the other arm of the lever overlaps the picker stick slot, a pivot upon which the lever is mounted, friction material interposed between the surface of the lever and



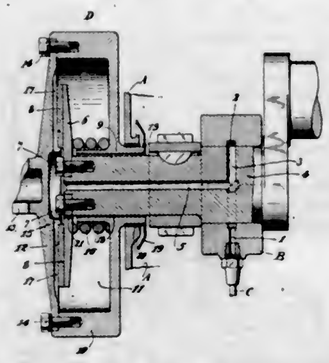
the surface of the pivot, and a spring, spring follower and nut for increasing and decreasing the pressure on the spring to increase and decrease the frictional resistance of the lever to turning.

1,678,269. COOK STOVE. GEORGE E. PICKUP, Newark, Ohio, assignor to The Wehrle Company, Newark, Ohio, a Corporation of Ohio. Filed July 8, 1927. Serial No. 204,163. 1 Claim. (Cl. 126—214.)



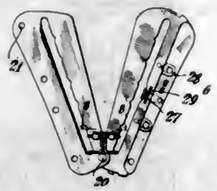
A stove top comprising, in combination, a plate having a circular burner opening therein, a plurality of ribs formed integral with the plate and extending radially into said opening, said ribs being equidistantly spaced apart and terminating short of the axial center of the opening, and a cover plate for said opening having a plurality of radially disposed slots having their outer ends terminating in the periphery of the cover plate, said cover plate being adapted to fit into said opening with its upper surface flush with the upper surface of the top plate and with said ribs entered in said slots, said ribs and slots being of greater width at their lower edges than at their upper edges whereby the ribs are adapted to engage and support the plate throughout the length of the ribs.

1,678,270. PIN-HOLDING TOOL. FLOYD F. PROSCH, McPherson, Kans., assignor of one-half to Ruben L. Walline, McPherson, Kans. Filed Aug. 2, 1926. Serial No. 126,456. 1 Claim. (Cl. 81—5.1.)



Pliers for placing and removing pins and the like consisting of two levers of sheet metal each including a handle and an intermediate portion in one straight piece, the latter having a nib and an ear longitudinally spaced from the nib, the nib and ear projecting from one edge of the lever, and a jaw portion extended longitudinally from the intermediate portion opposite the handle, said jaw having a terminal lateral extension in a plane with and at right angles to the jaw and formed with a groove across one side on a line longitudinally of the device; said ears being overlapped and pivotally connected, said nibs being presented inward in opposed relation, a helical spring seated at its ends around the nibs and against the levers, said jaws having a twist both in the same direction a quarter turn adjacent the intermediate portion and disposed to meet in close parallel relation with said grip extensions alined, the said grooves being alined and opposed to jointly receive a pin.

1,678,271. TELEPHONE RECEIVER. ALBERT JOE ROBERTS, Warren, Ohio. Filed July 29, 1927. Serial No. 209,300. 2 Claims. (Cl. 179—167.)



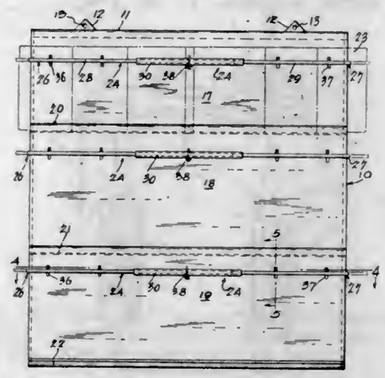
1. In a telephone receiving instrument, an insulated shell having a slot therein, a finger piece mounted for movement in said slot, a conductor plate carried by and movable with the finger piece and adapted for connection in a receiving circuit, a contact carried by the plate, a contact carried by and located in the shell and also adapted to be connected in the receiving circuit, said shell carried contact being normally spaced from and adapted to be engaged by the plate carried contact to close the circuit when the finger piece is moved inward and spaced shell carried stops located upon opposite sides of the finger piece to limit its movement in opposite directions.

1,678,272. LUBRICATING AND OIL-SEPARATOR APPARATUS. SAMUEL W. RUSHMORE, Plainfield, N. J. Filed Dec. 29, 1925. Serial No. 78,167. 9 Claims. (Cl. 184—6.)

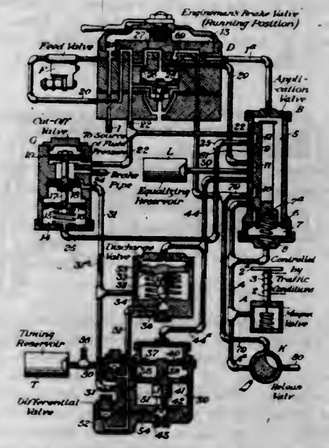
1. In a motor having a plurality of cylinders, a crank case, a crank shaft, and bearings for the shaft, a vibration damper comprising a disc element rigidly mounted on one end of said shaft, a hollow flywheel element housing the disc and frictionally coupled therewith, in combination with a pump drawing oil from the crank case and force-feeding it through a plurality of parallel connected conduits, to the several bearings and, through one of the bearings, to a supply duct in said shaft discharging into the interior between said flywheel element and said disk and an outlet near the axis of the latter, through which the oil flows back into the crank case.

1,678,273. FASTENING DEVICE FOR SHOES. KONRAD SCHUTZ, Brooklyn, N. Y. Filed Oct. 18, 1927. Serial No. 226,863. 1 Claim. (Cl. 24—207.)

A fastening device for shoes consisting of two metallic strips hinged at one extremity, said strips having longitudinal slots, a clamping member slidable in said slots to draw the plates together when the clamping member is moved into a position opposite the hinge, and means to fix the plates to the flaps of a shoe, one of said plates being formed in two parts and provided with means for selectively adjusting the width of the plates.



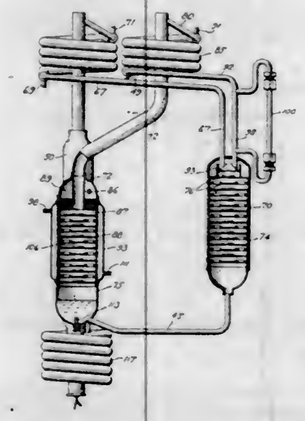
1,678,274. STRENGTHENING DEVICE FOR SHOES. KONRAD SCHUTZ, Brooklyn, N. Y. Filed Oct. 18, 1927. Serial No. 226,864. 3 Claims. (Cl. 36—58.6.)



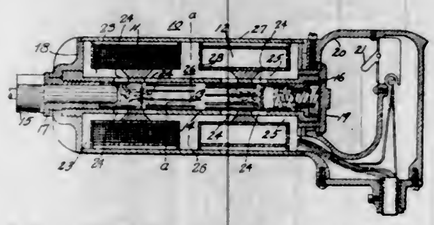
1. A strengthening device for the heel portions of shoes, comprising two arcuate metal strips hinged to each other, one of said strips being adapted to embrace the outside of the shoe, and the other strip having a pad fixed to its inner side, and hooks to engage the leather of said shoe and the first mentioned strip.

1,678,275. SECTIONAL MAGAZINE RACK. HENRY SPEARMAN, San Mateo, Calif. Filed Dec. 16, 1927. Serial No. 240,445. 4 Claims. (Cl. 211—55.)

1. A device of the class described, comprising a sheet metal rack section embodying a plurality of superposed panels, each provided with article supporting channels, supported ears formed on the upper of said panels and providing means for suspending the rack from an upright support, retaining members consisting of a pair of elements slidably mounted upon said panels and adapted to retain the upper ends of the supported articles, said retaining members bearing sleeves adapted to allow of lateral movement of the elements thereof relative to each other to increase their capacity, and means coacting therewith to limit their lateral movement and to prevent their complete separation.



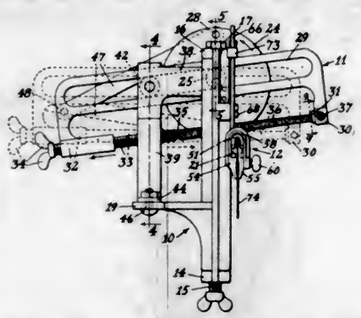
1,678,276. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. CLARENCE W. SPROULL, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Nov. 18, 1926. Serial No. 149,083. 17 Claims. (Cl. 303—18.)



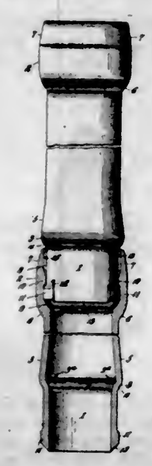
2. Automatic brake applying apparatus on a train comprising a brake pipe initially charged with fluid pressure and arranged to apply the brakes when the pressure in such pipe is reduced, a cylinder containing a reciprocable piston, a spring constantly bearing against one side of the piston, means for at times exposing one side of the piston to the pressure in the pipe and for exposing the other side of the piston to the pressure to which the pipe was initially charged, and a valve controlled by said piston for reducing the pressure in the pipe until the combined force exerted on one side of the piston by the spring and the pressure in the pipe is less than the force exerted on the other side of the piston by said initial pressure.

1,678,277. REFRIGERATION. BALTZAR CARL VON PLATEN and CARL GEORG MUNTERS, Stockholm, Sweden, assignors to Electrolux Servel Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 7, 1928. Serial No. 245,204. 16 Claims. (Cl. 62—178.)

1. Refrigerating apparatus comprising a generator, a condenser, an evaporator and an absorber forming a circuit for a cooling agent and a second circuit for an auxiliary agent comprising said evaporator, said absorber and a second condenser through which the auxiliary agent passes from the absorber to the evaporator.



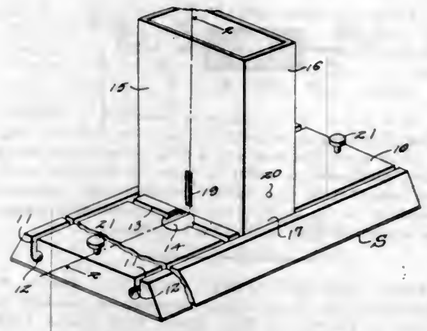
1,678,278. RECIPROCATING ELECTRIC MOTOR. CARL S. WEYANDT, Pittsburgh, Pa., assignor to Central Electric Tool Company, a Corporation of Pennsylvania. Filed May 2, 1924. Serial No. 710,501. 24 Claims. (Cl. 172—126.)



2. In a reciprocating motor the combination with two solenoids adapted to be alternately energized and a movable member to be reciprocated by the solenoids in response to such energization, of a laminated structure for the solenoids to conduct the magnetic fluxes developed thereby to zones of concentration to influence the movable member, said structure comprising a laminated section constituting a common path of conduction which the fluxes developed by the solenoids traverse in opposite directions.

1,678,279. SAW-FILING MACHINE. BENJAMIN A. BRANCH and GEORGE SCHNURR, Long Beach, Calif. Filed Feb. 15, 1927. Serial No. 168,377. 1 Claim. (Cl. 76—35.)

In a saw filing device of the character described, the combination, with the main frame, horizontal saw-carrying frame, and reciprocatory file-carrying frame; of angularly adjustable guiding means for said file-carrying frame, said adjustable guiding means comprising a vertical sleeve, a bolt within said sleeve to pivotally secure it to said main frame, a radial pin fixed in one side of said sleeve, rotary means mounted on said radial pin and operatively connected with said file-carrying frame to reciprocate the latter, a lateral extension projecting from the upper portion of said sleeve, a vertical leg with which said extension is provided, and adjustable securing means at the lower end of said leg to provide for an arcuate adjustment of said leg with relation to said sleeve, there being two guides for the file-carrying frame which are in fixed relation to said leg and sleeve, one of said guides being located adjacent to said sleeve, and the other of said guides, being on said extension of said sleeve in spaced relation to the latter.

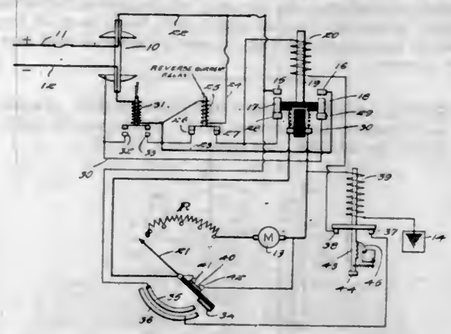


1,678,280. WELL CASING. HARRY Y. CARSON, Birmingham, Ala., assignor to American Cast Iron Pipe Company, Birmingham, Ala., a Corporation. Original application filed Aug. 18, 1922, Serial No. 582,725. Divided and this application filed Jan. 14, 1925. Serial No. 2,331. 4 Claims. (Cl. 166—4.)

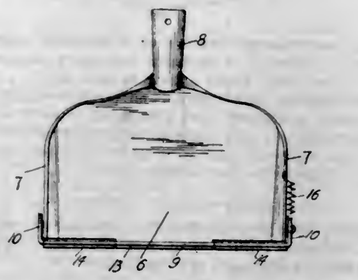
1. A well casing composed of pipe sections each having a bell and spigot end, said bell being of greater diameter than the pipe section, a circumferential enlargement of slightly less diameter than the bell formed on the spigot in spaced relation to the end thereof and having its outer surface rounded and merged into the spigot, said enlargement being so spaced from the end of the spigot that when the bell and spigot are connected the enlargement is caused to overhang the bell end; each pipe section being gradually tapered in opposite directions at both ends of the bell and likewise gradually tapered from the enlargement toward the bell, so that the outer surfaces of the bell and enlargement are practically continuous when the spigot is fitted within the bell.

1,678,281. MATCH-DISPENSING DEVICE. EATON COLE, Eureka Springs, Ark. Filed Dec. 17, 1927. Serial No. 240,832. 4 Claims. (Cl. 312—77.)

1. In a match safe and in combination, a base having parallel slots, an open-bottomed receptacle seated upon the upper surface of the base and having portions extending into said slots and having engagement therewith preventing vertical movement of the receptacle with relation to the base while permitting reciprocatory motion thereof longitudinally of the base, said base having a groove extending transversely with respect to said slots and of a depth to receive a single match.



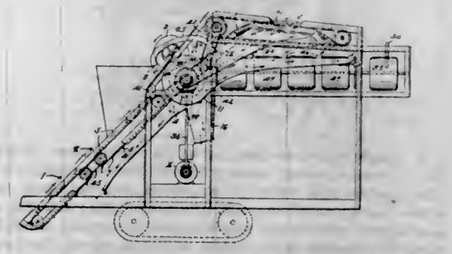
1,678,282. ARTICLE HOLDER. CHARLES N. CORYELL, New York, N. Y. Filed Dec. 23, 1926. Serial No. 156,618. 18 Claims. (Cl. 206—56.)



16. In a lip stick holder, a tubular body, a lip stick carrier slidable in the body, a closure for the top of the body, and means operable through the bottom of the body and connected to the carrier and to the closure for operating the carrier both toward and away from the bottom of the body.

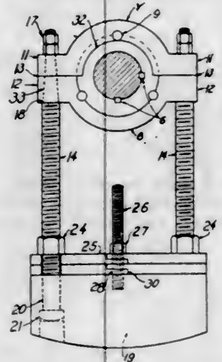
1,678,283. PROTECTIVE DEVICE FOR ELECTRICALLY-OPERATED MIXING MACHINES AND THE LIKE. JAMES E. DILLON, Masontown, Pa. Filed Feb. 12, 1927. Serial No. 167,803. 4 Claims. (Cl. 191—8.)

1. In a safety system for electrical motor operated machines the frames of which are not permanently connected to the negative side of a grounded circuit, a normally open circuit for the motor including a rheostat, positive and negative feed wires for the motor circuit, a reel upon which the feed wires are wound, a control circuit including means for closing the motor circuit operative only when the rheostat controller arm is in "on" position, parallel connections between the negative side of the motor circuit and the reel frame, one of which is nominally open and the other of which is nominally closed, said means when the motor circuit is open closing the open connection and means opening the other of the connections when the motor circuit is closed.



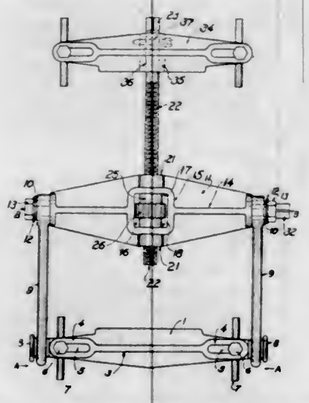
1,678,284. DUSTPAN. FERDINAND DUHSEL, Denver, Colo. Filed July 12, 1927. Serial No. 205,218. 4 Claims. (Cl. 65—20.)

1. The combination with a dust pan having a bottom and rim portions at opposite ends of the forward edge thereof, of a lid hinged at said edge and adapted to close the space between the rim portions, and a spring holding the lid in its normal closed position, the lid having downwardly ranging projections adapted to open the lid by contact with a surface over which the pan is moved.



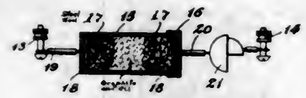
1,678,285. CANE-HARVESTING MACHINE. RALPH SADLEIR FALKINER, Melbourne, Victoria, Australia. Filed Apr. 7, 1927, Serial No. 181,840, and in Australia Sept. 20, 1926. 17 Claims. (Cl. 56—17.)

17. In a cane harvesting machine employing superposed throwing rollers, a travelling hood formed of a slatted belt, a series of pairs of discharge rollers beneath the hood, fans or blowers for supplying air blast rollers, the provision of a trash removing elevator provided with



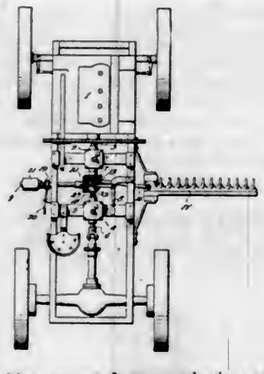
rakes and feeding the throwing rollers, air jets at front and back of the upper throwing roller receiving air from said fans or blowers, a grooved rotary trash discharge roller in contact with the rear of the lower throwing roller, a suction chamber within the hood, open at the bottom and connected with the suction sides of said fans or blowers.

1,678,286. BAND-WHEEL COUNTERWEIGHT. GEORGE E. FENTRESS, Los Angeles, Calif. Filed June 24, 1927. Serial No. 201,153. 2 Claims. (Cl. 74—71.)



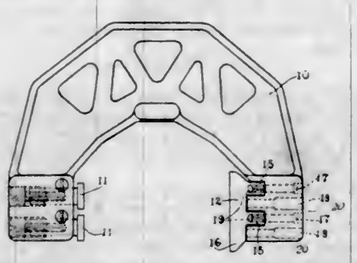
2. A counterweight for use on a rotatable shaft, comprising: a journal of diameter materially greater than that of the shaft, firmly affixed to said shaft; a bearing box surrounding said journal and freely rotatable thereon; readily removable taper pins fitted between said journal and said box and adapted to prevent relative movement therebetween, and a weight depending from and rigidly attached to said bearing box.

1,678,287. BELT TIGHTENER. GEORGE E. FENTRESS, Los Angeles, Calif. Filed Aug. 23, 1927. Serial No. 214,865. 5 Claims. (Cl. 254—54.)



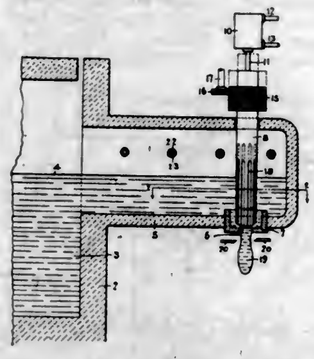
1. A belt tightener comprising, in combination: a rigid bar; a temper screw passing slidably through said bar on the shorter axis thereof; a geared nut engaging said screw and mounted thereon within said bar; a worm engaging said geared nut and attached to a shaft rotatably mounted on said bar; a hand operated means for rotating said shaft; a clamp for attachment to one end of a belt; means for detachably fixing one end of said temper screw in said clamp; a second clamp for attachment to the opposite end of said belt, and hook means for connecting said second clamp to said rigid bar.

1,678,288. ACCESSORY FOR RADIO SIGNAL RECEIVERS. SAMUEL N. FLEMING, Hopkinsville, Ky. Filed Sept. 2, 1927. Serial No. 217,199. 2 Claims. (Cl. 250—20.)



1. In a device of the character described, a container formed of insulating material having a content of a mixture of an insulating fluid and a mass of extremely finely divided conductive material, a mass of wool-like metal fibers embedded in the mixture at each side connected respectively to the antenna and the receiver, said masses being separated from each other a distance.

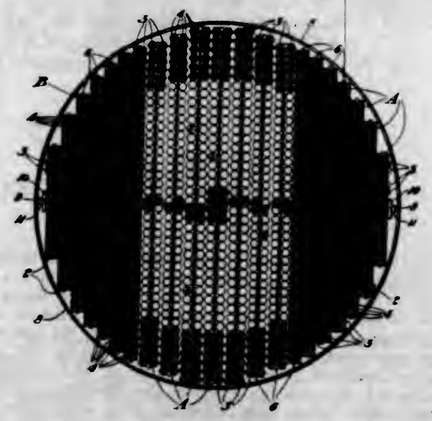
1,678,289. VARIABLE-SPEED GEARING. ANTON V. HARTMANN, St. Paul, Minn., assignor of one-half to Victor H. Stevens, St. Paul, Minn. Filed Mar. 8, 1927. Serial No. 173,705. 1 Claim. (Cl. 74—7.)



In a machine mounted upon wheels and including a motor and drive shaft, separate and independent transmissions in the length of the drive shaft, a gear wheel loose on the drive shaft, a clutch member for connecting the loose gear wheel to the drive shaft, other shafts geared to the said loose gear wheel, a pulley loose on one of the last mentioned shafts, a clutch member for connecting the pulley to its shaft, and an operating mechanism detachably connected with the other one of the last mentioned shafts.

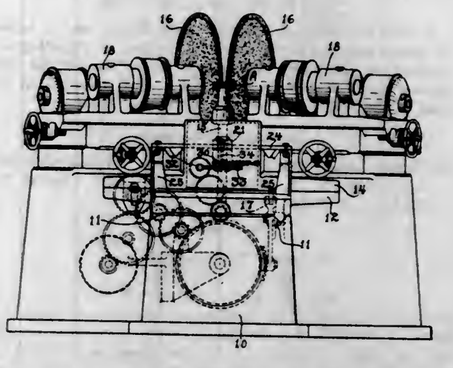
1,678,290. ADJUSTABLE SNAP GAUGE. FRANK O. HOAGLAND, Bridgeport, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 14, 1926. Serial No. 141,659. 6 Claims. (Cl. 33—163.)

1. A snap gauge comprising in combination, a gauge frame, a pair of parallel adjustable anvils within said frame, an anvil plate opposed to said anvils, projections on said anvil plate, projections on said frame, and means to secure said anvil plate to said frame by said projections upon or between said projections on the frame.



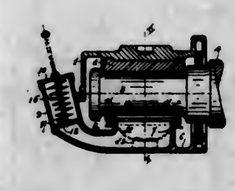
1,678,291. METHOD AND APPARATUS FOR FEEDING MOLTEN GLASS. GEORGE E. HOWARD, Butler, Pa., assignor, by mesne assignments, to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Dec. 4, 1922. Serial No. 604,785. 20 Claims. (Cl. 49—55.)

1. Apparatus for producing mold charges of molten glass comprising a container for the glass having a discharge outlet and a rotatable flow-controlling member disposed in line with said outlet, said flow-controlling member having a corrugated surface immersed in the glass.



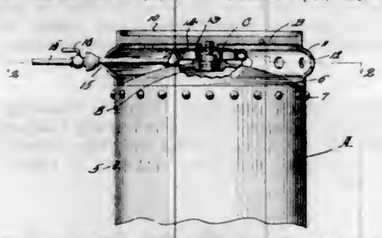
20. In glass feeding apparatus, two cooperative flow regulating members, one comprising a container for molten glass having a submerged discharge aperture and the other comprising an implement extending into the glass substantially in axial alignment with said aperture, one of said flow regulating members having non-spiral projections extending into the glass around the axial line of the outlet, and means for rotating one of said flow regulating members about the axial line of the outlet.

1,678,292. CABLE. JAMES FORREST HOWE, Worcester, Mass., assignor to The American Steel and Wire Company of New Jersey, a Corporation of New Jersey. Filed Jan. 22, 1925. Serial No. 4,044. 2 Claims. (Cl. 28—1.)



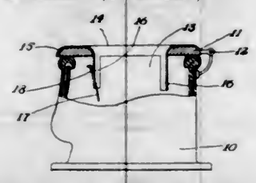
1. A large bridge cable having a substantially circular cross section and composed of a plurality of flat ropes, laid one on top of the other, the center rope of the cable being of a width substantially equal to the diameter of the cable and each of the successive ropes on either side of the center rope being of less width than the preceding rope, and suitable seizing arranged at spaced intervals along said cable for securing said ropes together.

1,678,293. GEAR GRINDER. CARROLL KNOWLES, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 3, 1924. Serial No. 753,651. 6 Claims. (Cl. 61—52.)



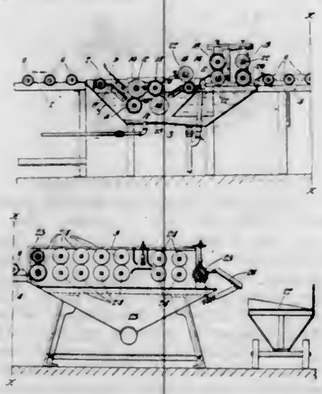
1. A gear grinding machine comprising in combination, a base, a rotatable grinding wheel thereon, a work supporting spindle, means to reciprocate the spindle past the wheel, an abutment fixed during operation having a plane surface thereon, a plate mounted on said spindle and having a curved surface adapted to contact with the plane surface on said abutment, whereby reciprocation of the spindle simulates a rolling motion of a gear blank thereon, and means to radially withdraw the blank from the wheel during operation and while the abutment remains in contact with the plate to permit indexing.

1,678,294. LUBRICATING DEVICE FOR AXLE BOXES. IGNACE MACWAY, Brussels, Belgium. Filed Sept. 9, 1926, Serial No. 134,543, and in Belgium Sept. 23, 1925. 3 Claims. (Cl. 308—79.)



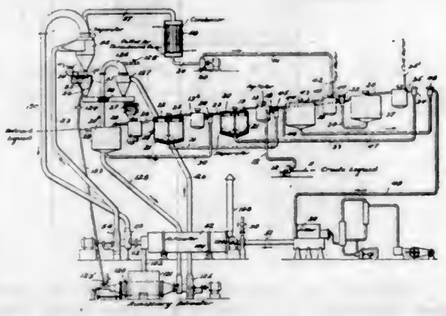
1. In an axle box, in combination with an axle journal rotating within said axle box, a bearing bush through which the axle box is supported by the upper part of the periphery of the axle journal, a grease cup arranged in the lower part of the axle box under the axle journal, a spring pressed packing surrounding freely the said grease cup, and contacting with the axle journal, whereby the said packing is adapted to move up and down along the grease cup and is adapted to follow the movements of the journal, a grease vessel, a channel whereby the grease vessel is connected to the grease cup and means whereby the grease contained in the grease vessel is fed to the grease cup and to the lower part of the periphery of the axle journal.

1,678,295. SUPPORTING IRON PLATE FOR BOILERS. SPIROS C. MARKATOS, New York, N. Y. Filed Oct. 6, 1926. Serial No. 139,921. 11 Claims. (Cl. 126—230.)



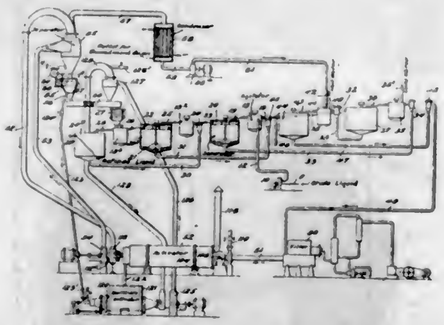
1. The combination with an iron holder and a boiler, of means for supporting the iron holder in superimposed relation to the boiler to conserve space and utilize heat arising from the boiler including a stud mounted in the wall of the boiler and secured to the iron holder.

1,678,296. SANITARY SEAT COVER. ADOLF MUELLER, New York, N. Y. Filed Dec. 30, 1927. Serial No. 243,526. 2 Claims. (Cl. 4—243.)



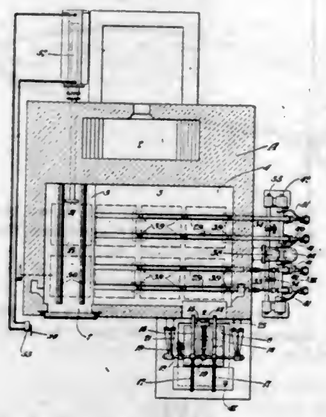
1. An article of the class described comprising a member adapted to cover the upper surface of a commode seat, said member being curved at the periphery to conform to the curvature of the edges of the seat, said member having a central opening adapted to register with the opening in the seat, the periphery of the opening in the member being curved to conform to the curvature of the seat opening, walls hanging from said member through the opening into the commode, and adjustable means in one of said walls for varying depth of said wall.

1,678,297. METHOD OF CLEANING TIN PLATE. THOMAS O'BRIEN, Sharon, and RUFUS E. ZIMMERMAN, Pittsburgh, Pa., assignors to American Sheet and Tin Plate Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Feb. 10, 1926. Serial No. 87,325. 6 Claims. (Cl. 51—18.)



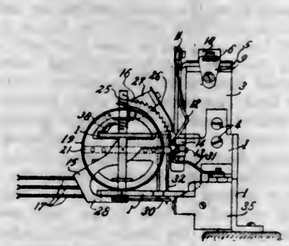
4. The method of cleaning oil having a recoverable value from tin plates after tinning, which consists in scrubbing both sides of said plates in a non-inflammable liquid from which the oil may be readily recovered to remove said oil and other matter therefrom, then subjecting both sides of said plates to a combined squeezing and rubbing action to remove the liquid with said oil from said plates, and then passing said plates through a body of cereal product to finally remove any remaining oil and any remaining moisture from said plates.

1,678,298. PROCESS FOR REFINING OILS AND WAXES. WALTER ALBERT PATRICK, Mount Washington, and ERNEST BALDWIN MILLER, Baltimore, Md., assignors to The Silica Gel Corporation, Baltimore, Md., a Corporation of Maryland. Filed Mar. 16, 1922. Serial No. 544,186. 11 Claims. (Cl. 196—147.)



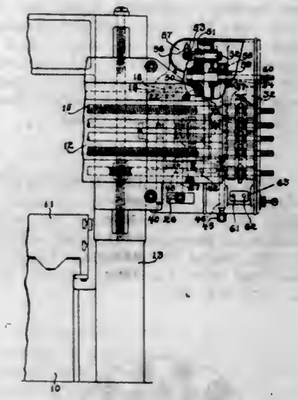
1. In the process of refining oils, the step consisting in treating the oil with a solid absorbent material having pores of such size that it will absorb water vapor to such an extent as to contain not less than about 10% of its own weight of water when in equilibrium with water vapor at 30° C. and a partial pressure of substantially 22 mm. of mercury.

1,678,299. APPARATUS FOR TREATING LIQUIDS TO REMOVE OR RECOVER SUBSTANCES THEREFROM. ERNEST B. MILLER, Baltimore, Md., assignor to The Silica Gel Corporation, Baltimore, Md., a Corporation of Maryland. Filed June 6, 1922. Serial No. 566,365. 13 Claims. (Cl. 196—147.)



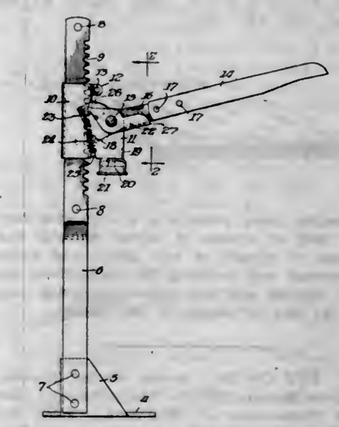
1. In a cyclic apparatus for refining liquids, in combination, an agitating device adapted to contain a hard porous adsorbent material, means to supply liquid to be refined to said device, a separator connected to said agitating device wherein the liquid and the material are separated, an activator, means to convey the separated material from said separator to said activator, a second separator to separate the adsorbing material and vapors after their discharge from said activator, and means to return the activated material from said last mentioned separating means to said agitating device.

1,678,300. SHEET-HEATING FURNACE. JOHN W. PERRY, Wheeling, W. Va. Filed May 20, 1927. Serial No. 193,014. 3 Claims. (Cl. 263—6.)



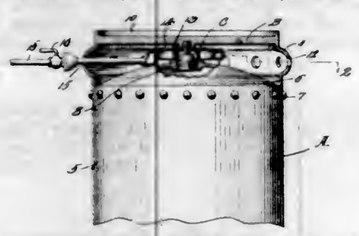
1. A heating furnace for sheets and plates, comprising a heating chamber, means for feeding at least two sheets transversely into said heating chamber in spaced relation, means for simultaneously feeding said sheets longitudinally of said heating chamber a distance equal to the width of said sheets with a step by step movement, said first named feeding means being adapted to be operated between each of the step movements of said second named means so as to feed other sheets into the path of said second named means and immediately back of the sheets previously fed into said chamber thereby forming two rows of sheets, and said second named means being adapted to feed said rows of sheets longitudinally of said chamber, a stacking floor in said chamber at a point below the main level of said heating chamber, said second named feeding means being adapted to feed the sheets of said rows of sheets successively onto said floor forming stacks, and mechanical means for feeding said stacks of sheets from said stacking floor.

1,678,301. SELECTING DEVICE FOR TELEPHONE SYSTEMS. PAUL QUASSOWSKI, Berlin, Germany, assignor to Siemens & Halske Aktiengesellschaft Wernerwerk, Siemensstadt, near Berlin, Germany. Filed Jan. 24, 1927, Serial No. 163,007, and in Germany Dec. 6, 1926. 6 Claims. (Cl. 179—27.5.)



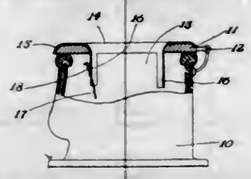
1. An automatic switch comprising stationary terminals, wipers successively movable in two different planes to engage said terminals, two separate pawls for executing said movements, an electromagnet having an armature for controlling said pawls, one of said pawls being effective upon attraction of said armature and the other pawl being effective upon retraction of said armature.

1,678,302. MANUALLY-CONTROLLED FEEDING MECHANISM FOR PLANERS. CLIFFORD F. RANDOLPH, Plainfield, N. J., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed July 11, 1925. Serial No. 43,022. 3 Claims. (Cl. 90—49.)



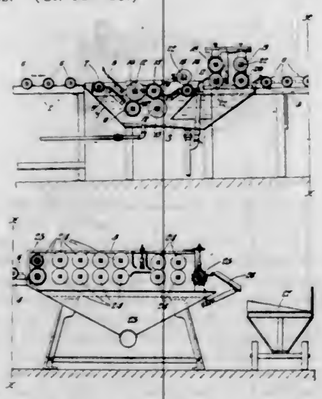
1. Feed mechanism for planers comprising in combination, a cross rail, a tool head movable thereon, a screw on said rail engaging said head, a motor, a shaft on said cross rail, two driving connections between said motor and shaft for rotating said shaft at two different speeds in the same direction, a pair of oppositely rotating gears driven from said shaft, pinions directly driven from said gears, a clutch splined to said screw and adapted to engage either of said pinions to rotate said screw in either direction, manual means to engage either of said driving connections for said shaft, an indicator for determining movement of said head, and means to connect and disconnect said indicator simultaneously with engagement with one or the other of said driving connections.

1,678,303. BOTTLE CAPPER. HAROLD G. RICE, Chicago, Ill. Filed May 2, 1925. Serial No. 27,378. 15 Claims. (Cl. 226—84.)



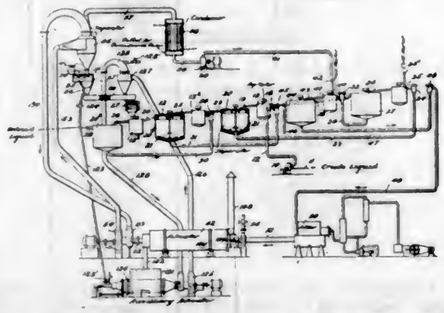
15. In a bottle capper, a frame having an upright rack, a rider freely slidable upon the frame, a capping member carried by the rider, a hand lever pivotally

1,678,295. SUPPORTING IRON PLATE FOR BOILERS. SPIROS C. MARKATOS, New York, N. Y. Filed Oct. 6, 1926. Serial No. 139,921. 11 Claims. (Cl. 126—230.)



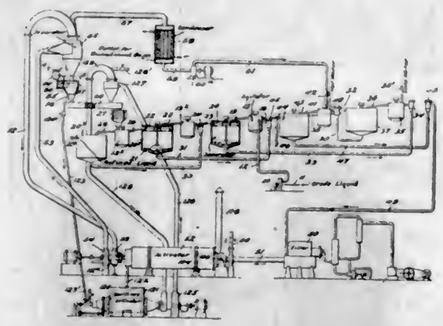
1. The combination with an iron holder and a boiler, of means for supporting the iron holder in superimposed relation to the boiler to conserve space and utilize heat arising from the boiler including a stud mounted in the wall of the boiler and secured to the iron holder.

1,678,296. SANITARY SEAT COVER. ADOLF MUELLER, New York, N. Y. Filed Dec. 30, 1927. Serial No. 243,526. 2 Claims. (Cl. 4—243.)



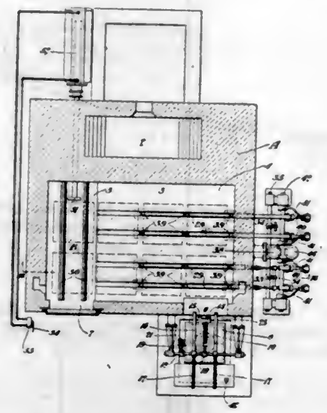
1. An article of the class described comprising a member adapted to cover the upper surface of a commode seat, said member being curved at the periphery to conform to the curvature of the edges of the seat, said member having a central opening adapted to register with the opening in the seat, the periphery of the opening in the member being curved to conform to the curvature of the seat opening, walls hanging from said member through the opening into the commode, and adjustable means in one of said walls for varying depth of said wall.

1,678,297. METHOD OF CLEANING TIN PLATE. THOMAS O'BRIEN, Sharon, and RUFUS E. ZIMMERMAN, Pittsburgh, Pa., assignors to American Sheet and Tin Plate Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Feb. 10, 1926. Serial No. 87,325. 6 Claims. (Cl. 51—18.)



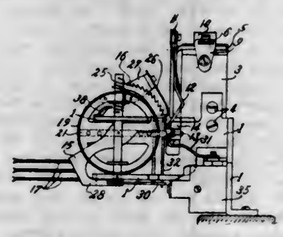
4. The method of cleaning oil having a recoverable value from tin plates after tinning, which consists in scrubbing both sides of said plates in a non-inflammable liquid from which the oil may be readily recovered to remove said oil and other matter therefrom, then subjecting both sides of said plates to a combined squeezing and rubbing action to remove the liquid with said oil from said plates, and then passing said plates through a body of cereal product to finally remove any remaining oil and any remaining moisture from said plates.

1,678,298. PROCESS FOR REFINING OILS AND WAXES. WALTER ALBERT PATRICK, Mount Washington, and ERNEST BALDWIN MILLER, Baltimore, Md., assignors to The Silica Gel Corporation, Baltimore, Md., a Corporation of Maryland. Filed Mar. 16, 1922. Serial No. 544,186. 11 Claims. (Cl. 196—147.)



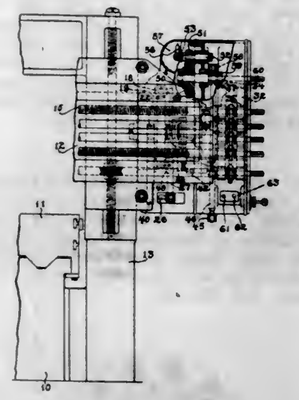
1. In the process of refining oils, the step consisting in treating the oil with a solid absorbent material having pores of such size that it will absorb water vapor to such an extent as to contain not less than about 10% of its own weight of water when in equilibrium with water vapor at 30° C. and a partial pressure of substantially 22 mm. of mercury.

1,678,299. APPARATUS FOR TREATING LIQUIDS TO REMOVE OR RECOVER SUBSTANCES THEREFROM. ERNEST B. MILLER, Baltimore, Md., assignor to The Silica Gel Corporation, Baltimore, Md., a Corporation of Maryland. Filed June 6, 1922. Serial No. 566,365. 13 Claims. (Cl. 196—147.)



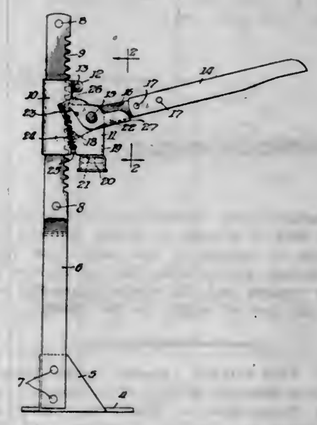
1. In a cyclic apparatus for refining liquids, in combination, an agitating device adapted to contain a hard porous adsorbent material, means to supply liquid to be refined to said device, a separator connected to said agitating device wherein the liquid and the material are separated, an activator, means to convey the separated material from said separator to said activator, a second separator to separate the adsorbing material and vapors after their discharge from said activator, and means to return the activated material from said last mentioned separating means to said agitating device.

1,678,300. SHEET-HEATING FURNACE. JOHN W. PERRY, Wheeling, W. Va. Filed May 20, 1927. Serial No. 193,014. 3 Claims. (Cl. 263—6.)



1. A heating furnace for sheets and plates, comprising a heating chamber, means for feeding at least two sheets transversely into said heating chamber in spaced relation, means for simultaneously feeding said sheets longitudinally of said heating chamber a distance equal to the width of said sheets with a step by step movement, said first named feeding means being adapted to be operated between each of the step movements of said second named means so as to feed other sheets into the path of said second named means and immediately back of the sheets previously fed into said chamber thereby forming two rows of sheets, and said second named means being adapted to feed said rows of sheets longitudinally of said chamber, a stacking floor in said chamber at a point below the main level of said heating chamber, said second named feeding means being adapted to feed the sheets of said rows of sheets successively onto said floor forming stacks, and mechanical means for feeding said stacks of sheets from said stacking floor.

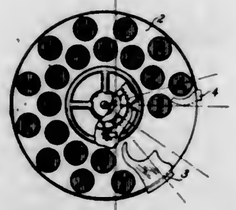
1,678,301. SELECTING DEVICE FOR TELEPHONE SYSTEMS. PAUL QUASSOWSKI, Berlin, Germany, assignor to Siemens & Halske Aktiengesellschaft Wernerwerk, Siemensstadt, near Berlin, Germany. Filed Jan. 24, 1927, Serial No. 163,007, and in Germany Dec. 6, 1926. 6 Claims. (Cl. 179—27.5.)



1. An automatic switch comprising stationary terminals, wipers successively movable in two different planes to engage said terminals, two separate pawls for executing said movements, an electromagnet having an armature for controlling said pawls, one of said pawls being effective upon attraction of said armature and the other pawl being effective upon retraction of said armature.

1,678,302. MANUALLY-CONTROLLED FEEDING MECHANISM FOR PLANERS. CLIFFORD F. RANDOLPH, Plainfield, N. J., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed July 11, 1925. Serial No. 43,022. 3 Claims. (Cl. 90—49.)

1. Feed mechanism for planers comprising in combination, a cross rail, a tool head movable thereon, a screw on said rail engaging said head, a motor, a shaft on said cross rail, two driving connections between said motor and shaft for rotating said shaft at two different speeds in the same direction, a pair of oppositely rotating gears driven from said shaft, pinions directly driven from said gears, a clutch splined to said screw and adapted to engage either of said pinions to rotate said screw in either direction, manual means to engage either of said driving connections for said shaft, an indicator for determining movement of said head, and means to connect and disconnect said indicator simultaneously with engagement with one or the other of said driving connections.



1,678,303. BOTTLE CAPPER. HAROLD G. RICE, Chicago, Ill. Filed May 2, 1925. Serial No. 27,378. 15 Claims. (Cl. 226—84.)

15. In a bottle capper, a frame having an upright rack, a rider freely slidable upon the frame, a capping member carried by the rider, a hand lever pivotally

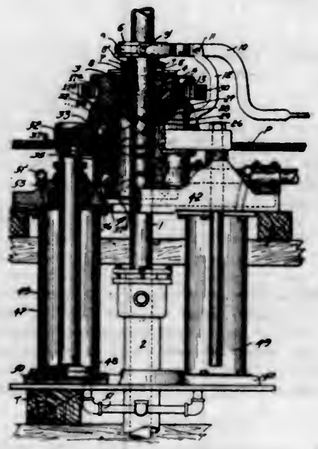
mounted upon the rider, the lever being provided with a toothed segment in mesh with the rack to form a fulcrum engagement therewith, and a spring connected to the rider and associated with the lever to automatically swing the lever upwardly upon its fulcrum engagement with the rack from a depressed position when released by the operator and thereby move the rider and capping member upwardly upon the frame and hold the lever and the rider and the capping member elevated, said lever capable of being turned upwardly upon its pivotal mounting from the elevated position in which it is held by the spring to disengage the segment from the rack and thereby permit quick slidable adjustment of the rider along the frame.

1,678,304. AUTOMATIC TELEPHONE SYSTEM. RODNEY G. RICHARDSON, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Original application filed Oct. 23, 1920, Serial No. 418,894. Divided and this application filed Oct. 21, 1926. Serial No. 143,057. 4 Claims. (Cl. 179—90.)

1. In a calling device for automatic telephone systems, a dial having two rows of finger holds, the finger holds in one row being displaced angularly relative to the corresponding finger holds in the other row, and a finger stop having two positions, one for each row of finger holds, one of said positions being displaced relative to the other an angular distance equal to the displacement between corresponding finger holds in the two rows.

1,678,305. BRAKE LINING. EDWARD SLADE, New York, N. Y. Filed Dec. 7, 1922. Serial No. 605,524. 2 Claims. (Cl. 188—259.)

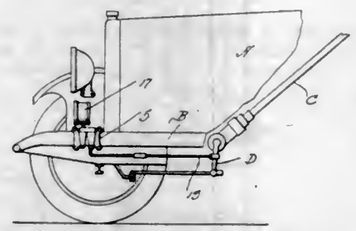
1. A friction lining comprising a laminated fabric including a weft of strands of fibrous material and wire and a warp of strands of wire alone, and staples extending through and securing the laminations together, the latter strands and the staples extending longitudinally of the line of strain on the lining.



1,678,306. TUB COVER. MOWRY SMITH, Neenah, Wis., assignor to Menasha Wooden Ware Company, Menasha, Wis., a Corporation of Wisconsin. Filed July 29, 1926. Serial No. 125,728. 3 Claims. (Cl. 217—76.)

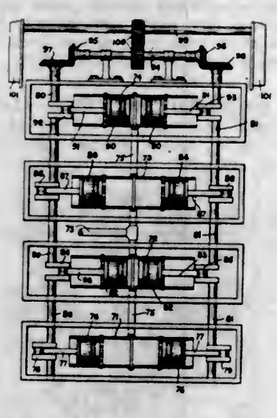
1. As a new article of manufacture, a top or cover for a pail, provided in its upper surface with a surrounding edge recess, and a band secured to the top or cover, having corrugations therein to permit said band to taper upwardly, the upper edge of said band being flanged inwardly, said flange being corrugated to prevent overlapping of portions thereof and fitting in the

recess in the cover, the depth of the recess being such that the surface of the inwardly extending flange will not be above the surface of the cover.



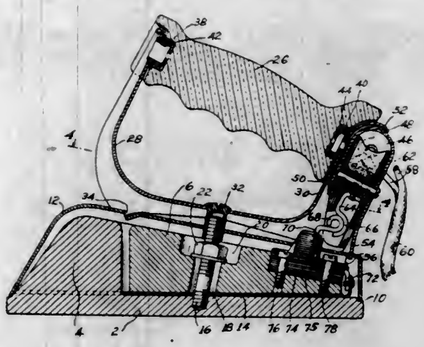
1,678,307. EARTH-BORING MACHINE. FREDERICK STONE, Spokane, Wash. Filed Jan. 12, 1924. Serial No. 685,744. 1 Claim. (Cl. 255—22.)

In well drilling apparatus of the character described, a non-rotatable horizontal table supported for vertical reciprocation and having an axial opening therethrough, an upstanding annular flange on the table about and annularly spaced from the axial opening, an anti-friction bearing seated on the table within the flange, a tubular, rotatable drill head adapted to take vertically extending work through its bore and to hold said work against relative rotation and vertical movement with respect thereto, said head embodying an upper portion of relatively large diameter, and a lower sleeve portion of relatively small diameter, there being a downwardly facing, annular shoulder formed at the junction of the portions, said upper portion being disposed within the upwardly opening socket defined at its bottom by said bearing and annularly defined by said flange, said shoulder engaging the bearing and the flange having radial bearing with said upper portions, said sleeve portion extending through the table bore to a point appreciably below the table, an upthrust bearing detachably held to the sleeve below the table and, in effect, coacting with the underside of the table to hold the head against upward movement with relation thereto, said up-thrust bearing being spaced above the lower end of the sleeve, and a depending annular flange on the underside of the table and annulary spaced from the sleeve portion, said depending flange extending downwardly about the up-thrust



bearing and providing radial bearing for the sleeve portion at a point below said up-thrust bearing, said depending flange forming a housing about said upthrust bearing.

1,678,308. DIRIGIBLE HEADLIGHT FOR AUTOMOBILES. CHARLES R. STOULIL, Pocahontas, Iowa. Filed Sept. 19, 1927. Serial No. 220,427. 1 Claim. (Cl. 240—62.)



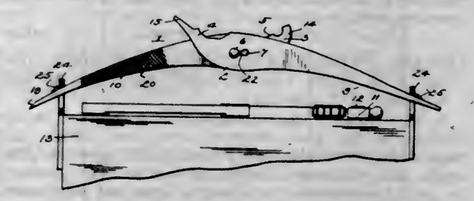
In a dirigible headlight for automobiles, a plate adapted to be rigidly secured in a vertical position on one side of the automobile frame, a pair of inverted conical shaped sleeves on the outer face of said plate and arranged in vertical position thereon, the respective ends of said sleeves being opened, a pair of conical shafts, said shafts being adapted to be supported within said sleeves and to depend at their lower ends below the lower ends of the sleeves, means on said depending ends of the shafts for preventing upwardly movement of the same within the sleeves, intermeshing gears at the upper ends of said shafts, a headlight carried by the upper end of one of the shafts, and a contact between the lower end of the other shaft and the usual steering mechanism of the automobile.

1,678,309. STEAM ENGINE. EVERETT W. SWARTWOUT, White Plains, N. Y. Filed Dec. 18, 1918. Serial No. 267,228. 7 Claims. (Cl. 121—125.)

6. The combination with a supply of a compressed medium, of a cylinder, a pair of pistons disposed in said cylinder in sealing relation with the interior of said cylinder, admission means leading to a substantially central portion of the interior of said cylinder for the admission of the compressed medium thereto, exhaust means disposed respectively adjacent the opposite ends of said cylinder and synchronizing means for effecting the simultaneous movement of said pistons in opposite directions within said cylinder.

1,678,310. SMOOTHING IRON. HENRY S. WOODRUFF, Schenectady, N. Y. Filed Jan. 17, 1925, Serial No. 3,202. Renewed June 5, 1928. 11 Claims. (Cl. 219—25.)

9. In an iron, a body, a handle having an arm, a heating unit secured to the body, electrical contacts connected to said heating unit, a connection plug having electrical contacts connected to a source of current, a spring tongue on said plug to interlock with said handle arm, and a spring member carried by said plug and detachably connected to the body.

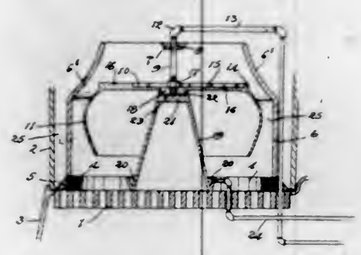


1,678,311. FLOTATION METHOD. GALE L. ADAMS, Elizabeth, N. J., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed Jan. 30, 1924. Serial No. 689,584. 5 Claims. (Cl. 209—166.)

1. A process of concentrating ores, which comprises agitating the finely divided ore with water and a small quantity of a mixture containing 80% of pressure still tar, about 19% of residuum from hydrolysis of sulfated olefines, and about 1% of a water-soluble sodium sulfonate of petroleum hydrocarbons, aerating to form a froth and separating the froth.

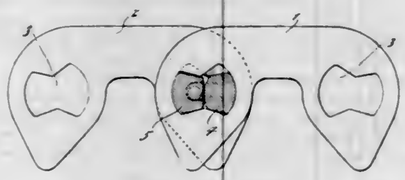
1,678,312. FLOTATION OIL. GALE L. ADAMS, Huntington, Park, Calif., assignor to Standard Oil Development Company, a Corporation of Delaware. Original application filed Jan. 30, 1924, Serial No. 689,584. Divided and this application filed July 28, 1927. Serial No. 209,189. 6 Claims. (Cl. 252—9.)

1. A flotation oil which comprises 80% of pressure still tar, slightly over 19% of residuum from hydrolysis of sulfated olefins, and slightly less than 1% of water-soluble sodium sulfonate of petroleum hydrocarbons.



1,678,313. BATTERY TOOL. ROBERT L. S. ATKINSON, Columbus, Ohio. Filed July 31, 1925. Serial No. 47,301. 2 Claims. (Cl. 294—44.)

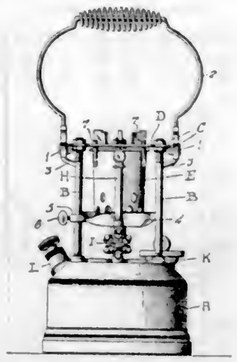
1. A battery tool comprising a plier shaped body including a pair of handle members pivotally connected at their point of intersection, means for locking said



members against pivotal movement when said members occupy substantially a fully open position, and means on the outer ends of said members providing for the suspension of a battery case therefrom.

1,678,314. OIL BURNER. ALFRED H. BEIRNES, Winnipeg, Manitoba, Canada. Filed Oct. 16, 1926. Serial No. 142,021. 4 Claims. (Cl. 158—53.)

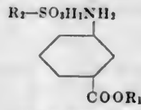
1. The combination with a supporting grate, of a casing mounted on the grate and having the upper and lower ends thereof open and the upper end inwardly flaring, an inverted bowl suspended for vertical adjustment within the casing and underlying the inwardly flaring upper end of the casing, said bowl forming an internal mixing chamber and an exterior annular passage between the bowl and the casing, a cone shaped member mounted centrally on the grate and extending upwardly within the bowl and provided at the upper end with an oil receiving cup centrally underlying the closed upper end of the bowl and a feed pipe for fuel oil passing through the closed upper end of the bowl and delivering into the cup.



1,678,315. CONNECTING PIN FOR LINK CHAINS. WARREN J. BELCHER, Hartford, Conn., assignor to The Whitney Mfg. Co., Hartford, Conn., a Corporation of Connecticut. Filed Dec. 22, 1924. Serial No. 757,316. 6 Claims. (Cl. 74—32.)

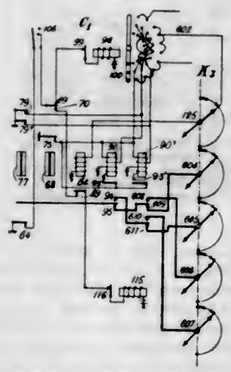
2. A connecting pin for link chains comprising two parts having coacting outside surfaces, one of said parts having an overhanging portion and the other part having a portion cooperating with the overhanging portion, said portions acting to hold said parts in cooperative relation.

1,678,316. PLUMBER'S FURNACE. OTTO BERNZ, Newark, N. J. Filed Aug. 26, 1926. Serial No. 131,555. 3 Claims. (Cl. 158—32.)



1. In a furnace, the combination of a frame, a burner thereon, a top plate disposed over said burner and formed at its edges with diametrically opposite pivot studs, and a U-shaped handle having its arms pivotally mounted intermediate their lengths upon said pivot studs, the free ends of said arms of the handle being formed with inturned fingers, and said studs, inturned fingers and top plate being relatively arranged so that said fingers engage the underside of said top plate in spaced relation to said pivot studs when the handle is swung in one direction to hold said handle in inclined relation to said top plate above the latter to support a soldering iron

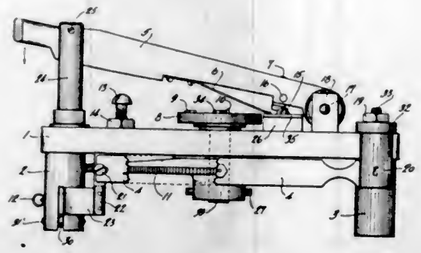
or the like, and said handle may swing in the opposite direction downwardly into an out-of-the-way position at one side of said frame.



1,678,317. MANUFACTURE OF EASILY-SOLUBLE ANÆSTHETICS OF THE METAAMINOBENZOIC ACID ESTER SERIES. OTTO BILLETER, ERNST ROTHLIN, and JULIUS PEYER, Basel, Switzerland, assignors to Chemical Works, formerly Sandoz, Basel, Switzerland, a Firm. Filed Mar. 3, 1927. Serial No. 172,551, and in Germany Mar. 10, 1926. 1 Claim. (Cl. 260—105.)

As new articles of manufacture the herein described anæsthetics, consisting of salts meta amina-benzoic acid-esters, having the general formula

where R_1 and R_2 stand for aliphatic radicals, these salts constituting colorless crystals, being readily soluble in water with a very weak acid reaction, being stable in aqueous solution, even when heated for a longer time and possessing a powerful anæsthetic action.

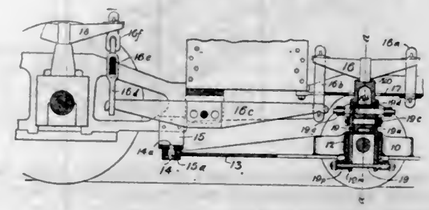


1,678,318. AUTOMATIC SWITCHING SYSTEM. ANTOINE BARNAY, Paris, France. Filed Apr. 28, 1925, Serial No. 26,507, and in France Apr. 29, 1924. 39 Claims. (Cl. 179—18.)

1. In an automatic telephone system, a calling line, a calld line, an electrical impulse sender, an impulse receiving organ having two separate series of contacts, a

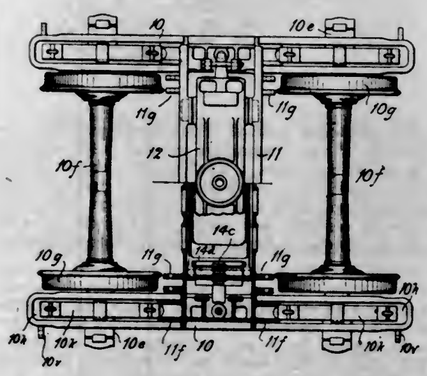
single motion connecting mechanism for connecting calling and called lines, the said mechanism having a plurality of series of contacts and corresponding sets of wipers constituting a plurality of similar rotary switches commonly driven, means for determining the setting of the said wipers by the state of the first series of contacts of the impulse receiving organ, the calling line being connected to a given set of wipers by the second series of contacts of the impulse receiving organ.

1,678,319. PUNCHING DIE. JOHN G. BLESSING, Oak Forest, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Jan. 14, 1925. Serial No. 2,250. 13 Claims. (Cl. 164—44.)



1. In a cutting die, a turn-table, a cutting member, a manually operable operating member for moving said cutting member from a normal to an alternate position and for positively locking said turn-table against rotation in either direction, means for restoring said operating member following its operation, and means controlled by the operation and restoration of said operating member for moving said turn-table.

1,678,320. ANIMATED SIGN. SAMUEL J. BLOCKER, Dallas, Tex. Filed Feb. 8, 1927. Serial No. 166,786 4 Claims. (Cl. 40—138.)

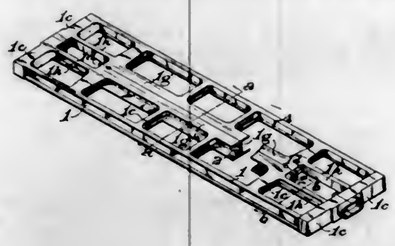


4. An animated sign comprising a stationary perspective view and a plurality of movable elements distributed about the view and means for simultaneously applying to said elements movements decreasing in intensity in proportion to the distance of the elements from the foreground of the view.

1,678,321. TRUCK FOR LOCOMOTIVE ENGINES. JAMES G. BLUNT, Schenectady, N. Y. Filed Apr. 21, 1926. Serial No. 103,457. 12 Claims. (Cl. 105—174.)

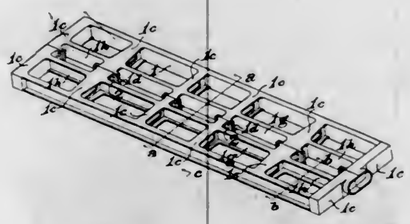
1. A frame member for locomotive trucks of the outside bearing type, formed as an integral casting, and comprising a horizontal loop at each end, adapted to receive and fit across a wheel, a transverse member connecting the loops, and a journal box in the outer portion of each loop.

1,678,322. FOUR-WHEEL TRUCK FOR RAILROAD VEHICLES. JAMES G. BLUNT, Schenectady, N. Y. Filed Apr. 5, 1927. Serial No. 181,026. 7 Claims. (Cl. 105—186.)



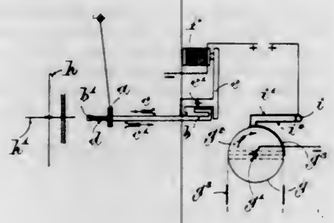
1. A four wheel truck for railroad vehicles, comprising two side frame members, each embodying two pedestals, and two spaced parallel side walls, the spaced side walls providing recesses intermediate the pedestals, for locking tongues, and pockets for springs, one pocket being disposed above each pedestal; and a cross member, having an extension at each end, extending over and bearing on a side frame, each of said extensions having two oppositely disposed tongues, fitted into the recesses in the juxtaposed side frame.

1,678,323. FRAME FOR RAILROAD VEHICLES. ALFRED W. BRUCE, New York, N. Y. Filed Feb. 15, 1928. Serial No. 254,369. 3 Claims. (Cl. 105—236.)



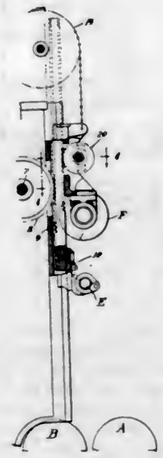
1. In a fabricated railroad vehicle frame structure, the combination of two counterpart castings, each comprising, in an integral piece, throughout its entire length, a longitudinally extending side member, a plurality of cross

tie sections, projecting laterally therefrom, inner longitudinal members connecting the cross tie sections, said inner longitudinal members abutting against counterpart



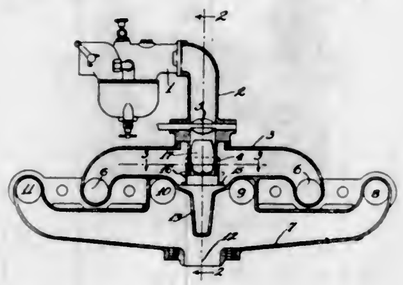
members on the other castings; and means by which the abutting inner longitudinal members are rigidly secured together.

1,678,324. FRAME FOR RAILROAD VEHICLES. ALFRED W. BRUCE, New York, N. Y. Original application filed Feb. 15, 1928, Serial No. 254,369. Divided and this application filed Apr. 4, 1928. Serial No. 267,169. 3 Claims. (Cl. 105—172.)



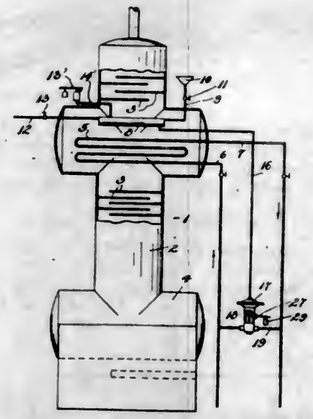
1. In a fabricated railroad vehicle frame structure, the combination of two counterpart castings, each comprising, in an integral piece, a longitudinally extending side member; a plurality of cross tie sections, projecting laterally therefrom; inner longitudinal members, connecting the cross tie sections; and means by which the cross tie sections of adjacent castings are rigidly secured together.

1,678,325. ARRANGEMENT FOR DIRECTLY REPRODUCING ON FABRIC THE REQUIRED PATTERN. EMILE ACHILLE BUTIN and LOUIS GIRARD, Lyon, France. Filed Aug. 3, 1925, Serial No. 47,952, and in France Aug. 7, 1924. 5 Claims. (Cl. 139—319.)



1. Apparatus for tracing patterns for Jacquard looms comprising an oscillating element, a jacquard needle controlling a sliding element arranged for movement corresponding to that of said oscillating element, a pivotally mounted lever having an armature, said lever and said sliding element being provided with means for engagement by said sliding member when the latter is in one position and for release by said sliding member when the latter is in another position, an electric circuit including an electro-magnet with which said armature is associated, a circuit closer for said circuit including a contact point, and a movable pattern carrying element provided with a pattern in card form, and an insulating background therefor, said contact point closing said circuit when said pattern comes in contact therewith.

1,678,326. WINDING MACHINE. JAMES A. CAMERON, Brooklyn, N. Y., assignor to Cameron Machine Company, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 22, 1927. Serial No. 185,731. 18 Claims. (Cl. 242—66.)



1. In a winding machine, a winding roll displaceable by accumulation of material thereon, a top pressure roll displaceable with the winding roll, and a reciprocatory equalizing device to control the parallelism of both rolls.

1,678,327. REGENERATOR MANIFOLD. WILLIAM S. CARLSTON, Kokomo, Ind., assignor to Byrne, Kingston & Co., a Corporation of Indiana. Filed Mar. 3, 1923. Serial No. 622,665. 5 Claims. (Cl. 123—122.)

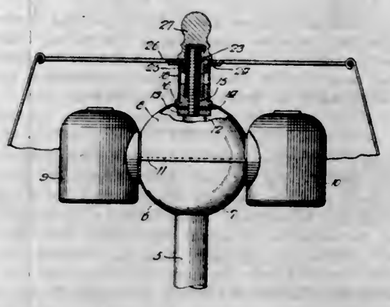
1. The combination with a hydrocarbon engine and the intake and exhaust manifolds thereof, of a pocket opening into the intake manifold and projecting into the exhaust manifold, the pocket being aligned with the fuel mixture inlet to the intake manifold and velocity responsive means for automatically varying the deflection of the path of flow of the fuel mixture into the mouth of the pocket.

1,678,328. TEMPERATURE CONTROLLER FOR OIL-SEPARATING TOWERS. RICHARD H. CARR and CORNELIUS B. WATSON, Columbus, Ohio, assignors to The Pure Oil Company, Chicago, Ill., a Corporation of Ohio. Filed Apr. 13, 1926. Serial No. 101,790. 7 Claims. (Cl. 196—141.)

3. The combination with a separating tower, of a preheater in said tower, inlet and outlet connections admitting of the circulation of oil stock through said preheater, a by-pass connection for shunting the oil stock circulation from said preheater, and automatic means responsive to the internal temperatures of said tower for controlling the oil stock flow through said by-pass.

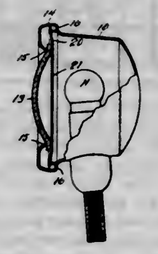
1,678,329. PICK-UP VEHICLE BODY AND METHOD OF HANDLING GOODS. WILLIAM H. CLARKE and BYRON G. COOK, Lakewood, Ohio. Filed July 27, 1921. Serial No. 487,972. 4 Claims. (Cl. 214—65.)

1. The process of transferring freight from the ground level to a truck for transportation and redelivery to the ground level, which comprises the steps of assembling the freight upon a removable body section of said truck, hoisting and positioning said body section, from any angle relatively to said truck from the ground level, upon said truck by a single continuous load lifting operation, transporting said freight to the point of delivery, releasing and unloading said body section from the truck through a single continuous load lifting operation, and unloading the freight from the body section.



1,678,330. CONTAINER AND PROCESS OF PRODUCING THE SAME. ROBERT G. CLYNE, St. Louis, Mo. Filed May 24, 1926. Serial No. 111,303. 2 Claims. (Cl. 18—59.)

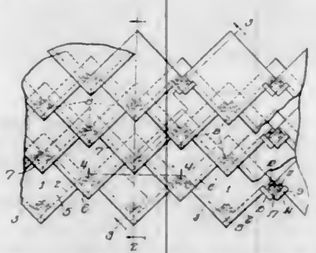
2. The process of producing a closed-end container, which consists in providing a tubular body the wall of which at an end thereof is soft and plastic, then seating a plastic flanged end-closure within the body at the plastic end thereof, then by spinning, inturning, and clinching the plastic body end-portion over and upon and into interlocking engagement with the flange of the closure, then



seating a second plastic closure upon the first closure and in peripheral engagement with the inturned end of the body, and then compressing and compacting said closures and the body end-portion substantially integrally together.

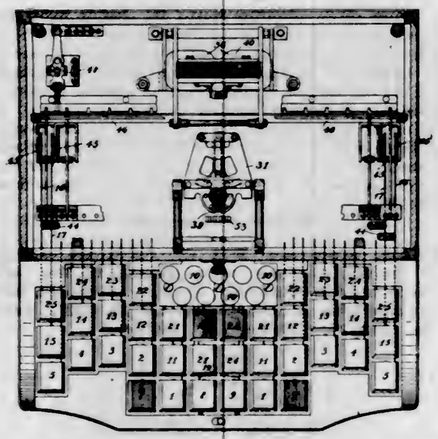
1,678,331. ELECTRIC CLUSTER LAMP BODY AND SHADE HOLDER. VICTOR R. DESPARD and HANS C. R. POPP, Valparaiso, Ind., assignors to McGill Manufacturing Company, Valparaiso, Ind., a Corporation of Indiana. Filed June 3, 1927. Serial No. 196,262. 2 Claims. (Cl. 240—128.)

1. Lamp shade mounting means for electric light clusters comprising a screw-threaded stem projecting from the cluster body, a clamping member screw-threaded thereon and having an enlarged recess extending downwardly from the top thereof, a sleeve on said member projecting thereabove, a tubular member detachably mounted in said recess and surrounding said stem, a disk member resting on said sleeve and screw-threaded on said tubular member, and a securing member screw-threaded on said tubular member above said disk for clamping a lamp shade thereon.



1,678,332. SIDE LAMP FOR AUTOMOBILES. SAMUEL E. DRAYER, Cleveland, Ohio, assignor to The Guide Motor Lamp Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 19, 1927. Serial No. 184,812. 4 Claims. (Cl. 240—41.)

1. As a new article of manufacture, a lamp comprising a body portion having oppositely disposed outwardly extending lugs, a channeled ring having a notch, a glass

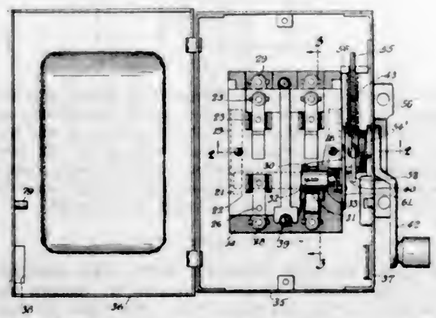


front, and a flat ring interposed between the forward edge of the body portion and the rear edge of the glass, the inner edge of the channeled ring engaging the outer face of the glass and the outer edge being held in locked relation with the edge of the body portion.

1,678,333. ROOF AND SHINGLE SECURING MEANS. CARROLL C. FIGGE, Chicago, Ill. Substitute for application Serial No. 633,829, filed Apr. 23, 1923. This application filed June 9, 1926. Serial No. 114,902. 8 Claims. (Cl. 108—33.)

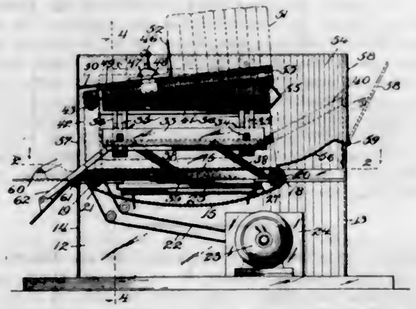
1. A concealed single piece shingle holding device for angular butt shingles comprising a box having ledges at different elevations from the bottom thereof for engaging within turned under angular shingle extremities and on top of shingles in three different courses.

1,678,334. KEYBOARD FOR TYPEWRITING MACHINES. OSKAR FISCHER, Berlin-Friedenau, Germany, assignor to N. V. Machina Maatschappij vor Handel en Industrie, Amsterdam, Netherlands, a Corporation of the Netherlands. Original application filed Jan. 25, 1924, Serial No. 688,399, and in Germany Nov. 4, 1918. Divided and this application filed Apr. 10, 1925. Serial No. 22,060. 3 Claims. (Cl. 197—98.)



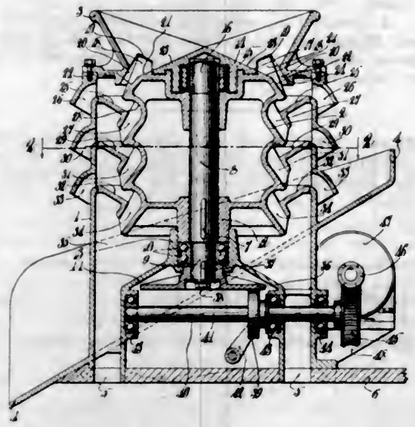
1. In a keyboard for a typewriting machine a grouping of fifteen keys in three groups of five keys each, the keys within each group being situated in a common plane and displaced from straight-line succession according to the natural positions of the finger tips of a user, the three groups being arranged at successively higher levels from front to rear, the sides of outer keys of the second and the third rows extending adjacent inner keys of the first and second rows, and each three corresponding particular keys within the three rows lying within normal reach of a finger of the operator while the hand remains substantially at rest.

1,678,335. FLEXIBLE SHAFT. RALPH M. GASTON, Chicago, Ill., assignor to Mall Tool Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 28, 1927. Serial No. 171,522. 6 Claims. (Cl. 64—30.)



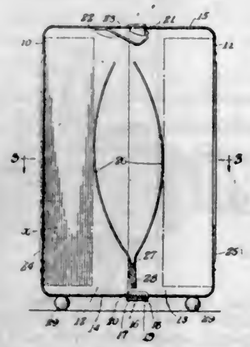
1. A flexible shaft including a housing, a hard metal helical liner therefor having a slightly rounded inner surface of substantial area, and a driving core extending through the housing and located within the liner thereof.

1,678,336. MOTOR-STARTING SWITCH. BENJAMIN E. GETCHELL, Plainville, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a Corporation of Connecticut. Filed Apr. 4, 1925. Serial No. 20,610. 17 Claims. (Cl. 200—3.)



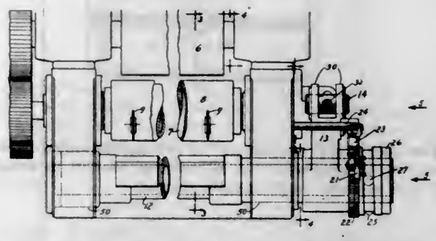
1. The combination in a fused switch construction of a quick-make and quick break, double break, main switch, a double break auxiliary fuse disconnecting switch, coacting means for causing a predetermined sequence of movement of the auxiliary switch and the main switch by the normal manual operation of the main switch, said coacting means including means for holding the main switch and the auxiliary switch in their respective on and off positions.

1,678,337. TOASTER. DANIEL F. HALIFAX, Newark, N. J. Filed Apr. 21, 1927. Serial No. 185,427. 7 Claims. (Cl. 219—19.)



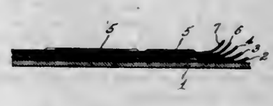
6. A toaster comprising a casing having a conveyor therein, a heater between the reaches of the conveyor, said heater being removable transversely from the casing, a second heater above the conveyor, a track for the travel of said second heater, a bar for supporting said heater, links for raising and lowering the bar and a feeding means for supplying slices in succession to the conveyor and means for operating the feeding means when the conveyor is in operation.

1,678,338. CENTRIFUGAL CLEANER. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Oct. 19, 1921. Serial No. 508,793. 11 Claims. (Cl. 209—115.)



1. In a cleaning mechanism, a cleaning member rotating on a vertical axis having an inclined initial receiving surface on its periphery adapted to deliver material externally and internally, means for directly delivering material between the edges thereof by gravity feed, means for collecting material externally discharged therefrom and means for receiving material sliding inwardly thereon.

1,678,339. DISPENSER. PAUL H. HORWITT, Brooklyn, N. Y., assignor to Independent Paper Mills, Inc., Brooklyn, N. Y. Filed Mar. 23, 1926. Serial No. 96,894. 3 Claims. (Cl. 312—61.)

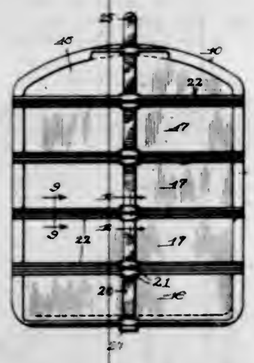


1. In a dispenser for napkins and the like, the combination with receptacles hingedly connected together at one end and provided with openings for the withdrawal of the contents thereof, of means for adjustably positioning the said contents adjacent the said openings and comprising spring members hingedly mounted at one end on said receptacles and adapted with their free ends to press the said napkins toward the said openings and means for locking together the free ends of the said hinged receptacles.

1,678,340. SLITTING MACHINE. ROBERT MCC. JOHNSTONE, Roselle Park, N. J., assignor to Cameron Machine Company, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 23, 1926. Serial No. 104,043. 6 Claims. (Cl. 164—60.)

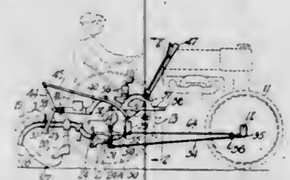
1. A cutting mechanism including: a backing member, a score-cut cutting member to engage therewith, means for moving said cutting member toward and away from the member, and means, actuated by the to-and-fro movement of said cutting member, to cause endwise traverse of it with respect to the backing member, to thereby establish a new point of control between the members when they reengage.

1,678,341. TRANSFER SIGN. JOSEPH W. KABER, Cleveland, Ohio. Filed July 13, 1925. Serial No. 43,186. 1 Claim. (Cl. 41—33.)



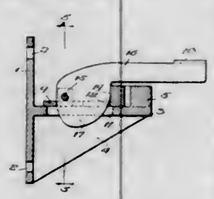
A transfer sign, comprising a sign character provided with an adhesive coated face for securing it to a surface for display, a first backing sheet of relatively transparent and thin material removably secured by a relatively strong adhesive to the other face of said sign character and adapted to remain therewith until said character becomes firmly secured to said surface, and a second backing sheet of relatively strong material removably secured by a relatively mild adhesive to said first mentioned backing sheet, whereby the sign may be secured to the surface by its application thereto with moisture between the surface and the otherwise dry sign and the second backing sheet may be promptly stripped from the first backing sheet by separation along the plane of the mild adhesive, and the first backing sheet may be subsequently removed by the application of moisture thereto.

1,678,342. FURNACE DAMPER. FRED E. KLING, Youngstown, and CHARLES EDWARD MALLEY, Springfield, Ohio. Filed Nov. 26, 1926. Serial No. 150,789. 7 Claims. (Cl. 126—285.)



1. In a damper, a gate member comprising a plurality of sections disposed in the same plane, and connecting

means for said sections permitting freedom of expansion or contraction of said sections in said plane independent-



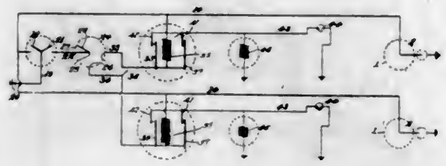
ly of each other, including a tie rod maintaining adjacent sections in alignment but permitting relative movement of said sections longitudinally thereof.

1,678,343. PLOW. CHARLES D. KRETZER, Portland, Oreg. Filed June 6, 1927. Serial No. 196,737. 3 Claims. (Cl. 97—47.)

1. A plow having a hitch for attaching the same to the front axle of a tractor, an adjustable hitch support for the forward end of the plow beam, a lever for raising said plow out of the ground, a crank actuated by said lever, a roller on said crank engaging the under side of the plow beam, and spring means on said crank adapted to urge said plow downwardly.

1,678,344. LINE HOLDER. HERMAN E. MANOFSKY, Chicago, Ill. Filed Apr. 21, 1927. Serial No. 185,612. 7 Claims. (Cl. 24—134.)

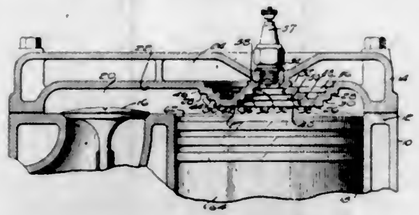
1. In a device of the class described and in combination, an angular bracket having its horizontal portion slotted, a stationary jaw on the horizontal portion, a movable jaw slidably mounted on the horizontal portion, a pivotally mounted cam for movement into the slot and engaging the second jaw to move the same toward the stationary jaw, and means whereby to manually actuate said cam.



1,678,345. MILLBOARD PRODUCT AND PROCESS. RICHARD V. MATTISON, Ambler, Pa., assignor to Keasbey & Mattison Company, a Corporation of Pennsylvania. Filed June 25, 1921. Serial No. 480,356. 9 Claims. (Cl. 106—18.)

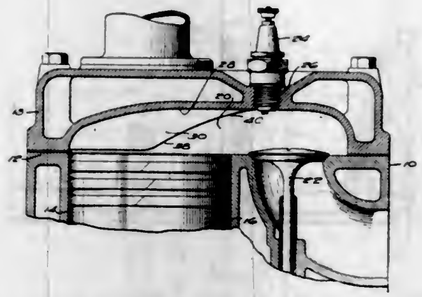
1. A composition comprising hydraulic cement, asbestos fibre and a finely divided precipitated calcium carbonate.

1,678,346. MILLBOARD PRODUCT AND PROCESS. RICHARD V. MATTISON, Ambler, Pa., assignor to Keasbey & Mattison Company, a Corporation of Pennsylvania. Original application filed June 25, 1921, Serial No. 480,356. Divided and this application filed Feb. 12, 1924, Serial No. 692,431. Renewed June 11, 1928. 9 Claims. (Cl. 106—18.)



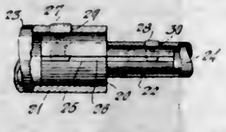
1. A composition comprising colloided hydraulic cement, fibrous material, calcium hydrate and precipitated calcium carbonate, the mixture being subjected to pressure before the cement sets.

1,678,347. METHOD OF AND APPARATUS FOR LUBRICATING FRICTION SURFACES. RALPH R. MCCLURE, San Francisco, Calif. Filed May 24, 1924. Serial No. 715,762. 6 Claims. (Cl. 184—7.)



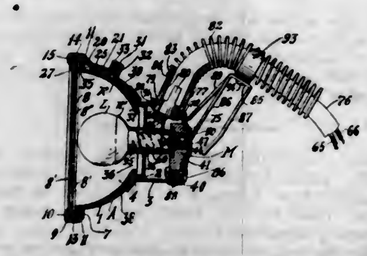
4. An apparatus for lubricating friction surfaces consisting of a lubricant holder connected with and located in close proximity to the surface to be lubricated, an electrically operated lubricant expelling means associated therewith, an operating circuit, a signal circuit, a signal within the latter circuit and a relay for controlling the operation of the signal dependent on a variation from normal of the condition of the signal circuit.

1,678,348. COMBUSTION CHAMBER FOR INTERNAL-COMBUSTION ENGINES. ARLINGTON MOORE, New York, N. Y., assignor, by mesne assignments, to Maxmoor Corporation, New York, N. Y., a Corporation of Delaware. Filed Oct. 30, 1926. Serial No. 145,212. 15 Claims. (Cl. 123—191.)



1. An internal combustion engine comprising top and lateral wall portions forming a combustion chamber, and a portion projecting downwardly from said top wall portion into the combustion chamber in spaced relation to the lateral wall portions thereof; said projecting portion having an upwardly tapering recess therein opening at the base thereof into said combustion chamber.

1,678,349. ANTIDETONATING CYLINDER HEAD FOR INTERNAL-COMBUSTION ENGINES. ARLINGTON MOORE, New York, N. Y., assignor, by mesne assignments, to Maxmoor Corporation, New York, N. Y., a Corporation of Delaware. Filed Oct. 30, 1926. Serial No. 145,213. 5 Claims. (Cl. 123—191.)

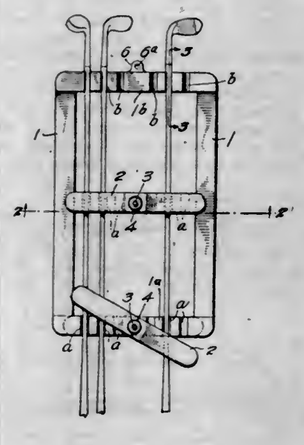


1. An internal combustion engine comprising a cylinder having a combustion chamber at the end thereof extending laterally therefrom, means in the laterally extending portion of the combustion chamber for admitting a fuel charge thereto, and a plurality of rib portions projecting downwardly from the part of the ceiling of the combustion chamber over said cylinder and extending towards said laternally extending portion of the combustion chamber; said rib portions forming a series of parallel passages opening into said laternally extending portion at the ends of said passages adjacent thereto and open at the lower sides thereof.

1,678,350. ELECTRIC CLAMP CONNECTER. WILLIAM N. OTT, Bloomfield, N. J. Filed Nov. 5, 1926. Serial No. 146,457. 3 Claims. (Cl. 173—263.)

1. An electrical clamp connecter, comprising an expansible member for insertion in a tubular conductor, said member having wings hinged longitudinally of the member and otherwise free from each other and adapted to be spread apart, and means transverse to the member for spreading said wings.

1,678,351. ELECTRIC SAFETY LANTERN. PAUL D. PAYNE, Irvington, N. J., assignor to Edison Storage Battery Company, West Orange, N. J., a Corporation of New Jersey. Filed May 17, 1923. Serial No. 639,496. 2 Claims. (Cl. 240—17.5.)

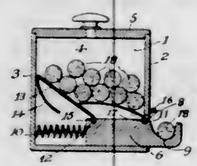


1. In an electric safety lantern, a two-part separable casing, a window for said casing, means for securing said window to the casing, and unitary means for maintaining said securing means in operative position and for holding the parts of said casing in connected position, substantially as described.

1,678,352. PERMANENT-WAVE CLIP. FRANK A. PEARL, North Milwaukee, Wis. Filed Nov. 5, 1926. Serial No. 146,432. 2 Claims. (Cl. 132—36.1.)

1. A permanent wave clip, comprising a pair of overlapping jaws hinged together at one pair of extremities and provided with releasable pin and tooth locking means operable only upon lateral movement of the jaws, said pin and tooth being slightly flexible with respect to each other.

1,678,353. HOLDER FOR GOLF CLUBS. WILLIAM F. REACH, Springfield, Mass., assignor to A. G. Spalding & Bros., New York, N. Y., a Corporation of New Jersey. Filed July 2, 1927. Serial No. 203,202. 6 Claims. (Cl. 211—8.)



1. A holder for golf club shafts comprising a rigid frame, composed of a pair of side members, end cross members joining the side members, and a rigid cross member intermediate the end cross members, each of said cross members having a transverse channeled recess therein, said recesses aligning longitudinally of the frame, to receive a golf club therein extending between the cross members, the channeled recess in one of said end cross members having a contracted entrance slot, the entrance slots of the channeled recesses in the other cross members being uncontracted; the recess having the contracted entrance slot being adapted to receive the shaft of a golf club and to lock the club in the end of the contracted recess, clamping bars for clamping the club in the recesses in the said other cross members, said clamping bars each overlying the recessed face of one of said cross members, each of said other cross members having a central opening therein, bolts mounted one in each opening and projecting from said cross member, each of said

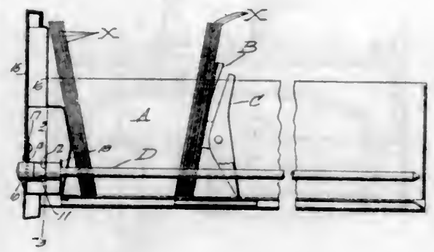
clamping bars having a central bore adapted to receive a bolt therethrough, and nuts on the bolts bearing on the outer surfaces of the clamping bars, and adapted to be operated to clamp the bars to the cross members.

1,678,354. PROCESS OF RAYON MANUFACTURE. GEORGE A. RICHTER, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed July 13, 1926. Serial No. 122,272. 7 Claims. (Cl. 18—54.)

1. In the manufacture of rayon, a process which comprises heating without appreciable coagulation an aqueous solution of a cellulose derivative to reduce its viscosity immediately prior to spinning it, while so heated spinning such solution into filaments, and delivering the filaments into a setting bath.

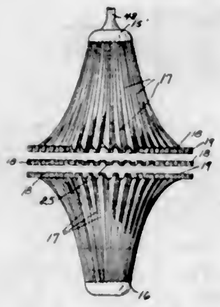
1,678,355. CIGARETTE-DELIVERY BOX. CHARLES C. ROBERTS, Bridgeport, Conn. Filed Dec. 22, 1927. Serial No. 241,752. 2 Claims. (Cl. 312—80.)

1. A cigarette delivery device, comprising a box, a normally spring impelled delivery tray having a channel in its front portion, a downwardly inclined tilting plate pivotally carried by the rear of said tray and bearing at its free edge against the rear wall of the box, and an agitator plate whose front edge is pivotally connected to the tray while its rear edge rests freely upon said plate.



1,678,356. CAR LINER. WILLIAM WALLACE ROWE, Cincinnati, Ohio, assignor to The Paper Service Company, Lockland, Ohio, a Corporation of Ohio. Filed Apr. 28, 1926. Serial No. 105,263. 8 Claims. (Cl. 105—423.)

1. A car liner section formed of two pieces of paper or other fabric folded and secured so as to form a base, side and end walls, with a lapped seam about all of the base angles in which all interior laps are secured on the base, as distinguished from the side or end walls, and a full lapped seam reinforcing the vertical angle on the outside.

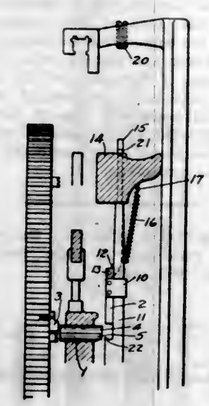


1,678,357. LOCKING MEANS FOR INDEX CARDS AND THE LIKE. ERICK SAMPSON, Sr., Jamestown, N. Y., assignor to Art Metal Construction Company, Jamestown, N. Y. Filed Jan. 27, 1926. Serial No. 84,082. 7 Claims. (Cl. 129—16.)

1. The combination with a holder for cards or the like, of a locking rod passing through a hole in a wall of said holder and adapted to engage the cards for locking them in the holder, said rod having adjacent its outer end a peripheral shoulder, a locking member on the holder adapted to engage said shoulder to lock the rod in place in the holder, and a key having a sleeve portion adapted to be inserted into said hole around the outer end of said

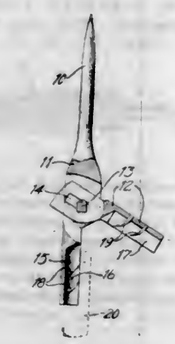
rod over said shoulder and between said rod and said locking member to release said locking member from the rod and permit the rod to be withdrawn through said hole, said sleeve portion of said key being adapted to pass over and obstruct said shoulder to prevent the reengagement of said locking member therewith.

1,678,358. CHRISTMAS-TREE ORNAMENT AND THE LIKE AND METHOD FOR THE MANUFACTURE THEREOF. WILLIAM H. SCHNEIDER, Milwaukee, Wis., assignor to Arthur C. Kootz, Milwaukee, Wis. Filed Mar. 14, 1925. Serial No. 15,483. 11 Claims. (Cl. 220—1.)



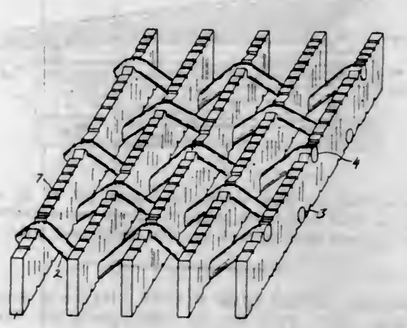
1. A new article of manufacture comprising two elements each provided with a portion formed with a plurality of convolutions each opening marginally of said portion and interlocked with a corresponding convolution of the other element.

1,678,359. METHOD OF TREATING METAL ARTICLES. LOUIS SCHULTE, Pittsburgh, Pa., assignor to Allegheny Steel Company, a Corporation of Pennsylvania. Filed Apr. 20, 1926. Serial No. 103,375. 3 Claims. (Cl. 148—8.)



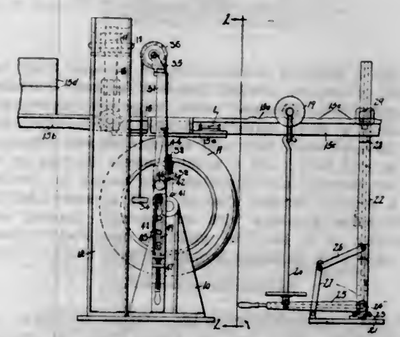
1. The method of treating the surfaces of articles made from chromium iron alloys which consists in subjecting said surfaces to the frictional action of solid particles in the presence of a nitric acid solution.

1,678,360. AUXILIARY VISE AUTOMATIC. DE WITT C. SCOUGAL, Seattle, Wash. Filed Apr. 7, 1927. Serial No. 181,694. 4 Claims. (Cl. 199—52.)



1. In a device of the class described, a split dog with both members resiliently held endwise, said dog being adaptable to replace the vise automatic stop mold disc dog of a casting machine, a clamp adaptable to be attached to the mold disc to engage the upper portion of the said dog, a bar slidable on the vise automatic stop rod, means for moving the said bar downward to engage the upper portion of the said dog when the first elevator slide fails to stop at the correct position and means for resiliently holding the said bar upward.

1,678,361. SURGICAL NEEDLE. CLARENCE G. SHEARON, Evanston, Ill., assignor to Sharp & Smith, Chicago, Ill., a Corporation of Illinois. Filed June 25, 1927. Serial No. 201,337. 3 Claims. (Cl. 128—339.)



1. A needle having a pointed end with a thickened shank including a stationary part with a jaw pivoted thereto, said jaw adapted to be closed against the stationary part to grip the end of a thread therebetween, and means operated by movement of the jaw for locking the jaw in its closed position.

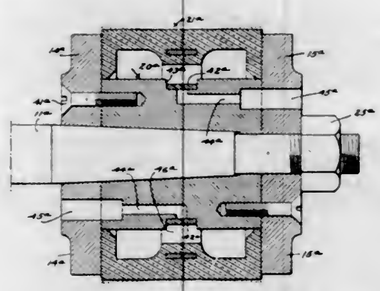
1,678,362. GRATING. ALONZO H. SLOAN, Detroit, Mich., assignor to Blaw-Knox Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed May 12, 1924. Serial No. 712,708. 6 Claims. (Cl. 94—30.)

1. A grating comprising a plurality of girder bars having slots formed in an edge thereof and lattice bars woven around the girder bars, the lattice bars lying in the recesses at the point of engagement with the girder bars.

1,678,363. MACHINE FOR INVESTIGATING THE PROPERTIES OF TIRES UNDER LOADS. VERNON L. SMITHERS, Cuyahoga Falls, Ohio. Filed Mar. 22, 1927. Serial No. 177,316. 10 Claims. (Cl. 73—51.)

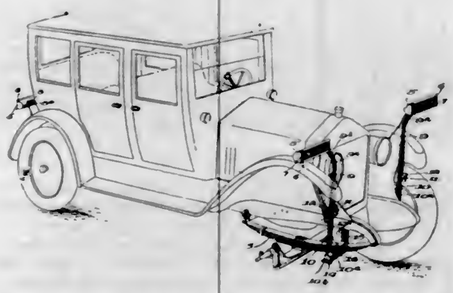
1. A device of the class described comprising means for supporting a pneumatic tire, means for applying determinate loads onto the periphery of the tire, means for taking tread contact impressions of the tire under the determinate loads, and means for reproducing profiles of the sidewall of the tire on a chart when deflected under said determinate loads.

1,678,364. CONCENTRATOR TABLE. ALBERT H. STEBBINS, Los Angeles, Calif. Filed Jan. 8, 1927. Serial No. 159,817. 9 Claims. (Cl. 209—467.)



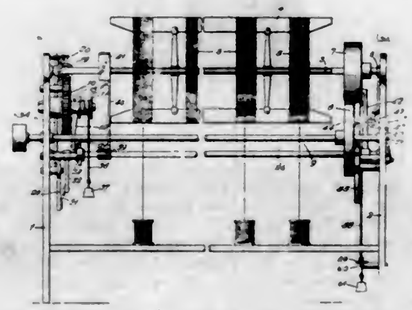
1. A concentrator table, comprising in combination, a deck casing having a material supporting surface that is mounted at a transverse inclination and having a concentrate wall that extends along the upper side of the deck, means for supporting the deck for vibratory movement, riffles provided upon the deck surface near the concentric wall and arranged to extend lengthwise

of the deck at a slight angle to said wall to direct the concentrates against the concentrate wall for retreatment, and other riffles provided upon the lower



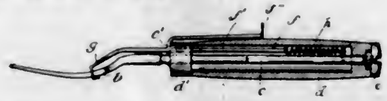
portion of the deck surface and arranged at an angle to the first mentioned riffles to direct concentrates up the inclined deck toward the first mentioned riffles.

1,678,365. SLUSH-PUMP PISTON. WAYNE N. SUTLIFF, Brea, Calif. Filed Nov. 10, 1926. Serial No. 147,538. 6 Claims. (Cl. 74—109.)



1. In a pumping organization: a plunger body comprising a central section disposed between outwardly extending radial flanges which cooperate therewith in providing a single annular chamber; means for admitting fluid pressure into said annular chamber from one end of said body; and a packing sleeve floating in said annular chamber and provided with means for restraining a central portion thereof, said pressure-admitting means being provided with an inwardly opening valve consisting of a band of yieldable material extending over said fluid passages formed in said central section.

1,678,366. VEHICLE SIGNAL. JAMES H. TANN, Lansing, Mich. Filed Dec. 28, 1926. Serial No. 157,560. 1 Claim. (Cl. 248—2.)

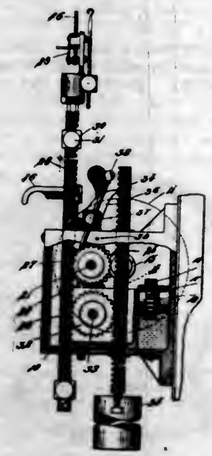


A signal casing support for automobiles and the like comprising a stud attached to the casing, an extensible and angularly adjustable standard comprising longitudinally slotted sections in a flat contact with each other, clamp bolts and nuts associated with the slots of said sections whereby the same may be retained in a predetermined adjusted position, the upper standard section terminating in a laterally directed branch the slot of which rotatably receives said casing carrying stud whereby the signal element can be adjusted rotatably and transversely of the axes of said standard while the sections thereof are alined, the lowermost standard section having its lower end formed with an enlarged flattened base portion, a threaded axially extending stud projecting from said base portion and having a clamp nut, and a slotted horizontal support having means for attachment to the vehicle and upon which said standard is mounted for rotatable and horizontal adjustment by means of its stud and clamp nut.

1,678,367. REELING MACHINE. PACIFIC J. THOMAS, Pittston, Pa. Filed July 22, 1926. Serial No. 124,176. 8 Claims. (Cl. 192—139.)

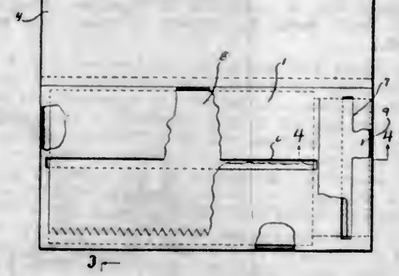
1. In a reeling machine, a reel shaft provided with a reel, a driven shaft, a counting wheel actuated by the driven shaft, an arm movable with the counting wheel, a bell crank lever actuated by said arm, a cam controlled by said bell crank lever, a rock shaft controlled by the cam, and means actuated by the rock shaft for breaking the connection between the driven shaft and the counting wheel and for halting the movement of the reel shaft.

1,678,368. PRONG CLEARING FORK. PACIFIC J. THOMAS, Wyoming, Pa. Filed Aug. 10, 1926. Serial No. 128,378. 1 Claim. (Cl. 30—5.)



In combination with a pronged fork having a rearwardly extending shank and a separate handle enclosing the latter, a fork clearing member slidable upon said prongs and having a U-shaped shank portion the shorter leg of which lies outside of and substantially parallel to said handle and is provided with an actuating finger, and the longer leg of which is enclosed by said handle and provided with a spring connection to said fork shank.

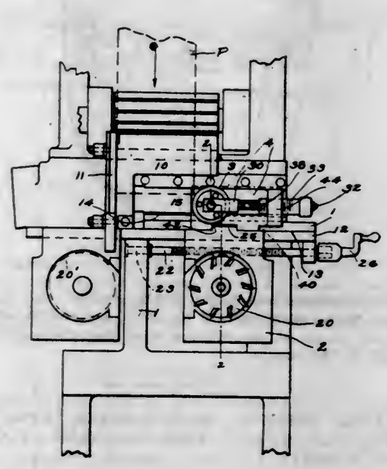
1,678,369. TESTING MACHINE. FRANK A. VALENTINE, Apponaug, and DAVID C. SCOTT, Providence, R. I., assignors to Henry L. Scott Company, Providence, R. I., a Corporation of Rhode Island. Filed Oct. 22, 1926. Serial No. 143,372. 7 Claims. (Cl. 265—12.)



1. In a testing machine, a pull member through which tension is applied to the work being tested, driving mecha-

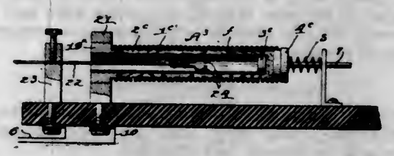
nism for actuating said pull member in one direction, means for releasing said pull member from the action of

said driving mechanism, and gravity actuated means for quickly returning said pull member to its starting position when so released.



1,678,370. CARTON. FRANK P. VAUGHAN, Green Bay, Wis., assignor to Bay West Paper Co., Green Bay, Wis. Filed Nov. 24, 1926. Serial No. 150,485. 2 Claims. (Cl. 206—57.)

1. A carton comprising a front and rear panel and side panels, a cover flap carried by said rear panel and adapted to be wrapped downwardly over said front panel, said front panel having an elongated slit extending partway across, and having a transverse slit spaced from the end of said first mentioned slit, and a pair of stacks of interfolded sheets positioned behind said front panel and having the outermost sheets projecting through said slits.

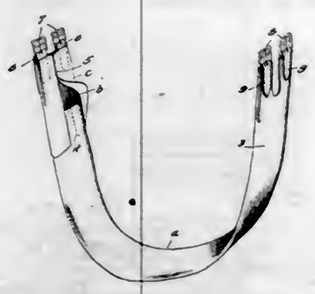


1,678,371. HOLD-OVER GUIDE FOR LUMBER-FINISHING MACHINES AND ADJUSTING MEANS THEREFOR. ORRA W. WEBB, Seattle, Wash., assignor to Stetson-Ross Machine Company, Seattle, Wash., a Corporation of Washington. Filed Nov. 6, 1924. Serial No. 748,094. 14 Claims. (Cl. 144—243.)

1. In a lumber-finishing machine, in combination, a side head yoke adjustable transversely, a cutter head carried by said side head yoke, a guide roller positioned to engage the lumber in advance of said cutter head, means independent of the side head yoke for supporting said guide roller, said guide roller support being movable transversely in a path parallel to the path of said side

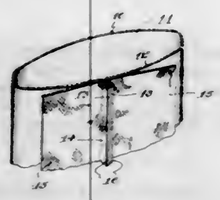
head yoke, means permitting transverse yielding of said guide roller independently of its support, means connecting said support and said side head yoke for simultaneous transverse movement, and means for adjusting said latter connected members transversely.

1,678,372. ELECTRICALLY-OPERATED THERMOSTAT. GEORGE H. WHITTINGHAM, Baltimore, Md., assignor to Monitor Controller Company, Baltimore, Md., a Corporation of Maryland. Filed June 2, 1921. Serial No. 474,383. 3 Claims. (Cl. 200—122.)



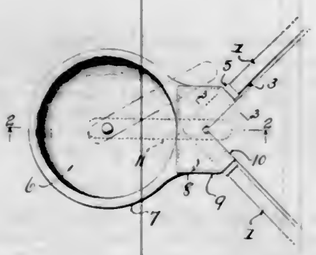
1. An electrically operated thermostat comprising a closed chamber filled with an expansible liquid, the wall of said chamber comprising a heating section composed of a tube of high resistance metal adapted to be included in an electric circuit, and an expansible section composed of a thin annularly corrugated metal tube, one of said sections being arranged within the other.

1,678,373. SADDLE GIRTH. JOSEPH WIESENFELD, Baltimore, Md.; Hattie M. Wiesenfeld executrix of said Joseph Wiesenfeld, deceased. Filed Nov. 18, 1926. Serial No. 149,058. 1 Claim. (Cl. 54—23.)



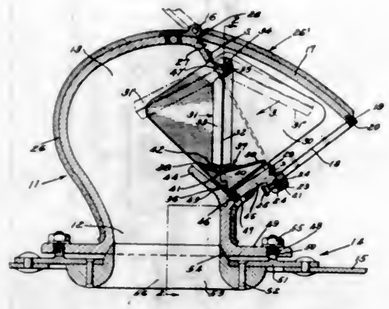
A saddle girth comprising a longitudinally folded leather band, a strip of elastic material secured at one of its ends to one end of said band and between the

folds thereof, a sheath of pliable material covering said strip and secured to its free end, said sheath extending over the adjacent end portion of the band and being



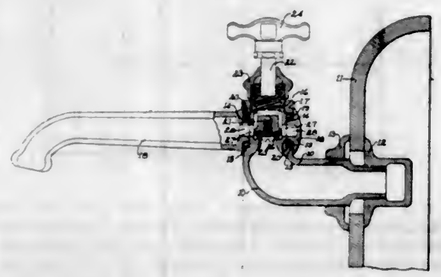
slidable thereon, and buckle straps doubled over the end of the strip and secured to the strip and sheath, one end of each strap, at the inner side of the girth, being enclosed by the sheath.

1,678,374. NECKTIE. JACOB F. BAKER, Detroit, Mich. Filed July 29, 1927. Serial No. 209,315. 4 Claims. (Cl. 2—146.)



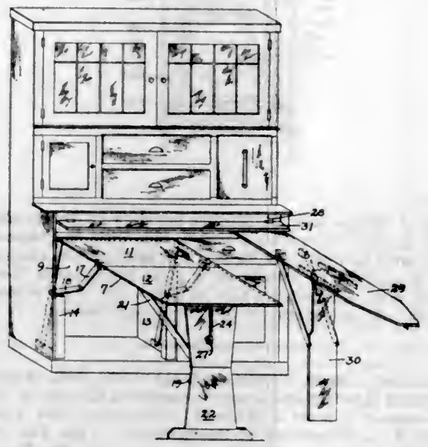
1. In a necktie, an outer member of flat tubular construction having a longitudinal turned-in seam located intermediate the folded edges thereof, and a lining comprising two strips arranged within said outer member and on opposite sides of said seam and joined to said outer member by stitching their adjacent edges when said seam is sewed, the free edges of said lining strips terminating adjacent the folded edges of said outer member.

1,678,375. ASH TRAY. WILLIAM H. BERSSENBRUGGE, Milwaukee, Wis. Filed Jan. 29, 1927. Serial No. 164,613. 4 Claims. (Cl. 45—75.)



1. An ash tray comprising a body portion having a depression for the reception of ashes and having a bearing portion projecting therefrom, said bearing portion being provided with downwardly extending lips adapted to engage the groove of a card table at spaced points, and means for preventing the upward lifting of the ash tray.

1,678,376. OIL-STORAGE-TANK BREATHER. GLENN H. BOWLUS, Los Angeles, Calif. Filed Oct. 11, 1926. Serial No. 140,771. 17 Claims. (Cl. 220—85.)

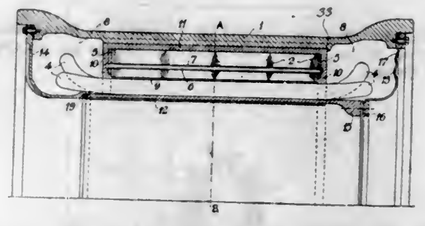


13. An oil tank breather, comprising: an attachment member; a hood member rotatable thereon in a horizontal plane; a nose member attached to said hood member, said nose member having a substantially rectangular opening therethrough; a light flap swingingly supported at its upper edge and substantially closing said opening when in a vertical position, said flap being free to swing in either direction, and a trough for containing a sealing liquid in which the lower edge of said flap is immersed when said flap is in a vertical position.

1,678,377. SWINGING-SPOUT VALVE. FRANK G. BROTZ, Kohler, Wis., assignor to Kohler Company, Kohler, Wis., a Corporation of Wisconsin. Filed Aug. 26, 1927. Serial No. 215,662. 1 Claim. (Cl. 251—157.)

1. A swinging spout valve for sinks, comprising an angular casing having a reduced end on its horizontal portion, said casing and said reduced end being screw threaded, a flanged collar threaded on the casing and a flanged supply coupling threaded on said reduced end to clamp the sink back between them, the upturned end of the casing having a reduced portion forming a shoulder and a screw threaded end, a spout member having a vertical bore fitting on the reduced portion of the upturned end of the casing, a packing nut threaded on the end of the casing and provided with a cylindrical portion, the ends of the bore of the spout member being countersunk to fit on the shoulder of the casing and the cylindrical portion of the packing nut respectively, to form packing glands at both ends of the bore, packing rings contained in the packing glands, a packing cap threaded on the end of the casing, a valve member threaded in the casing, a stem thereon passing through the packing cap, a handle on the stem, a valve face on the valve member, and a valve seat in the casing adapted to be engaged by the valve face, there being outlet ports in the valve casing beyond the valve seat and an annular groove in the bore of the spout member registering therewith and communicating with the passageway of the spout member.

1,678,378. CABINET. CLARENCE J. CAMPBELL, Oakland, Calif. Filed Apr. 23, 1924. Serial No. 708,445. 1 Claim. (Cl. 45—51.)

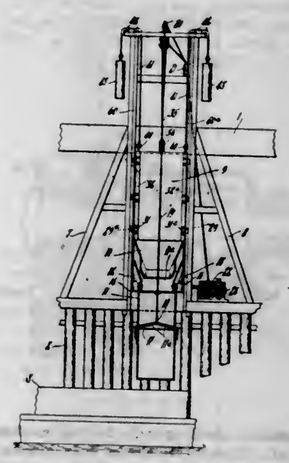


1. A table arranged for concealment in a recess, comprising pivotally connected sections arranged to be folded together within or extended when positioned without the recess, a supporting member for supporting one of said sections fixed thereto and arranged to lie within said recess while the table is extended, means for supporting the other section arranged to lie without the recess while the table is extended and comprising a leg portion fixedly secured to said latter section at substantially right angles thereto and provided with a slot, a leg portion pivoted to the first, a lever connected to said second section and arranged to extend through said slot and engage said first leg portion, and a link connecting said lever and second leg portion.

1,678,379. COAL BRIQUETTE AND PROCESS OF MAKING IT. GEORGE ALBERT CHAPMAN, Forest Hills, and ELTOFT WRAY WILKINSON, Queens Village, N. Y., assignors to Minerals Separation North American Corporation, New York, N. Y., a Corporation of Maryland. Filed Mar. 17, 1926. Serial No. 95,456. 19 Claims. (Cl. 44—1.)

1. A baked briquette consisting of uncoked anthracite coal substantially passing 10 mesh and bound by a binder which consists largely of the residue of oil which is less than ten per cent on the coal, said briquette being adapted when burned in a deep mass in a grate to leave an ash containing less than ten per cent of unconsumed carbon and burning nearly or absolutely smokelessly and without substantial softening.

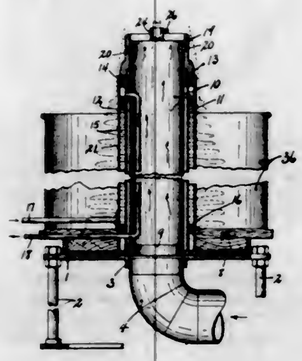
1,678,380. DYNAMO-ELECTRIC MACHINE. THOMAS LANCELOT REED COOPER, London, England. Filed July 20, 1925, Serial No. 44,688, and in Great Britain July 25, 1924. 9 Claims. (Cl. 171—252.)



2. Dynamo-electric machine comprising in combination a rotor and a stator element, and a fluid-tight chamber for the stator windings consisting of a hard insulating material completely enclosing the back and ends of the stator laminæ and lining the stator slots.

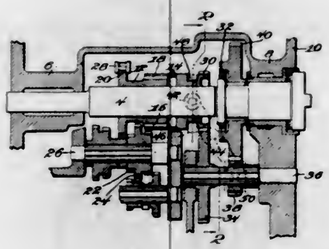
1,678,381. PRODUCTION OF COMMERCIAL BORAX FROM $Na_2O.2B_2O_3.4H_2O$. THOMAS M. CRAMER, Long Beach, Calif., assignor to Pacific Coast Borax Company, a Corporation of Nevada. Filed Jan. 12, 1927. Serial No. 160,778. 5 Claims. (Cl. 23—41.)

1. In the production of commercial borax from a natural-occurring sodium borate which resists solution, a method which includes: subjecting said mineral to a temperature sufficient to render the mineral less resistant to solution in water, dissolving the same in a watery medium; and crystallizing a commercial borax from the resultant solution.



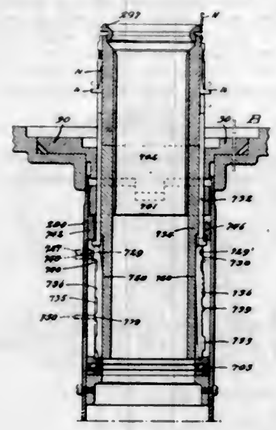
1,678,382. MATERIAL-HANDLING DEVICE. JOSEPH DAW, Quebec, Quebec, Canada, assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Feb. 9, 1926. Serial No. 87,139. 3 Claims. (Cl. 193—16.)

1. A device for loading material by gravity into a conveyance position adjacent thereto, comprising a shaft having a wall which constitutes a bunter plate, a hopper



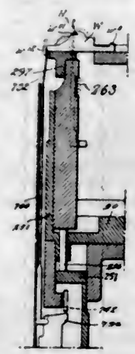
supported by said bunter plate and arranged to receive the material discharged from said shaft, a laterally swingable chute into which said material is fed from said hopper and supported by said bunter plate, and means for raising and lowering said bunter plate.

1,678,383. DRYING MACHINE. JOSEPH A. FIRSCHING, Utica, N. Y. Filed Sept. 29, 1925. Serial No. 59,434. 3 Claims. (Cl. 26—56.)



1. A drying machine for tubular fabric comprising a tube along the exterior of which the fabric is adapted to be drawn, an air chamber surrounding the tube, a water jacket surrounding the air chamber, means for supplying a drying fluid to one end of the tube, and a spreader mechanism at the opposite end of the tube over which the fabric is adapted to be drawn and which permits the drying fluid to contact with and escape through the fabric.

1,678,384. VARIABLE-SPEED DRIVING MECHANISM. BENJAMIN P. GRAVES, Cranston, R. I., assignor to Brown and Sharpe Manufacturing Company, a Corporation of Rhode Island. Filed Jan. 4, 1927. Serial No. 158,889. 6 Claims. (Cl. 74—57.)

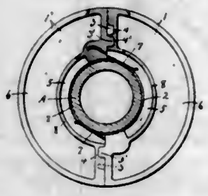


1. In a variable speed spindle driving mechanism, the combination of a spindle, a sleeve gear loosely mounted directly on the spindle, a second sleeve gear loosely mounted directly on the spindle and permanently splined to the first sleeve gear in driving relation thereto, back gearing for driving the spindle from one of the sleeve gears and means for disconnecting the back gearing and for connecting said sleeve gear directly to the spindle.

1,678,385. CIRCULAR-KNITTING MACHINE. IVAN W. GROTHEY, Laconia, N. H., assignor to Scott & Williams, Incorporated, New York, N. Y., a Corporation of Massachusetts. Filed Dec. 22, 1926. Serial No. 156,458. 14 Claims. (Cl. 66—50.)

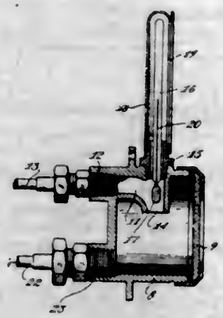
1. A circular knitting machine having a needle cylinder and a circle of knitting elements therewith, in combination with pattern jacks for said knitting elements adapted to be selected by rocking on a point intermediate their ends, each jack having a butt on either side of its rocking point, and cam means to operate on said butts.

1,678,386. DROP-STITCH MECHANISM FOR KNITTING MACHINES. IVAN W. GROTHEY, Laconia, N. H., assignor to Scott & Williams, Incorporated, New York, N. Y., a Corporation of Massachusetts. Filed Dec. 24, 1926. Serial No. 156,972. 5 Claims. (Cl. 66—50.)



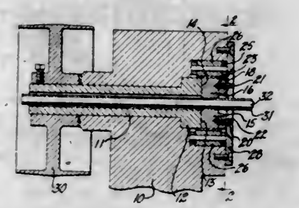
1. A circular knitting machine having a needle cylinder, a series of sinkers therein and a series of jack means each associated with a sinker and adapted to rock said sinker for the purpose of forming a drop stitch, said series of jack means including pattern jacks having butts on different levels in combination with a jack selector cam and a pattern wheel adapted to move said selector cam directly from one position to another within the range of butt levels.

1,678,387. BRIQUETTE AND PROCESS FOR PRODUCING IT. ROBERT MARION HALE, New York, N. Y., assignor to Minerals Separation North American Corporation, New York, N. Y., a Corporation of Maryland. Filed Apr. 30, 1926. Serial No. 105,627. 24 Claims. (Cl. 44—16.)



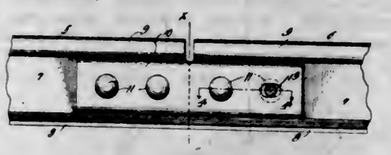
1. A briquette consisting of coal finer than 20-mesh bound by a binder which contains a considerable proportion of oil and also a considerable proportion of sulphite cellulose residues and contains substantially no added inorganic substance.

1,678,388. COMBINATION FLOOR AND CEILING PLATE. JOSEPH B. HOLDEN, Canastota, N. Y. Filed Oct. 4, 1927. Serial No. 223,908. 5 Claims. (Cl. 126—317.)



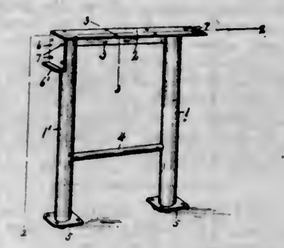
1. A floor or wall plate composed of half sections identical in construction and adapted to be placed around and upon a pipe, each section having a yielding member adapted to frictionally engage the periphery of the pipe when the sections are assembled thereon, each section having one of its end faces provided with a plurality of lugs in different planes at right angles to the axis of the plate and its other end face provided with a corresponding number of recesses complementary to the lugs and in different planes corresponding to the planes of the lugs, each lug and its corresponding recess in the same plane being equal distances from said axis.

1,678,389. OIL THERMOMETER. ARTHUR HOLMES, Newark, N. J., assignor to The Holmes Automobile Company, Canton, Ohio, a Corporation of Ohio. Filed Aug. 16, 1920, Serial No. 403,747. Renewed June 8, 1928. 3 Claims. (Cl. 73—52.)



1. A casing having an upper inlet port and a lower drainage chamber and outlet port for a circulating liquid, and a thermometer having its bulb above the drainage chamber and at the mouth of the inlet port in position to be bodily impinged by inflowing liquid, the drainage chamber being relatively large and deep as compared with the thermometer bulb.

1,678,390. METHOD OF WORKING FIBROUS MATERIAL. WILLIAM FULLER HOSFORD, Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 28, 1927. Serial No. 171,672. 6 Claims. (Cl. 92—55.)

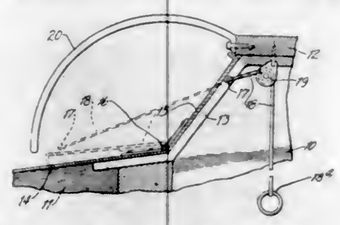


1. A method of working fibrous material on a core, which comprises swaging the fibrous material.

1,678,391. RAIL-JOINT. JOHN M. HUFFT, Tucson, Ariz. Filed July 17, 1925. Serial No. 44,269. 6 Claims. (Cl. 238—151.)

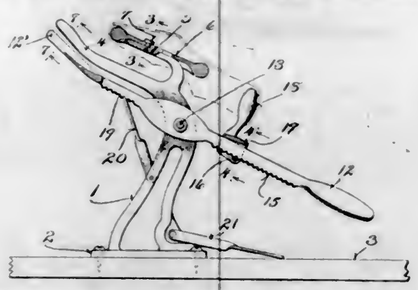
1. In a rail joint, a pair of meeting rail sections having their adjacent ends formed with the web and base portions thereof projecting slightly beyond the tread portions of the same, and means connecting the adjacent ends of said rail sections for permitting relative longitudinal movement of the same.

1,678,392. BENCH LEG. HENRY B. HURSH, CARL J. ANDERSON, and WILLIAM M. BARTELS, Syracuse, N. Y. Filed Apr. 26, 1926. Serial No. 104,668. 2 Claims. (Cl. 45—31.)



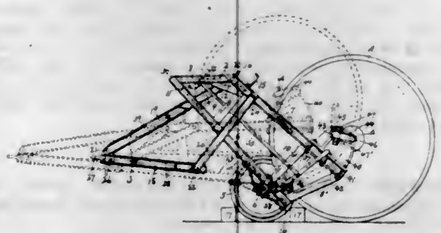
1. A bench leg comprising a pair of upright tubular posts, a flat top plate welded flatwise against the upper end faces of the posts and provided at its rear end with a downwardly projecting flange engaged with the outer side face of the adjacent post, said flange having its lower end provided with a rearwardly projecting ledge for supporting a back board.

1,678,393. POULTRY-CAR VENTILATOR. WALDO P. JOHNSON, Chicago, Ill. Filed Jan. 30, 1928. Serial No. 250,479. 2 Claims. (Cl. 98—6.)



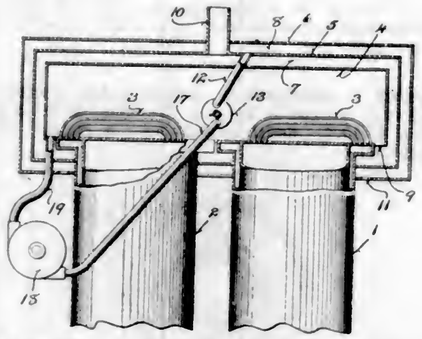
1. A ventilated car roof having a longitudinal opening in its center, saddle irons extending across said longitudinal opening at intervals and supporting a running board in elevated position above the car roof; ventilating

doors hinged to the car roof adjacent said opening and adapted to be swung from open position on said roof to closed position against said saddle irons; means for closing said doors from inside of the car, said means including a flexible member having one end attached to the



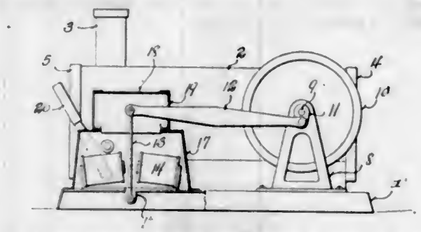
door, thence passing over a pulley mounted on the underside of the running board, the other end of said flexible member hanging within reach of an attendant in the car; and a curved guard member mounted above said door, one end of said guard member being attached to said running board.

1,678,394. COMBINATION SHOE FLEXOR AND STRETCHER. WILLIAM J. KAPPEL, Milwaukee, Wis., assignor to Marcus Sax and Isadore Sax, Copartners doing business as Sax Bros., Milwaukee, Wis. Filed Sept. 16, 1927. Serial No. 219,931. 1 Claim. (Cl. 12—129.2.)



A combined shoe flexing and stretching device comprising a standard having a forwardly projecting arm and having an upper spaced arm, a toe engaging portion carried by said upper arm, a hand-lever pivoted to the standard, an adjustably mounted heel engaging portion carried by said hand-lever, said hand-lever having a handle at one end and having a pair of spaced arms adjacent its other end positioned in proximity to the first mentioned arm of said standard, and means for locking said hand-lever in any desired position.

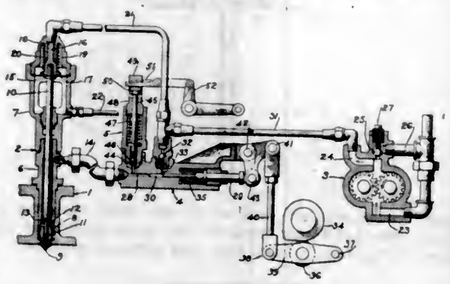
1,678,395. SELF-LOADING TRAILER. EDGAR E. KELLEMS, Syracuse, N. Y. Filed Jan. 11, 1927. Serial No. 160,378. 6 Claims. (Cl. 214—65.)



1. A two-wheel trailer having a body tiltable about the axis of the wheels a draft bar movable endwise relatively to the body, a link pivotally connected to the rear end of the draft bar and to the body, and an additional link pivotally connected to the front end of the draft bar and to the body some distance in front of the first-named link.

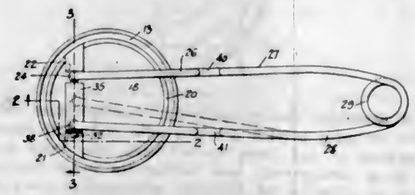
1,678,396. HEATER FOR HOT-AIR ENGINES. JOSEPH KOENIG, Manitowoc, Wis. Filed Mar. 17, 1926. Serial No. 95,357. 3 Claims. (Cl. 60—24.)

2. In a device of the class described, the combination of an air conditioning cylinder having hot tubes at one end, an inner casing surrounding such hot tubes, an intermediate casing surrounding the inner casing and spaced therefrom, said inner casing communicating freely with the space between such casing and the intermediate casing, a vent pipe opening outwardly from the intermediate casing, an outer casing surrounding said intermediate casing and having air entrance apertures therein, a burner supplied with preheated air by means of a pipe opening through the intermediate casing into the space between the intermediate and outer casing having a blower adapted to suck the products of combustion from the intermediate casing and return them in proximity to the burner, whereby a rapid circulation of the products of combustion is assured.



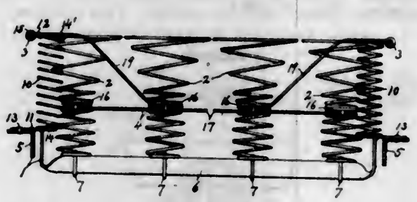
1,678,397. TOY ELECTRIC ENGINE. JOSEPH KOENIG, Manitowoc, Wis., assignor to Metal Ware Corporation, Two Rivers, Wis. Filed Sept. 16, 1927. Serial No. 219,965. 4 Claims. (Cl. 46—49.)

1. A toy electric engine comprising a base, a battery casing carried by the base and simulating a boiler, electromagnets, an armature operated by said electromagnets, a rotary shaft provided with a fly-wheel and a crank, said crank being connected to said armature by means of a link, switch mechanism controlled by said shaft for alternately turning on and off the current to the electromagnets, and a removable battery carried by said battery casing for supplying said magnets.



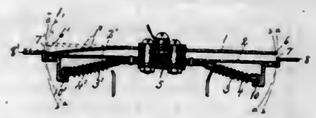
1,678,398. FUEL NOZZLE AND CONTROL. EDWARD C. LANGE, Mill Valley, Calif. Filed Sept. 13, 1924. Serial No. 737,583. 3 Claims. (Cl. 123—139.)

1. A fuel nozzle and control therefor comprising the combination of a spray valve including an orifice and a cooperating plunger, a fuel chamber adjacent the plunger and orifice, a fluid chamber adjacent another portion of the plunger, fluid pressure in the first chamber normally acting on the plunger to withdraw the same from the orifice and fluid pressure in the second chamber normally acting on the plunger in the opposite direction, means



providing a conduit to the first chamber, and means for forcing fuel through the conduit and into the first chamber, the plunger operating area in the first chamber being several times smaller than that in the second chamber whereby a high fuel pressure is required in the first chamber to lift the plunger from the orifice.

1,678,399. COVER FOR CANS. CHARLES F. LARSEN, New York, N. Y. Filed Nov. 27, 1926. Serial No. 151,109. 5 Claims. (Cl. 67—10.1.)

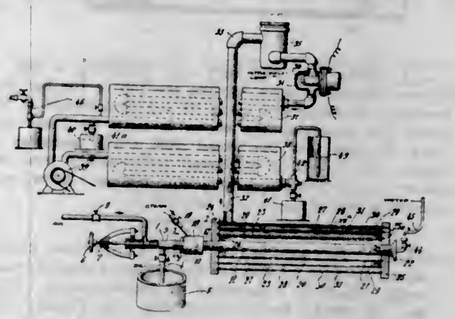


1. A can having a removable cover, an igniting device fastened to the cover, a lever projecting from the said cover adapted to remove the cover entirely from the can, and means optionally coacting with the said lever to operate the said igniting device.

1,678,400. SPRING CUSHION. WILLIAM LEWIS, Utica, N. Y. Filed Apr. 2, 1926. Serial No. 99,261. 3 Claims. (Cl. 5—252.)

1. In a spring cushion of the character described, a lower deck, a series of coiled springs mounted on the lower deck in parallel lengthwise rows and also in parallel transverse rows, a floating deck mounted upon the intermediate portions of said springs, braces extending upwardly and outwardly from the intermediate portion of the deck between some of the adjacent transverse rows of the springs, and supplemental springs interposed between the upper ends of said braces and the lower deck.

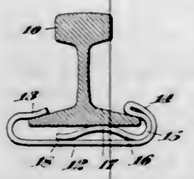
1,678,401. ELECTROTHERMOSTATIC SWITCH. NICHOLAS J. LUTTRELL, Liverpool, N. Y. Filed Dec. 24, 1925. Serial No. 77,491. 4 Claims. (Cl. 200—122.)



1. An electric switch comprising two flat spring terminals normally supported at one end in parallel spaced relation and having their other ends extending in the same direction and free to yield transversely under pressure of one against the other in the same direction, one of said terminals having a shoulder offset toward the other terminal, the end of said other terminal being extended slightly beyond the shoulder to abut against said shoulder and thereby to automatically hold the terminals in electrical contact when the pressure is released.

1,678,402. AUDIBLE SPEED INDICATOR. KARL GUNNAR MAGNI, Linkoping, Sweden, assignor to Aktiebolaget Baltic, Stockholm, Sweden. Filed Feb. 18, 1927, Serial No. 169,391, and in Sweden Feb. 22, 1926. 7 Claims. (Cl. 116—74.)

1. A speed indicator provided with a sound emitting member, a rotary member, and a pendulum actuated by impulses dependent upon the rotation of said rotary members the number of revolutions of which is to be indicated, said pendulum being swingably suspended on the member which imparts impulses to the same, and means acted upon by the pendulum to cause the sound emitting member to give an audible signal at a predetermined oscillation of the pendulum.

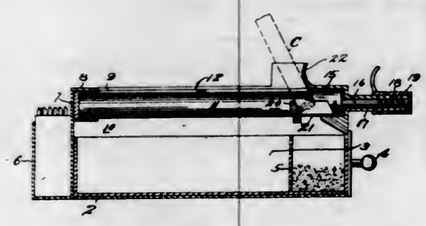


1,678,403. PROCESS FOR THE PRODUCTION OF OXIDIZED PRODUCTS. RHETHERFORD B. MARTIN, New York, N. Y., assignor to Minerals Separation North American Corporation, New York, N. Y., a Corporation of Maryland. Filed Oct. 30, 1920. Serial No. 420,808. 20 Claims. (Cl. 260—138.)

1. The process which includes passing a continuous stream of hydrocarbons in vapor form mixed with oxygen past a source of ultra-violet light to produce com-

pounds containing carbon combined with both oxygen and hydrogen, and condensing the condensable part of the product.

1,678,404. RAIL ANCHOR. GEORGE LOOP MOORE and JAMES ROBERT STEELE, Owego, N. Y. Filed Mar. 28, 1927. Serial No. 178,924. 10 Claims. (Cl. 238—330.)

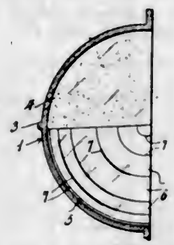


3. A single-piece rail anchor comprising an under rail portion, a pair of hook end portions adapted to engage with the upper surface of a rail base, and a spring bar portion bent upwardly from the under rail portion adapted to engage the underside of the rail and having a free end supported on said under rail portion.

1,678,405. PROCESS FOR RENDERING GAS-ABSORBENT BODIES AIR-TIGHT IN LIQUIDS. RENÉ OPPENHEIM, Levallois-Perret, France, assignor to Société Anonyme le Carbone, Levallois-Perret, France. Filed Apr. 18, 1925. Serial No. 24,234, and in France June 3, 1924. 5 Claims. (Cl. 136—122.)

1. A process for rendering porous bodies impervious to liquids, and particularly the porous bodies of the electrodes of certain types of electric batteries, electrolyzers or accumulators, which process consists in fixing on the porous body a strongly adhering sheath or mass of air or gas prior to use.

1,678,406. BUTT-EXTINGUISHER AND TRAY. HANS RUE, Los Angeles, Calif. Filed Nov. 21, 1927. Serial No. 234,688. 4 Claims. (Cl. 131—51.)



4. A safety ash and butt tray including a box, a drawer therein, a barrel closing the top of the box and having a receiving slot along its top, and means in the barrel for quenching fire of an inserted butt and toppling the butt into the barrel said means operative to rotate the barrel to discharge its contents into the drawer; said drawer having an ash pit below said quenching means.

1,678,407. THERMOSTAT. JOHN A. SPENCER, Revere, Mass., assignor to Spencer Thermostat Company, Cambridge, Mass., a Corporation of Massachusetts. Filed Nov. 10, 1923. Serial No. 673,960. 10 Claims. (Cl. 297—14.)

1. A thermostatic device comprising an elastic sheet having a dent therein, thermostatically operated means for flexing a portion of the dent in the direction opposite to the dent flexure, said dent having such depth and elasticity that said flexing sets up internal stresses which, when the flexing reaches a predetermined magnitude, cause another portion of the sheet abruptly to move into a different position, the latter portion of the sheet being free to snap into said different position.
